"If we want an open-door policy, we must have a clear and understandable policy that will keep the door open.

"I have been misunderstood in my use of the word alliance. My meaning, when I have used the word, was commercial alliance to keep the door open with all nations on an equality and with favoritism to none.

"What do we care about what you do with the Philippines? That's your business, not ours. What is meant by 'open door' regarding China? It means that we want her to help herself; to keep her own arms and her own institutions. We must help her, though, for if we do not she will collapse, and if that happens there will be nothing left save control over certain portions of China. The doors cannot be kept open unless the four countries I propose agree to keep them open."

M. Loubet's Message.

The new President of France submitted his message to both houses on the afternoon of February 21. He pledged himself to support the Constitution, and asked for the co-operation of both the Senate and Chamber of Deputies.

He said that the election of a new president within a few hours of the death of M. Felix Faure, was proof of the fidelity of France to the Republic at a time when many were trying to shake the confidence of the country in its institutions. He spoke of the necessity there was for tolerance and concord, and also respect for the essential organs of society, the parliament, the magistracy, the government, and the national army. He affirms his faith in the ability of France to solve all the problems that disturb the well-being of her citizens. He concluded by recalling the work of the Republic, which, he asserted, has given France free institutions, assured peace and liberty, founded a great colonial empire, concluded alliances and precious friendships, and has given a wonderful impulse to all labors of charity, co-operation, and thrift.

Admiral Dewey cabled the Navy Department that the Oregon should be sent to Manila at once for "political reasons." Various theories are entertained as to what is meant by "political reasons," which should make the presence of the Oregon at Manila so imperatively necessary. The admiral is so conservative in his statements, that it is felt he must apprehend some immediate danger. Although it was assumed that the Oregon had already left Honolulu, orders were immediately telegraphed to San Francisco, to be forwarded by the next steamer, directing the Oregon to go as promptly as possible to Manila, in case she had been detained at Honolulu.

General Otis cabled the War Department as follows, under date of Manila, February 23:—

"Determined endeavors to burn last night. Buildings fired in three different sections of city. Fires controlled by troops after severe labor. A considerable number of incendiaries shot and a few soldiers wounded.

"Early this morning a large body of insurgents made a demonstration off MacArthur's front, near Caloocan, and were repulsed. Loss of property by fire last night probably $500,000."

The United States Army transport Sheridan has sailed from Brooklyn for Manila, by way of the Suez Canal, with 1,835 enlisted men and officers. It is expected the trip will be made in about fifty days. The transport Grant will probably reach Manila on March 4, and the Sherman about ten days later. More than five thousand regular troops are embraced in these several expeditions, thus giving General Otis an effective force of about twenty-five thousand.

Senator-elect Chauncey M. Depew addressed the railroad men in Chicago. He recounted the history of the railroad men in this country, and spoke of the power they can wield in politics when they are determined upon the carrying of some measure that they believe is for the good of the country or the betterment of their own condition.

The appropriations of the present Congress will amount to $1,600,000,000, and it may exceed even this enormous amount by more than $100,000,000 if the Nicaraguan canal amendment to the River and Harbor Bill is adopted. War with Spain is responsible for almost all the increase above the average of the past few years.

The aggregate sum realized from the sale of the three hundred and seventy-three American paintings in New York recently was $234,495, making the average price for the pictures, which included water colors as well as oils, about $600. Nothing approaching this result has ever been attained before in an auction sale of American pictures.

Blackwood's Magazine has just issued its one thousandth number, thus making a record the world over for longevity in periodical literature. For eighty years it has been issued by the famous Edinburgh publishing house whose name it bears, and it has always been conducted by a Blackwood.

It is reported that the United States is feeding five per cent of the total population of Cuba. From twenty to twenty-five thousand are fed in Havana alone on army rations. There is no doubt that the distribution of rations is helping the unworthy as well as the deserving.

The War Department has arranged to despatch further reinforcements to General Otis. The Ninth Infantry, now at New York, and the Sixth Infantry, at San Antonio, Texas, have been selected, and they are expected to leave San Francisco by March 15.

The stars and stripes have been hoisted on the island of Negros, of the Philippine group, which is one of the richest in the archipelago, and the principal producer of sugar. It is thought that this will have an important effect on the general situation in the islands.

General Charles P. Eagan and his friends consider that the testimony of General Miles completely vindicated him from the charge of dishonest collusion with the beef packers, which he believed to be implied by General Miles' first statement.

A recent despatch received from General Otis is to the effect that a Filipino chief has issued an order that no quarter is to be shown to the Americans, but all are to be exterminated without any compassion whatever.

The directors of the George Washington Monument Association have announced that plans are completed for the erection of a $25,000 monument in Chicago to the memory of George Washington.

It is stated that General Gomez has arranged with General Brooke for the distribution of the $3,000,000 which it is expected will be paid to the Cuban troops within a very short time.

The extradition treaty between the United States and Mexico has been signed. It has a retroactive provision under which criminals may be apprehended when the treaty enters into effect.

The inhabitants of Manila have been ordered to confine themselves to their homes after seven o'clock in the evening, at which hour the streets will be cleared by the police.

The Senate passed the River and Harbor Bill, including the Nicaragua Canal amendment, by the decisive vote of fifty to three.

The statement that another bond issue was in contemplation has been denied by Secretary Gage.

General Alger's business partner has stated positively that he has no intention of resigning.

Miscellany.

From a Journalist.

As one of the many professional men whose life experiences a complete transformation through the influence of Christian Science, I desire to send you a colleague's greeting.

After twenty-six years of newspaper life, a long run of studies, saturated with intellectualism, I learn through this great power of Truth, the real integrity, the real purity, the real thought! If only one per cent of the newspaper world begins to see light, the clouds and darkness will disappear like a dream. Man's wisdom is but a shadow compared with the understanding of Truth as taught by our dear Mother. Three-fourths of all our learning—our so-called accomplishments—sinks to its native nothingness when once we receive the baptism of this new power, and are newly born of Spirit. Language cannot express what Christian Science will do for the newspaper men when they grasp the A B C of this heavenly purification. Indeed this is the only progress.

For thirty years of my life I wandered about from church to church; every creed seemed darker and gave me nothing, until finally I concluded the synagogue was the nearest to my ideal. But one hour convinced me that in Christian Science I had at last gained a foothold; that I received bread and not a stone. What seemed to me a farce in the old church is now Life and Love, reflected by me, and how glorious the gain! I can call myself God's child—Love's image. I can see harmony everywhere.

In meekness and Love,

Max Jägerhuher.

A Baptist Church Fights Sectarianism.

Another move is about to be taken by the members of the Grace Baptist Church, which will still further remove them from any semblance of denominationalism. At the suggestion of the Rev. W. J. Mosier, the pastor, the word "Baptist" in the church title is to be changed to "Gospel." By doing this, everything that pertains to a denominational name will be as effectually removed as the church is now from denominational ideas. In many respects this is the most remarkable church body in the country.

"The term Baptist," explained Mr. Mosier to me yesterday, "originally stood for the independent local church. It is not so now. It designates a sect, which is contrary to Scripture, and characterizes a system of church government which practically has no warrant in Scripture. Our church has withdrawn from every intimation of denominationalism, but we retained, inconsistently, the name which ranked us with one of the greatest sects in Christendom. This was an injustice to us. At times I have been embarrassed by having to explain and excuse a sectarian name while renouncing and denouncing sectarian practices and principles.

"This question of too many sects has been the death of the Church. The fearful condition of the Christian churches to-day is due to this, and Protestantism is a failure so far as spiritual things are concerned. We are not seeking or having trouble with denominations, but we are fighting sectarianism."—New York Herald.

Preached His Own Funeral Sermon.

The Rev. August Stewart, an aged minister of Paola, Kan., died the other day under most peculiar circumstances, and was buried to-day. On Wednesday the Rev. Mr. Stewart preached his own funeral sermon, and at his own request there were no services over his remains to-day beyond a short prayer.

Wednesday morning the Rev. Mr. Stewart, who was in robust health for a man of his age, announced to his wife that he had done his last day's work, and that he would not live the week out. His wife tried to persuade him out of the notion, but he clung to it, and prepared for the end, disposing of all his personal property and making his will. Wednesday afternoon he called in his neighbors and made the same announcement that he had made to his wife. Then he announced a hymn, which was sung, and following it Mr. Stewart preached his own funeral sermon, closing with a prayer for the repose of his soul.

Immediately afterward he went to bed, and when a doctor was called he sent him away, saying that he had been called by death, and that medicine would do no good. He requested that his body be taken directly to the cemetery, and that no funeral sermon be preached, as he had attended to that. Yesterday he died and his wishes were observed.

Physicians say that he had no physical ailment, and that his death was due entirely to his presentiment and his refusal to combat it.—Cincinnati Enquirer.

A Lesson in Art and Science.

Why, after working for months in my own thought, trying to realize the Truth, examining my motives, correcting my actions, erasing my seeming errors, had I no definite results, no clear conception of the perfect man?

In my perplexity, the opportunity of entering an art school presented itself. I began my first drawing from the cast. My professor said one day in criticising my work, "I notice that you work a long time over your paper without looking at your model. You must study your model more, get your thought filled with its perfect proportions, see nothing but that, think of nothing but that. Don't work aimlessly. Say to yourself exactly what you intend to put down. Let every line be a true line—no guess-work about it—never mind the likeness at this stage, that will come. Look more at the model than at your work."

Then the answer to my question, Why? came. But had not our dear Mother told us the same thing on page 144 in Science and Health, "We must form perfect models in thought, and *look* at them continually, or we shall never carve them out in grand and noble lives."

Will Stick to Medicines.

The Rev. C. H. Holden, pastor of the Clinton Avenue Baptist Church, who apparently was healed by prayer about a month ago, has written a long letter reciting the facts of his "cure," as published in the Press at the time.

He says that since the hour he arose from his bed he has had no recurrence of pain, although the leg that was injured still is weak. He says he believes firmly in the power of God to heal the body, but does not wish to be considered a fanatic, and has no desire to disturb his present church relations, and neither will he harp on Divine healing all the time. Mr. Holden says that he does not believe in condemning and discarding medicines, medical skill, and surgery. He says if he has occasion to use either in the future he will do so, and if they fail he will turn to God again for relief.

New York Press.

Recently in a lecture in Baltimore, Dr. Dean Campbell Fair was asked, "Shall we recognize one another in Heaven?" He replied that the greater question was, "Do we recognize one another on earth?" and said that it would be better to break down the barriers between pew-holders in the same church, which are undermining the power of Christianity.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. — CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six month's subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered as second-class matter.

[Copied from the Concord Monitor.]

Address by Rev. Mary Baker G. Eddy.

FIRST CHURCH OF CHRIST, SCIENTIST,
CONCORD, N. H.

My Beloved Brethren:—In the annals of our denomination this church becomes historic, having completed its organization February 22—Washington's birthday. Memorable date, all unthought of till the day had passed! Then we beheld the omen—Religious Liberty—the Father of the universe, and the father of our nation in concurrence.

To-day, with the large membership of seventy-four communicants, you have met to praise God. I, as usual, at home and alone, am with you in spirit, joining in your rejoicing; and my heart is asking, What are the angels saying or singing of this dear little flock, and what is each heart in this house repeating, and what is being recorded of this meeting as with the pen of an angel?

Bear in mind always that Christianity is not alone a gift, but a growth Christ-ward; it is not a creed or dogma,—a philosophical phantasm, nor the opinions of a sect struggling to gain power over contending sects, and scourging the one in advance of it. Christianity is the summons of divine Love for man to be Christ-like—to emulate the words and the works of our great Master. To attain thereunto men must know somewhat of the divine Principle of Jesus' life work, and prove their knowledge by doing as he bade—"Go and do thou likewise."

We know Principle only through Science. The Principle of Christ is divine Love, resistless Life and Truth—then its Science must be Christ-like, or Christian Science. More than regal is the majesty of its meekness; and its might is the ever-flowing tides of Truth that sweep the universe, create and govern it,—and its radiant stores of knowledge—the mysteries of exhaustless Being. Seek ye these, till you make their treasures yours.

When a young man vainly boasted "I am wise, for I have conversed with many wise men," Epictetus made answer: "And I with many rich men, but I am not rich." The richest blessings are obtained by labor; and a vessel full, must be emptied, before it can be re-filled. Lawyers may know too much of human law, to have a clear perception of Divine justice! and divines be too deeply read in scholastic theology to appreciate, or to demonstrate Christian charity. Losing the comprehensive in the technical, the Principle in its accessories, cause in effect, and faith in sight—we lose the Science of Christianity; a predicament quite like the man who could not see London for its houses.

Clouds that swing in the sky with dumb thunderbolts parsimonious of rain, are seen and forgotten in the same hour; while those with a mighty rush that waken the stagnant waters, and solicit every root and every leaf with the treasures of rain, ask no praising. Remember, thou canst be brought into no condition, be it ever so severe, where Love has not been before thee, and its tender lesson is awaiting thee. Therefore despair not nor murmur, for that which seeketh to save, to heal, and to deliver will guide thee, if thou seek this guidance.

Pliny gives the following description of the character of true greatness: "Doing what deserves to be written, and writing what deserves to be read; and rendering the world happier and better for having lived in it." Strive thou for the joy and crown of such a pilgrimage—the service of such a mission.

A heart touched and hallowed by one chord of Christian Science can accomplish the full scale; but this heart must be honest, and in earnest, and never weary in struggling to be perfect—to reflect the divine Life, Truth, and Love.

Stand by the limpid lake, sleeping mid willowy banks dyed with emerald; see therein the mirrored sky,—and the moon ablaze with her mild glory will stir thy heart. Then, in speechless prayer, ask God to enable you to reflect God—to become His own image and likeness—even the calm, clear, radiant reflection of Christ's glory, healing the sick, bringing the sinner to repentance, and raising the spiritually dead in trespasses and sins to life in God. Jesus said: "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Beloved in Christ, what our Master said unto his disciples when he sent them forth to heal the sick, and preach the gospel—I say unto you: "Be ye therefore wise as serpents, and harmless as doves." Then, if the wisdom you manifest causes Christendom, or the disclaimer against God, to call this "a subtle fraud," "let your peace return to you."

I am patient with the newspaper wares, and the present schoolboy epithets, and attacks of a portion of Christendom:

(1) Because I sympathize with their ignorance of Christian Science:

(2) Because I know that no Christian can or does understand this Science and not love it:

(3) Because these attacks afford opportunity for explaining Christian Science: and,

(4) Because it is written: "The wrath of man shall praise Thee: the remainder of wrath shalt Thou restrain."

Rest assured that the injustice done by press, and pulpit, to this denomination of Christians will cease, when it no longer blesses it. "This I know, for God is for me." Psalms. And in the words of St. Paul, "If God be for us, who can be against us?"

"Pass ye the proud fane by,
The vaulted aisles by flaunting folly trod,
And 'neath the temple of uplifted sky—
Go forth, and worship God."

To this message the Church made this fitting response:—

Beloved Mother:—In behalf of First Church of Christ, Scientist, in Concord, N. H., we return our heartfelt thanks for the beautiful and loving message you so kindly sent us on the anniversary of your memorable address in Christian Science Hall. We assure you that we shall earnestly strive to follow the wise counsel and to heed the tender words therein contained.

Faithfully,
IRVING C. TOMLINSON, President.
MABEL C. GAGE, Clerk.

The Christian Science Sermon.

I.

THE MAKERS OF THE SERMON.

THE Christian Science pulpits are now teaching of God in God's way. The sermons from Sunday to Sunday in these pulpits are "undivorced from Truth, uncontaminated and unfettered by human hypotheses and *authorized* by Christ," as the introductory note truly affirms. The word spoken by God through Paul for his day, is God's word for

Digitized by Google

this day. "Beware lest any man spoil you through philosophy and vain deceit, after the tradition of men, after the rudiments of the world, and not after Christ." That the Christian Science sermons are after Christ is plain, since "The Bible and the Christian Science text-book are our only preachers."

The Maker of the Christian Science sermons is God, for He "made all that was made." Humanly speaking, God's agents do His work. As Christ Jesus said, "My Father worketh hitherto and I work." The subjects for these sermons, as is quite well known, were furnished by our Leader. These subjects cover the essentials of Christianity. As has been observed, they follow the order she was wont to employ in teaching her classes. These subjects are taken by the Bible Lesson committee, who at their regular meetings carefully prepare the sermons. As these discourses are made up wholly of passages from the Bible and the Christian Science text-book, they contain nothing of human opinion; they are devoid of man-made theories. They have no guesses at the future, no conjectures regarding the past, and no rudimentary exhortations about the present. They are free from sensationalism, and they make no effort to please the fancy or foster the pride of mortals.

Paul wrote the Church at Galatia that to which it were well the Church of Christendom should give earnest heed, "Do I seek to please men? for if I yet pleased men, I should not be the servant of Christ. But I certify you, brethren, that the gospel which was preached of me is not after man. For I neither received it of man, neither was I taught it, but by the revelation of Jesus Christ." Adapted to the present situation, this message reads, Christian Science sermons seek not to please men: for a preacher who seeks to please men is not the servant of Christ. The gospel preached from our pulpits is not after man, neither was it taught of man, but by the revelation of Jesus Christ.

These sermons contain the word of God unmixed with human error. They voice the eternal fact concerning the everlasting Truth. They set forth the realities of being, they inform, instruct, and enlighten concerning the verities of God and man. How do we prove these affirmations? By the test of Jesus: "Wherefore by their fruits ye shall know them." A sermon without fruits, without healing, is a barren fig-tree. Mere human opinion has no healing. It is the word of God which heals, for it is written, "He sent His word and healed them." These sermons in more than four hundred Christian Science congregations have healed and are healing their thousands. As James says of faith, to the Church of his day, so God says to the Church of this day, "If it hath not works, is dead, being alone. Yea, a man may say, Thou hast faith, and I have works; shew me thy faith without thy works, and I will shew thee my faith by my works."

Having considered the makers of the Christian Science Sermon, the next article will treat of the make-up of the Christian Science Sermon.

As to the Lectureship.

THERE seems to be a failure on the part of many of the Churches to understand one of the main purposes for which the Board of Lectureship was instituted. The intention evidently is to reach those who are strangers to the truth regarding Christian Science, or who are interested enough to listen to a public discussion regarding Christian Science, but who, so far, have not been reached by other methods. As a matter of experience, in some cases nine-tenths of the audience will be composed of those who are either strangers or inquirers. A Church, by arranging for a lecture, becomes an instrument for the propagation of the truth regarding Christian Science in the whole community; for when lectures are given in public auditoriums the interest of the press is aroused, and in many cases the whole lecture, or a large part of it, is published, and can be quietly perused at home by those who were not even interested enough to attend the lecture.

When we think of the great effort that is being made through the press and platform and through the publication of pamphlets, to mis-state Christian Science, it seems very clear that all the loyal Christian Scientists should be intensely in earnest at this time, in using all the means which our Leader has furnished them for letting the light of Truth shine.

Any one who has read the published lectures will notice that the life and work of the Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy, have been accorded their true place in history, and will also notice how inquirers are directed to the study of the text-book of Christian Science, "Science and Health with Key to the Scriptures." In view of the unjust attacks which are being made upon the Leader of this great movement, any one can see the importance, not of answering these attacks in the spirit in which they are made, but of stating clearly, earnestly, and lovingly the Truth, so that the earnest seeker and the innocent may not be misled. Also, in view of the misrepresentations regarding Christian Science on the part of those who do not understand it, it is important that all honest seekers should be directed to the text-book from whose pages they not only may learn what the Truth is, but how to demonstrate it and make it a practical force in their lives.

The delay on the part of some of our Churches in not calling a member of the Board of Lectureship to present the claims of Christian Science in their community, seems not in accord with the demands of the hour. The fact, evidenced in these columns, that many of our smaller Churches have easily raised the necessary funds, conclusively proves that the delays are not due to any financial lack. Wherever a Church has been really in earnest, ways and means to pay all the expenses of a lecture have readily been provided. What adequate reason, then, is there for the failure of these Churches to employ this efficient arm of our service? The people of this country are eager to know what Christian Science is. The Lectureship has wisely been provided to meet this need.

What stronger evidence, then, is there of loyalty to the Cause and of obedience to its By-laws on the part of all Christian Science Churches, than to have the lectures regularly as provided for in the Church Manual?

Showing Faith by Using Means.

BY JOHN B. WILLIS.

"FAITH in God must show itself in conduct in God's service. He who trusts God implicitly will be ready to obey God unhesitatingly."

"A pupil who has faith in his teacher shows that trust in corresponding conduct."

"God is not dependent on human means, but God has chosen to make his children dependent upon these means for their ordinary help."

"Medicine as a Science is the selection of those articles of food and drink, with accompanying treatment, which are known by experience to be honored of God in the struggle of his children with the opposing forces of decay, and disease, and death."

"To neglect such means is in defiance of God's teaching, and in disregard of God's indicated and provided means."

"If any man now claims that he can hope to meet these opposing forces in the universe which tend to the shortening of human life, without the use of medicines or other means, let him remember that food and rest are such means quite as truly as are any other proper medicines."

"The truly sensible and faith-filled child of God can show his faith in the wise use of God-appointed means while well or sick."

Digitized by Google

The above quotations from a late editorial in the Sunday School Times, state very fairly, we think, the position which is maintained by a large number of earnest and conscientious believers with respect to mental healing. They also reveal the utter untenableness of the ground to which they are driven by a misplaced devotion to theological dogma and preconceived opinions.

With the emphasis laid upon conduct, and especially upon obedience, as the necessary exponent of true faith; and with the asserted lawfulness and necessity of the use of "God-appointed means," for the cure of sickness and disease, we are in entire accord. This, however, is *not* the issue. The real question is, What are the "God-appointed means" for the cure of sickness? To assume that drugs are thus providentially provided, not only begs the whole question, but it awakens a number of legitimate inquiries which such an assumption is called upon to answer.

If it be true that God has ordained tinctures rather than Truth for the cure of sickness, the use and application of these remedies would be scientific, and a specific once found would always remain a specific. Such a condition would furnish the substantial and abiding foundation on which a *science* might rest. But if this be true how happens it that no single, unvarying, and permanent drug specific for any disease has ever been found; and how could it be conceded by the most eminent representatives of every school of therapeutics, that there is no medical science, and that the use of remedies and methods of treatment is wholly empirical? The whole history of *materia medica* is indisputable upon the point. We have not only the most diverse and contradictory methods represented by the different medical fraternities, but each of these is constantly varying from its standard of authority, so that the one fact common to all systems is this, that they are in a perennial state of flux, —they are not scientific but experimental.

Again: If such a "God-appointed" order of things did exist to-day, it existed surely in our Lord's time. Why, therefore, did he studiously ignore it "in defiance of God's teaching and in disregard of God's indicated and provided means"? He neither used these divine appointments himself, nor is it known that he ever referred to them, much less commanded his disciples to employ them. On the contrary, he everywhere healed both sin and sickness by one and the same means, the word of Truth, and sent forth his disciples to preach *his* gospel, and continue *his* ministry of healing, and this they did, casting out devils and curing all manner of diseases by the same word of authority. He further declared that these works of healing should ever be manifest among those that believed (Mark, 16 : 17, 18), and for an indefinite period, according to the apostles and church fathers, this prophecy was fulfilled.

Was it ever known that a great teacher advised and required his pupils to pursue a course that was entirely foreign to his own methods of demonstrating the problems which confronted them? If the carpenter's son were to come to Boston to-day, what means, we ask, would he employ to dispel the abnormities of sin and disease? would he do differently from what he did when he began to teach and to heal? Would he show his faith and power "in the wise use" of *materia medica* to the shame and confusion of those among us who are demonstrating, in the eyes of all who will see, that the word of God is still "quick and powerful," the unfailing remedy, in the measure of our understanding, for both sickness and sin? If it is fair to presume that Jesus' methods are not to be improved upon, and if he commanded his disciples and followers to continue his work among all nations, reproving them when they failed, not for incorrectness of method, but for an inadequate understanding of it, and if we are face to face with the same overwhelming and universal need of spiritual demonstration to-day, the same enslavement to sin and disease which called forth his mighty works, what of our professional obedience, our asserted loyalty to him, if we not only leave his works undone, in disregard of his explicit commands, but counsel and condemn those who are trying to fulfil them?

To classify drug remedies with foods is to ignore the manifestly necessary discrimination between the normal and the abnormal, between health and disease.

Jesus came both eating and drinking, and thus approved a normal order upon the plane of our present consciousness. Had he used drugs or authorized others to use them in righting abnormal conditions, the contention of our friends would certainly not be groundless. Jesus taught that the root of evil and all it entails is error, the belief and exaltation of a lie; and he both taught and demonstrated that the antidote for this error and all it entails is Truth.

This is the fundamental declaration of Christian Science and in this understanding his works are again manifest today, to the joy and rejoicing of tens of thousands whom Satan had bound.

Dr. Peloubet, in a recent comment on the healing of the nobleman's son, has remarked that if the nobleman had been like multitudes of men he would have paid no attention to the reports of miracles wrought by Jesus, and would have counted him only a trickster; but *he* was wise enough to inquire into the matter. It seems to us that these suggestive words might be commended with great propriety to not a few clerical critics of Christian Science healing.

The Lectures.

At Gloucester, Mass.

Rev. Irving C. Tomlinson, C.S.B., delivered a lecture on "Christian Science: What it is, and What it is not," in City Hall, February 9. Notwithstanding the bitter cold and biting wind blowing outside, there was a good audience assembled, and earnest and undivided attention was accorded the speaker from beginning to end. A few Scientists from neighboring towns were present. More were prevented from coming because the electric cars were not running to Rockport and many of the suburbs.

The lecture was impressive and convincing on account of the simplicity with which the subject was treated.

Mr. Tomlinson was introduced by Hon. W. W. French, mayor of the city, who made the following remarks:—

Ladies and Gentlemen:—Before introducing the speaker this evening, I will take the liberty to say, that, doubtless, there are many Christian Scientists in the audience; many, like myself, who are not Christian Scientists, but who believe there is a great deal of good in their religion; and many who are not at all impressed, and who know very little about the principles and practice of Christian Scientists, who have been unfairly and unjustly criticised and condemned by people who know very little of what they profess and what they do. As a sect they are constantly increasing in numbers in all parts of our country; and the position they will occupy in the future it is difficult to determine.

In order that their principles and beliefs may be known, and, if they are to be criticised, it may be done with candor and intelligence, they have decided to have lectures in various parts of the country by persons competent to speak of their religion. That is why you have been invited here this evening. I will now introduce as the speaker one well versed in the principles of Christian Science, and thoroughly competent to explain them, Rev. Irving C. Tomlinson.

After the lecture, the resident Scientists were favored by a quiet visit with Mr. Tomlinson at their Reading Rooms, Middle St. He gave a short talk there which was much enjoyed, and was very helpful and encouraging. This lecture was a demonstration for the small body of believers in Gloucester. The total expenses of one hundred and fifteen dollars were readily subscribed. Moreover, a fund has already been started for a second lecture at no distant date.

S. E. Bradley

At Bloomington, Ill.

A magnificent audience, possibly the finest ever assembled at the Grand, was in evidence Friday night, February 17, when Edward A. Kimball, C.S.D., of Chicago, was announced for a lecture on "Christian Science—What it is." The house was packed from orchestra to dome, and scores remained standing throughout. It was also a representative audience, including all classes of society, giving testimony of no inconsiderable public interest in a subject much talked about, but not generally understood by the masses. The stage was prettily set for the occasion, and at eight o'clock the speaker was happily introduced by Mrs. Della H. Rigby, First Reader of the First Church of Christ, Scientist, of Bloomington. Mrs. Rigby said:—

Ladies and Gentlemen: Truth turns and overturns until "He whose right it is shall reign."

Thirteen years ago Christian Science first found productive soil in the hearts of a few struggling, despairing, sick mortals in Bloomington. We now find very few people who are not directly or indirectly touched by this troublesome Truth. It is indeed the divine leaven, and is fast leavening "the whole lump." The red dragon has poured forth its flood of persecution, but, tempest-tossed, the highest billows have only lifted us to where we could get clearer and truer views of God, thereby enabling us to know how to "heal the sick and cast out devils." This ability alone has caused us to grow out of parlor meetings into halls, from halls to our own church property, from Chautauqua tent to the Grand Opera House.

Christian Science has been called an epidemic, which is verified by the presence of this large and intelligent audience, who, to say the least, want to know "What is it?"

I now have the pleasure and honor of introducing to you Mr. Edward A. Kimball, C.S.D., of Chicago, a member of the Christian Science Board of Lectureship.

Mr. Kimball is a man of striking presence, and an earnest, though easy, graceful speaker, and particularly impressed the great concourse as being profoundly convinced of the absolute verity of his assertions.—The Sunday Bulletin.

At Ottawa, Ill.

An audience which filled the Opera House greeted Mr. Edward A. Kimball, C.S.D., Thursday evening, February 16. It was the first public lecture here in the interest of Christian Science, and the public were not slow to avail themselves of the opportunity to hear the lecture.

Mr. S. R. Blanchard introduced the speaker, who at once started in to disabuse the minds of his hearers of the idea that the Christian Scientists did not believe in an infinite God nor the divinity of Jesus Christ. He also emphasized the fact that there was no connection between hypnotism, mesmerism, or any other ism, and Christian Science. He said they were following the teachings of Christ in healing the sick. Christ said: "Go ye forth and preach the gospel and heal the sick."

The same ministers who are carrying out the first injunction to go forth and preach the gospel cast reproaches upon us for fulfilling the second, said the speaker. He gave a brief outline of the doctrines of Christian Science, and if he did not succeed in making any converts he certainly removed the prejudice of his listeners, if any present had prejudice against the Christian Science teachings and beliefs.

Ottawa (Ill.) Free Trader.

At McGregor, Ia.

Mr. Edward A. Kimball, C.S.D., of the Board of Christian Science Lecturers, addressed a good-sized audience in Bergman's Opera House on the evening of December 21, 1898.

He said he came to explain Christian Science,—its Principle and effects,— and many who came inquiring went away satisfied, and with a more charitable feeling toward its followers.

While our membership is not large nor by any means wealthy, yet not one cent was solicited, but it all came as a free-will offering. A part of the amount was contributed by people who were not even in sympathy with Christian Science.

We, as a church, are proud of our demonstration.

Miss Barbara Strickler, Secretary.

At Davenport, Ia.

Mr. Edward A. Kimball, C.S.D., lectured in one of the largest halls in the city, Wednesday evening, January 18, 1899. He was introduced by Mr. John Hoyt, one of the well-known business men of the place. He spoke for an hour and a half to a large and thoroughly appreciative audience.

We feel that a great need has been supplied through the lecture, and words of thanksgiving should certainly be offered to Mrs. Eddy for her loving wisdom and foresight in establishing these lectures, whereby the public is reached, and many minds disabused of the misconceptions regarding Christian Science.—Cora Compton.

At Binghamton, N. Y.

There was a large audience at Stone Opera House Friday evening, February 17, to hear Carol Norton, C.S.D., expound the principles of Christian Science. The audience, which included many representative men of the city, gave the lecturer close attention through his address of about an hour and a half. Mr. Norton is an easy and graceful speaker, and clear and logical in the presentation of his argument. Mr. Norton was introduced by the Rev. Dr. A. B. Curtis of the Messiah Universalist Church.

At New London, Conn.

Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., delivered his lecture, "Christian Science: What it is and What it is not," at Lyric Hall, Thursday evening, February 2. As this is the first time a New London audience has had a chance to hear the doctrines of Christian Science explained by one of its leaders, the speaker's remarks were very interesting to many.—The Day.

Church Organization Perfected in Concord, N. H.

At the close of the regular Wednesday evening testimonial service in Christian Science Hall last evening steps were taken to perfect the formal organization of a church society, articles for which incorporation had been filed with the secretary of state on Monday.

The Rev. Irving C. Tomlinson was chosen temporary chairman, and Joseph G. Mann temporary clerk of the meeting of incorporation of the First Church of Christ, Scientist, in Concord, N. H. The roll of signers of the charter, seventy-four in number, was called, and nearly all were found to be present.

The preamble and by-laws for the government of the church were read by George H. Moore, and Mr. Joseph G. Mann offered the following resolution, which was unanimously adopted:—

Resolved, That the draft of a preamble and by-laws for the government of the church, submitted to the meeting by George H. Moore, be, and the same hereby is, adopted as and for the preamble and by-laws of First Church of Christ, Scientist, in Concord, N. H., provided, however, that power to elect at this meeting the trustees and directors of the church for the remainder of the current year, is hereby reserved and retained by the incorporators.

Digitized by Google

Following the adoption of the above resolution the incorporators proceeded to the election of a board of five trustees, to be men, and five female directors. Mr. George H. Moore, Mr. Joseph G. Mann, and Miss Ida Brainerd were chosen as a nominating committee, who proceeded at once to discharge their duties, and the following named ladies and gentlemen were nominated and subsequently unanimously elected as officers of the church:—

Trustees, Rev. I. C. Tomlinson, Dr. Alfred E. Baker, Mr. H. G. Boutwell, Mr. George H. Moore, Mr. Joseph G. Mann; directors, Mrs. Anna D. White Baker, Miss Mary Tomlinson, Miss Ida Brainerd, Mrs. Marianna E. Clarke, Mrs. Elvie H. Piper.

A joint meeting of the trustees and directors was next announced, at which the following officers were elected, their terms of office to continue until after the next annual meeting of the church, which is fixed by the By-laws, and will occur January 11, 1900: President, Rev. I. C. Tomlinson; Clerk, Miss Mabel C. Gage; treasurer, Mr. George H. Moore; auditing committee, Mr. Joseph A. Moore, Mr. Fred A. Piper, Miss Lizzie Thompson. This election completed the business of the meeting and adjournment was taken.

The growth in numbers among Christian Scientists in Concord has been both noteworthy and gratifying. Mr. and Mrs. E. M. Buswell, under whose charge the first steps were taken to gather a congregation of the faith here, came from Beatrice, Neb., in the fall of 1894, and early in 1895 they began to hold services at their house. The attendance then numbered nine. In about two years the congregation outgrew its accommodations in Mr. Buswell's house, and quarters were secured in Grand Army Hall on Warren Street. The congregations there averaged about thirty-five. In the summer of 1897 the Rev. Mary Baker Eddy, the Founder and Discoverer of Christian Science, manifested her interest in the local congregation by purchasing for their use the Russell estate at the corner of School and State Streets. The dwelling was remodeled so as to provide a handsome hall, with a seating capacity of two hundred or more, and the first services were held there on the last Sunday of November, 1897, Mrs. Eddy being present on the occasion. On the following Easter, noteworthy services were held in the hall, and Mrs. Eddy was again present and took a leading part.

The growth of the congregation since then has been continuous. Early in the present year Mr. and Mrs. Buswell relinquished their relations with the church here and returned to their Western home. The Rev. Irving C. Tomlinson succeeded Mr. Buswell in the pastorate here, his assistant being Miss Mary Tomlinson. He, finding the field too large for his efforts—Mr. Tomlinson being also a member of the Board of Lectureship in the Christian Science denomination—Alfred E. Baker, M.D., C.S.B., was summoned here to take charge of the hall and to occupy the residence connected with it.

The action of last evening puts the Christian Science organization in this city upon a permanent footing, and it is both pertinent and significant that a church standing so emphatically for freedom from both sin and sickness should choose Washington's birthday as a date for perfecting its status.

The legal steps in connection with forming the society were taken by Reuben E. Walker, Esq., and the society tendered him a vote of thanks and presented him with a handsome bouquet of flowers in recognition of the value of his services.

Concord (N.H.) Evening Monitor, February 23, 1899.

A Seed of Truth.

BY ELIZABETH HOAG WELD.

Some twelve years ago, the editor of a farm paper was visiting a little city where a class in Christian Science had just been taught. A correspondent of his paper had heard of Christian Science and asked him if he knew of any who could help her. He referred the questioner to these friends, who, by way of letters and silent help, endeavored to shed a little light. The party referred to was wonderfully blessed in healing, and testified clearly and faithfully through the columns of the "Home Council Department" of the farm paper.

Much permanent interest was awakened, and all down through the years occasional letters have been published on this subject of divine Love, as taught in "Science and Health with Key to the Scriptures." Thus by way of questions, and testimony, on to very positive statement of the Science the little seed grew, and took root in a soil well suited to fruitage; for a farm paper, and especially its "Home Council," is thoroughly read and is often the only paper in the family. Last fall, an article on the subject of teaching little ones to pray, was evidently from the pen of a Scientist, and was simple, forceful, and appealing in its message to the mothers' hearts.

A pitiful appeal from the old slavery to the belief in heredity, was signed, "Puzzled Mother," and was answered by a Scientist, who referred her to the promise in Jeremiah, 31 : 30, and stated that she was a student of Christian Science as taught by Mary Baker G. Eddy, Discoverer and Founder of Christian Science, author of Science and Health. The letter from the Scientist was published in full in the Christmas (1887) issue, with this note from the editress.

The "Letter to Mothers," given in another column, was received by a Puzzled Mother some time ago, soon after the appearance of her letter in these columns proclaiming some of the perplexities and problems that beset her in the training of her children, and was written to her personally. But it contains such beautiful ideas, which cannot fail not only to help but strengthen and comfort all mothers, that it is finally given publication. And it seems especially appropriate at this time, and will be considered by many a mother as a most beautiful and blessed Christmas gift—a gift from God through one of His inspired human instruments.

Soon afterward the writer of the letter learned that the puzzled mother was the editress herself, and also received a letter from far-off Oregon in which the writer said, "Something in your letter makes me feel that you can help me. Who is Mary B. G. Eddy and where can I get her book?" Both parties were instructed to get Science and Health and study it.

A few weeks later one signing herself "Congregationalist," asked for instruction—how to investigate Christian Science, and in the following issue thanked the many kind friends who responded to her request. That the interest keeps up steadily is evidenced by an article from the editress of the "Council" which is as follows:—

"In order to be able intelligently to answer several inquiries concerning Christian Science, of which I had little previous knowledge, I procured Mrs. Mary Baker G. Eddy's book, 'Science and Health with Key to the Scriptures,' and read it carefully with the view to giving a synopsis of the work in these columns. This I found difficult to do. Those who desire further information should procure and read the book for themselves. I wish to add, however, that after a thoroughly unbiased reading of the above book, I cannot understand the prejudice with which I am told it is generally regarded by the orthodox clergy."

The history of this growth plainly shows a demand from the thirty-five thousand or more people who read this paper—for the Truth that will bear fruit. May the "Home Councils" of other papers notice this helpful tendency in Farm, Stock, and Home, of Minneapolis, Minn., and thus enlarge their possibilities. People who see the simple and wholesome growth of Christian Science among children, should make every effort to spread the blessed help to all these little ones, thus removing from their paths the traditions of the past, and giving them a free passageway from sense to Soul.

Diphtheria Healed.

THE following letter was recently written by a healer to his teacher:—

Dear Mrs. D.:—I would like to tell you of a case to which I was called recently. The disease was diphtheria, and every child in the family was ill with it; one had already passed away, and it looked as though the other three would follow through the combined fears of the family and a trio of physicians. The nurse who attended the first child was compelled to resign through having contracted the disease, as they thought, but which afterward proved to be tonsilitis. It became necessary to fill her place, and the nurse who responded to the call happened to be a firm believer in Christian Science, and by profession a trained nurse. The day of her arrival the first child who contracted the disease was being taken from the house to the cemetery. She was cautioned by the physician in charge, and also by the officials of the Trained Nurses' Agency, to use every precaution for herself, such as frequent gargling, wet cloths over the mouth, etc., and to encourage her to do these, they informed her that her predecessor was already down with the disease.

She quietly went about her work and, as they said, took her life in her hands, by not resorting to any of the aforesaid precautions. Only one of the children was down with it when she was called, but a few days later the remaining two were attacked and all put in one room. This was done in order to confine all the germs in one room, so to speak.

Examination and consultations were now in order, and it was decided to insert a tube in the throat of the child. This was objected to, as it had been performed in the other case, and proved unsuccessful.

The physician, a good man by the way, had no other alternative, so departed. When he reached home he telephoned the nurse to cease giving medicine and do whatever she thought would ease him, in other words, make his last moments as comfortable as possible.

This was the nurse's opportunity, or I might say God's, for it certainly was man's extremity. A moment later my telephone bell rang and on answering it I was requested to come at once to their home, which was a good hour's ride from my home, and as it was now my usual bedtime, I had to make all haste, as the cars cease running at midnight. Arriving on the scene I was accosted by the father at the door, who inquired if I was he that should come. I replied in the affirmative. Poor fellow, he had suffered many things of many physicians, and I suppose I looked strange to him, on account of the absence of the ominous hand-satchel.

I was ushered up to the room where three little tots were in quarantine. There I met the nurse, who soon had the room cleared of fearful parents and relatives.

I cannot describe the scene; suffice it to say that the room was filled with odors indescribable, medicine of all sorts and sizes. On a table near the apparently dying boy was an arrangement for boiling something, supposed to be good in such cases. What torture! The child had been propped up so that the fumes or steam which was being emitted might enter his mouth and throat, and now he was so exhausted that death would have been a relief, to use an old phrase. I stayed about an hour and left him sleeping; the nurse telephoned me next morning that the membrane came away in a solid piece. A few days later he was playing tag in the room with his sisters, all three, of course, out of danger. Aside from all this it has been a great proof of growth in our own family. As a result of this recent proof of the efficacy of Christian Science to heal the sick, when all other means had been exhausted, we now say that though we walked through the valley of the shadow of death, we would fear no evil. The father of the family referred to has the "little book."

W. John Murray, San Francisco, Cal.

A Frank Confession.

BY MOSES W. KAHN.

FOR some months it has been borne in upon me that I ought to make a confession. They say it is good for the soul.

I was born and raised a Jew. My father was an orthodox of the old school, strict in his observance of the Mosaic code. He is now, at the age of three score and ten, one of the most earnest of Christian Scientists, through having been healed of a very serious case of hernia and sciatic rheumatism.

Before I was of age I had become a most pronounced infidel. I was a great admirer of Thomas Paine, Voltaire, Spinoza, etc., and believed as they did. In later years I became an agnostic.

When about thirty years of age my eyesight commenced to fail, and for ten years I doctored with oculists of good repute. They said I had astigmatism; that I should be obliged to wear glasses. At the end of ten years my eyesight had not improved, but quite the contrary. I was obliged to give up reading and save my energies for my business.

I had heard of Christian Science. One of my sisters claimed that she had been healed of some chronic difficulty that learned physicians of this country and Europe had given up as incurable. I knew she was better, but was unwilling to believe but that she had outgrown the trouble and was deceived into believing such rank superstition. Such were my thoughts at the time. I was so opposed to the teachings of the Bible, or anything pertaining thereto, that the mention of the words Christ or Christianity in a conversation would arouse intense antagonism.

Four years ago one of my sisters (not the one above mentioned) visited me here. She asked if I would like to have my eyes healed. I answered, certainly. "Would you permit me to try?" I replied, go ahead. I hadn't a particle of faith in what I termed at the time a craze. I even thought it safe to offer her a sealskin coat should she perchance succeed.

To my intense surprise, my eyesight was completely restored in a short time. My eyes were made new, as it were, and I haven't had any need for oculists or glasses since.

During my treatment I was advised to read "Science and Health with Key to the Scriptures," and I became very much interested in its pages. For twenty years I had been a slave to tobacco. Had tried to break myself of the habit a number of times, but to no avail. When I got to page 402 of the book, I read and re-read the last paragraph several times. It struck me as a most remarkable passage. This was in the evening; the next morning when I arose I was completely cured of the tobacco habit, and since that time I have never even for one moment had any desire for the weed.

This was even a more convincing proof (to an old sceptic like myself) than the other demonstration, of the power of Mind over matter.

I wish to express my gratitude to our Mother in Israel by saying that if I had my choice between all the wealth of the rich men of earth and a copy of "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, I would unhesitatingly choose the latter.

Sees Beauties in Other Systems.

Our little systems have their day,
They have their day and cease to be;
They are but broken lights of thee.
And thou, oh Lord, are more than they.

WITH this quotation from Tennyson, Rev. Theophilus Macleod commenced a sermon Sunday evening, February 12, before the First Presbyterian Church on "The Beauties of Christian Science."

He said in part:—

"Christian Science lays great stress on the truth that to

Digitized by Google

think always of the bright and cheerful is good. We might well profit by imitating our friends just at this point.

"We read in another place 'that in God we live, move, and have our being.' He is not far from any of us. He is our Father and we are under His constant care. Every good and every perfect gift is from our Father in heaven. All that is good is God; all evil is man's failing to get the good. When a human being does right, God approves of him and when man fails to do right God pities him and loves him all the same.

"The great question with humanity is how to please God; how to get out of the hell of wrong into the heaven of right; how to be true, honest, just, pure, lovely, and of good report. 'Think on these things.' This is a simple thing to tell an audience, but the simple things are the important ones after all.

"Failure to cure every one is no argument against Christian Science. If Christian Science is to be condemned for failing to cure an old saint whose time for departing has come, then on the same basis every doctor in Brockton might give up the practice of medicine.

"A great deal has been preached about the marvelous cures performed by our Saviour while on earth, but we seldom hear any minister say that Christ failed many a time to cure disease. When he came to Nazareth, where he had been brought up, the people there had no faith in him, and it is reported that there he could do no mighty works. It is equally true to-day that Christ is willing to heal men if they only have faith in themselves and faith in God. The majority of people die from sheer laziness—too lazy to live.

"Courage for the battle of life means to feel pains and aches and temptations but to stand up and defy them, to say to them, 'depart from me.' This is the beauty of Christian Science.

"Christian Science repeats the words of Milton, 'The mind makes heaven a hell or hell a heaven.' I like that idea.

"Paul says, 'Think on things that are honest.' A man robs a bank to the amount of thirty thousand dollars. Bulletins announce the fact in every newspaper window, because people like to hear such things. But there is not a word about the thousands who have never stolen a cent from any bank. Such things as these are polluting the stream of our moral being. A woman steps aside from the path of virtue, it is heralded from continent to continent, but not a word is said about the ninety and nine who never sinned.

"Christian Science says, 'Let us always think pure thoughts.' All that suggests the pure ought to be our constant study. To overcome disease by thinking of Truth, to become honest by thinking of honesty, to become pure by thinking of purity are fundamental truths of Christian Science, and these are also the teachings of Christ and his true followers."

Brockton (Mass.) Daily Enterprise.

Another Slave Set Free.

BY RICHARD HOWARD.

I FEEL it my duty to thank God for the blessings He has bestowed upon me by restoring me to my home and family.

For fifteen years I had been a slave to liquor. At last, because of my wickedness, caused by drink, my wife and three children were obliged to leave me, and I was without a home. I did not have a place to lay my head, and could not see one ray of hope.

I had tried many times to overcome this terrible sin, but each time I failed. At last a thought came to me to see a friend and ask for assistance. This friend took me to a Christian Scientist. I told the Scientist I felt there was no hope, as I had gone on so long in sin; but she said there was always hope in Christian Science for any one who was honest and earnest. Then she told me that God loved me, and that I was His son, superior to sin and sickness; that I need not fear to assert my God-given power, and trust in divine Love to protect me.

She read from Psalm 27: "The Lord is my light and my salvation; whom shall I fear? The Lord is the strength of my life; of whom shall I be afraid?" She told me that my family would be with me again, for the promise was true. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

When I left her I felt as though a load had been lifted from my heart, the desire for drink had gone. I spent the remainder of that day in a saloon, not knowing any other place to go, but still my thoughts clung to the beautiful words I had heard, and I could not drink.

The next morning, on awakening, I felt as though I had taken my first step up the mountain, and each day I found myself nearer the top. From that time until now there has been no desire whatever to go back to the old sinful life. I obtained work at once, and in two weeks I was with my family again.

Everything is bright and happy now—a happiness I have never known before. I can truthfully say that any who are struggling under such difficulties will surely be cured by Christian Science treatment, if they will be earnest, and trust in God.

Medicine for Character.

PHYSICAL healing, though wrought in the name of God, would be a trifling benefit, if unaccompanied by a fundamental change of character.

Doctors of medicine regret the limitations of their profession, for in many cases the patient needs moral healing more than physical relief. A doctor is called to attend a man sick with fever, who is a drunkard and a wife beater. The good physician feels that it is a thankless task to restore this man to strength, only that he may get drunk and maltreat his family. For the sake of the miserable wife and the poorly fed and clad children, the doctor wishes that he had the power to make a decent man of his patient, but his business is to deal with physical ailments. He has no medicine for character.

Christian Science is primarily a medicine for character. The change within—a change in the secret thought of the man—gives health to the body, and the process of restoration never stops until all "the old man with his deeds" is put off, and "the new man, which is renewed in knowledge after the image of Him that created him" is put on.

A Christian Science practitioner would be profoundly disappointed should his patient be healed of blindness in an instant, if he then turned away satisfied, desiring none of the more precious blessings this Science has in store for all who are ready to receive them. But in the practice of Christian Science healing, such disappointments are rare. It is almost an invariable rule that the little leaven which is dropped into the patient's consciousness while being treated for physical ailments, leavens the whole lump, and he gradually develops a Christ-like character.

By many people all curative agencies are classed together. Drugs, electricity, hygiene, and Christian Science, are, to such persons, so many possible methods of curing disease. If they can find the cure it makes no difference which system they try.

To the discriminating student, Christian Science stands entirely by itself, for in the other systems, healing is an end in itself, while in Christian Science, healing is the outward expression of a mental change; it is the indicator of health, and not health itself, for in the Science of Christianity it is learned that one cannot be really healthy while the character is diseased.

Christian Scientists at the present time are compelled to work largely among invalids, not because they wish to emphasize physical healing, but because there is such demand

Digitized by Google

for healing. The sick come to Christian Science for health and get so much more than health that they take up the religion also. Those who have no serious physical ailments are usually well enough satisfied now not to investigate Christian Science. When this Science is better understood the people who are well will see that they need it as much as those who are sick.

Every one who is healed in Christian Science is made better morally. Can this be said of medical healing? On the contrary, it is a well-known fact that many men and women have become mental, moral, and physical wrecks through the use of drugs which were first taken because the doctor prescribed them. Doctors, in good faith, prescribe morphine to patients under certain conditions, because they know of no other means of giving relief. In a short time, the morphine habit is formed and the doctor is powerless to repair the damage his prescription has done.

No doubt there are many who honestly believe that Christian Science is either a delusion or a humbug, and that it never healed anybody who really had anything the matter with them. To such, the statement that every one who is healed in Christian Science is made better morally, will be equivalent to saying that no one is made better morally by Christian Science.

In an age when so many frauds are masquerading under the cloak of a religion or healing, honest people are not condemned for being sceptical or even intolerant concerning the immense claims made for this Science. Christian Scientists have not inherited their faith in the power of Truth to heal the sick without drugs. Most of them were hard to convince, and exacted just as tangible proof before they would believe, as did Thomas before he would concede that Jesus had risen.

When one who is sceptical becomes enough interested in Christian Science to investigate its claims, he will not encounter hostility from the adherents of this faith. They will always furnish the names and addresses of respectable witnesses and assist the inquirer in every possible way to a clear knowledge of what Christian Science is and what it has done. There is nothing mysterious or mystical about these people. They offer plain facts and do not ask any one to believe in Christian Science healing on the testimony of irresponsible witnesses.

Those who are sceptical, but who haven't enough interest in the subject to investigate, say many things about Christian Science which are absurd and misleading. They ought not to condemn what they know almost nothing about, but there is no way of preventing them from doing so. To their sense the claims made for Christian Science are so self-evidently preposterous that no investigation is necessary. They would consider it a mark of failing intellect in themselves were they to go even so far as to ask a man whether Christian Science had healed him. While such persons hold on to their intolerant prejudices there is no way of convincing them that Christian Science is worthy of intelligent consideration. In the same intolerant attitude they could not be convinced that the earth is round.

Christian Scientists are not eager to force their religion upon the attention of those who are unwilling to receive it. One is never so ready to try to master the science of numbers as when he needs to apply it in an emergency. So with the Science of Christianity—which is the Science of Life—it finds ready acceptance when one realizes the need for it. The science of numbers can wait until people get tired of guessing how to multiply. Christian Science can wait until people get tired of guessing how to cure disease.

When any one is ready to learn how to conduct his life so that it shall be as harmonious as the interlacing revolutions of the spheres, he can get all the knowledge he requires by studying the Bible in connection with "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Denver Republican.

Senator Mitchell's Letter.

Chicago, January 31, 1899.

Mr. Oliver C. Sabin.

My Dear Friend of "ye olden time:"—I have for some time had it in mind to write you to say that I read with a great deal of pleasure the account of your experiences in gaining a footing in Christian Science, as published in the Monthly a short time ago; also to say that I have of late read a great many copies of your interesting little paper, the Washington News Letter. My youngest daughter, Bernie, married a Mr. John U. Higinbotham, and they are both very earnest and devoted Scientists, and, of course, are subscribers to your paper; hence I see it very regularly, and am highly entertained and greatly benefited by its interesting columns.

I have had some very great benefits come to me from reading the books pertaining to Christian Science, and hope to reach a full realization of the spiritual power of their teachings at no distant day.

I had entirely lost track of you since you left the service of the Federal Government until I found the News Letter. The Scientists here have a splendid church edifice on the South Side, not far from where I live, and I am about as regular in my attendance at the services as any one can be.

We have quite a good many old Bloomingtonians that you and I knew well, who are members of this Church. Just think of it, a little more than a year ago this church building was dedicated, with a seating capacity of sixteen hundred. I think I have been present at every morning service since dedication, and it has been practically full every meeting, and in many cases people occupied all the standing room and many went away because they could not gain admission. The audiences are composed of the very best people of this city, many of them being personally known to me as splendid representatives of the great and powerful class of successful business men.

Recently a church was organized on the North Side, and a little later one on the West Side. Notwithstanding these took away quite a large number of the members, others seem to have come in so that their absence could scarcely be noticed. I give a portion of every day to the reading of that wonderful book, Science and Health, and hope, as I have already said, soon to come into the full realization of its spiritual import. And when I do I shall be glad to take you by the hand as a brother in Christ, and go the balance of this world in fellowship and communion, and in the enjoyment of a Life, Truth, and Love to be reached only through the teachings of this glorious revelation. Rejoicing in your well-being, and earnestly wishing you increasing success, I am very truly your friend of "ye olden time,"

THOMAS F. MITCHELL.
Washington News Letter.

Atoms upon Atoms.

THE Sentinel of February 9, gave an extract from the address of Mr. C. W. Hunt, ex-President of American Society of Mechanical Engineers, which contains the following momentously interesting statement: "More nearly touching him personally [the mechanical engineer] comes the work of the biologist, whose quest for the thing we call life has continued from the primitive man to the present time. Constantly flitting from his grasp, it has seemingly passed from fire and storm to mountain and deep, from animal and plant to seed, to cell, and now it has been followed to the molecule or atom, and yet it as completely eludes his grasp or even his comprehension as ever it has. But followed it certainly has been, by all the laws and forces of nature at the command of man, until the search for it is now in the molecule or the atom, a space physically so small that only the trained imagination can even faintly comprehend its minuteness."

What is the missing link between the atom and "the thing

Digitized by Google

we call life"? Graphically stated, the modern atomic theory is this: "Matter is composed of minute particles called atoms." The smallest particle of dust we can see, when made a thousand times smaller is still thousands upon thousands of times too large for an atom. Truly it is "physically so small that only the *trained imagination* can even faintly comprehend its minuteness."

Let us reason a moment. "Imagination" is a faculty of the human mind. Through imagination we comprehend an atom. That atom exists only to the "trained imagination" of the human mind, according to Mr. Hunt, being unrecognizable by any of the five material senses. Reasoning backwards: If this single atom can be comprehended only by the "trained imagination," so can two atoms; so can two million atoms; so can *all atoms forming all matter exist only to the human mind.*

Is Professor Wilhelm Oswald of the University of Leipsic deluded when he states: "Matter is a thing of thought, which we have constructed for ourselves rather imperfectly to represent what is permanent in the change of phenomenon"?

Is Professor Huxley wrong when he questions, "After all, what do we know of this terrible 'matter' except as the name for the unknown, hypothetical cause of states of our own consciousness?"

What is matter if it is not, as Mr. Carol Norton, Christian Scientist, recently stated in a lecture, "a thing of thought, an externalization of the human mind and not an entity or element having independent life apart from thought or mentality"?

I do not advance these questions as an offhand solution of the question which has for years absorbed the attention of physicist, chemist, biologist, and philosopher, but simply to show that the researches of modern sages point directly to the verity of the statement advanced over thirty years ago by the Rev. Mary Baker G. Eddy as the basic principle of Scientific Christianity—Christian Science—"All is Mind and Mind's idea." ROWLAND T. ROGERS.

Meat, Drink, and the Doctors.

WHAT shall we eat and drink? One after another the great doctors have set a seal of condemnation upon nearly everything that we like.

Tomatoes, we are warned, breed cancer. Cucumbers give colic. Beans are overrich and destructive of digestion. Beef contains the germ of tapeworm. Pigs and chickens have trichinae. Sugar, bread, and peas tend to diabetes. Wine gives gout. The "old oaken bucket that hangs in the well," the "moss-covered bucket," is infested with disease-germs, and, besides that, the water of the well, not being properly aerated, is prolific of malady.

Even the bubbling spring bears typhoid in its waters, coming as they do from no man knows whither. Milk, the accepted type of innocence, is a disseminator of tuberculosis and other dread diseases, besides being indigestible to grown-up folk.

And now at last comes a great German scientific sharp—Dr. Hans Koeppe—to warn us against chemically pure, distilled water as a positive and active poison, destructive of the mucous membrane and otherwise alarmingly deadly.

Now, we had all settled down upon distilled water as the one safe thing in the world to swallow. It is rather unpalatable, of course; it is troublesome to procure, and it is by no means satisfying to the cravings of a hungry and thirsty man; but at any rate we believed it to be unimpeachably wholesome and so thoroughly safe that our drinking of it—even with a grimace of disgust—we have regarded in the light of an almost supererogatory act of virtue.

Again, what are we to eat and drink? The doctors themselves who pronounce all these anathemas against solids and liquids eat and drink whatever they like. Some of them even eat mince pie at midnight and regale themselves in the small hours with Welsh rarebits and mulled clarets or hot Scotches.

Shall we follow their precepts or their practice?

The World.

English as it is Written.

ENGLISH is written more than any other language. Statistics for 1898 emphasize the fact that more letters are written in English than in all the other languages together.

To be more exact, three-fourths of all the letters that go into the mails of the world are in English. This remarkable fact is the more impressive when we remember that only about one-fourth of the civilized world speaks our language. There are substantially 500,000,000 persons who speak the ten chief modern tongues, and of these 150,000,000 speak English. But the number is increasing rapidly—beyond all proportion as compared with the growth of other languages—and as the English-speaking people increase in numbers, not only do the letters in the language increase, but the number of letters per capita also increases.

At the beginning of this century about twelve per cent of the civilized world spoke English, at the middle of the century it was nineteen per cent, and now, at its close, it is thirty per cent. The increase in letter writing has been far more rapid than this, and now, out of the enormous number of 10,640,000,000 letters posted last year, 8,000,000,000 were written in English.

The march of intelligence headed by the English-speaking races, the wonderful decrease of illiteracy among them, and the demands of commerce, with these same races in its van, have brought this result. Commerce has extended the post office system to all parts of the globe, into every nook and corner of the civilized world, and its language has been evolved from the English tongue. All races that enter into commerce of necessity learn more or less of the English language, and to some considerable extent carry on their business correspondence in English. Any one who goes among the native merchants of Hong Kong will be impressed by this fact.

If you move with the world you must do it in English. Then, English-speaking persons write more letters because more of them know how to write, for while ninety-one per cent of them have this accomplishment, but a little more than one-half of the persons speaking other modern languages can write their names. This is why the mail matter of the world for last year held thirty-one letters for each English-speaking person. German came next with twenty-four, and French followed with seventeen for each person.

In the United States, alone, last year, there were mailed thirty-seven letters for each inhabitant, which aggregated forty per cent of all the letters written in the world, and equaled the number written by all the nations of Continental Europe.

Next to the English, with its 8,000,000,000 letters written last year, comes the German, with 1,300,000,000; French, 1,000,000,000; Italian, 220,000,000; Russian, 180,000,000; Spanish, 120,000,000; Dutch, 100,000,000; Scandinavian, 80,000,000 and Portuguese, 24,000,000.

New York Herald.

Zero Weather has no Terrors for Him.

No overcoat yet this winter, and he rides day in and day out, and of nights, too, on the platform of a local cable car! What do the ulster-loaded shiverers think of that?

Conductor Harvey B. Ray, of the Westport line, is the man. His comrades call him the "Gold Bug," because of his insistent advocacy of McKinley doctrines in 1896, when he was a newcomer on the road. They now claim that

Digitized by Google

Ray's politics and his coatlessness in zero weather are both to be explained by the same reason—he lacks common sense. Which is to say, of course, his views and the views of the great majority of his fellow street-railway employes do not agree.

The "Gold Bug" is a queer genius. He is a man of many isms. And when he espouses any particular idea he goes the limit. It was that way on the money question. It is so now as to the overcoat. You can see him any day riding along with the same sack coat he wore all summer hanging open, and with the wind whistling gayly through his crisp and rather curly iron gray hair. He eschews ear-tabs, of course. He is ruddy of countenance, and, strange to say, he never seems to have even a cold in the head. He wears no gloves, yet no one ever sees him blowing his fingers. If he has any feelings at all, he must be in misery a good part of the time lately, but he gives no sign of it. He likes to think he is a philosopher.

Ray is a good deal of a Christian Scientist. He does not believe in the reality of a great many things that to most people are very emphatically and disagreeably real. He does not believe in sickness. He does not believe in being cold. He holds that the horse that is carefully blanketed every night and whenever he stands for a few moments, is not nearly so hardy and rugged as the horse that is accustomed to take weather as it comes. Ray holds that cold is purely a matter of think—and he resolutely thinks he is warm enough in the same clothes he wore when most of his passengers wore crash. So far his idea seems to have worked him no particular ill. Can it be he is right?

Kansas City (Mo.) Paper.

Christian Science News.

ARCHITECTS commenced work this morning on the plans and estimates for the new $100,000 edifice which the Third Church of Christ, Scientist, is to build at Washington Boulevard and Leavitt Street, and the construction of it is to begin as soon as the frost is out of the ground.

At a meeting of the conference committee, which is made up of the officers and Readers of the three Chicago Churches, on Saturday evening, permission was granted to the sub-committee of the Third Church to advertise for plans for the building on a basis of $55,000.

The lot, which is 95x130 feet, cost $21,500, and the furnishing of the church will run the total cost up to $100,000 or over.

The growth of the West Side Church has been rapid, and it now has over three hundred active members. Its temporary quarters in the Jewish synagogue at Washington Boulevard and Ogden Avenue, which has a seating capacity of only about seven hundred, have been too small for some time, and the large new church will meet the demand for more room.

The sub-committee from the Second Church is still searching for a suitable location for a handsome new church on the North Side. Several sites are in view, but it is the opinion of the committee that the property is all held too high.

It is expected, however, that a large lot will be secured in time, so that work on the new church can be commenced early this spring. It will be a large and imposing structure, and will be one of the finest North Side churches.

The Second Church congregation suffers from the same difficulty that is experienced by the one on the West Side, as the Jewish synagogue at La Salle Avenue and Goethe Street is not large enough to accommodate the worshipers.

Christian Science services yesterday were attended by six thousand people. The First Church was crowded to the doors at both services, as were also the Second and Third.

Chicago Democrat, February 20, 1899.

The Failures of the Church.

TAKING for his text the words, "Not by might nor by power, but by my spirit, saith the Lord of Hosts," Dr. L. W. Munhall of Philadelphia recently preached at the Clarendon Street Baptist Church, Boston.

The speaker declared that, if ever there was a time to look heavenward because of a great spiritual declension, it is now. This is a time when the enemies of God are boastful.

"They that believe on him shall receive," is as true in Boston to-day as at Ephesus centuries ago. God alone can give you grace. You may have organizations systematically arranged, you may have your pews in the churches filled with influential men and women of wealth, but if the spirit of God is not in them, the church is desolate, for "it is not by might nor by power, but by my spirit alone," saith the Lord of Hosts.

Cut loose from all the entangling alliances that bind you to creeds, superstition, worldliness, and place yourself in touch with God. The least of us may do greater things than even the Master did.

The church never had so much money as to-day; we are cultured to a degree of haughtiness; we have Christian associations of all kinds—yea, we are organized to death. We have come to rely on the organization instead of the Holy Ghost. Many of our churches are turned into concert halls. High-flown music that people do not understand is given the congregation—yes, I question whether the Lord even understands some of the programmes or bills of fare that are carried out in churches.

We have three times as many churches as we need, but I thank God for all of them, with their millions of dollars, and their multitudinous societies, with their culture and education; but we want more Christ consecration. All your fine equipment never made a convert for Christ.

Energy of God is needed to make effective in the church these sermons. Though you have everything from a worldly standpoint, it is nothing unless God uses it.

Boston Herald.

Invitation to the Clergy.

THE First Church of Christ, Scientist, of Scranton, cordially invites the excellent clergymen and religious workers of our city to unite their Christian Endeavors with ours, and to labor with our Leader, Mary Baker Eddy, for the uplifting, nay, the redemption of all men, on the following basis of Christian Science:—

1. The literal and spiritual intent of the sacred Scriptures—"Love working no ill to his neighbor."—Paul.

2. One God and Father of all—"God is Love."—John.

3. One ever-present Christ, one certain and only Redeemer, the Only Begotten of Love, "full of grace and truth."

4. Our Comforter, as was pledged by our Master, even the atmosphere of Love, leading into all truth.

5. Love relieving and enriching all human affairs and establishing the Kingdom of Heaven on earth, the Kingdom of Love, the dominion of health and good-will among men.

6. Love, not hate, dominating all Christian churches and demonstrating One Shepherd and one fold; even the Almighty gently leading gentle hearts, bearing weary ones in omnipotent arms, and healing the sick, tenderly lifted to the Great Heart of Love.

7. The Decalogue and the Sermon on the Mount, whose authors foresaw, foresaid, and exemplified more Love than the splendid exponents of the most favored theology now understand and exemplify in their daily lives.

8. The example of Jesus and his apostles—Being persecuted we love, when defamed we revile not, but instantly rest our cause at the bar of infinite Love, whose unerring Wisdom justifies and "is justified of her children."

DAVID N. MCKEE, C.S.B.

The Scranton (Pa.) Tribune.

Questions and Answers.

Why is it that the Christian Science text-book is sold at a fabulous price, even the cheap edition, while Bibles are sold at all prices?—S. F., Chicago.

This is a question very often asked by persons uninformed as to the office that the Christian Science text-book is performing in the world.

Let us answer the question by the citation of a single instance: We know of a family consisting of husband, wife, and several children. They were in comparatively humble circumstances, the husband being employed on small wages by a railroad company. By means of frugality and simplicity of living, they had saved enough to purchase and pay for a comfortable little home.

In the course of time the wife became an invalid. She was placed in the hands of physicians and treated off and on for a number of years. Finally a severe and dangerous operation was performed upon her, but without benefit. Meantime, the physicians' bills and incidental expenses of her sickness amounted in the aggregate to upwards of fifteen hundred dollars. The little home had been sacrificed to the payment of this indebtedness. The family were reduced to almost abject penury, by reason of this sickness and the expenses growing out therefrom.

Some time after the performance of the operation, when there seemed to be no further hope for the sick woman, but death was staring her squarely in the face, Christian Science was resorted to. This was about ten years ago. The Christian Science text-book, "Science and Health with Key to the Scriptures," was placed in her hands. She also received some personal help. She began to improve at once, and in a few months was a well woman and has remained so ever since, discharging her duties well and efficiently as wife and mother; at the same time carrying on a useful work in Christian Science, healing many and bringing many into the knowledge of the Truth, as taught through Christian Science.

While, as we have said, she received some personal aid, her own firm belief is, as she repeatedly said to us, that the Christian Science text-book and the Bible, as understood through the teaching of this book, were her healers. She had been a consistent Christian all her life, according to her best understanding, and had conscientiously and regularly read the Bible according to such understanding, but it failed to heal her, until its spiritual meaning was brought into her consciousness through the Christian Science text-book. Her edition of the book, as we remember, cost her three dollars, with perhaps the added postage of eighteen cents.

We ask our good friend "S. F." of Chicago, whether "Science and Health with Key to the Scriptures," under these circumstances, proved to have been purchased by this woman at a fabulous price?

The above case is cited simply by way of illustration. There are many thousands of instances analogous to this one, many of them even stronger in their facts. Those who have been benefited by the Christian Science text-book need no reminder that the price for ordinary books, that are read merely for amusement, entertainment, or material information, furnishes no criterion for the price of a book that not only heals the reader thereof, but teaches that reader how to heal others, not only of physical ills, but of all moral ills, thereby making the Bible the practical and effective Word that God manifestly intended it to be.

Is Christian Science a religion for the poor and humble, or for the rich and well-to-do?—S. F.

It is for all, high and low, rich and poor. That it is for the poor, let our answer to the preceding question attest.

Why are testimonials signed with initials? Oftentimes we might desire to write to these parties.—S. F.

There is often a good reason why the names should not be published, and we are often requested to publish only initials. We, of course, respect this request, but wherever it is deemed wise to publish the name we do so. We, however, keep a record of the names of all whose testimonies are published, and unless especially requested to the contrary, furnish them to inquirers when asked for.

Does the Church By-law establishing the Sunday School of the Mother Church apply also to the Branches?—G. L. B.

As we understand it, the Church By-law relates only to the Sunday School of the Mother Church. The Branch Churches are left to their own best judgment in the regulation of their Sunday Schools. The conditions differ so greatly in the Branches that a general rule might work inconvenience and hardship, therefore the question is to be worked out by the Branches according to the convenience and best needs of each locality.

Testimonies.

From Invalidism to Health.

Ten years ago last May I had a very severe attack of measles, followed by malarial fever. While I was suffering with the fever, another dreadful disease entered our home, and we were unable to secure help because of a fear of contagion. My mother's strength failed and all the work of a large family fell on me, which, in my feeble condition, resulted in a general break-down. During the following ten years, I suffered "many things of many physicians, and had spent all that I had, and was nothing bettered, but rather grew worse."

On the 17th of February, 1898, I had an attack of nervous prostration which confined me to the bed for three months. The suffering which I endured is almost indescribable. I had spells when it seemed that every nerve in my body was drawn to its greatest tension, and the pain at my heart was so severe it seemed that it must stop beating. After those spells passed off and the re-action set in, it seemed almost impossible for me to live. My spine was so affected that I could not sit up. I was being treated by one of the leading physicians in this city, and was getting worse all the time.

As a last resort I concluded to try Christian Science, and sent for Mrs. T. After the second treatment she told me I must get up and walk. I thought I could not, but said I would make an effort. After taking about a dozen steps I had a queer feeling creep over me, and my strength returned, so that I walked as steadily as ever. The next day I rode a distance of two miles, and the sixth day I walked half a mile and rode ten miles on the car.

During those ten years I was also a great sufferer from dyspepsia, but now I can eat anything I desire without suffering. I can truthfully say I have been *well* ever since my second treatment.—Maggie E. Gerard, Detroit, Mich.

Saved from the Operating Table.

I was rescued on the eve of going on the operating table, with little hope of coming off it alive. After eight years of intense suffering and invalidism, trying many modes of treatment and many physicians, I was healed by Christian Science, and am well and able to do heavy work without fear of any bad results. But this physical healing seems of small account in comparison with the mental and moral healing. Thank God, Christian Science has taught me there is more love than hate, more good than bad, more harmony than inharmony, and has given me hope, courage, and

Digitized by Google

energy to meet and overcome all trials that have come to me in six years.

My mother has been healed of heart trouble of twenty years' standing, a brother has taken off glasses, and a sister who was given up by physicians, who said she could only live two months, is entirely healed.

What a comfort this Truth has been to me with my children! They are both stanch little Scientists, often meeting claims of sickness or accidents without even coming to me for help. Is it any wonder our hearts overflow with love and gratitude to Mary Baker Eddy, who through fiery trials stood firmly on the rock of Truth to teach us the Christ-Truth which makes life all sunshine?

Madge S. Fay, Brooklyn, N. Y.

Fargo, North Dakota.

Our little band recently passed through a week of steady persecution from a visiting lecturer, and our Wednesday experience meeting of that week was one of the best we have had. The beautiful message from our beloved Leader was read from the Sentinel of February 9, and the organizing of a Sunday School followed the experience meeting. God is certainly very good to us.

In March, 1898, we began our services with two ladies present. Four months later the band had grown so that a beautiful little church building was rented for Sunday afternoons, and at the first public meeting there were twenty-five present. Our hearts were full of love for God, our Leader, our brother and sister Scientists. Yes, and for our neighbor who has not as yet come into his inheritance. We have been put to the test, but we always find that Love meets the need by sending just the right word at the right time, and usually through the Journal or Sentinel. What would be the result in the Field if each laborer should follow Mother's example and "love" error out of existence?

Many helpful demonstrations could be told about our infant organization, but perhaps it is enough to know that a new field is opened and a steady growth assured

Grace Lincoln Burnam, Clerk.

I am sixty-four years old. I was a great sufferer with rheumatism for twenty-five years, and was healed by Christian Science a little over two years ago. I have used no material remedies since I had my first treatment, and I have no desire to do so. I was also healed of smoking, and many other claims have gone, leaving me free in the sunshine of God's love. I have given my life to the work, and have had many beautiful demonstrations.

W. F. Grigsby, Dallas, Texas.

Branch Church at Roxbury, Mass.

Sunday morning, January 12, 1899, the first service of the Roxbury Church of Christ, Scientist, was held in Fauntleroy Hall, Roxbury, Mass. In spite of a raging snow-storm, the hall was nearly filled, about two hundred and fifty people being present at the service. The usual simple Christian Science service was observed. Mr. John W. Reeder, C.S.B., officiated as First Reader, and Miss M. Ethel Whitcomb, C.S., as Second Reader.

This is the third branch of the Mother Church recently established in the suburbs of Boston. It bids fair soon to outgrow its present place of worship.

The Souvenir Spoon.

I have received my beautiful souvenir spoon. It has a language of its own which sets aside all curiosity, questioning, and criticism.

The spoon says to me in silent words, "If we listen to the silvery voice of Love, it will guide us safely home, or into the consciousness of Soul, where we find matter to be nothing and Mind All-in-all; we will then awake in His likeness, satisfied, and lay down the cross for the crown."

To a right-thinking and love-reflecting student, there is nothing idolatrous or personal. Love is the only Cause of all things, and the effect from that cause is the loveliness of love.

We are grateful for these gifts. Let us be true Sentinels, in deed, and in truth; and when the voice of Love says to us, "Watchman, what of the night?" be ready with a decisive answer to say, "All is well."

M. Bettie Bell, Chicago, Ill.

Jacksonville, Fla., February 14, 1899.

Rev. Mary Baker G. Eddy

Beloved Mother:—I send you grateful thanks for your strengthening letter in the Sentinel just received—Sentinel indeed. I thank you, too, for that new name of our weekly paper; and I feel that you will not mind my telling you that since the January class, for the privilege of being in which I daily give thanks, I have grown to know our beloved Mother more and better.

Our work has received a new impetus in every way.

Sincerely in Truth,

Annie E. Wood.

2449 Forest Avenue, Kansas City, Mo.

I desire to express my gratitude for the souvenir spoons. The motto alone is worth the price paid for the spoons. I shall use them on my dining table at each meal, sipping from these bowls, which I know are and will always be filled with Love and Truth, from our beloved Mother.

With gratitude and love for what you have done and are constantly doing for us all, I am sincerely your loving

Sallie A. Saunders.

Boston, Mass., February 16, 1899.

Am more than glad to own the souvenir spoon. That motto presented for human conception three times a day will do a great work, as even I can see.

L. N. Bennett.

Notices.

Free Distribution of Literature.

Upon the recommendation of a Christian Scientist known to the Publishing Society, the Sentinel and the Journal will be sent free for one year to any Public Library having a Reading Room. This free subscription may be continued if the recommendation is renewed.

Upon request from the clerk of a church where a lecture is to be given, copies of the Sentinel will be sent by mail, postpaid, for free distribution to strangers and inquirers at the lecture. Order blanks may be had from the lecturers, whereon clerks will specify the number of copies required for this purpose. These orders should be sent to the Christian Science Publishing Society early enough to secure delivery of the papers in time for the lecture. If sent by express, it will be sent at the expense of the receiver.

No subscriptions for the Quarterly will be received for less than one year. No subscriptions for the Sentinel will be received for less than six months. Orders other than subscriptions, for Sentinel, Journal, and Quarterly, should be given for current issues and back numbers only.

The next admission of candidates for membership with the Mother Church will take place June 3, 1899. Applications to be presented at that time must be in the hands of the clerk on or before May 15.

We wish to state that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

The pamphlet, Christian Science Movement, has been revised and corrected up to date.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles — cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen $6.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

Pamphlets.

HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 24 pp.

THE BUSWELL TRIAL. 24 pp.

REPLY TO SERMON. By SEPTIMUS J. HANNA. 30 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By SEPTIMUS J. HANNA. 32 pp.

One copy or more, each, 10 cents; 13 copies, to one address, $1.00; Twenty-five copies to one address, $1.75; 50 copies to one address, $3.00.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MARCH 9, 1899. | Vol. 1 No. 28

A Cordial Welcome.

MR. JOSEPH H. CHOATE, the new United States ambassador to the court of St. James, arrived at Southampton at four o'clock on the afternoon of March 1, on the American line steamer St. Paul, from New York.

The mayor and sheriff boarded the ship and welcomed the ambassador in behalf of the corporation. Mr. Choate was met by Lieutenant J. C. Colwell, the United States naval attache, instead of by Mr. Henry White, the United States charge d'affairs, who was attending the Drawing-room at Buckingham Palace, London.

The president of the Southampton Chamber of Commerce presented Mr. Choate with an address, tendering him the most cordial welcome, and saying:—

"Your arrival in the magnificent St. Paul, which recently did such signal service in your navy, gives unique interest to the occasion, and forcibly reminds us of the ever-increasing facilities afforded the commerce of the two countries, and the cordiality and friendship whereby we recognize that your nation is akin to us in common ancestry, language, and pursuits."

In reply, Mr. Choate said in part:—

"The ports of New York and Southampton are now closely united by the great steamships flying between them, like the shuttles and weaves of a loom, connecting them by imperishable bonds. This mutual commerce, interchange, and travel will do more to strengthen the ties which already unite the two countries than anything else can do. If the men and women of your country could visit my country as freely as ours do yours, the good understanding which now exists would never fail.

"Southampton has a special significance for Americans, as it was the point of departure of the Mayflower on the historic voyage which was to end in planting a new nation. It proved to be the first great departure of the English race from their island home and island life. They went to take possession of the continent waiting to be subdued and replenished. The God in whom they trusted prospered the good work. They carried with them the English Bible, common law, the idea of representative government and liberty of the individual. Springing from this stock a republic of seventy millions, allied in blood, institutions, interests, and hopes of the future, stretches across the Atlantic the right hand of fellowship, and is ready to meet the mother country more than half-way, in everything which will tend to promote the common good of the two nations and the general welfare of mankind.

"The Mayflower of 1620 and the St. Paul of to-day furnish a symbol of the marvelous change which time has wrought. The crazy little bark of one hundred and eighty tons, bearing beneath her deck the fortunes of a race, putting in for repairs at Dartmouth and Plymouth, hardly strong enough to hold together across the Atlantic, landed her hundred heroes and heroines, after more than four months, on a rock which was to be the corner-stone of American freedom. To-day the representatives of their descendants traverse the same seas in a single week, in a mighty cruiser just converted from a swift engine of war to a welcome messenger of peace, herself an emblem of that sea power upon which the destinies of the Anglo-Saxon race depend.

"As I go to present my letter of credence from the President to your illustrious sovereign, who, after more than sixty years, still reigns supreme over the hearts of her subjects, and commands the affectionate admiration of my own countrymen as their ever steadfast and faithful friend, I accept your cordial greeting as the harbinger of that practical friendship which is henceforth to control and govern the conduct of the two nations."

A crowd of people numbering several thousands awaited the arrival of the United States ambassador, the stars and stripes were displayed on many buildings, and immediately after the arrival of the St. Paul she was boarded by a delegation of two hundred of the principal citizens of Southampton, headed by the mayor and other officers in their official robes. They were introduced to the ambassador in the dining saloon by Lieutenant Carter, and there the addresses were delivered. Afterward many members of the welcoming party shook hands with the ambassador.

All Mr. Choate's references to the friendship existing between the two nations were loudly applauded, as was the graceful tribute which he paid to Queen Victoria.

Items of Interest.

Information is received from Madrid that Senor Sagasta has handed the resignation of the ministry to the Queen Regent.

The administration at Washington learned of the resignation with interest, but with entire serenity, since it has no apprehension that it will prevent the ratification of the treaty of peace, or interfere in any way with American interests.

The Queen Regent is designated in the treaty itself as the person to ratify it, without reference to the Cortes or any other Spanish authority, and it was understood by our commissioners at Paris, when that provision was inserted in the treaty, that the Cortes had already, in approving the protocol signed by Judge Day and Ambassador Cambon, conferred upon the Queen Regent plenary power to sign any treaty that might be negotiated, and the understanding here is that

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

the action of the Spanish ministry in asking the passage of a bill for the cession of the Philippines was equivalent to asking a vote of confidence.

In the introduction to his new history of British India, Sir William Wilson Hunter, former member of the Indian Legislative Council, and former president of the Indian Education Commission, referring to the advent of the United States as a colonizing power, says:—

"America starts upon her career of Asiatic rule with an amplitude of resources, and a sense of moral responsibility which no previous state of Christendom brought to the work. In her splendid and difficult task, she will be trammelled by no Portuguese Inquisition of the sixteenth century, nor by the slave colonization of Holland in the seventeenth, nor by the cynical rule for gain of the rulers which, for a time, darkened the British acquisition of India in the eighteenth.

"The United States, in the government of their dependencies, represent the political conscience of the nineteenth century. I hail their advent as a new power for good; not alone for the island races coming under their care, but also in that great settlement of European spheres of influence in Asia, which, if we could see aright, forms the world problem of our day."

At a banquet recently given at Baltimore, Md., in honor of Rear Admiral Schley, a magnificent medal of gold and diamonds was presented to the admiral in the name of the state as a testimonial of the esteem in which he is held by the people of Maryland, and of their appreciation of his services during the late war with Spain.

Amid a storm of applause, Governor Lowndes placed the medal, which contained three hundred and twenty diamonds, about the neck of Admiral Schley.

When the applause, which lasted many minutes, had subsided, Admiral Schley spoke in part as follows: "The priceless decoration on this occasion for my part in the battle of July 3 at Santiago brings to me much that will always last to remind me of an event in my life and service that will live in the history of our state and country. I shall keep it always with infinite pleasure and pride."

The following despatch has been received by Secretary of War Alger from General Otis in answer to Secretary Alger's inquiry respecting the number of American prisoners held by the insurgents:—

Manila, March 3, 1899.

Secretary of War, Washington.

Insurgents have not taken nor do they hold a single prisoner of war.

They have three soldiers in Malolos picked up in January, who, without permission, went among them near Cavite and Caloocan. I am looking after them and providing money.

Have captured over fifteen hundred insurgents since February 4, and hold the majority as prisoners of war.

Detrimental reports which reach the United States manufactured mostly in Hong Kong. Troops here in splendid condition. OTIS.

Admiral George Dewey raised his flag as an admiral, on board the Olympia Monday morning, March 4, and was saluted by the guns of the forts, of the foreign warships, and by the American ships in port. Admiral Dewey holds a higher position than any other naval commander in the world.

The bill which revived the grade of admiral provides that: "The President is hereby authorized to appoint, by selection and promotion, an admiral of the navy, who shall not be placed upon the retired list except upon his own application, and whenever such office shall be vacant, by death or otherwise, the office shall cease to exist."

The German flagship Kaiserin Augusta has been ordered away from Manila. She will go to Tien-Tsin, China, to exact reparation for attacks on the Germans. In the mean time the United States will protect the interests of Germany in Samoa. The German government has made repeated declarations of friendship for the United States, notwithstanding the fact that it has frequently been regarded with suspicion, and it is hoped that this practical way of proving its words will do much towards helping to settle the difficulties at Manila.

The conferences on the Indian appropriation bill have reached a final agreement and have submitted their report. The Senate amendment relating to sectarian Indian schools is retained, but the amount is reduced so that not exceeding fifteen per cent of the amount used in 1895 shall be used next year. A new proviso adds the words that this shall be "the final appropriation for sectarian schools."

The proposition for a submarine cable between the United States and the Hawaiian Islands, which has been adopted by the Senate, will probably remain in the sundry civil bill and become a law. The importance of this connection was strongly emphasized during the Spanish war, although the necessity for a cable has been repeatedly urged by those interested for several years.

During the seven months ending with January 31, the value of manufactured goods exported amounted to $182,336,503, an average of a million dollars a day for every business day. This is $23,000,000 more than the greatest ever known in the corresponding months of any year. During this period the exports exceeded the imports of manufactured goods by $35,000,000.

Information is received from Madrid, though there is no official confirmation of the rumor, that Senor Don J. Brunetti, Duc d'Arcos, former Spanish minister to Mexico, will be designated minister to the United States on the resumption of diplomatic relations. The report that Senor Polo y Bernabe, late minister at Washington, will go to Lisbon is officially confirmed.

The army reorganization bill has been signed by the President. According to the provisions of the bill he will have an army for two years to come, which will probably meet all the necessities of the government in the islands taken from Spain.

Acting Governor Northcott of Illinois has signed the bill appropriating nine thousand dollars for a statue of Frances E. Willard to be placed in the rotunda of the Capitol building at Washington. The statue of Miss Willard is the only one of a woman given a place in the rotunda.

President and Mrs. McKinley recently attended a cabinet dinner party given by the Secretary of the Navy and Miss Long, which was a unique departure from the usual custom of such stately functions, since it was held aboard the Dolphin lying off the navy yard wharf.

A recent strike of the train hands employed on the Brooklyn bridge lasted just twenty-five minutes, and ended in favor of the men. The cause of the strike was a new time and pay schedule which materially cut down the earnings of the men.

Believing that Spain will soon ratify the peace treaty, President McKinley is considering the appointment of a minister to Spain. The appointment will probably be given to Lawrence Townsend, now minister to Portugal.

Digitized by Google

On and after March 1, persons desiring to send money to Cuba by means of United States postal money orders, will be compelled to pay the international instead of the domestic rate of charges as heretofore.

A motion, signed by all the Spanish generals in the Senate, demanding a parliamentary inquiry into the conduct of the recent wars, was approved by a vote of one hundred and thirty to seven.

Information has been received from Madrid that General Toral, who commanded the Spanish forces at Santiago has been arrested, and will be court-martialed for surrendering to General Shafter.

A dinner complimentary to Hon. Carl Schurz was given March 2 at New York City. Four hundred friends joined him in the celebration of the seventieth anniversary of his birth.

The proposed constitutional amendment prohibiting polygamists from being elected to Congress has been reported favorably to the House.

The Senate has settled the Schley-Sampson controversy by making each a rear admiral, with Schley two numbers in advance of Sampson.

Dr. Lyman Abbott preached his farewell sermon at the Plymouth Church, Brooklyn, February 26. He will retire from the ministry.

Rev. James Monroe Taylor, president of Vassar College, has declined the presidency of Brown University recently offered him.

The United States Philippine commissioners have left Hong Kong on board the United States cruiser Baltimore for Manila.

The flag was raised over the island of Guam February 1 by Commander Taussig, and was saluted by the native troops.

The President's nomination of Brigadier-General Otis to be Brevet Major-General, has been confirmed by the Senate.

Senor Silvela, the conservative leader, has undertaken the task of reconstructing the Spanish cabinet.

The bill appropriating $20,000,000 to pay Spain for the Philippines has passed the Senate.

Lieutenant Hobson is to be advanced ten numbers for extraordinary heroism.

The cost of despatches to and from Manila is $2.25 a word.

From Simon Peter.

WHEN a theologian starts out to make himself ridiculous he can beat anybody in that behalf, and if it were not so sad it would really be very funny to see him squirm. I am led to write this letter from having read an article on Christian Science in the Church and Home, a six by nine religious paper edited by Rev. T. J. Mackay of this city. I am not a member of the organization maligned in said article, but I write about it because I believe in honesty and fair play. The good priest starts out by admitting that the Scientists do cure diseases, and in the next paragraph says that they ought not to do so because such patients as they can cure would get well anyhow. Funny argument, is it not? They cannot cure everybody, therefore they should cure nobody. It was probably an Episcopal clergyman who said of Jesus, "He saved others: himself he cannot save." Then he comes to the money question—a modern preacher always reaches the money question early in the game. He objects to Christian Science demonstrators because they charge for their services, and mentions the fact that Jesus said to his disciples, "Freely ye have received, freely give." Jesus neither charged a fee for healing nor for preaching. How is it with the clergyman who receives three or four thousand dollars a year for preaching Christ's gospel to the poor? Christ lived in poverty and associated with publicans and sinners, and Mary the Magdalene was one of his chosen friends. The modern preacher lives in a fine house, handsomely furnished, his friends are the rich and powerful, and he wouldn't have anything to do with a Magdalene even if thereby he could save her soul alive. The Scientist charges a small fee for healing, but he preaches and prays for nothing. Mr. Mackay charges an immense price for preaching, but he doesn't even try to heal anybody. A modern preacher could hardly be expected in this hard climate to live out doors and preach in groves and forests, or deliver wise sermons from the mountain top, or gather a precarious existence by plucking corn from his neighbors' fields, and therefore it is right and proper that he should receive such payment as his labors are worth. That would put some of them on mighty short allowances —but I do not think any of them should be compelled to do as a certain Omaha preacher testified the other day that he was doing. He said he preached the gospel while his patient wife took in washing to support the family. If the preacher is entitled to pay, so is the healer, for the laborer is worthy of some hire, even if he be a mighty poor laborer. He says next that Mrs. Eddy charges one hundred dollars to educate a doctor of medicine. Now isn't that cheap when we consider how many thousands it takes to make a doctor of divinity? He wastes half a column in telling us that healing gifts cannot be purchased with money. Who ever said that they could? The power to heal comes from God or it doesn't come at all, and that is exactly what the Scientists claim. Christ said: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

The apostle James says: "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins they shall be forgiven him. Confess your faults one to another, and pray one for another, that ye may be healed." When the good doctor hears of a sick brother, does he call his vestry together to pray over him, or does he pray over him himself? and do these prayers cure the patient? Do he and his congregation pray for each other when any of them have the grip or the smallpox, or do they send for a doctor? The Scientists have all the texts on their side. They are modestly and conscientiously following the commands of Christ. They are hurting nobody, but helping many. They believe Jesus meant what he said, and that he was not romancing, and they are copying his noble life as far as possible. If these things be so, why are they maligned and persecuted? The answer is plain and simple. The pews in the churches are being vacated, the communicants are seeking a new religious home and a new faith. Even some of the paying Christians are paying their tithes elsewhere. Something must be done to keep the sheep from abandoning the fold, and therefore the clergy are arousing the prejudice of the people against these faithful followers of the Saviour of the world. But it won't do, brethren; it won't do; persecution will only make them grow the faster; the rack and the thumbscrew never yet killed a good cause, and it never will. As an outsider I am enjoying this fight, and in this and all other contests I rejoice to see the under dog winning the battle. The Nonconformist.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.B., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six month's subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered as second-class matter.

The Christian Science Sermon.

II.

THE MAKE UP OF THE SERMON.

By the make up of the sermon is meant the manner and the method of its construction or composition. As Truth is infinite, and as our subjects are of the Truth, it is readily seen that each subject may be treated an indefinite number of times and each time be practically a new sermon. By this, it is not meant that no sentence contained in a former sermon will be repeated, but because of its use in an entirely different connection, it will possess new meaning and throw new light upon a never-ending theme.

While the makers of the sermon seek to avoid the oft repetition of favorite texts from the Bible and passages from Science and Health, a student could make no greater mistake than to object to the use of such Scripture because contained in some previous sermon. Illuminated by its new surroundings, it has become a new gem, even as precious stones under changing lights become transformed.

The character of each sermon is largely determined by the purpose in view. The end which is to be accomplished will guide the selection of the proper passages. In the first sermon on God, the purpose was to show the true thought of God as revealed by the Scriptures. In the second sermon, the purpose was to show how the Heavenly Father is to be understood. A third sermon might show what is meant by God as Principle, and thus new light would be continually coming to the same grand theme.

So much for the sermon as a whole. Each sermon also has its parts or sections, I., II., III., etc. As all have observed, each of these parts deals with some one special phase of the subject under consideration, and each part helps to make the whole understood; even as head, trunk, and limbs, as parts of the whole body, have their special functions, and minister in their special ways to the whole, so do the various parts of the sermon have their special uses, perform their special functions, and minister in their special ways to the whole subject. In the first sermon on God, it will be remembered that the sections brought out the thought of God, first as Creator, second as Principle, etc; each section unfolding more of the divine nature, and each part ministering to the whole subject.

The use of the Bible texts is threefold. First.—It may give an exact definition of the subject. As in the sermon on God, in Section VIII., which treats of God as Love, the Bible text affirms that God is Love. Second.—The Bible text may contain a statement which Science and Health unfolds. In the sermon on Soul, one of the Psalms is quoted as saying, "Bless the Lord, O my Soul." The correlative passages from our text-book show that the Bible uses the word Soul in two meanings: first, it is applied to Deity; next, where it refers to the Spiritual sense; third, the Bible text may be figurative or symbolic, which the parallel passages from its Key will make plain. An excellent illustration of this is to be found in the sermon on Man, for February 26, 1899. Section III. treats of the false testimony of the five material senses regarding man. The Bible text is from Ezekiel, 14 : 1–6, and at first glance there might appear to be no connection between this text and the explanatory passages from Science and Health. Study, however, reveals that the "idols," which the prophet describes as stumbling-blocks, are the false evidences, the lying testimony, of material sense. Thus does the energizing spirit of Christ-Truth cause the dry bones to live.

It may be asked, why the sections are not named, so that the student may readily tell what the sections contain. First, because each student should do his own work, the requisite study to discern the contents of the section is part of the preparation for understanding and for reading that section; again, the proper naming of the sections is at best a matter of human opinion, and human opinion begets discussion, and sometimes controversy; finally, the introductory note affirms that the Christian Science sermon is "uncontaminated and unfettered by human hypotheses." Composed as it is at present wholly of the Bible and "Science and Health with Key to the Scriptures," this assertion is absolutely true. On the whole, then, it seems wise that the naming of the sections should not be a part of the sermon, but should be the work of each individual.

Study reveals progress in each lesson; there is introduction, body, and conclusion. The first section may affirm the scientific fact regarding the subject, and the following sections in an orderly way explain this fact; or the introduction may hint the reality, and that which follows unfold this hint in Scriptural order, "first the blade, then the ear, then the full corn in the ear." It is seen, also, that each lesson denies the error and affirms the truth regarding the subject. The false teaching is suggested and the true teaching plainly set forth which destroys the false. Through the entire sermon there is the single theme or subject, even as in a grand anthem there is one theme which each note, chord, and harmony unfolds, develops, and strengthens. So each verse and sentence of our sermon echoes and re-echoes the divine Truth which, when heard, gives melody and harmony, and brings the eager listener into tune with the infinite Principle of all harmony.

While it is not to be understood that the Golden Text and Responsive Reading form a part of the sermon, nor that in any sense they form the text of the sermon, as in the former International Lessons, yet they do fulfil their mission. The Golden Text may be said to contain the fundamental thought with which the sermon deals. It is a general statement of Truth which the sermon elaborates. The responsive reading, while entirely separate from the sermon, deals with the same subject from the sacred author's point of view. While no part of the temple (sermon), it may be called the stairway which leads to the temple, warning the worshiper that he is drawing nigh unto the holy place.

The Christian Science sermon, then, is a complete whole of various divisions. It is a God-given structure, with foundation, walls, and arching roof. It is a flower of many parts unfolding its divine order, even as the petals of a rose open to the genial greeting of the summer's sun. Our next article will help in the interpretation of this structure to those whom we serve as guides, to increase the appreciation of our sermons, God's love-tokens, so that their reading will bring rest to the heavy laden, life to the dying, and light and joy to all.

Falsehood Concerning the Souvenir Spoon.

The same busybody who, of late, has been so industriously circulating a variety of falsehoods in reference to Christian Science and the Rev. Mary Baker Eddy, has set afloat another rumor to the effect that the sale of the Souvenir Spoon has been stopped by Mrs. Eddy. It is unnecessary to say that

Digitized by Google

this rumor is wholly foundationless and of a piece with the other falsehoods, some of which have recently been refuted in our columns

The moral turpitude involved in spreading falsehoods which are so palpable that they can be at once met with the word of truth, seems unaccountable, and would be so were it not for the fact that the mental condition whence they emanate is without either accountability or responsibility. It is a pitiable condition indeed.

We are informed that a recent visitor to Pleasant View had the pleasure of hearing the Rev. Mary Baker Eddy read several poems from the work of a favorite author. This author was none other than her fellow-townsman, Mr. Edward A. Jenks, whose gathered poems are entitled, "The Spinning-Wheel at Rest." Mrs. Eddy, who has a high appreciation of Concord's eminent citizen, commends his beautiful poems to all Scientists. "The Spinning-Wheel at Rest" is beautifully illustrated and its typography is worthy of the thought it enshrines.

It will be remembered that Mr. Jenks is the author of the terse article published in the Sentinel of February 14, entitled, "Reply to New York Sun."

A Correction.

In the article entitled "The Legal Aspect of Christian Science," by Judge McKeighan, published in the Sentinel of February 16, two errors crept in, which we deem of sufficient importance to correct.

In the second line of page 11, second column, the word "covert" should read "overt." In line thirty-one of the same page and column, the word "disapproval" should read "approval." It will be observed that an entirely different sense is conveyed by the correct words.

Proposed Prohibitory Legislation in Rhode Island.

In Rhode Island there was recently held a hearing by the Committee on Judiciary of the Senate, on proposed amendments to the general laws entitled, "Of the Practice of Medicine." There was a very general interest in the matter, and an active opposition developed against the proposed amendments. Among those appearing to oppose it were Christian Scientists and their representatives. As usual, while ostensibly general in its terms, the bill was directed especially against Christian Scientists. The following section is the one against which the Christian Scientists raised their objections:

"Second: Any person shall be regarded as practising medicine within the meaning of this act who shall investigate or diagnose, or offer to investigate or diagnose, any physical or mental ailment or defect of any person with a view to affording relief, as commonly done by a physician or surgeon, or who shall practise obstetrics, or who shall prescribe for or otherwise treat a person for the purpose of curing any real or supposed disease or ailment, whether by the use of drugs or by the application of any other agency or alleged method of cure or alleviation or prevention of disease or other ailment, or who shall operate as a surgeon for the cure or relief of any wound, fracture, or bodily injury or deformity."

Dr. Swarts of the State Board of Health was the first speaker in favor of the passage of the bill.

In opposition to the passage of the act Walter R. Angell, Esq., appeared as a representative of the Christian Scientists. He called attention to the fact that nothing in Dr. Swarts' remarks had tended to bring in the Christian Scientists of the city and state, although in the second section of the eighth clause of the act it certainly included this sect. They claim they do not practise medicine and do not want to do so. In fact, the Supreme Court has already decided that the Christian Scientists do not practise medicine. The speaker affirmed that the act certainly did include the Christian Scientists in its provisions, and was probably drawn for that purpose.

The Christian Scientist does not use material or other agencies that come under police power, but uses prayer alone, and on that ground the Supreme Court has decided that the sect does not practise medicine. Medicine is a science only when the practitioner uses dangerous agencies. It is sufficient to say that the Scientists are simply using spiritual agencies, and do not want to be connected with the practitioners.

By this act, he said, the Legislature is asked to make doctors of the Christian Scientists, and then to punish them because they are such. Restrictions may be imposed only upon the business which it is being attempted to restrict. The question then is, Why should an attempt be made to restrict the Christian Scientists in the operation of something they do not do? The passage of such an act as this would be the extension of the police power further than has ever been done. Why should an attempt be made to say that no man shall be a Christian Scientist unless he be a practising physician, any more than to say that no one can be a physician unless he understands Christian Science? "I submit," he continued, "the Legislature of this state cannot say that Christian Science is the practice of medicine, any more than it can say that a tree is a stone.

"The sole ground on which these people are supposed to be doing an injury is that they keep people away from the doctors. This is purely a mental process, and you cannot police the human mind.

"One thing more. Who asks for this legislation? It is one of the most peculiar things. When you are asked to curtail human liberty you do it as a crying need. I am informed that there is not one petition on the files asking for the passage of this act. In opposition to it are scores of people here and scores more who could come, who feel that such an act is an abridgment of their rights. Where is the demand for the passage of this act? Not only is there none, but there is a strong opposition to its passage. We do not care how much action is taken by the doctors to make it difficult for them to practise, but we do object to such an act as this.

"It is time those who are pushing this act should learn that they can never pass such legislation in this manner.

"Let the people who apply in their treatment drugs and nostrums, know something about them, but do not legislate against those people who do not use them."

The Act of the State of Connecticut contains this express language: "Shall not apply to any person practising the mind cure, or Christian Scientists, nor to any other person who does not use or prescribe in his treatment of mankind, drugs, chemicals, or nostrums." Now this is sensible.

Following Mr. Angell, Mr. Henshaw addressed the committee, stating he had come as the representative of several prominent people. He considered that every possible safeguard should be offered to the people, but in the latter part of the proposed act he thought that a severe blow was struck at the free exercise of civil and religious liberty. "It is not enough," said he, "that the Scientists do not use drugs and medicines, but the fact that they do not do so is sufficient to condemn them, it is claimed. Because it is said that homœopathic doses are small is no reason for the suppression of homœopathic physicians. The purpose of this act was to regulate the practice of medicine. I have never known a Christian Scientist who claimed to be other than what he was. Under this bill, none but physicians could attempt to cure diseases. This act is an infringement on the rights of all of us."

Judge Lorin M. Cooke, the next speaker, drew from Dr. Swarts a reply to the question as to what the act included, to the effect that it was to oblige those who manipulate the

Digitized by Google

human body to have a thorough understanding of it. Judge Cooke then hurled back the question, "Do you understand that the Christian Scientists treat the body?"

Continuing, the speaker affirmed that the proposed act was drawn to deprive the people of the right to think. Similar acts had been brought before most of the intelligent states of the country and had been refused. He stood before the committee simply as an exponent of full and free liberty of mind and thought.

Mr. Hatch spoke after the following manner: "Mr. Chairman and Gentlemen:—I desire to address you briefly as a remonstrant against the bill before you, which has the rather impersonal and harmless sounding name of 'An act in amendment of and in addition to Chapter 165 of the General Laws.' This bill seeks to restrict the healing of the sick to practitioners of those schools in which 'surgery, anatomy, physiology, and theory and practice of medicine' are taught and subject to the approval of the State Board of Health.' This is a bill which, if it could be enacted into law and could then be enforced, would prevent the healing of the sick by the use of any except material means. I presume, gentlemen, that in your previous experience you have known or heard of bills being introduced into legislative bodies ostensibly for the good of the public, but really for the good of some special class desiring profit or protection at the expense of the public. Perhaps it is a fair question whether this is such a bill.

"When, a few months ago, the legality of the practice of Christian Science was questioned in the courts, it was unanimously decided by the Supreme Court of this state that the practice of Christian Science did not violate the laws. I am informed that on learning this fact, an official of the State Board of Health remarked that if such were the case he would get the law changed so that it would. I suppose that this bill is his attempt to keep so foolish a promise. Under such circumstances, we need not be surprised that the bill savors more of jealousy than of statesmanship.

"Before considering the question of the merits of Christian Science as a school of medicine, I protest against this bill as a direct infringement of my individual right to take whatever medical treatment I see fit—and against my religious liberty to worship God according to the dictates of my own conscience. These are purely personal rights, guaranteed to every citizen of this state, in the first article of our constitution.

"Gentlemen, this bill seeks to trample on some of the most sacred rights of a free people, the very rights which this state of Rhode Island especially was founded to preserve.

"I understand that this bill expresses the judgment and the wishes of the State Board of Health. If that be so, I want to tell those gentlemen that they are overstepping the bounds of their office, that they have misunderstood the call of duty which they owe to the people of this state; that they are the servants and not the masters of the people.

"I want to tell them that they do not hold the right of private judgment for the people of this state, and that they are not the custodians of our consciences nor of our intelligence. Furthermore, an act framed in the spirit of this act is against the public good, as tending to suppress the development of truth. I call myself still a young man, but I can well remember the bitter controversy between the allopathic and the homœopathic schools, when the former claimed possession of all the wisdom and all the virtue. I do not know that all their animosities are dead yet, but I believe they do agree on the principle of making substantial charges for their services, whether the patient survives them or not.

"Now, a word as to Christian Science, which this act seeks to illegalize and to suppress. Christian Science is not regarded by its believers simply or mainly as a school of medicine, but as a religious faith in which the healing of the sick follows an understanding of its interpretation of the Bible, by the grace and power of Almighty God. Its practice in the healing of the sick is the sign and certificate of a power higher than the State Board of Health, and one which, with all due respect to your honors, you have neither the power nor, I am sure, the wish to oppose.

"I am not here, gentlemen, to preach you a sermon, nor to ask you to accept my beliefs, any further than the evidence on which they rest appeals to your reason, but I want to tell you that a majority of its believers, and a majority of these remonstrants before you, are living witnesses of the efficacy and truth of Christian Science.

"Look at them, gentlemen. I am sure that you will agree with me that they appear to be not only intelligent, reliable, sane, self-respecting, law-abiding people, people capable of managing their own affairs, and of entertaining and maintaining their own opinions, but also pretty good examples of physical health, and yet it is safe to say that the most of them have in time past exhausted the skill of the best regular physicians in this and other communities, to be healed by the help of Christian Science when all other means failed. Such testimony cannot be lightly buried nor flippantly scoffed at. It is before you and subject to your serious investigation. And such a system of healing as this is deliberately ruled out by the provisions of this bill.

"Under such circumstances, I am persuaded that your honors will wisely decline to be made the tool of jealousy and ignorance by the passage of this bill, which is an insult to your intelligence and virtue as guardians of the rights and liberties of the people of this state. In closing I commend to you the advice of one Gamaliel, a doctor of the law, who said, in concluding an address to his fellow councillors on a somewhat similar occasion: 'Take heed to yourselves what ye intend to do as touching these men, . . . for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found to fight against God.' The record significantly adds: 'And to him they agreed.' "

Mr. Fessenden, the next speaker, stated that he stood an avowed believer in Christian Science. He believed there was one point that had not been touched upon that should be impressed upon the minds of the committee. That was that if the teachings of Christ amounted to anything they amounted to everything, and that they meant to heal the sick as well as to go out into the world and preach the Gospel. In view of these facts, continued the speaker, what right has any man, or any set of men, to come here and ask for the passage of such an act as the one proposed? The speaker thought that the committee could not conscientiously recommend any such bill, and desired to offer his earnest protest against any such action.

Is Christian Healing

As Taught and Practised by Christian Scientists an "Unreasonable Fad"?

THE "Democrat Doctor," in commenting on my article of February 2, says, "Mr. Baird assures us that he believes most firmly in Christian Healing, as taught by Christian Scientists. This is his right. But he is endowed with reason, and should therefore be able to tell us clearly why he holds to the above conclusion."

I am not surprised that the "Doctor" should be unable to understand how a person may be benefited by anything that is not tangible to the five senses. The bias of education in this material age is such that it is not an easy matter for a person engaged in the pressing cares of active business life to spend sufficient time in silent communion with God to become well enough acquainted with Him to believe He will help when the *carnal mind* binds upon him a conviction of so-called disease; hence, when afflicted, instead of going to God for help, some physician with whom he is better acquainted, is called upon. But in the light of God's word, is it the most reasonable way? Old Asa, King of Judah (2

Digitized by Google

Chronicles, 16 : 12, 13), concluded that the physicians could help him when suffering. The record reads that "he sought not to the Lord, but to the physicians. And Asa slept with his fathers." If you will read the fourteenth verse you will notice that they gave him a first-class *funeral.*

Now please contrast this case with another king of the same people, who lived and reigned a few years later (Isaiah, 38 : 1–5). "In those days was Hezekiah sick unto death. And Isaiah the prophet, the son of Amoz came unto him, and said . . . Set thine house in order: for thou shalt die, and not live. Then Hezekiah turned his face toward the wall, and prayed unto the Lord. . . . Then came the word of the Lord to Isaiah, saying, Go, and say to Hezekiah, Thus saith the Lord, the God of David thy father, I have *heard* thy prayer, I have seen thy tears; behold, I will add unto thy days fifteen *years.*" Paul declares that God is the "*same yesterday, and to-day, and forever.*"

"Doctor," is it true that God healed King Hezekiah in answer to his prayer, and lengthened his life? Is it true that God is the same to-day as He was when Hezekiah called upon Him? If you answer in the affirmative, as I know you must, then surely you will admit that it is reasonable to conclude God can, and will, hear us, if we call upon Him. He is as able and willing to heal to-day, as He was when Hezekiah, who was "sick unto death" obtained fifteen additional years, through resorting to the same means that *Christian Scientists now employ.* Had man not been endowed with power to reason, God would never have said to him (Isaiah, 1 : 18): "Come now, and let us reason together." The writer abandoned the use of drugs as a remedy for physical ailments thirty-six years ago, after having been an invalid for years—after taking drugs prescribed by many different physicians—after paying for many a prescription written in a *language* that had long been dead—after becoming well satisfied that, if he continued the same course much longer, he would also be dead—after watching for years the result of drug medication, terminating, as it did, in the burying out of sight the bodies of friend after friend, filled with drugs they had either swallowed, or had injected into their bodies while alive,—after learning that the average of human life (at that time) was only a fraction over thirty-three years—after reading in the Bible that man's days should be at least three score years and ten, or four score years—after asking myself, and many others, why it was, that with a class of physicians protected by law as no other class of men were ever protected, giving them all advantage over so-called quacks, that it was possible for human ingenuity to give—with special laws enacted in their favor, enabling them to imprison any one who dared to interfere with their monopoly in the treatment of disease—laws so stringent in their favor that it was, and is still, almost unsafe for a mother to give her infant a spoonful of catnip tea, without consulting them, that still, with all this in their favor, the average of human life was then (and is now) much less then one-half of what the Christian world believes from a study of the Bible, God intended it to be. "Doctor," after carefully considering all this, and very much more along the same line of *facts,* then began to use the reason which God had endowed him with.

The more he reasoned, the more fully he became satisfied that the whole drug system, so far as it related to the treatment of disease, was a *delusion.* The more he studied the Bible, the more thoroughly he became convinced, that Jesus came as the *Great Way Shower,* and that he left us an example of how to obtain freedom from sin, and physical ills as well; and that in no case did he use drugs, or call a physician, except as he called one to leave his practice and follow the Christ-way of treating disease.

There are now a rapidly increasing number of Christians who believe that Jesus intended, when he taught his followers to pray "Thy will be done in earth, as it is in heaven," that they should expect their prayers to be answered; and that in answer to such prayer the time would come on earth when harmony would prevail. Disease is discord, and is unknown in heaven (harmony), and should be overcome by the prayer of faith on earth. James tells us (5 : 15) that "*the prayer of faith shall* save the sick, and the Lord *shall raise him up;* and if he have committed *sins,* they shall be forgiven him." For fear some one should doubt the efficacy of prayer in thus saving the sick, and think it necessary to take a dose of whiskey, quinine, tobacco, or other approved material remedy, James gives us that wonderful illustration of the power of prayer by a man as he says, "Subject to like passions as we are." (Oh, how plain!)

Please read the last chapter of James. It can be read in less than two minutes and a half. Just in so far as the people are induced to abandon the use of stimulating nostrums, and the drugs which they have been taught to depend on for help, and come to realize that God is a present help in *every* time of need; just so far will they be enabled to rise above the fear of disease, and obtain that *saving faith* which will enable them to live independently of drugs.

Thus far I have tried briefly, and in a general way, to show that Christian Healing as practised by Christian Scientists is not an "Unreasonble Fad," and to give, in compliance with the request of "Democrat Doctor," my reason for believing, as I do, in Christian Healing. In a future number I will answer pointedly the four questions asked by the "Doctor." To correct a wrong impression, which appears to be held by some who have not studied Christian Healing, permit me to say, that no body of people hold the higher class of physicians in greater respect than do Christian healers; and when they read Job, 13 : 4: "But ye are forgers of lies, ye are all physicians of no value," they do not believe that this is true of the honest, earnest men, who, filled with motives of philanthropy and love, go forth to minister to suffering humanity. Mrs. Eddy says, "Physicians, whom the sick employ in their helplessness, should be models of virtue. They should be wise spiritual guides, when material things cease to bring ease or hope. To the tremblers on the brink of death, who understand not the Truth which perpetuates Being, such physicians should be able to teach it; that when the heart is willing and the flesh weak, the patient's feet may be planted on the rock Christ Jesus, the basis of spiritual power." That there are many such physicians in our day, there can be no doubt, while, unfortunately for humanity, the class that Job referred to are not *all* dead.—H. C. Baird.

Woodford County Democrat, Eureka, Ill.

Letter from Carol Norton.

New York, February, 8, 1899.

To the Editor of the Daily Eagle:—

During the time that has elapsed since my recent lecture in your city, numerous communications relating to Christian Science have appeared in the columns of the newspapers of Poughkeepsie. In most cases they have represented criticisms of Christian Science from representatives of *materia medica* and theology. Some have been broad, and while opposed, have been just and tolerant. Others have conspicuously manifested the spirit of intolerance, bigotry, and misrepresentation. While thoroughly unwilling to enter into any controversy as to the merits or demerits of Christian Science, I feel that a few truths can be opportunely stated. Having in view this end let the following statements be compared with the teachings of Christ, the Founder of our common Christian religion.

In Christian Science we believe in Christianity according to Christ. We disbelieve in popular religion according to the schools. Christian Scientists prefer the simple precepts of Christ and his practical promises, to the dogmatism and mystery of creedal philosophy. Christian Scientists believe that Jesus meant all that he said. The Christian

Digitized by Google

ministry is founded on the great commission of Christ. The first command of this commission reads, "Go ye into all the world, preach the Gospel." The second command, yea the very next sentence, reads, "Heal the sick." If Christian ministers, missionaries, and believers imitate Christ's method of proclaiming his Gospel, they should also imitate his method of healing the sick without drugs, and through spiritual means alone. St. Luke gave up his medical practice and adopted Christ's method of healing when he became a follower of our Master. The sick were healed for over three hundred years in the early Church through spiritual means, as established by Christ and practised by his disciples and immediate followers. Christian Scientists do not claim as yet to be infallible demonstrators of their system. They do not affirm that they are capable of performing the cures that Christ did in their fulness, but they remember with joy his promise, "The works that I do shall ye do also; and greater works than these shall ye do." They are steadily working toward the attainment of the spiritual power that will make these greater works possible.

Did Jesus fail to heal the sick in any recorded case? No. Why? Because his spirituality and pure life were sufficient for every emergency. Did his immediate disciples ever fail to effect a cure, or produce instantaneous healing? Yes, if we are to believe the Gospel record. If we read the Gospels thoughtfully and honestly it will be observed that after the disciples of Jesus had failed in a given instance they asked Jesus privately the cause of their failure, and his answer was, "This kind can come forth by nothing, but by prayer and fasting." This is equivalent to his saying, such a severe case of sickness, as this instance of epilepsy, cannot be cured except by a greater degree of spirituality.

Christian Scientists, therefore, are in a position quite similar to that of the disciples. Their demonstration represents the infancy of spiritual attainment. It should be remembered that three-quarters of the cases that they heal are those that have proven failures under regular medical practice. Even if in isolated instances they take a year to heal a given case of severe illness, and thereby set aside a series of hopeless medical verdicts and alleviate great suffering, their work is not only Scriptural, but humane.

Some object because Christian Scientists receive remuneration for their labors. Clergymen receive salaries for preaching the word of God. Physicians receive fees for the humanitarian labor of alleviating human suffering. Jesus sent forth his disciples and commanded them to take no money with them. In his philosophy of the laborer being worthy of his hire, he certainly must have meant that the Christian healers and reformers that he sent forth were to be furnished with all that they needed from and through their labors. Common sense, justice, and the obligations of love and gratitude are as much with the consecrated men and women in Christian Science who give all their time to a suffering race, as with humanitarian laborers in any other walk of life. I find myself wondering why Christian Scientists are ever criticised for practising Christianity according to Christ. If our critics were agnostics, sceptics, infidels, and pagans, I would not marvel; but when we witness the spectacle of Christian believers opposing the most practical aspects of Christianity, is it strange that we renewedly ask the question, "When the Son of man cometh, shall he find faith on the earth"?

To Mary Baker Eddy, Christendom owes an endless debt of gratitude. Through the agency of her pure life, unselfish nature, and tireless research, the world to-day possesses the re-established and primitive Christianity of our Master, and the divine aspects of Christian Science are daily being proven as both Christian and Scientific.

These views are offered for the just contemplation of all who love our Lord, and the healing and saving might of His love. CAROL NORTON, C.S.D.

Poughkeepsie (N. Y.) Daily Eagle.

What Good Should Mean.

IT is often said that Christian Science is good as far as it goes, but that it is fanatical and dangerous to carry it to extremes.

Good is a word that is not often employed in its highest sense. Good wine will often lead to very bad conduct, but good conduct cannot be in any sense evil, and cannot result in evil. If Christian Science be good at all, it is good in the very highest sense, and good, as opposed to evil, never can be carried to the point where it becomes bad or dangerous.

Beclouded by the foolishness of this world, which they call wisdom, men look upon everything as being either good or bad, according as it is applied. In this sense, arsenic is considered to be a good medicine, but a bad poison; it may cure or kill, according to the size of the dose. Food is good in moderation, but evil results follow ravenous eating. A change in freight rates is said to be good for one merchant and bad for another, or an act of Congress may be good for the state of New York, but bad for Colorado.

In the vocabulary of Christian Science, good is always superlative. Better and best bear no natural relationship to this word, for they come from another root. There is nothing better than good.

A good thought is good for all people for all time, and thought determines the quality of our acts. It is commonly supposed that a graceless beggar has it in his power to turn to evil account the good act of the kind-hearted man who gives him money, but it is not so. If the thought of the giver is good, it will go with the material gift and do its work of goodness. The tramp may toss the coin on the counter of a bar-room in payment for whiskey, but the good thought will give him no peace until he turns from his evil ways.

The bane of all materialistic reasoning is that every seemingly good material thing or institution, pushed to the farthest limits, becomes bad, and ends disastrously. Work is supposed to be good, but continuous work is not. Sleep is good, but continuous sleep is not. Interest is considered by all but a few, to be a good thing, but interest at the rate of one hundred per cent per annum is supposed to be destructive to commerce. Taxation is almost universally conceded to be good, but carried above a certain indefinite point it leads to revolution. Everything which materialistic philosophy deals with is Janus-like, having two faces looking in opposite directions. Its factors are always in flux.

According to the "wisdom of this world," it cannot be determined whether an act is good or bad until its general effect is determined. If a new tariff law results in affording two million idle men remunerative employment and reduces one million men to the verge of starvation, it is said to be a good law, the balance tipping to the side of good.

Christian Science sweeps aside such paltering timidity and proclaims that good is derived from God and must ever be like its source. A good act of Congress is good for all the people, for all the states, and for all the people and nations of the earth, or it is bad for everybody. A good individual act is not good unless it is good for everybody. A medicine is not good that is ever bad, in any quantity administered. There can be no shrinking if one is ever to get hold of Principle and be freed from medicine and fear.

When a man, after feeling the impulse to do an act of justice, stops to estimate the possible effect on this one and that one, his courage will begin to fail him. Let a man act from Principle, promptly and fearlessly, disdaining to consider the consequences, and his act will be clothed with the majesty and might of omnipotent God. It will not only be good for the doer, filling him with the strength of the Mind which prompted the impulse, but his deed will cheer, encourage, and bless thousands whom he may never know.

When a man simply says or does a thing because that thing is right, and true, and good, he is invincible. The expression of Truth, in word or deed, is the voice of God, and in the forty-sixth Psalm we read: "The heathen raged, the kingdoms

Digitized by Google

were moved: he uttered his voice, the earth melted." Truth destroys all material obstacles which seek to prevent the fulfilment of its helpful mission; the earth and all the grossness which the word typifies melt into nothingness.

When a man does a thing because he is told that it will be good policy, and that his act will elicit public approval, or if he refrains from doing a thing for the same considerations, he will derive no help or strength from God. Principle never rewards moral cowardice.

Christian Science is not faith-cure, hypnotism, or healing through the influence of one human will over another. It is the knowledge that God is unlimited and all-powerful Good. This knowledge, when imparted to the consciousness of the sick, helps them to thrust aside all false teaching and vicious reasoning, to the end that they may see and take hold of the outstretched arm of Almighty God, who is the all-sustaining Infinite. When one lays aside his confusion of thought and looks to Principle, the sense of enduring Life is harmoniously diffused throughout his consciousness, and health and peace come to the weary invalid, like the deepening color which silently spreads over a bank of violets. Of this good, which emanates from God, one cannot get too much.

Denver Republican.

The Lectures.

At Troy, New York.

It is more than probable that never in the history of Music Hall has it contained a larger audience than it did Monday evening, February 27, when Carol Norton, C.S.D., lectured on "Christian Science and Common Sense." Numbers were turned away disappointed who could not gain admission to the hall, and every seat was taken some time before the time for the lecture. Not only did those directly interested in Christian Science attend, but many who wished to make honest investigation into the religion that is gaining widespread attention all over the civilized world, and is demanding recognition by its attested works. From observation it was patent that representatives from every church in the city were present, and all were deeply interested in the lecture, presenting what Christian Science is and what it can do and has done. The lecturer appeared under the auspices of the First Church of Christ, Scientist, and on the stage were seated members and friends of the Troy society. The forward section of the hall and the boxes were reserved for visitors from the Albany society, which sent a flattering delegation.

Mr. Norton has a most pleasing delivery, the most marked characteristic of which is dignity. Allied to this is that force which, believing in itself, commands the respect of all. He proclaims his belief in a straightforward, earnest way, and those who hear him are satisfied that he believes even as he speaks, and that he makes no statements that he is not willing to substantiate. The definition given by Mr. Norton, and his explanation of several matters in regard to which many were either in a state of absolute doubt or had entertained mistaken impressions, were welcomed by the many who came to be enlightened. He told the difference between what the Christian Scientist believes, and what those ignorant of the truth of his religion think he believes, thus clearing away many hazy ideas on the subject.

Mr. Norton was introduced to the audience by Hon. John H. Peck, president of the Rensselaer Polytechnic Institute. Mr. Peck's speech was full of graceful compliments and was well received. He said:—

I was honored last week by an invitation to introduce to this meeting an accredited lecturer on Christian Science. A reason for my selection was given. "You are an outsider." My attention was not arrested by the expression, at the time, as yours probably is not now. It was not long, however, before the words were frequently recurring to my mind, You are an outsider. Why an outsider? Was it commendation or criticism? Outsider is a relative term—a very relative term—depending for its significance on circumstances. It means one thing on a stage coach, another thing at Sing Sing, a very different thing in Wall Street, and again another concerning those who leave their country for their country's good—I do not now refer to men of the class of Admiral Dewey or Mr. Choate. So the phrase itself being relative did not help me much. What was I outside of? I was very sure, that is, I wanted to be very sure, that the gentleman who invited me did not incline to the opinion that I was outside the pale of the Christian Church. I had known him well for forty years, and during all that time his Christian attitude had deserved my highest respect, I might say my admiration, and I knew his had never been the type of Christianity that judges others. Then the question occurred to me, might it be that I was held by him unscientific? No, I felt assured, if he believed that, he would not say it—not to my face. Then was it that I was outside Christian Science speaking generally? All science of this age finding its root in the untrammelled intellects of free men, is distinctly Christian, and to banish me outside of modern science would leave me either too old or too young to permit of attendance here to-night. I dismissed all these speculations as untenable. I found myself, then, face to face with the proposition that he undoubtedly intended to say, that I was outside that form of thought or faith that has accepted the name of Christian Science. I had to confess myself incompetent to say, What it is and what it is not,—I did not know. I had never heard it defined by my friends; and, if I am to assume any definite position in regard to it, I must first yield the just claim of its advocates to my reasonable attention. A reference to fundamental principles is not needed at this time in this country. The value of the right of free speaking depends on the corollary right to a fair hearing. Free speech in a solitude would not be an exercise of a human right. On the other hand, the capacity for hearing involves an obligation to hear, at the very least, before announcing a judgment. But in the last days of this century and with us, these principles have so long been practised that on such subjects we see through a clarified atmosphere. So much that had been thought impossible has been realized, so many blessings that were unsuspected have been found and utilized, that most men will listen. Any one who believes he has a message can get a hearing—from outsiders—how much more from an earnest and consistent body of thoughtful people. This great assembly is here to listen to an authentic and representative "insider." He is to tell us what Christian Science is, and what it is not. We wish to know, we must know, or we shall have to ask some one else "where we are at" on the subject.

I take pleasure in presenting to you the lecturer of the evening, Mr. Carol Norton.—The Troy (N.Y.) Record.

The same issue of the above paper contains the following editorial:—

Christian Science.

The crowded house which greeted Carol Norton, C.S.D., at Music Hall last night, bore eloquent testimony to the interest which the subject of Christian Science has aroused in the minds of the people. Mr. Norton is recognized everywhere as one of the ablest lecturers in the Christian Science field, and hundreds gathered to hear his explanation of his belief and the grounds upon which it is based. The subject has been much discussed in recent months, and a somewhat prevalent impression is that its principles are visionary and its devotees are fanatics. Mr. Norton's effort was to show that Christian Science and common sense go hand in hand, and the most earnest opponent of the system must admit that his argument was clear and practical.

The Record this morning publishes Mr. Norton's lecture in full in order that the readers of this paper may have a clear understanding of what Christian Science is. A system which within a generation has drawn to itself more than a million

Digitized by Google

followers, which has hundreds of churches in all parts of the world, and within the last year has established them at the rate of half a dozen a month, has reached proportions which demand for it something more than a passing notice. It is a development which merits study, whether one is ready to accept the doctrines or not. To investigate it is an educational duty wholly independent of its actual merits as a form of belief.

The Record does not claim knowledge sufficient to warrant it in deciding for or against Christian Science. It claims simply that a movement of such proportions deserves to be judged on its merits as developed by careful investigation, not passed upon by prejudice or tossed aside as an unexplainable mania. Mr. Norton presents his cause in form for easy grasp, and thousands will welcome the opportunity to learn from one who knows just what is meant by Christian Science. The lecture last night was listened to with deep interest. A number not to be estimated will read it with care in order to gain new light upon a subject now attracting world-wide interest.

At Detroit, Mich.

Curiosity about Christian Science, as expounded by Mrs. Annie M. Knott, of Detroit, one of the best-known women disciples of Mrs. Mary Baker Eddy, the Founder of the sect, and by Judge William G. Ewing, one of the most eminent lawyers of Chicago and a non-resident member of the University of Michigan law faculty, packed the Detroit Opera House Sunday afternoon, February 26, with a crowd that put Mansfield to shame. Mansfield's alert agents, however, would claim the palm on price, for this was a free lecture.

The seats from orchestra rows to the roof were taken fifteen minutes before the tall, spare Chicago orator introduced Mrs. Knott, and people were soon turning away, though the aisles in the balcony and the foyer were crowded during a good part of the lecture. Considerably more than half the audience were in all probability "unbelievers," while many were absolute strangers to the doctrine except as a claimant to miracles of healing.

Judge Ewing's short address in introduction, was cleverly calculated to remove prejudices arising from ordinary misconceptions of a faith in which, he said, he had spent the fifteen happiest years of his life; "coming to it just as my feet were on the edge of the grave and knowing that every breath of life since has been bestowed upon me by the revelation of how to live at unity with God, self, and the universe."

It was a serious audience. The judge tried to tell a joke to ease his way at the start, but his hearers never cracked a smile. The mystery of life was what they had come to hear about. Lawyers in Chicago, who know the brilliant brother as a splendid dry wit, a sort of Sol Smith Russell at the bar, would have smiled at first and then would have been intensely interested at seeing this side of his character. At the close of one of those long, deliberate, and impressive periods for which he is famous, his voice broke completely as he told of what "the love of the lowly Nazarene might do in the world, if the world would but know—would but have it."

His first attempt at reading from his manuscript, which he brought in order, he said, that he might say nothing to which he would not in all moments of his life subscribe, was to correct any ideas his hearers might have as to this new religion being one of antagonism to Christianity. He showed how it was built upon the Bible, and claimed for it the fullest realization of Christ's teaching; "nothing complex, but simple, as the early faith of Christianity was simple. It was brought to the world now thirty years ago, born amid the suffering and pain of Mrs. Eddy, whom I have no hesitation in deliberately pronouncing the most marvelous woman of all the ages.

"Through her labors," he continued, "was opened the way for the world to realize that God is indeed Love; that in Him we have life, not death; for Jesus came that we might have life and have it more abundantly; that healing the sick, raising the halt and maimed, making the blind see, are nineteenth-century possibilities, no less than miracles of long ago; that error cannot live before the light, pain before a healthy mind, nor suffering and sorrow before Love, the love that the Nazarene came to proclaim, the love that means light, life, and thanksgiving.

"That Love is revolutionizing the world!" said Judge Ewing. "Is it strange that it was proclaimed anew in this century by a woman? Woman—last at the cross and first at the sepulchre—in all ages where progress was made has received more nearly her just recognition. Her love has been the symbol of faith throughout, and it shall become the greater until it shall be able to take in its arms the poor fallen sister—scarred in the tempest-tossed and unequal struggle of our work-a-day world for existence—and forgive her and heal her as did the Master of old." The Evening News.

At Riverside, Cal.

The Universalist church was crowded to hear A. A. Sulcer, M.D., C.S.B., speak on Christian Science. The pulpit and platform were beautifully decorated for the occasion, and the speaker was listened to with the closest attention.

J. H. Roe introduced the lecturer in the following words:—

I have been asked to introduce Dr. Sulcer to this audience, but he is so well known to you that I do not think much introduction necessary. I do not know what the doctor is going to say, but I know the subject of his lecture, and I want to say that I endorse it heartily. I consider it the most important subject which can be considered by the thoughtful and intelligent citizens of Riverside. In fact, from any standpoint it is not too much to say that the welfare of humanity depends very largely upon the reception they give to the propositions of Christian Science. If they reject it, sin, sickness, suffering, and sorrow will continue to reign as heretofore for ages past. But they will not reject it—humanity has a brighter future before it than that. They are receiving its blessed truths, and as it is better understood it will be better received; and when accepted fully, sin, sickness, and suffering will begin to disappear, and health, happiness, and peace will take their place.

A wise old Puritan said long ago that some day more light would break forth from the Holy Scriptures; and there are many of us who think the Rev. Mary Baker Eddy has caught a gleam of this light divine, and has reflected it to us from the pages of Science and Health. The fact that the mere reading of that book has cured thousands of sick and suffering ones, goes far to substantiate this claim.

Five years ago Dr. Sulcer was a practising physician, as successful as is customary amongst the medical fraternity, when he passed through some interesting experiences and deep trials, which caused him to seek the help of Christian Science. He found the help, studied the Science, believed it fully, and with the courage of his convictions renounced the practice of medicine, and devoted himself to metaphysical healing through the Christ Truth.

Since then he has in the most practical manner followed the blessed Master, of whom Whittier so beautifully wrote:—

> The healing of the seamless dress
> Is by our beds of pain;
> We touch him in life's throng and press,
> And we are whole again.

Last fall the doctor was called East to attend a class personally taught by Mrs. Eddy, which resulted in his appointment as one of the Board of Lecturers of the Christian Science Church. The doctor is a forcible and convincing writer, and I believe you will find him an equally convincing speaker.

Dr. Sulcer, in an able and interesting address of over an hour, presented Christian Science from several different standpoints.—Riverside Daily Press.

At Santa Monica, Cal.

Wednesday evening, February 8, 1899, A. A. Sulcer, M.D., C.S.B., of Riverside, the official lecturer for southern California, delivered a lecture on Christian Science in Odd Fellows Hall, Santa Monica, Cal.

A large and representative audience filled the hall, some being obliged to stand. Many prominent Orthodox Church members were present, who gave the speaker's words careful consideration.

On the platform, which was beautifully decorated with potted plants, were the First and Second Readers and some of the officers of the Church. After an organ voluntary Dr. Sulcer was introduced by the First Reader, Mr. E. H. Carpenter, who spoke as follows:—

Ladies and Gentlemen:—Something over thirty years ago there was a little, lone star away in the East, shining out very faintly at first. At that time our Mother, the Rev. Mary Baker G. Eddy, was lying on what people called her death bed, her physicians having given her up to die. The light of this little star, though shining faintly, enabled her to see that God could heal her of all her diseases. The result was she arose from her bed, and has given to the world what is known to-day as Christian Science. The little star that shone in the East, has grown full orbed, and now sheds its bright rays of light on every land of the globe.

Our Master said, "And these signs shall follow them that believe." Now here arises a question, Did the Master know what he was talking about, or was he simply guessing at something? We answer most emphatically that he did know just what he was talking about, and we assert that Christian Scientists are believing, for the signs are following them. In this hall to-night are representatives from the Soldiers' Home who have been healed by Christian Science. There are some here from Los Angeles who, years ago, were given up to die, but they are here to-night well and strong. There are others right here in our midst who have been healed. Glasses have been removed from eyes that once could not see without them. Crutches have been laid aside, yes, and chopped up for kindling-wood, because they were not needed any more. All these persons are standing up as pillars of strength for Christ. ORMOND R. NISKERN, Clerk.

At St. Joseph, Mo.

In spite of the inclement weather of Wednesday evening, February 8, a large audience of St. Joseph people who are interested in the teachings of Christian Science, filled the Tootle Theatre to listen to a lecture by Edward A. Kimball, C.S.D., of Chicago. Those who braved the elements were rewarded by hearing an excellent lecture.

The speaker was introduced to his audience by C. M. Howe, one of the most prominent Scientists of St. Joseph. In his introductory remarks Mr. Howe spoke of the prominence in Christian Science circles of the gentleman who was about to address the audience, and of his successful lectures and enthusiastic receptions in other cities.

At the close of Mr. Howe's remarks Mr. Kimball stepped to the front of the stage and began his address. Mr. Kimball has a very good appearance. His address was delivered in such a manner as to impress those who listened, and held their attention until the last word was spoken. The speaker spoke upon Christian Science in general, and handled his subject in an able and convincing manner.

St. Joseph Daily Gazette.

At Saginaw, Mich.

A large and attentive audience greeted Mrs. Annie M. Knott, C.S.D., of Detroit, Wednesday evening, February 15, at Masonic Temple, where she spoke upon "The Doctrines of Christian Science." Rev. George W. Jennings was to have introduced her, but was unexpectedly called to a wedding at eight o'clock, and the duty fell to Mrs. John W. Symons, who presented Mrs. Knott to her audience in a few well-chosen words.—Saginaw (Mich.) Evening News.

The Board of Lectureship.

Dear Editor:—I have desired for some time to say some things concerning the lectureship, but have hesitated because of a fear that it would have a semblance of soliciting patrons. Now that I am out of the Board of Lecturers I can speak with better grace.

No compulsory rule has been laid down that the Churches must have lectures, yet the lectureship exists as one of the institutions of the Mother Church, and was established by our beloved Leader, who has so wisely guided us all the way.

Strict obedience demands that the Churches give to the public this opportunity of gaining a true sense of Christian Science and its work. Pulpit and press have, to a considerable extent, given out an erroneous and a biased sense of Christian Science; and, in other ways, wrong impressions of it have been given, until the public lectures are needed to break down the prejudice which would rob the people of its benefits.

Furthermore, we reach, through the lectureship, a class of people that could not be reached in any other way.

One object of the lectures is to convince the people that Christian Science is a good thing, and start them to thinking and investigating in this line.

That the time for these lectures has come is manifested in the mere fact that we are requested to have them. If the Churches do not consider themselves ready, the remedy is not to defer the lecture, but to get ready for it. The plea of a lack of money is generally not well founded, as the lecture itself will bring added interest and money more than enough to pay for itself.

In most places where the effort has been made, the money has been easily provided, and in many instances in ways never dreamed of. In one place where I lectured, people who were not Scientists, and who attended the lecture, sent in money afterwards, stating that they had been benefited by the lecture and desired to help pay for it.

Where these lectures have been given the interest in Science has increased, proving the efficacy of the lectureship. The lectureship was instituted for the present, and should be used now, even though it require much self-sacrifice.

We should look after all of God's institutions, not simply a part. Then we shall be prospered and find plenty.

If we are lame in one foot we shall limp, though the other may be sound; and we limp because of the lame foot, not because of the one we have cared for and kept well.

Prosperity comes from obedience. Ask the Churches who have given the lectures if they have lost financially by so doing. ALFRED FARLOW.

The Fruits of Obedience.

OBEDIENCE is one of the sweetest words in the vocabulary of the Christian Scientist. In the old thought it often implied a giving up of something that one wanted to do, but which, for reasons of policy, had best not be done. In Christian Science it means a willing yielding to a new call of Love.

In Isaiah, 1 : 19, we read: "If ye be willing and obedient ye shall eat the good of the land." In its construction this sentence always seems to be lovingly mandatory, and not susceptible of interpretation as permissive. It is not ye *may* eat of the good of the land, but ye *shall.*

That this encouraging promise is as operative to-day as ever, and that its fulfilment follows close in the wake of loving, cheerful, and unselfish obedience, has been strikingly exemplified in the experience of Brockton First Church of Christ, Scientist.

Last fall it came to the members of this church that had not the Mother desired the branches of the great church root which she waters and nourishes, should take advantage of the official Board of Lectureship, it would not have been established. It followed logically, then, that if she desired that

Digitized by Google

it be taken advantage of, it was simple obedience to recognize this call to duty and obey it.

Upon this thought, and this thought alone, a lecture was brought about by a Church which then had but twenty-eight members and an average attendance of forty-five. Love for and obedience to our Leader were the only incentives, and no other argument was put forward. Nobody questioned whether the Church would profit by a lecture, or whether the individual members would. It was enough to know that it was the right thing to do. For the time, all sense of gaining anything from it was lost sight of. It was not, "Will it pay?" but "Let us obey." In this spirit the lecture was had without trouble, even with so small a number; and inside of three weeks Rev. William P. McKenzie spoke to an audience of several hundred in one of the large halls of this city.

Now for the sequel. As has been said, no thought of gain had been expressed while the demonstration was being made, but the next Sabbath the attendance at the church service markedly increased, and the next, and the next, and so on until the average attendance was nearly fifty per cent above what it was when the lecture was held. This gain was made in a little over two months.

To me this visible increase in numbers is the direct fruit of obedience. Carrying out the wishes of our Leader, so far as we saw them, without hope of gain, the increase came, as it always will come when Love and obedience lead in demonstration. In this Church the promise of Isaiah as quoted above, has been fulfilled. HERBERT S. FULLER.

Brockton (Mass.) February 27, 1899.

Christian Science. A Reply.

To the Editor of the Republic:—

I have just read in the last issue of your excellent paper what appears to be an editorial, entitled, "A Good Time Coming," in which the writer attempts to tell what Christian Science is, calling it fanaticism, and substantially saying that no one in Parker County or in Weatherford had ever received any benefit from Christian Science.

I thank you, Mr. Editor, for kindly allowing me space in your valuable paper for a reply. I shall not attempt to write on the theology of Christian Science, but will only reply to two points in a said article, to wit: whether anybody has been benefited by Christian Science, and the question of paying for healing through Christian Science.

For the last eighteen months I have been a close student of the teachings of Christian Science, and through the understanding gained from such study, I have been able to make demonstrations over sickness for myself and others. Any honest student of Christian Science can demonstrate it in healing, in proportion to his understanding of the Principle. No one can gain this understanding without carefully studying the Christian Science text-book, "Science and Health with Key to the Scriptures," in connection with the Bible.

The question has been asked, Has any one in Weatherford or Parker County ever been benefited by Christian Science? A lady of this city was healed of asthma a few years ago, and is now well and strong. In this county three men over fifty years old have been healed of the tobacco habit, the desire for it being destroyed by Christian Science in a few days. During the last month, in this city, some of the cases which have been successfully treated by Christian Science are colds, grip, pneumonia, neuralgia of the heart, and inflammatory rheumatism. Other cases of healing have come under my observation, namely, apoplexy, female trouble, liver complaint, chills, passing of the gall stone, neuralgia, and bloating, some of which had defied medical skill.

The fact that Christian Science cures at all, shows that there must be something in it, and if we fail to effect a cure, it is from a lack of understanding, and not the fault of the Principle. The disciples of Jesus sometimes failed, but the fault was not in the Principle.

As to the pay question, there has been more gratuitous healing done by Christian Scientists in Parker County, than that for which money has been paid; but it is the rule to charge for treatment if the patient is able to pay. When Jesus sent out his disciples at one time he said, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers. . . . The workman is worthy of his meat." (See Matthew, 10 : 7–10; Luke, 10 : 7; and 1 Timothy, 5 : 18.) Are you willing to pay your doctor for treating you? Are you willing to help support the ministry? or will you withhold your support because he says he is working in the Lord's vineyard? Then why not be willing that a Christian Scientist should collect a reasonable fee for his services?

The doctors of medicine in this city are noble, self-sacrificing men, and untiring in their efforts to alleviate the sufferings of mankind, and I honor them for working up to their highest understanding, and feel grateful to each of them who has rendered me service when called upon; and especially do we love the dear good doctor, who stood by us and did all he could for us while we were under the medical thought. I also love the ministers who are lovingly and courageously striving to lift the thought of their congregations to a higher understanding of God.

Now, Christian Scientists fully believe that they have found a spiritual and more effectual system of healing, and also a higher understanding of the religion of Jesus; and why should they be maligned and scoffed at, and uncharitable things said about them and their religion? If it be not of God, it will come to nought.

May the spirit of brotherly kindness so rule in our hearts that we may not so far forget ourselves as to be intolerant in religious matters. Very respectfully,

A. C. R. MORGAN.

The Weatherford (Texas) Republic

A Remarkable Case of Mental Dentistry.

To this age has come a glorious light. The words and works of Jesus have been revealed to us in our text-book, "Science and Health with Key to the Scriptures," so that all may come and share the Light of which St. John said, "He was not that Light, but was sent to bear witness of that Light. That was the true Light, which lighteth every man that cometh into the world." We had heard of this light before coming into the understanding of Christian Science; but now our eyes behold, that our feet may walk therein and not stray.

We ofttimes hear some who are just coming into this (to them) new Light, say that they cannot always see clearly. Let me give to such my experience while taking a trip on my wheel a distance of one hundred and twenty-five miles in South Dakota. One evening going from one station to another, I got off the main road, and followed the railroad. This was full of weeds which would get into my wheel so that I had to get off and walk. By this time it was dark, no house to be seen, and I had gone too far to return. The best thing I could do was to keep going, and I should reach the station. Whenever I was on the top of a hill I could see the lights of the city; but when I was in the valley it was dark. Each time the light would appear brighter and clearer, until I reached the city.

I think it is often so in making our demonstrations. When we get out of the valley of self we see the Life divine, in which there is no darkness, sin, sickness, nor death. Being accustomed to believe that there was life in matter, we have many valleys to cross, until we see the real and true Light. In Science we have the proof, and can also "bear witness of the Light."

Eleven years ago I was suffering with my back, heart trouble, and other ailments. One remarkable demonstration took place of which I was not conscious at the time. I had always had poor teeth, and would walk the floor many a night with the toothache. A few weeks before taking treatment in Christian Science I was taken to a dentist, who, after examining my teeth, said I had come too late to have them saved. Six double teeth had cavities and three front teeth were loose. He extracted the one that bothered me most, and told me to come again when I felt better. I can truthfully say that I never again thought of my teeth after I had Christian Science treatment, until a year later when I met the dentist, and remembered that I had not even settled my bill. I told him I would call and settle the next day.

When the dentist again examined my teeth, he said, "What have you done?" I said I had not done anything. "This is beyond my comprehension," said he, "there is not a cavity, and they are all solid." I then told him I had been taking Christian Science treatment and studying Science and Health, and my teeth were entirely out of my thought. This was in the year 1887, and I have not had the least trouble since.

Two years ago in South Dakota I started to take a drive of twenty-two miles. After I had gone fifteen miles a terrible blizzard came up, and I had to unhitch and lead the horse, and yet could realize God's all-ness and ever-protecting care, which kept me cheerful, and I could sing all through the storm Hymn 92 in the Christian Science Hymnal. At twelve o'clock that night I reached the house of my friend, who was also a Christian Scientist.

I am now in El Reno, Oklahoma. We have a little band of earnest workers, and while the growth is not rapid, we feel sure that the work is going on, and the leaven is working. We have a Christian Science Reading Room, hold services Sunday morning and evening and Wednesday evening. My sister has a little Sunday School class. Many who have been healed have gone to other places, and while we miss them from our little fold, we know that they will sow the seed "beside the still waters."

Magdalena Weischedel, El Reno, Okla.

Miscellany.

Cinching the Scientists.

The bill to amend the act to regulate the practice of medicine in the State of California, is one which is causing considerable discussion in the public press and in the several societies whose members are devoted to the cure of disease. The bill in question is aimed at that certain class of people who claim to be Christian Scientists, and the purpose is to prevent them from attempting to cure disease or to assist people to maintain a state of good health.

Now this may appear all right to the legislative mind and to the minds of those who try to cure disease by "regular" methods, but to the man in whose vision "all doctors look alike," a measure of that kind appears to be the climax of paternalism and an act of dangerous interference with the liberty of the individual. It may be well enough to protect the individual from the fraudulent wiles and deceits of charlatans and quacks, for here the fraud is the thing aimed at; but to deny to all persons the right to give advice as to the proper manner to maintain good health is carrying the matter to an extreme.

Furthermore, there is yet another class of people concerned in the imposition of such a measure, and that is composed of a very large number of people who want to choose their own manner of living and dying. Why shouldn't a man have the right to try a dose of faith as well as a dose of drugs? The proper view to take of this question is from the standpoint of individual liberty. The safest rule to follow is that which gives equal rights to all men.

The Mercury knows nothing about the principles of Christian Science, or whether the followers of this school can really and truly cure disease, and, therefore, is making no defense of their doctrines. Neither does it deny them. Its position is simply that of an individual who wants to have the liberty to do as he pleases maintained. Many of our distinguished and intelligent citizens believe in the doctrine of Christian Science, and we see no reason why they have not as much right to such belief as the doctors of medicine have for belief in drugs.

Its teachings are for the betterment of humanity, to say the least, and the lawmakers can devote their time to much better purposes than to try to establish laws to abridge such salutary efforts toward intellectual advancement. It would be better for the legislature to study and practise a little more such Science themselves. We think it would materially improve the atmosphere of the Capitol.—San Jose (Cal.) Mercury.

Vaccination Proves Fatal.

Dora Weatherman, a little eleven-year-old girl living at 3013 South Ninth St., died yesterday at one o'clock of tetanus, or lockjaw, which Dr. Teters says is the result of compulsory vaccination at the Bancroft school about ten days ago.

The girl's arm was not so sore as to be very painful several days after the vaccination. In fact, it was never in a serious condition; but Friday night she was taken with convulsions, and between that time and the hour of her death, at one o'clock the next day, the little frame was racked with sixteen convulsions.

"If she had been my patient," remarked Dr. Teters last night, "I would never have vaccinated her—such a frail and weakly appearing little girl. She was vaccinated by the hypodermic method, which I consider is the most dangerous of all. This plan of injecting the virus with a pump is employed where the subjects are numerous and the operation is hurried. I have seen lots of sore arms, but those which are the result of hypodermic injection are the most alarming and produce unnecessary suffering. I am not saying this in a spirit of criticism, but it is my opinion and that of a number of other physicians of this city.

Dr. Teters says that he was called to the Weatherman household Saturday forenoon after the child had had a number of convulsions. He is firmly of the opinion that the lockjaw was the result of this method of vaccination, and condemned it in the most severe terms.

Omaha World-Herald, February 12, 1899.

Starved Herself to Death.

A peculiar case of overwrought imagination was that of Miss Mollie Danner, aged thirty-two, who died at her home in Mitchell, Ind., February 1. Her trouble was thought to be cancer of the stomach, as she complained constantly of intense pain. For a long time she has refused to take food, and nourishment was supplied by injections. At the post mortem examination the stomach was found to be in the most perfect condition, and it was decided that her trouble was hysteria. She imagined the intense pain in her stomach, and in refusing food virtually starved herself to death.

Won't Do.

A New York man who had the grip for four years in succession escaped it this year because he says he kept his feet dry, and now feels sure that the disease is contracted through the feet. And right on top of this another man comes along and says he has had the grip for five years in succession, and wears two wooden legs.—Henry County Weekly.

Christian Science is not understood by merely listening to the attacks upon it, any more than are the Scriptures.

Utica (Ill.) Weekly Gazette.

Questions and Answers.

Do you (Christian Scientists) really mean what you say, when you declare that the attacks from pulpit and press upon your system, aid your cause, or do you say so as a mere matter of bravado?—T. S. B.

A frank question, truly, and meriting a frank answer. Yes, dear friend, we mean just what we say. These attacks not only aid our Cause, but the Christian Scientists themselves. Persecution is wholesome in many ways. It keeps us alert. Left only to the sweeter phases of our ideal life, there would be danger of our lapsing into a fanciful transcendentalism, more of a hazy-intellectual than a spiritually-active sort.

We need the jogging of persecution—or that which seems to be so—to keep us in tune for good healing work.

In this connection we call especial attention to the article by the Rev. Mary Baker Eddy published in the Concord Monitor and in the last Sentinel. We herewith republish the concluding part:—

"I am patient with the newspaper wares, and the present schoolboy epithets, and the attacks of a portion of Christendom:—

"(1) Because I sympathize with their ignorance of Christian Science:

"(2) Because I know that no Christian can or does understand this Science and not love it:

"(3) Because these attacks afford opportunity for explaining Christian Science; and,

"(4) Because it is written: 'The wrath of man shall praise Thee: the remainder of wrath shalt Thou restrain.'

"Rest assured that the injustice done by press, and pulpit, to this denomination of Christians will cease, when it no longer blesses it. 'This I know, for God is for me.'—Psalms. And in the words of St. Paul, 'If God be for us, who can be against us?' "

Here is a full answer to our question.

Need we a better exhibition of Christly charity than this? Broad and deep indeed is this charity, for it is the reflection of the Love that is infinite,—the God-love.

***

When you (Christian Scientists) pray, do you address God as a person?—Same inquirer.

Christian Scientists pray to, not at, the God that is Love, —universal, omnipotent Love. Their constant effort, their earnest desire, is to keep so instantly near to divine Love that they reflect it in their daily living. This they understand to be the unceasing prayer taught and exemplified by Jesus. By this prayer they heal sickness and overcome sin. They commune with God by ever *knowing* Him to be their Life, Health, and Strength. No matter what their occupation, this thought is *first* with them. It has—so to speak—the "ground floor" in their consciousness.

Testimonies.

Defective Eyesight Healed.

It is remarkable that when a false claim has been fairly met and fully overcome in Christian Science, it is indeed blotted out (Isaiah, 43 : 25).

For over fourteen years I wore eyeglasses that were especially ground, on the prescription of a skilled oculist who diagnosed the disease as myopia and astigmatism, and who prognosticated that I would always require the aid of glasses to be able to see properly and get immunity from the claims of aches in the eyes and head. All of which has been proven false.

Before the demonstration was made I advised a stenographer to try Christian Science treatment for a similar claim. She reminded me of the fact that I wore glasses, and said that I had better get some for myself before I recommended such therapeutics for others. I told her she was right, and I would never again wear them.

From that time, I regularly declared, night and morning, that man was, and is, made in the image and likeness of God, therefore his sight expresses perfection. Whenever the false claims tried to assert their validity through opticians and those who use their wares, I faithfully "stood porter at the door of thought" (Science and Health, page 391), denying their claims and affirming the Truth of Being. Thus, hour by hour and day by day, I have grown out of the false into the true.

The senses became more spiritualized, expressing more perfection in their action, so that within eighteen months from the time I began to handle the claim in Science I found myself able to read the finest print and see distinctly distant objects that before were invisible, and the aches and pains which caused so much uneasiness and suffering were gone.

The gain made in the understanding of God cannot be put into words. Suffice it to say, passions have been subdued, desires refined, temper and tongue controlled. Thus, where once glasses and the false mental conditions that always accompany them seemed so essential, it now seems strange that I could ever have subscribed even to a belief in their necessity. Louis Bendit, St. Louis, Mo.

Mental Surgery.

I should like to give an account of a case of mental surgery which occurred here last August.

My baby, a year and a half old, accidentally had his shoulder dislocated. He began screaming in such a way that I knew something was wrong, and immediately undressed him, and the trouble was plainly evident. His little arm hung perfectly limp, and he screamed loudly if even his fingers were lifted.

Feeling that my slight understanding of Science was not sufficient to destroy my own fear and meet the claim for him, I ran over to the house of our leader in the work here and asked him to treat the baby.

I then came home and put the baby to bed, where he slept quietly most of the night, but cried out if his arm was moved ever so slightly.

The next morning I put him in his high-chair, and going to the healer's house asked him if I should not have a surgeon in a case of this kind. He assured me with quiet composure, "Truth is equal to any emergency." I went back perfectly satisfied, and had not been in the house ten minutes before the baby suddenly threw both arms over his head and the bone snapped into place. He then began waving, first one hand and then the other, laughing gleefully, seeming to understand that harmony had been restored, for he was perfectly healed and has had no further trouble with his arm.—Mary R. Bolton, Joplin, Mo.

The Mind-Healer Failed.

About three years ago I first heard of Christian Science. Having at that time an attack of chills and fever, I asked a healer who called himself a Christian Scientist for treatment. He gave me a week's treatment. I followed his directions not to use any medicine, but grew daily worse, until at the end of the week, unable to endure the pain any longer, I fell back on the old remedies which gave me temporary relief. I also tried to overcome the habit of smoking, but the same healer told me that there was no harm in it. I afterwards learned, that he was not a Christian Scientist, but a mind healer. Almost a year after this experience, I was taken sick again with the same malady; this time I asked treatment from a loyal student of the Rev. Mary B. Eddy, and in two treatments was entirely healed. I then bought a copy of Science and Health and by simply reading it lost all desire for both smoking and drinking.

In every number of the Journal and the Sentinel I find

Digitized by Google

some testimony that is just what I need to help me along in my work, and I am very thankful to the one who through demonstration has shown us the way to health and harmony.—Julius Stein, Peoria, Ill.

Two years ago I called to see a lady who had reached her one hundredth year. She had had a shock, the family said, and was unable to speak. After having three treatments she was healed, to the joy of her friends. The day before Thanksgiving, 1898, she received her many friends, it being her one hundred and second birthday. She is a lovely old lady, and does not care to talk upon any subject but the Bible and her heavenly Father.

Another demonstration was last fall. A young lady called, said she had been through two operations, and two physicians had now advised her to go to the hospital. While at her mother's visiting in summer, the old family physician was told of her condition and what the physicians had said, and his reply was, "If you go you will never come out," and she said to me, "Now, what shall I do?" I said, "I know no other way than the Christ-Way—the way I was healed." In three treatments she was healed, and is doing her work, walking about wherever she chooses to go.

Ruth A. Brierly, New Bedford, Mass.

A Locomotive Engineer Healed.

My wife was an invalid for nearly eleven years. She was sent to a hospital for treatment, but after returning was worse than ever. A friend asked her to try Christian Science. She did so, and we thank God for what it has done. She is now well, and is helping others.

For years previous to my taking up Christian Science, I had been subject to piles, rheumatism, lumbago, heart trouble, and also the habit of using tobacco. I have been healed of all these by reading and studying Science and Health.

Two years ago I thought I would have to give up work (I am a locomotive engineer), but feel now that I am good for a number of years.

There are about fifteen who meet on Sunday at my house to study the lesson. We expect soon to secure a public place for our services, and then organize a society.

W. M. Camp, Clinton, Ill.

The Sentinel has helped me in many ways. After reading it I go on with renewed strength for the work. There are always words of cheer, and I find they are doing good work, for it meets the need of the people. Reading the paper leads them on to the reading of our text-book, Science and Health. I wish to express my gratitude for what I feel the Board of Education has done for the Field in destroying the error that would hinder the advancement of our beloved Cause.

It is five years since my thought was first directed to Christian Science. I sought help for physical healing, but did not receive until I was made to see there was something for me to do, that I must take up the cross and bear it. Divine Love directed me to a loyal teacher, and since that time I have worked earnestly and gladly for the Cause, never doubting, but taking the steps as they were presented to me. I have been blessed more than words can tell, and I thank God that I am being awakened to hear the admonition, in the words of Jesus, through our beloved Mother, "to watch."

Mary Sturtevant, Ogden, Utah.

As I am obliged to support myself and little daughter, I have a restaurant and bakery, and do most of the work myself. In one corner I have placed a table which I call my reading table. On this are the Bible, Science and Health, Quarterly, Journal, Sentinel, Washington News Letter, and tracts.

Almost every one who comes in takes something from the table to read while waiting, and sometimes they ask questions about Christian Science. Some of the seed falls on good ground, some by the wayside, and some on the rocks. I keep on sowing each day as I have opportunity, knowing that God will give the increase. I always try to keep my consciousness filled with Love.

Mrs. H. B. Pender, Mancelona, Mich.

One day I called upon an elderly lady who said she was suffering from a painful knee. She had been thrown by her dog some time before, and had struck her knee. The entire limb was swollen and painful, and the doctor had said that the ligaments had grown fast to the bone, and a surgical operation was necessary to loosen them. I denied this and declared the Truth, talked about Christian Science for an hour or so, but did not treat her. I thought no more about it until two or three months after, when I called again, and she said she had had no pain or trouble whatever from it since the last time I was there. Surely, "the Truth" does "make free" indeed.—Carrie B. Booth, New Haven, Ct.

Notices.

Free Distribution of Literature.

Upon the recommendation of a Christian Scientist known to the Publishing Society, the Sentinel and the Journal will be sent free for one year to any Public Library having a Reading Room. This free subscription may be continued if the recommendation is renewed.

Upon request from the clerk of a church where a lecture is to be given, copies of the Sentinel will be sent by mail, postpaid, for free distribution to strangers and inquirers at the lecture. Order blanks may be had from the lecturers, whereon clerks will specify the number of copies required for this purpose. These orders should be sent to the Christian Science Publishing Society early enough to secure delivery of the papers in time for the lecture. If sent by express, they will be sent at the expense of the receiver.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen. Send orders to Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

No subscriptions for the Quarterly will be received for less than one year. No subscriptions for the Sentinel will be received for less than six months. Orders other than subscriptions, for Sentinel, Journal, and Quarterly, should be given for current issues and back numbers only.

The next admission of candidates for membership with the Mother Church will take place June 3, 1899. Applications to be presented at that time must be in the hands of the clerk on or before May 15.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per capita taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We wish to state that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, WATC

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MARCH 16, 1899. | Vol. 1 No. 29

Dr. Watson at Tremont Temple.

Ian Maclaren again lectured in Boston on the afternoon of March 6. The welcome extended to him by his audience was genuine and hearty. Dr. Watson, who was in excellent spirits responded with some introductory remarks in his happiest style, and then gave his listeners a literary treat in the form of a lecture on "The Place of the Minister in Scotch Life."

Dr. Watson said:

I retain a very grateful recollection of the cordial welcome I received on a former occasion in Boston. Since that time various things have happened, and on our side we are very glad to know that your feeling toward England has not grown less cordial during the last two years. (Applause.) It is not necessary that nations which belong to the same family should be forever making protestations of affection; for, indeed, from our Scotch standpoint, overmuch of a thing is not always a proof of permanent friendship. (Laughter.)

It is better to take this friendship for granted. But it is a good thing that, in time of trouble, this friendship should appear on the surface, for friends in need are friends indeed. It is not for me to suggest that you have any need of our friendship. And yet, a person is very grave, and a person is too good for this world, who is not glad to know that people are friendly; and during the last year I can safely say that whole nation, from the highest unto the lowest, had a very warm heart toward the United States. (Applause.) You had no need of our help, yet it is an open secret that if you had been harassed from any quarter, such help as we could give would not have been wanting. (More applause.)

And any incident taking place in history that would bring together for a short space, and in a more or less bloodless manner, the forces of England and the forces of your great nation, so that their flags should wave together in the cause of freedom and of civilization — that incident, I say, would be a happy thing, not only for our people, but also, I believe, for the civilized world. (Loud applause.)

✠

Dr. Watson then began his lecture by citing some comments in which Buckle had traced certain characteristics of the Scotch to the Scotch kirk. There are nations, he continued, which have been made by politicians, and nations which have been made by the trader; but of this Scottish people, as it is now known, it must be said that everything that is peculiar to its character and its spirit has been created by the kirk of Scotland. Some nations culminate in a king, some in a nobility, and some threaten to culminate in millionaires, (laughter,) but the Scottish people culminate in the minister. (More laughter and applause.)

And whatever he may be from the worldly, the political or the humanist point of view, he is the very embodiment of the Scottish kirk. The Scottish minister is to-day the most powerful, and the most active, and the most beloved man in his parish. I am speaking of him, not as an individual, but as a representative. For behind him there is a historic past; he is, in fact, a symbol, and he is the symbol of the liberties of the Scottish people.

Here Dr. Watson took his hearers to the sixteenth century, and there disentangled from the crowd of celebrities two figures — the figures of Mary, Queen of Scots, and John Knox. Speaking of Mary, he dwelt on her beauty, her power to attract and fascinate the men of her time, and her extraordinary learning, which fitted her for controversy even with expert theologians. It was this girl who, going to Scotland as its Queen at the age of eighteen, soon put an end to the turbulence that prevailed, and won the common people over to her side.

As the very antithesis of this fascinating creature stood John Knox, the reformer. No one could accuse him of dangerous beauty in personal appearance. The lecturer could not call him even a liberal man. Yet it must be said that in the great battle between the two opposing tendencies which then divided Scotland — the conservative and the liberal, the aristocratic and the democratic — with the Scottish nation as the prize, to fall to whomsoever might win — Knox led the popular cause, while the aristocratic side was championed by Mary.

✠

It was the time, moreover, of Elizabeth, and Elizabeth, it must be remembered, loved England so much that she was willing to offer herself in marriage anywhere in Europe if the interests of England could be advanced by her marriage. Mary, on the other hand, loved France better than Scotland, and Darnley better than France and Scotland together. It was the old tragedy — too much women, too little queen. If, after winning the common people over to her side, Mary had died, she would have had the reputation in history of one of the most successful queens, as well as that of one of the most attractive of women.

She had only one opponent, Knox, and to dispose of him, she invited him to Holyrood. The dispute began. The Queen put to good use her acquirements, but was soon worsted in the controversy. Resorting to the last weapons of a woman, she burst into tears. If Knox had had the making of a courtier in him he would have yielded. But he stood firm, passed from the interview to his own pulpit, and there declared the freedom of the people of Scotland. (Applause).

The lecturer, after characterizing the personality and career of King James, cited from his own writings some characteristic sketches of the life of the Scottish kirk and parish.

Items of Interest.

At the London Chamber of Commerce banquet recently, M. Paul Cambon, French Ambassador to Great Britain, was the principal guest. In reply to a toast, he said that peace and war no longer rested with governments, but with the peoples. He noted with great pleasure the determination of the promoters of commerce in Great Britain and France to augment the cordiality of the relations between the two nations and to foster "that real spirit of conciliation by which all differences can be readily settled."

The official statement of Representative Cannon of Illinois, chairman of the House Appropriation Committee, summing up the appropriations of the fifty-fifth Congress, shows an aggregate appropriation by the entire Congress of $1,566,890,016, and for the session just closed a total of $673,658,400, with authority for contracts subject to future appropriations amounting to $70,000,000. Of this sum $482,562,083 is directly chargeable to our late war with Spain or incident thereto.

James E. McKinley, a distant relative of the President, has prepared an authentic history of the McKinley family for hundreds of years back. The first known of the family was in Scotland and the early members fought in the clannish wars. Some of their deeds being chronicled by Sir Walter Scott in "The Lady of the Lake." Some of the ambitious and venturesome ones went to Ireland to fight against England. From that branch of the family descended the President.

The new Spanish Cabinet has been well received by the Conservatives and the business world, but the Democrats and Republicans denounce it. The Weylerites are violently opposed, and stormy times are predicted. The elections to the Cortes will take place in April next. A diplomat at Washington who has been minister to Spain, says the new Cabinet is a good one but there are too many factions opposed to it and predicts that it will not live long.

The situation in China will be closely watched by the state department and by the United States minister at Pekin. The United States does not favor the surrender of Chinese territory to Italy or any other power. Minister Couger has not been instructed, however, to go further than to join the British and the Japanese ministers in protesting against any policy calculated to close Chinese ports to the trade of the world and against the partition of China.

The Italian minister has been informed that his dispatch asking for a concession at San Mun was returned to him because it was impossible to comply with the request, and because a refusal might have endangered the relations between Italy and China; but it was added that as the action had been misunderstood the Chinese minister in Rome had been instructed to express the Tsung-li-Yamen's regrets.

President McKinley the second time tendered the position of librarian of Congress to Hon. Samuel J. Barrows, who declined it with thanks. The reason given was that he felt it would be impossible for him to do justice to the position without the hearty support of the Senate, which was withheld by the failure to act on his previous nomination.

The Rev. Francis E. Clark, D. D., the head of the United Christian Endeavor has sailed for Jamaica where he will attend five conventions in different parts of the island in the interests of the order. At each of these conventions he will speak on Christian Endeavor work.

It is reported that Otis and Shafter will be the two additional major-generals in the regular army, under the new bill which provides for five, Miles, Merritt and Brooke being already on the list. The re-organization of the regular army will be completed at once.

The naval bill as finally passed by Congress provides for three battleships, three armored cruisers, and six protected cruisers. The cost of these exclusive of armor and armament, not to exceed $3,600,000, $4,000,000, and $1,141,800 each respectively.

The United States Supreme Court has decided that the sugar bounty paid by the government belongs to the producer of the sugar, and not the grower of the cain whereof the sugar is made. This reverses the decision of the Louisiana Courts.

Lieutenant-Commander Corwin P. Rees, who was the executive officer of the flagship Olympia at the battle of Manila Bay, was the guest of honor at a banquet recently given at the Union League Club of Brooklyn.

Inspector General Roloff has completed the list of the Cuban Army. He estimates the total number in the army at fifty thousand, of which twenty-five thousand are officers or officials holding commissions and entitled to officer's pay.

It is reported that Rear Admiral Schley will request Secretary Long to appoint a court of inquiry to investigate his conduct during the war with Spain, which has been the cause of so much controversy.

It is reported that the Representative Cubans are annexationists, and are anxious to see the United States keep its army there until everything is running smoothly and Cuba is ready to be annexed.

For the month of March the various provinces of Cuba, except Santiago, have made requisition for two million rations. Instead of diminishing the requisition has doubled since January 1.

The joint assembly of the Utah Legislature adjourned *sine die* March 9, without electing a United States senator. One hundred and sixty-one ballots were taken.

Rev. Dr. T. DeWitt Talmage has resigned his position as pastor of the First Presbyterian Church, of Washington, D. C. He will devote most of his time to literary pursuits.

United States Ambassador White and Mrs. White recently attended a banquet given by Emperor William and Empress Augusta Victoria, to the members of the diplomatic corps.

The United States ambassador and Mrs. Choate recently attended a reception given by the Marchioness of Lansdown, wife of the Secretary of State for war.

England will spend about £28,000,000 on the navy during the coming year which will be increased by four or five thousand men.

Japan is supporting China in her resistance to the Italian demands for a concession at San Mun.

The Czar's peace conference will meet at The Hague, May 18.

Immediate Cures.

IT is with pleasure we re-publish the following from a a recent issue of the *Boston Traveler*. This just acknowledgment by the press, of the good work which is being done by Christian Scientists, is in striking contrast with the unjust criticism they have so long endured:

"The prevalence of the grippe in Boston and vicinity has been more marked lately than for some time previous, but the Christian Scientists of the city claim that because of their ministrations the epidemic has greatly abated.

A representative of *The Traveler* has visited several Christian Science practitioners on the strength of the statement that a number of notable cures in the way of the grippe had been effected. It cannot be said that any kind of investigation was made of the cases reported. Indeed, no work of verification even was tried, mainly because the practitioners did not care to give out the names of the persons who had been cured.

It remains, then, that the stories of the cures are to be accepted only upon the word of the Scientists, but the representative can say that the practitioners, whose names must also be withheld, related their experiences with sincerity and faithfulness, evidently desiring to say nothing not the truth, and these considerations, together with the fact that the healers are persons of high repute, combine to render the statements of more than the ordinary weight.

If such cures are being effected day after day in our very midst it is no more than justice to the Christian Scientists, and to the people not of that faith, that the word should be brought out, especially in view of the fact that when a Christian Scientist loses a patient by death, the world is certain to hear and certain to condemn.

One of the healers called upon has practiced for nearly a score of years. His manner is not a way which can well be told of. Simple, direct, straightforward and open-hearted was the bearing of this man, and the visitor in his presence felt a strange peace come upon him, as he listened to the words of the man whose life was wrapt up in his faith.

"You come to have me tell of cures?" he asked.

"I suppose," he went on, "that it is unnecessary for me to tell you that we have a great many of them, far more, I suppose, than people outside the church ever become aware of. Yes, the cases of grippe have been very numerous lately, and we have had more cases of this nature to attend to than of any other kind of sickness."

"How long, on the average, does it take you to cure a case of grippe?" was asked.

"The grippe ailment is usually destroyed in from three to six days, but there are instances in which the patient is well in much shorter time than that. For example, only two weeks ago I had a case of instantaneous healing.

"A sick mother sent her son here to me in the middle of the night. I had gone to bed, and when the young man rang the door bell, according to my custom, I went to my window, looked out and spoke to my caller.

"The young man said to me: 'My mother is suffering from the grippe, and is coughing incessantly. I fear that she has pneumonia.' I told the young man that I would treat the case. I went back to bed and read, and treated the case.

"The next morning I received a letter from the woman whose son had called upon me. 'Within an hour after my son left me to go to your house,' she wrote, 'my cough left me, and I called myself well.'"

"Is it not out of the ordinary to treat the unseen patient?" was remarked.

"Not at all; half of our patients are absent. I treat many persons whom I have never seen. The case which I have just referred to was the only instantaneous cure I have had for some time. I could quote to you many other cases where very quick healing has been brought about."

"How about the skeptical sick people that come to you to be made well: are such persons cured as easily as the others?"

"Many who are skeptical are cured. They come to us and say: 'I have no faith, but I want to give it a fair trial.' That is all we ask of them to begin with. There is nothing unnatural in Christian Science healing. All of our sciences are but the natural workings of laws, and Christian Science differs only from these in that it is divinely natural."

A woman practitioner, upon whom the representative next called, was more vigorous in the expression of her sentiments than the gentleman referred to above. Not hesitating to uphold the value of her belief, she laid great stress upon the large number of people who were dying in Boston from grippe who were under the care of medical doctors. She went on to say with quiet firmness, which contained no spirit of boastfulness, that the Christian Scientists have lost not one case of the grippe during the present epidemic.

"I am not myself," she said, "a regular practitioner, but I have cured ill friends in from one to two days. It is very rare indeed that a case lasts over two weeks. Some of my Scientist friends are treating from fifteen to twenty cases every week. What is to be said when so many people are made well? Surely Christian Science is not to be vilified."

"How can one best get to know the truths of Christian Science?"

"Christian Science is not to be driven in. It cannot be forced upon anyone. He who would know the Truth must seek the Truth himself, and rely upon no man. The best method is by reading the Christian Science text-book by Rev. Mary Baker G. Eddy. Some can assimilate only a little at a time and others a great deal. The quantity matters not, for the Truth will surely grow upon the heart, making it its abiding place and never leaving.

"I know a young man who came to America from England a few years ago. His mother died just before he started, and her last words to him were these: 'When you get to America look about for a religion that heals, for that religion will be the true religion.'

"The young man came here and was educated in one of our great universities. No religion that he found satisfied. One day he went to a business office and was obliged to wait some time for the business man he wished to see. On the table was a copy of the Christian Science text-book, SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, which he started to read. He read three hours, but did not realize it.

"At the end of that time the business man came in. 'Well,' said the young man to him, holding up the text-book, 'here is a religion that heals.' 'Precisely,' said the business man.

"I need not add that the young man became a Christian Scientist. This is the way that the truth of Christian Science comes. This is the religion which is quietly, unostentatiously, but steadily healing sickness today."

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

The Christian Science Sermon.

III.

THE INTERPRETATION OF THE SERMON.

IT is not too much to say that the work of the Readers of the Christian Science sermon is an exalted task. As the sermon contains the truth of God, it will, if rightly interpreted, fulfil the work of Truth of which Christ Jesus spoke saying — "You shall know the Truth, and the Truth shall make you free." The sermons of Christ Jesus healed the sick and the sinful. So would every Christian Science sermon rightly interpreted and understood. The Reader then voices the word which heals, — of which it is written — "He sent His word and healed them." The Reader is an ambassador of the King, nothing in himself, everything in the message which he brings; a message which sets the captive free and restores to the outcast his rightful heritage. How sacred the task! How noble the mission!

In the work of the Reader there are several things to be considered. The Reader should be correct in his English, and the words correctly pronounced. The Readers should be so familiar with the sermon that the reading from commencement to close will be continuous and smooth. He should know that each scriptural passage has a two-fold meaning. It has the outward form and the inward spirit. It has its plain statement of fact and its spiritual interpretation. It has its body of Truth and its heart of Love. His first duty is to become acquainted with the outward. In the case of the Bible texts, the first Reader should familiarize himself with the Bible references and the second Reader be thoroughly acquainted with those from SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In the case of the Bible texts then the Reader should study the context, and if an historical incident be referred to he should learn the whole history of the event named. In this study he may be helped by Smith's Bible Dictionary, the Revised Version of the Bible, Rotherham or other equally high authorities. Having a clear understanding of the outward facts concerning the Bible passages, he should study them in connection with their correlative passages from SCIENCE AND HEALTH to learn their scientific meaning. Then with prayer and meditation he will behold their deep inward meaning, and grasp their profound spiritual import.

While this study has been going on he has most likely seen the truth which each section of the sermon is intended to set forth. And he sees the intimate bearing which each part has toward the subject as a whole. If not, further study will reveal it. Often the first sentence from the first SCIENCE AND HEALTH reference will reveal the import of the section. Often every Bible reference in the section will deal with the phase of the subject to be presented. Again the study of all the passages may be needful to unfold the teaching of that division of the subject. As every architect, to rightly build a house, first sees its frame work, so every interpreter of the Christian Science sermon should know its frame work. Understanding this, his interpretation will have strength and character.

As all understand, an important item in the preparation to rightly interpret the sermon, is the unity of thought and unity of spirit between the two Readers.

Having done all to rightly interpret the message of the sermon, the true interpreters will give earnest heed to the words of Paul. "Not that we are sufficient of ourselves: but our sufficiency is of God; who also hath made us able ministers of the new testament; not of the letter, but of the spirit: for the letter killeth, but the spirit giveth life." Truly the Reader is sufficient for his task only because he knows that the work is God's. His highest preparation is that of the Spirit which giveth life. "More than regal is the majesty of meekness," our Leader has declared. And nowhere is meekness more regal in its majesty than in the Reader who does not think anything of himself, but of the Royal message which he bears from the King of Kings, to the waiting hearts, eager for the glad tidings of peace and good will.

Christian Science in Daily Life.

I DESIRE to express my gratitude for what Christian Science has done for me in a business way. I do not mean in a financial way only, but also in all intercourse with my fellow beings; in the home and out of it.

So much of the sorrow and trouble of life comes from differences with our fellow mortals. Now the teachings of Jesus give us infallible rules as to how to overcome all these, and the revelation of Christian Science shows how we can make practical all those sayings of the Master.

One is the "Golden Rule," another, "Agree with thine adversary quickly, whiles thou art in the way with him." At the first intimation of trouble or disagreement with another, when anger, however slight, or resentment and its accompanying sin, self-justification, come up, handle it quickly. Do not give back the bitter or self-justifying word, nor even harbor its corresponding thought. If you do, these sins will grow. They are but fuel to a flame. Meet the desire for evil thinking instantly, with the thought that, divine Love governs man, — the other one as well as yourself.

No matter how superficial or meaningless this assertion may seem at the time, when error is clamoring for a hearing, assert the truth that Love is supreme, and keep asserting it, till error yields. If honestly persistent, it will yield, for God's word is Truth. Then comes the blessing when Love triumphs, — "Well done, good and faithful servant, enter thou into the joy of thy Lord" — which is peace and harmony.

To win in Christ's way, we must conquer evil thinking. The ordinary Christian or moralist may not give back the blow, or the bitter word perhaps, but may give back the bitter thought, while Christian Science shows the necessity of not even giving back the angry thought, and instructs us how to overcome that thought.

If we let our thoughts run in the way of the world, and blame the other person for all the wrong, — sin, injustice, ingratitude, anger and dishonesty, while we claim for ourselves all that is right, we are making something of error instead of making nothing of it. If he is not a Christian Scientist, and knows not how to meet these suggestions of error, they will grow in his thought towards us and we shall reap what we have sown—resentment and distrust for resentment and distrust. Then comes trouble and woe to both.

In Christian Science we learn to overcome evil with Good; error with Truth; and hate with Love.

The Truth of Being, as the Bible and "SCIENCE AND HEALTH" teaches us, is Love, not hate. And when we are

Digitized by Google

governed by Truth and Love, harmony is the result. We cannot destroy the sense of evil in ourselves while believing it belongs to some one else. "Condemn not, and ye shall not be condemned;" "Forgive us our debts, as we forgive our debtors." We can love another when we understand that evil is not personal, but impersonal error. Neither evil nor Good are in personality. Both are outside of person. One is Intelligence, the other non-intelligence, though claiming to be intelligence in matter or the flesh. (A liar and the father of the lie.)

When governed by Intelligence, God, we are wise and make no mistakes to be afterward regretted; but when we allow non-intelligence or evil, resentment, passion, envy, prejudice, self-will, or any sin to control us, we err, and do and say foolish things, which result in trouble, suffering and inharmony. We are cast into "hell." How can we expect any other outcome when we understand that sin is the absence of Intelligence, God?

We have all had experience with the fact that anger is the absence of Intelligence. For instance, when governed by anger, we do or say what at the time seems to be just the right thing; but afterwards when the passion has subsided, we wonder how we ever could have been so foolish; thus showing that sin is non-intelligence.

Now to be harmonious in our relations with each other, and in all the affairs of life, how necessary it is to be governed by Intelligence instead of non-intelligence, Love instead of hate, Truth instead of error.

In proportion as we overcome the desire to impute evil to others and justify ourselves, and are governed by divine Love, in that proportion do we have the Mind that was in Christ Jesus. We will then reap what we sow. We will get love in return for love. The seeming differences will fade into their original nothingness. There will be no more family troubles or divorces, no business troubles or anxieties, no law suits, no feuds.

This is something every one can attain here and now, by earnest striving and constant watchfulness and being instant in prayer. It is a demonstration every one can make daily. We have no need to wait for some claim of sickness to demonstrate over, to prove that Christian Science is the Word of God; but we can and must make this proof in our daily life, that Good is the only Intelligence. Then harmony is the result. Then we will understand Jesus' sayings, "The kingdom of heaven is at hand," and, "The kingdom of God is within you."

Chicago, Ill. IRA W. PACKARD.

Believing or Understanding.

To believe in Christian Science is certainly better than to believe in materia medica or any other mortal mind delusion; but only believing in Christian Science does not make one a Christian Scientist. When only believing in Christian Science we can talk with the greatest fluency of the efficacy, the value, the good of it, without being able to prove what we say. When only believing, we can prophesy about, judge and condemn Christian Scientists or non-Christian Scientists with impunity.

When only believing we can be envious, jealous, resentful, hateful, proud, selfish, — plus one or all of the mortal mind qualities, and excuse ourselves on the ground of "righteous indignation" or some form of "self justification or self righteousness."

Now if we care to go no further, Christian Science will lose nothing, but if we find that we do want to go a step further than believing, the way will open for us. Do we want to be rid of every mortal thought? It will not do to allow even one to live, for do we not read that to break the law in one point, is to break all? So even our pet fault must go.

Then if we find that we really do want to know the principle by which every evil can be destroyed, are we willing to bend every effort to gain the understanding of it? This means more than can be briefly stated but we have many things to help us, and if we are faithful and in earnest we can find the way which will take us step by step beyond only believing into the realm of understanding. Here we can prove our right to the name of "Christian Scientist," by demonstrating in some degree, however small, the Principle which we have found.

As for help — we have everything to help us. First we have that God-inspired book, "SCIENCE AND HEALTH" — the marvel of our age — the most wonderful book, viewed from every standpoint, ever produced, except the Bible.

Then we have good, strong, faithful teachers all over our land. Those authorized to teach by our dear Leader, the one whose wisdom cannot be questioned. These will not do your work for you, but will teach you how to do the work yourself. Then we have the much-beloved Sunday Lessons, — every one of which cannot help but take us many steps onward. Then the Journal and the Sentinel so filled with helpful thoughts and abundant proofs of the power of Truth. And last we each have our own environment to help us.

Our surroundings are sure to be just what each one needs, and the worse it hurts the better it is, and it will keep on hurting harder until we have been forced to rise above the hurt self so often that finally we have grown strong enough in Truth, not to care how many thorns there are, because we can lift our true selves above them all and soar away into the sunlight and joy of divine Love.

Analogous to our own experience is that of a certain bird which builds its nest of thorns. But the baby bird is protected from the thorns by the softest of down until the time arrives when it too must learn to fly. Then the mother bird scratches off the down by degrees, and the more the bird rebels against the thorns, and refuses to fly, the more the thorns are exposed, until the bird must fly in self-defence. In being forced to fly, it learns to fly. After repeated experiences which nothing could so well give as those thorns, the bird grows stronger and finally grows strong enough fo fly far above and away from the thorns into the pure sunlight and beauty of the blue sky.

Now the bird not only believes flying possible and good, but it understands how to fly. So one may not only believe in Christian Science as good and possible, but he may become a Christian Scientist by learning to demonstrate its divine Principle. LAURA L. DRESSLER.

Akron, Ohio.

"As A Little Child."

WE begin so early to "train up a child in the way" of worldly wisdom; to forewarn him of danger; to talk to him of sorrow, sickness and death; to fill his thought with that wisdom by which the world knoweth *not* God, that we, in large degree hide the child nature and almost lose sight of the simplicity and unworldliness which always behold the face of the Father.

And yet, after we have done so much to becloud the childish thought and hamper it with our petty ideals, our ignoble motives, and great anxieties, one characteristic remains typically childlike through all the generations.

The fearlessness of danger, the careless generosity, the ready credulity, the thoughtless glee, all have their source in ignorance of evil.

We hasten to enlighten that ignorance with knowledge which shall replace his fearlessness with anxiety; his lavish generosity with prudent forethought; his credulity with suspicion; his careless laughter with doubt and perplexity, and we say we are educating him.

We take it for granted that he is empty and will remain so until we fill him. So we pour in our own acquired rubbish, the accumulation of generations of error, forgetting utterly that "the wisdom of this world is foolishness with God."!

Digitized by Google

The more of this muddy stream we pour into his receptive thought, the more are we closing the channels to the streams of divine wisdom which are his birthright.

Every teacher of music knows the difficulty of teaching the right way to the pupil who has been taught a wrong way. Far better were entire ignorance. "It's better not to know so much, than to know so much *that ain't so!*" quaintly says a humorous writer, echoing with a smile the strong, sad words of the Man of Nazareth, "If, then the light that is in thee be darkness, how great is that darkness!"

The travail of humanity is to *un*learn the unlovely and untrue. Mortal man must even be *born again* before he can *see* the kingdom of heaven which lieth at his very door. He *knows* so much that he "cannot enter in because of unbelief." Not many wise after the flesh are able to see God.

The things of the Spirit, the realities of the universal Kingdom which "ruleth over all," are "hid from the wise and prudent, and revealed unto babes." The child-heart that is without suspicion "believeth all things;" carries no apprehensive forecast of the future, —"hopeth all things;" knows nothing of the worldly virtues called prudence, caution, calculation, for he "taketh not account of evil."

Rantoul, Ill. HARRIET M. MORRIS.

The Christian Scientist's Side.

To the Editor of *The Mercury:* In an article published in your issue of March 1, it says that Louise M. Seals passed away while under my care. This is true, but I see no reason why a case of mine should be published any more than the cases of the M. D.'s. I have practiced Christian Science twelve years in New Bedford and Fairhaven, and in all these years I have lost only two children. Can any M. D. in this locality, or any other, show such a record?

The first case I had in New Bedford, twelve years ago, was a case of tumors. Her physicians said she could live but a very short time; notwithstanding that, she was healed and is today a strong, healthy woman. She left her room on the third day and went down stairs and took her meals with the rest of the family and continued to do so. A few years ago her brother was taken with typhoid fever and a physician was called in, but the patient continued to grow worse, and his people became much alarmed, for they had lost one brother of the same disease while under the medical treatment, so they called me in and on the third week he was up to Acushnet on his mother's farm.

Twelve years ago I was called to a patient who had had the asthma for thirty years and she was healed, and so was her sister who had had dyspepsia for twenty-two years. One of their nieces the night that I gave her the first treatment was so low that she could only whisper and could not take any food, but after twelve o'clock that night she began to call for food and the next morning she came out into the parlor to see me. The lady at whose house she was boarding had a white swelling which she had had for some time and her doctor told her she would have to have her leg amputated. She took a few treatments of me and was healed and put her crutches away and has had no use for them since 1887.

These people are well known citizens of New Bedford, whose address can be had by any sincere investigator and the address of those who have been healed of blindness, chronic headaches, consumption, and other diseases too numerous to mention.

To say these people did not nave these diseases is to question the veracity of the physicians, for they, and not I, gave the names of the diseases.

There are many physicians who admit that drugs do not heal, and I am not going far away from New Bedford when I tell you that I treated the mother of a physician, who said that "Christian Science is common sense." A daughter of another physician told my wife that her father did not dose her with medicine and that he said there was a great deal in Christian Science. This same physician had a child whom he was treating, and there was another child in the family that drank all the medicine of the sick child, which frightened the mother, who sent at once for the physician. When he told her that it would not hurt the child she said, "If it would not hurt the well child it could not help the sick one," and dismissed him.

It was only recently that I had a talk with a physician, who told me that he was a graduate of the allopathy and homeopathy schools, that he had been in several hospitals in Europe and that he had practiced medicine for thirty-five years and gave it up some sixteen years ago because he could not conscientionsly practice it any longer. Another well known physician — a woman and a Methodist, — after seeing patients healed by Christian Science that she had failed to heal, and reading some of our literature, said to her attending physician, nine years ago, that there was going to be a great change in religion. He said, "And in medicine too." She asked, "More or less?" He said, "Less."

That the above has been fulfilled is evidenced in the fact that at that time we had only eighty-eight church notices in our official organ, The Christian Science Journal, and only one church building had been erected up to that time, and that was a little wooden building in Oconto, Wis., but now we have in the same publication four hundred and twenty-four notices and many beautiful church edifices in this country and in others.

That the latter has been fulfilled is found in the following: Three years ago last Christmas I was told by a trained nurse that she was attending a bad case of scarlet fever and the physician was giving no medicine and no tonic, and that the doctors during the last five years had been giving less and less medicine. I said to her: "It has cost me much to help to bring this about." In reply she said: "You have done good just the same." Some weeks after the conversation she told me that the patient came out all right.

A patient is not healed by the medicine that he takes, but by his faith and expectation and that of his doctor and friends. These mental states, with the understanding of Christian Science, work wonders. We may dose and have faith and expectation, but this will not save us from the effects of sin if the sin is not repented of, in other words stopped. Anger, hatred, malice, jealousy, lust, envy, strife, worry, sorrow, fear and other discordant mental states are the causes of disease and death. Hence, how important it is that we watch our bodies less and our thoughts more.

JAMES E. BRIERLY.
In The Morning Mercury.

The Law and the Christian Scientist.

THE following, under the above title, is from the pen of the Hon. C. B. Hoffman, Enterprise, Kansas.

Our representatives at Topeka are addressing themselves seriously, earnestly, enthusiastically to the work of suppressing illicit doctoring. Hereafter, the Christian Scientist, should he be found practicing his uncanny cult, without due license, which of course he cannot get, is to be fined, mulct, decapitated.

Did the regular M. D.'s instigate this bill? Perish the thought! They are too busy attending to their patients, who when last heard from were as sick as usual. No, its our representatives, who have discovered the dire dangers threatening us from Christian Scientists, mental healers and bone rubbers. A bas the villain or the villainess who would cure my headache by giving me a kindly thought instead of a box of Anti-Kamnia! People of Kansas alarum! We are betrayed! We are about to be cured against our will by folks who are not regular curers, who cannot tell the difference between a sessimoid bone and the rouget!

Who is clamoring for the passage of this law? Are the masses, the people, sending in petitions? Do they really confess themselves incapable to decide what kind of a doctor they

Digitized by Google

want or whether they want any at all? Kansas prides itself upon its intelligence,— claims to be the best informed people in the Union,— but we do not know enough to select our own physician if he is not regularly labelled and duly registered.

But if the people are unable to decide between sugar pills and calomel, between mind cure and blue mass, how can they be entrusted to decide what to read and what to think?

Lately there has been no great clamor to suppress all men who write for public instruction, or to put in jail those who speak on stump, pulpit, stage and platform against what the majority are for. Some of the legislators who are for this law would be against that. But a censorship providing that the minds of men shall not be poisoned, is quite as reasonable as one which demands that you shall be cured only according to orthodox methods. The logic is the same. It is the old, old story. Crafts, professions, seeking monopoly through law, trying to secure for themselves the sole right to make money in a given field. And some of our representatives do not seem to perceive the fundamental difference between a law restricting a commercial of natural monopoly like that enjoyed by the transportation companies of the owners of coal mines, and the creation of a new monopoly by giving a special class of men the sole right to perform one of the important functions of social life.

Were the Christian Scientists in the majority and were they as narrow as the supporters of this bill, they would demand a law suppressing all doctors who do not subscribe to the doctrines of Christian Science.

Would you kick? Yes. Why? The logic is against you except if you insist that each indi.idual, the man, the woman, has the natural right to decide who he will employ when he or his are sick.

It is a serious matter, this tampering by law with the most personal, most delicate, most important private affair in life. Who shall I call when my dearest on earth is sick, is threatened by death? No law can guide me.

The profession of medicine is a noble one. It contains some of the noblest men who have made the world better and wiser. It is not the able and conscientious physician who asks for such a law nor needs its unfair advantage. It is the quack, the mountebank, the unscrupulous, unfeeling swindler who "passes" his examination, who gets his permit to legally rob the unsophisticated, reckless of the misery and mourning he causes.

Diplomas are cheap. Sheep-skins can be bought,— but conscience, sympathy, learning and love for one's fellow man,— all prime requisites of a good doctor, cannot be granted by the State.

If doctors always cured their patients, I too would clamor for a law ordering constables to search out the sick and take them willy nilly to the nearest M. D. who could master a permit. But alas! physicians do not always cure. They are at best groping as to the best methods, and there is a greater difference between the allopath who gives medicine in horse doses and the homeopath who gives them in infinitismal doses, than between the "infinitismal dose" M. D. and he who does not give drugs at all.

The Advocate and News, Topeka, Kan.

All Churches Should Heal.

It is not the ambition of the Leader of the Christian Science movement to build up a powerful denomination of her own and pull down other denominations. Her desire is that all people who have adopted the name Christian, shall be filled with the loving spirit of the Master, having that Mind which was also in Christ Jesus. She is eager for the coming of that time which she years ago predicted, when every Christian Church in the land will heal the sick in the name of Christ.

Christian Scientists are human and sometimes speak with pride of their own church and the achievements wrought under its Leader's guidance, but that is not the feeling of Rev. Mary Baker Eddy or her followers as a rule. All of them must rejoice at the seeming readiness of earth's weary inhabitants to now receive the Truth into their hearts and express it in their lives, as is indicated by the great throngs that gather in Christian Science churches to merely hear the Bible and "SCIENCE AND HEALTH" read. But this rejoicing is without malice toward sister churches.

Christian Science is just the primitive Christianity which in times passed endowed its conscientious followers with the spirit of divine Love which heals the sick as well as the sinner. It is primitive Christianity reinstated.

It is certain that there is not a minister of the gospel in the world who would not be glad to preach sermons that would heal the sick as well as awaken the sinner. There is not a minister of the gospel in the world who has not just as good biblical authority for healing as he has for preaching. See Mark 16:15–20.

Christian Scientists do not wish to injure any other denomination. They wish to see the orthodox church people "put on the whole armor of God" and take up the work of the Master as he directed, not leaving any of it undone. When ministers teach the gospel as it was taught by John, Peter and Paul, they will be teaching it correctly and their teachings will be confirmed by signs following.

Ministers of the gospel must prove their sermons true by healing the sick. They will be held responsible for the talent the Master has given them. In almost every church congregation in the United States there is springing up a demand for the "signs following" and the church members will not be much longer satisfied with doctrinal arguments instead of the bread of Life. In order to keep their flocks together, the ministers will have to feed them, not with the letter that killeth, but with the Spirit that giveth Life.

When the orthodox ministers begin to demonstrate the presence of God as all powerful Good, healing the sick, bringing harmony into households where it has been long absent, and attracting men away from their follies, vices and crimes to the joyous worship of the God of Love — when that glad time comes orthodox churches will be, like Christian Science churches, crowded to the doors and more churches will be built, for people give bounteously to support a religion that redeems them from sin and despair and heals their diseases by the power of Love.

Ridicule is heaped upon Christian Science because it defines disease — no matter what form it assumes — as a false belief of the human mind, which can be and is destroyed by discerning the Truth, that man is spiritual and therefore independent of all material conditions.

To establish the fact or falsity of the claim that Christian Science is a divine healing agency, is a work for each individual to undertake for himself whenever he has enough interest in the question to investigate.

Denver Republican.

Enslaved by Drugs.

PEOPLE who fall into the practice of dosing themselves with drugs, do not realize how thoroughly they have become victimized by the fear of disease. The drug slave is as superstitious as a Kentucky colored "mammy."

Sometimes this fatal superstition will hold an entire family of otherwise intelligent people in the grasp of fear and it is pitiful to see their abject submission to pills, potions, tinctures, salves and syringes. They dare not eat, drink, sleep or walk without worshipping at the shrine of one or more of the gods in the pantheon of materia medica.

The writer had an opportunity recently of observing the daily order of this superstitious worship in a family where all are faithful believers. One member had to bathe his feet in cold water immediately on rising. Three members owned rubber tubes, which were inserted into the stomach through

Digitized by Google

the mouth, and each morning these three members pumped water into their stomachs and pumped it out again. Another member had to take a liquid medicine after breakfast and another a pill. Around meal time all more or less participated in the incantations.

Before retiring at night all anointed their hands and faces with unpleasant smelling salves, and used inhalers, syringes, powders, pills, etc. On Saturday night these devotions were supplemented by vapor baths, massages, etc.

In every room in the house in question there were numerous bottles partly filled with obnoxious looking drugs, some of them labeled "poison." There were medicated tooth washes, porcelain salve boxes, and many pill boxes. On a shelf in the bath room there were seventeen bottles of medicine, and there were thirteen bottles on one dresser.

To a Christian Scientist accustomed to maintaining perfect health without ever using drugs, it is inexpressibly gloomy to see people in bondage to medicine. They know that the more these poor, misguided slaves yield to the fear of disease and the more they depend on drugs, cold baths, injections, dieting, etc., the worse off they become. They know from bitter experience that a drug which seems to help for a while gradually loses its power, and they try first one thing and then another, until finally they lose faith in all drugs and then the drugs cease to have any effect. Then they try water applications and injections until finally they lose faith in water. Then dieting, then massage, then electricity, and so on, but all prove to be false gods.

There is no certainty in medicine, hygiene or dieting, and all such methods are powerless when the patient loses faith in them. Health, perfect and enduring, is found in Christian Science after all other methods fail, and with recovery of health comes a desire to be better and nobler.

Denver Republican.

What is Christianity?

Is a Christian one whose great aim in life is to save his own soul? who, in order to do this goes regularly to church, and whose supreme hope is to get to heaven when he dies? We think that if there is anything a Christian is not, it is one with a selfish desire to save his own soul. If there is one thing more than another which Christian Science — as taught by Christ — seeks to extirpate from a man's nature, it is selfishness.

In the new version of the New Testament the word "soul" is translated "life." This marks a revolution in the popular theology, and it must mark a revolution in every heart when it comes to better understand that man's Christianity does not consist in merely seeking to purify and save his own soul, but those of his fellow-men as well. We are told in the New Testament that Christianity is leaven. "Leaven" comes from the same root-word as "lever," that which raises up — elevates. Then a Christian must be one who seeks to raise up or elevate the lives of those around him. "To bind up the broken-hearted, to proclaim liberty to the captives, to comfort all that mourn, to give beauty for ashes, the garment of praise for the spirit of heaviness."

We all know in some relations what it is to be hungry for love. There are those all around us who have an unspeakable heart longing for Christ's love. Pulpit eloquence fails to satisfy this longing, and why? Famishing and weary because of worldly greed and strife, they seek for a religion that is practical, one that shall fit into every niche of their lives, blessing them every hour, enabling them to look toward the realization of that time when "Thy will be done in earth as it is in heaven." They receive but little food or warmth in being told to "Bear their poverty and ills patiently, since it is the Lord's will," and further on when the change called "death" shall have claimed them, they will receive their reward.

The true Christian Scientist knows and demonstrates that God is no respecter of persons, and that He never doomed a man to poverty and hunger, and that "Whatsoever enslaveth man is opposed to the divine government" (Science and Health, p. 121).

We know that all doctrines, systems, measures, methods —what may be called the necessary mechanical and external part of worship, the part which the senses would recognize, — must wither and fall before Truth and Love, the divine Principle of being, like last summer's leaves. The final test of religion then will not be what we have done, or what we have believed, but what we have achieved for Christ's sake.

Reform Press, Pueblo, Col.

Cure for Epidemics.

1. Stop talking and thinking about contagious diseases.

2. On arising in the morning repeat the Lord's Prayer in the spirit of holiness.

3. As soon as breakfast is over, before taking up your duties of the day, take your Bible and carefully read the Ninety-first Psalm, knowing "that God is, and that He is a rewarder of them that diligently seek Him." You might linger over the lines of this beautiful Psalm: "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. I will say of the Lord, He is my refuge and my fortress: my God; in him will I trust. Surely he shall deliver thee from the snare of the fowler and from the noisome pestilence. He shall cover thee with his feathers, and under his wings shalt thou trust: His truth shall be thy shield and buckler. . . . Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling." (You will observe that David said, "His truth shall be thy shield and buckler." Evidently David had more faith in God's protecting power than he had in vaccine virus and poisonous lotions.)

4. When conversation or thoughts about disease and contagion come to you during the day, think over the inspiring words you read in the morning.

5. In the evening read the twenty-third Psalm, re-read the Ninety-first Psalm, repeat the Lord's Prayer, and take care above all, to observe the first of the Ten Commandments, "Thou shalt have no other Gods before me." If you observe this commandment "in spirit and in truth," you will not let disease of any name or nature become the chief in your thought and conversation.

It is but just to state that we got the inspiration for this prevention and cure of disease, from the writings and teachings of Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, and have found this mode of treatment of infinite value in whatever case it has been applied.

It has been asked what Christian Scientists will do in a time of contagion. This is what one Christian Scientist has done to direct the thoughts of the people into higher and healthier channels. If there is anything pernicious in this advice we hope it will be pointed out to us.

Weatherford (Texas) News.

Medicine for the Heart.

WHEN the African chief Sicomi sat one day ill in Dr. Livingstone's tent absorbed in thought, he said in pompous tones:

"I wish you could change my heart. Give me medicine to cure it, for it is proud, greedy, and angry always."

Dr. Livingstone picked up his testament, and was about to tell the chief how it could be cured, when he said: "No, I wish to have it changed by medicine to drink, and have it changed at once, for it is always very proud and very uneasy, and continually angry with someone." And then he would not wait to hear the remedy, but rose and walked out of the tent.

Digitized by Google

How many there are who have the same disease, and do not know the cure. Their hearts are uneasy, unhappy, full of angry impulses, passions and deceit, and there is no help for them in man and drugs, no healing but in the power of Christ. If money would buy salvation they would have it. If some new medicine would remedy the evils which sin has wrought, how gladly they would take it. But nothing will avail except the living Word of the living God: the power of Christ working in the hearts of men, purifying, renovating, and restoring the lost image of the Creator. Oh, that the sons of earth would fly to Him who "healeth all our diseases." They would find in Him the help and blessing they need. Then would they offer the Psalmist's prayer: "Create in me a clean heart, O God; and renew a right spirit within me." Thus would they become new creatures in Christ, ever rejoicing, that "old things are passed away and all things are become new."

F. A. HEUBNER.

Manitowoc, Wisconsin.

The Lectures.

At Chicago, Ill.

Edward A. Kimball, C. S. D., of Chicago, lectured before an immense audience at First Church of Christ, Scientist, Drexel boulevard, near Fortieth street, Wednesday evening, March 1, on the subject of "Christian Science." He was introuced by Mrs. Ruth B. Ewing, C. S. D., who said:

"In place of the usual exercises of the regular Wednesday evening meetings of this church, we have the privilege this evening of listening to an address by one of the authorized Christian Science lecturers, sent out under the auspices of the Mother Church of the Christian Science denomination.

"Toward this event our own people have for some time looked with very happy, earnest, and sincere anticipations of pleasure and profit, 'for the edifying of the body of Christ,' to be attained thereby. But it is not so much for ourselves, at least not for ourselves alone, that this opportunity is vouchsafed by those having in charge the arrangements of this appointment.

"Christian Scientists take unbounded delight in discourses, spoken or written, which, are in any valid, practical way expository of the interest to humanity which they believe to to be inherent to this subject.

"To them the greatest of all themes is Christian Science, and to bring its benefits to view and inspire others with some perception of its sublime ends and influences, is the greatest desire of their hearts; in other words, to share with all mankind the boon of fresh courage, hope, and happiness which the knowledge of Christian Science has brought to many homes and communities, is the purpose of all our public demonstrations, church services, and printed publications.

"To preach the gospel to every creature is our Christly mission. Jesus, however, feeling the resistance of the world to this holiest mission, said, weeping over Jerusalem, 'How often would I have gathered your children together, but ye would not.'

"The truest follower of him today, the discoverer of the Principle and rule and demonstration which alone elucidate fully his words and works, has said that until she learned the vastness of Christian Science, the fixedness of mortal illusions, and human hatred of Truth, she cherished sanguine hopes that Christian Science would meet with immediate and universal acceptance. (Science and Health, page 225.)

"Professor Huxley has said: 'I know no study so unutterably saddening as that of the evolution of humanity, as set forth in the annals of history. Of man, whom he has traced as emerged from 'the darkness of prehistoric ages to a degree of comfort and a more or less workable theory of life,' he says, 'he makes a point of killing and otherwise persecuting all those who try to get him to move on, and when he has moved on a step repeats the process with all who want to move a step yet farther.'

"Is it not true, as these citations imply, that in every age of our human race, every great reform and great reformer have been met by strong adverse influences from the people of their time? It is as if an evil spirit in man, of ignorance and malice, did work mightily against his own best interests and cruelly beat back and threaten, at times, almost entirely to defeat his progress.

"Human experience, in the present age and era of Christian Science, is no exception to the general rule of human deportment against all efforts toward reform and progress.

"It is, therefore, with the deepest apprehension of the crying needs of the occasion, and with firm purpose toward the right, that we attempt on every hand and by every available means and opportunity to vindicate the system of Christian doctrine which we teach and preach, defending it against all unjust reproach among our fellow men.

"To clarify the public mind of many baseless suppositions and misrepresentations regarding our system and ourselves, and kindly to entreat its consideration of the proofs of benificent effects from the Principle and practice of Christian Science, are the ends subserved in the establishment of our Board of Lectureship. That these ends, with regard to the general dispersion of a better understanding of the whole matter, will be greatly aided by the effort of the speaker on this occasion I have no doubt. I esteem it a great privilege to myself and to you, dear friends, who are gathered here, to introduce to you Mr. Edward A. Kimball, who will speak to us concerning Christian Science."

— The Daily Inter-Ocean.

At Norfolk, Va.

Notwithstanding the inclement weather there was a good attendance at the Academy of Music Wednesday evening, February 22, to hear Mr. Edward H. Hammond, C. S. D., of Baltimore, lecture on "Christian Science: What it is and What it does." On the stage with the speaker were Rev. C. W. Pettit of the Methodist denomination, and formerly Mayor of the city, and Mr. William B. Cheek, an active Christian Scientist of Norfolk.

The lecturer was introduced by Rev. Charles W. Pettit, of the Methodist denomination, who was formerly mayor of Norfolk for two years, under a reform administration of its municipal affairs. Mr. Pettit said: —

"Ladies and Gentlemen: I appear before you tonight to present the speaker of the occasion, not that I am a Christian Scientist, for I know nothing of its teachings, but I have been requested by some of my personal friends to perform this office, and have consented.

"In doing so I can say that if Christian Science elevates man; if it gives him a better perception of his duty; if it makes him a better man; if it draws him nearer to God — then Christian Science is a good thing and we should bid it welcome.

I have the pleasure of introducing to you Mr. Edward H. Hammond, a member of the Board of Lectureship of the Mother Church of Christian Science, who will lecture before you on the subject: "Christian Science — What it is and What it does," and I bespeak for him a respectful and attentive hearing."

If there were any persons present who went there thinking that the purposes of Christian Science are not benificent, and that its ideal is not of the very highest type, their opinions in these particulars must have been disarmed by the lecturer. He dwelt upon the fact that man is a far nobler being than he is used to considering himself; that he is actually God-like, with the image of his Maker stamped upon him ineffaceably, and in proportion as he cultivates his God-like nature will he be able to rise above the limitations of the fleshy mind which now hampers him; that, like the painter and sculptor, he should ever have before him the highest and best model; that thinking sickness and talking sickness, and

Digitized by Google

entertaining the baser thoughts of the carnal mind, produce ill-health, while thinking health and talking health, and entertaining the higher and nobler thoughts, produce healthful conditions of the body. This emphasized the Christian Science teaching that all disease originates mentally, and they further teach that in proportion as they draw near to the Good (God) can Christian Scientists, through the teachings of their text book, heal disease. He said that the Christian Science mother who the evening before healed her child of croup used exactly the same principle — if in a small way — that Jesus used in raising Lazarus, or that the apostle used in healing the cripple at the gate; that Christian Science is simply a return to the teachings of Christ as they were practiced in the first three centuries.

— Public Ledger, Norfolk, Va.

At New York City.

Sunday evening, February 26, at The Metropolitan Third Church of Christ-Scientist, 82 West 126th St., New York City, Mr. Carol Norton, C. S. D., member of the International Board of Lectureship of the Mother Church in Boston, Mass.,— delivered his lecture, entitled "Christian Science and Common Sense," before a large and appreciative audience.

Mrs. Carrie Harvey Snider, C. S. D., the First Reader of the church, prefaced the introduction of the lecturer with these fitting words: — "Among the many proofs of the thoughtfulness of our Leader for the universal Good, and of her love and care for a weary world, perhaps there is no greater illustration than these authorized lectures.

Many present remember with pleasure the lecture delivered in this church a few months since. The helpful words of which are still fresh in memory. From this lecture are seen some rich fruits of the Spirit, and we gladly welcome an opportunity for a renewal of this blessing."

At Janesville, Wis.

Wednesday evening, January 25, Mr. Edward A. Kimball, C. S. D., of Chicago, a member of the Christian Science Board of Lectureship of Boston, delivered his very helpful and interesting lecture in Columbia Hall to an audience of about five hundred. It was very noticeable that the scientific words of Life and Love were received with appreciation. When the lecture was first talked of the people in general seemed pleased and anxious to hear it. Eighty-four dollars was quickly and easily raised to meet the expenses of the lecture. Many of our neighboring cities were represented, Belvit sending the largest delegation, forty-one in number. We are sure that all feel doubly rewarded for whatever sacrifices they have made to bring this lecture before a Janesville audience. My heart goes out in gratitude and love to our dear Leader for providing this means of breaking the true bread to poor suffering humanity. C. J. P.

At Memphis, Tenn.

At the Grand Opera House, Friday evening, March 3, Mrs. Sue Harper Mims, C. S. B., of Atlanta, delivered a lecture on Christian Science, in which she told of the origin of the faith, its essential teachings, and the manner in which it had spread throughout the countries of the earth.

Mrs. Mims is a woman of splendid address, and her language is clear and free from confusing verbiage. Her reasoning was clean-cut and almost syllogistic in the perfection of its arrangement. She had a splendid audience, and it was a representative one. The whole lower floor of the Grand Opera House was filled, and there was a good sprinkling up stairs. The lower boxes were all filled. During her whole lecture Mrs. Mims was followed closely by her audience, and those present seemed to manifest considerable interest in what she said.— Memphis (Tenn.) Commercial Appeal.

At Washington, D. C.

"Christian Science" was the subject of an interesting lecture delivered Sunday afternoon, February 12, at Columbia Theatre before an audience which filled the lower portion of the house and occupied a portion of the balcony. Many were there who are firm believers in the doctrine, while others were impelled by a desire to investigate. The speaker was Edward H. Hammond, C. S. D., member of the Board of Lectureship of the Mother Church of Christian Science, of Boston. He was introduced to the audience by John F. Linscott, C. S. D., of this city. Mr. Hammond is a man of pleasing appearance and earnest manner, and in terse sentences he undertook to explain what Christian Science is and what it does. Washington Post.

At New Orleans, La.

Wednesday evening, March 1, a large and representative New Orleans audience assembled in the Tulane Lecture Hall.

The occasion was the presentation of a lecture on the subject of Christian Science by Mrs. Livingston Mims, C. S. B., of Atlanta, Ga., who is one of the official lecturers sent out by The First Church of Christ, Scientist of Boston, Mass.

The lecture was attentively received, being practical in tendency and logical in context. The Lecturer repeatedly quoted from the Scriptures in support and explanation of the scientific statements she made.

The Sunday States, New Orleans.

Christian Science Reading Room Opened in Excelsior Springs.

THE time is here for us to begin to clean up for the number of visitors we expect this summer. While we are sweeping and cleaning our houses and streets, let us not forget to sweep out the dust of ignorance and prejudice from our own consciousness that we may be prepared to reflect the good spiritually as well as materially. This point in religion we are prone to forget. Would we rather look at another, to see and magnify his faults, than first to pluck the mote out of our own eye, so that we can see clearly how to lead the erring one in the way he should go, and by our example lead him to Christ? Many come here who are thirsting for the waters of Christ, Truth. Let all Christians be ready to point them to the fountain of Life. (Christ), where they may drink and never thirst. It occurs to me that Excelsior Springs is a great field for God's work. People come here who are blinded by hypnotism, mesmerism, spiritualism, so-called Christian Science, necromancy, occultism, mind cure, mediumship, clairvoyance, so-called divine healing, quack doctors, and other evils, and it is our duty so to reflect divine Love that they turn their gaze to the Christ, and thus be lifted to newness of life in Him.

I became a student in Christian Science about nine years ago. I went through a class at that time and have since received a certificate. I knew that it was God's work then, and I am daily more and more convinced that it is the Truth, the whole Truth, and nothing but the Truth.

I studied the system taught by Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, and this is the only system called Christian Science to which I adhere. Christians are falling beneath their privilege when they neglect to throw out the search light of Truth daily. Cast out the evil self and through the grace of God let the light shine. Christians are living in disobedience to him who said, "go ye into all the world, heal the sick and preach the gospel," if their lives are given only to preaching the gospel, and they do not heal the sick. Christian Science healing is no miracle, but a proof of God's power and presence. Christians should know this and believe it. Any Christian should be able to heal the sick which is done by realizing there is no power in self but that God is omnipotent and omnipresent.

Digitized by Google

"By their fruits ye shall know them." Nearly two hundred cases have been healed in Excelsior Springs through Christian Science treatment. It is sin that keeps many cases from being healed. Yet we do not wish to condemn those who are doing the best they know, and are living up to all the light they have.

In order that the good might better be done in Excelsior Springs, we have concluded to open a reading room at the Palace. No gossip will be permitted, no arguments on doctrinal points. The room will be opened to the public every Monday, Thursday, and Sunday from 2 to 4 P. M. Literature from the Christian Science publishing house, and the works of Mary Baker G. Eddy will be free to be read, but not to be taken away.

It is hoped that in this way much good can be done, and many seeds of purity, goodness, Truth and virtue be sown.

MRS. A. S. OREAR,
In Excelsior Springs (Mo.) Journal.

Healing Work in England.

It is almost three years since I first heard of Christian Science. I had been ill between four and five years and had been on my back for twelve months, in the vain hope that entire rest and being in a reclining position would help the internal trouble from which I was suffering. But at the end of the time allotted by the doctors I was no better. I was then told I had better get up and try to get well that way, and if at the end of six months I was still ailing, I would have to undergo a serious operation.

I got up but was hardly ever free from pain; was extremely nervous and full of fear, in fact wretched, physically and mentally, although I had every luxury and all those around me were tender and patient. I was in this condition when I heard of Christian Science. I eagerly grasped it expecting to find something by which I could be hypnotized or mesmerized and be relieved of my pain. I asked to see SCIENCE AND HEALTH. I shall never forget what a shock it was to me, when the first word I saw on opening the book was "God." I shut it feeling indignant. That was not what I wanted. I had tried God and He had never helped me and I had tried to think that I had done with Him and could get along without Him. Oh, how blind I was! Nevertheless, I re-opened the book and read a few pages, it was like Greek to me, but after thinking it over I decided to take treatment.

My improvement was very very slow, in fact hardly perceptible to my sense — but I was gaining daily. My real healing came about in this way. My friends who did not know I was being treated by Christian Science came to me and said I did not seem to be getting much better, therefore in a month's time the doctor would have to come and probably he would decide to operate. Fear seized me and I then saw that I must study this Truth and gain an understanding of its teachings and no longer depend entirely upon the loving, gentle help of my healer. Oh, how I did study, morning, noon and night! I began to catch faint glimpses of that glorious liberty of the child of God who had all things under his feet and that I was not obliged to have this pain and suffering. From that moment I began to make rapid strides, with the result that when the doctor came he was astounded, puzzled and amazed, and said I was perfectly well and there was absolutely no reason to operate. Oh, how grateful I was!

But it is not the physical healing for which I am most grateful, but for the peace and calm which I am daily gaining through the understanding of this great and wonderful Truth.

V. C. B., London, England.

Healed of Appendicitis.

ABOUT a year and a half ago while suffering from appendicitis and being under the care of two M. D's., who were administering seven or eight kinds of medicine and giving me nothing to subsist on but milk, and that being mixed with lime-water, I was seemingly brought very low. The M. D's. informed my parents that I could only live a short time and in order to prolong (?) my life it would be necessary to apply hot plates, hot sand-bags, liquor and other material remedies too numerous to mention.

At this time we were advised by a neighbor to try Christian Science but, as there were no Scientists in town we did not obtain aid until two days later, when a friend, who is a Christian Scientist, arrived in town. She at once took my case. I soon discarded all medicine and put my life into the hands of Him who gave it.

I never shall forget the change in the mental atmosphere when that dear follower of Jesus entered my room.

My thoughts were at once exalted from the atmosphere of error into the *pure* atmosphere of Truth, and I was (although I did not realize it) "entertaining angels unawares."

Oh! the blessed peace which came to my consciousness as I listened to the words of Truth which she read from "the little book" and it was indeed "in my mouth sweet as honey."

After a few treatments I was able to be about. I could eat anything I wished, whereas, the M. D's. had informed me that I must be *very* careful of my diet and must also, as soon as I recovered sufficient strength, go to the hospital and have my appendix removed. I have had no operation performed and have been fully restored to health through the divine Love.

The next fall while attending school, and not paying sufficient attention to Christian Science, I was overcome by a fever and error compelled me to return home. I summoned a Scientist from R—— who came to see me the next day after my arrival. After a few treatments I was enjoying health and comfort. Since then I have not known a sick day. I also laid aside my glasses which I had worn for three years.

As yet I have spoken only of the physical healing, but that is not to be compared to the spiritual uplifting which accompanied the healing. I am now a member of the Mother Church.

Centre Lincolnville, Maine. EDNA E. LAMB.

Miscellany.

Canadian View of the Doukhobors.

The event of the past week, which has interested Christians of all denominations in Winnepeg, Portage la Prairie, Brandon, and other centres, and indeed it may be said throughout Manitoba and the Northwest generally, has been the arrival from the Caucasus, south-eastern Russia, of the Doukhobors, spirit-wrestlers, or Russian Quakers, as they are variously called. Their appearance, the history of their persecutions, and the peculiarities of their religion have been discussed in articles, original or quoted, in every paper in Canada. A point, however, which may well be placed in greater prominence, and kept there permanently, is the stress which they lay upon Christian living. To live right, to have the truth in the heart, and obey it, is with them the main thing.

Mr. Leopold Sulerjitzky, who is with them as Count Tolstoy's representative, tells how he was impressed with their consistent living, when he became acquainted with them, and during his stay among them for the past four years. His observations of nominal Christians in Moscow and elsewhere had made him skeptical as to the fact or the possibility of any one living in strict accordance with the teachings of Christianity; but close study of the Doukhobors showed him nothing in their lives to which he could take any exception. Not only do the adults live as brothers and sisters, treating one another with the utmost love and deference, but even the children are free from angry passions, quarreling and fighting being unknown. A German woman, whose home was in the Caucasus, not far from the Doukhobor, on

Digitized by Google

being asked what she knew of their religion, answered, "They have a very holy religion." She went on to explain that they decline to associate with people who drink intoxicating liquor, or do other bad things.

Mr. Sulerjitzky makes the remarkable statement, that in the large settlement of two thousand people in which he is personally interested, that of those now here, a printed or written Bible had been, up to the time of his going among them, a thing unknown. They had never seen the book, or heard any portion of it read. When, for the first time in their lives, and apparently in their history from an indefinite period, he read passages of Scripture to them, their comments were, "That is true; that is good; that is just what we believe: just like our religion." They maintained, however, that it was better to have their religion in their hearts and heads than to have it in a book. A similar conclusion was expressed by them last Sunday. The choir of a neighboring city church visited the immigration hall last Sunday, and sang hymns for the Doukhobors. The latter, in return, sang (or chanted) some of their Psalms, and on being congratulated by Immigration Commissioner McCreary, replied, "Your people sing from a book; we sing from our hearts and heads."

Republished from the Friends' Intelligencer and Journal.

The Hymn Saved his Life.

THE Presbyterian prints a war anecdote of an unconventional sort.

"Some Americans who were crossing the Atlantic, met in the cabin, on Sunday night to sing hymns. As they sang the last hymn 'Jesus Lover of my Soul'— one of them heard an exceedingly rich and beautiful voice behind him. He looked around, and although he did not know the face, he thought that he knew the voice. So when the music ceased, he turned and asked the man if he had been in the civil war. The man replied that he had been a Confederate soldier.

"Were you at such a place on such a night?" asked the first man.

"Yes," replied the second man "and a curious thing happened that night, which this hymn has recalled to my mind.

"I was posted on sentry duty, near the edge of a wood. It was a dark night and very cold, and I was a little frightened, because the enemy were supposed to be very near.

"About midnight, when everything was still, and I was feeling homesick, and miserable, and weary, I thought that I would comfort myself by praying and singing a hymn. I remember singing these lines:

> "All my trust on Thee is stayed,
> All my help from Thee I bring;
> Cover my defenceless head,
> With the shadow of Thy wing."

"After singing that a strange peace came down upon me and through the long night I felt no more fear."

"Now," said the other, "listen to my story: I was a Union soldier, and was in the wood that night with a party of scouts.

"I saw you standing although I did not see your face.

"My men had their rifles focussed upon you, waiting for the word to fire, but when you sang — "Cover my defenceless head with the shadow of Thy wing." I said, "Boys, lower your rifles, we will go home."

Scared Into Appendicitis.

"I HAD appendicitis the other day," said a St. Charles Street business man; "that is to say I had it to all intents and purposes. This is the way I contracted it: About a week ago I borrowed a medical book from a friend to look up a point about which I was curious. It was a work on diagnosis, and among other things it gave a minute description of the symptoms of appendicitis. I have always been much afraid of the malady, and that chapter had a hideous fascination for me. I read it and re-read it, and as I did so it seemed to me that some of the premonitory signs coincided exactly with certain aches and pains I had felt for several days. I got alarmed at once, and that night was panic-stricken by severe cramp a little north-east of my right hip-bone. That I knew to be the fatal spot, and needless to say I didn't sleep a wink. By morning I had all the symptoms of a typical case, and could scarcely get around to see the doctor. I began to tell him my story, when he stopped me. 'How do you come to know so much about the disease?' he asked. I replied proudly that I had been reading up on it. 'The dickens you have!' he replied. 'Well, you get right out of this office, confound you! and don't waste any more of my time!' Then he explained that every medical student always has all the diseases on record, in regular order, just as he studies them, and I began to feel better. I went home, returned the blasted book, and am now entirely out of danger, thank you. It was the quickest recovery on record."

New Orleans Times-Democrat.

Concerning Christian Science.

THE editor of the Providence, R. I. *Journal* said 28th January, 1899. "No one will deny that the Christian Scientist states a truism when he says that many diseases yield to purely mental treatment." Precisely, then why allow the State Board of Health to have a law against our sick men and women who wish to avail themselves of this curing by mind, instead of by medicine. President Hall of Clark University, the highest institution of learning in this country says, "it is idle to say that this (Christian Science) is a mere delusion, or that it can be stamped out by laws." This very learned man says also, "That mind can cure certain functional diseases, admits of no possible doubt." Then why does the general Assembly prohibit the use of it by law? This same very distinguished man said, "It is a most striking fact that so many intellectual men and women are at heart convinced of some very important and fundamental truths in Christian Science." Then can the General Assembly enforce a penal statute against it? It never can.

Last winter, Professor William James, one of the most cultivated and distinguished teachers at Harvard University, gave good labor and learning to defeating just such an infamous act presented in the Massachusetts General Assembly.

There is not an honest, educated physician in Rhode Island who does not know the fact, and use it in his practice every day.

Book Notes.

Hold On.

BY THE HON. VIOLET GIBSON.

MOST of the testimonies in the Journal seem to be from those who have come into the Light at once on taking up Christian Science. It may help some brother or sister to hear that patient *fighting*, awful struggling, and the "grit" which enables one to *just hold on*, is rewarded.

When I first got Science and Health, I was certainly healed of two troubles very quickly. One was an internal complaint of two and a half to three years' standing, on which two doctors, who practised materia medica, did not make the slightest impression. Science removed every trace of it, and all its accompanying delicacy of constitution, in two months. Also my hands which had been disfigured with a multitude of warts for about a year (one wart had been there four years) were absolutely cured in a week, to my great astonishment. I am so grateful for that, but so much more grateful for the victory gained over the terrible temptations that have tried to overwhelm me for over two

Digitized by Google

years. Often it has seemed that I must let go, and then "the still small voice" has come to me "No, *hold on.*" And each time, when I had won this victory, the Light shone clearer than it had ever shone before. Very often love expressed for others has shown me the way, more than if I had sat shut up for hours, puzzling in my room. Some little loving act has often worked wonders. Self disappears. And the Light is again able to shine through. "*Hold on.*"

Dublin, Ireland.

A Blessing Instead of a Curse.

READING of the prosecution of Christian Scientists from time to time by those who call upon the courts to fasten some grave charge or criminal act on them, one is reminded of Balak, king of Moab, (Numbers, chapters 22–24), who calls upon Balaam, "Come now therefore, I pray thee, curse me this people; for they are too mighty for me;" . . . "Come now, curse me them; peradventure I shall be able to overcome them, and drive them out." But Balaam says, "How shall I curse, whom God has not cursed? how shall I defy, whom God has not defied?"

Again Balak persists, "Come, I pray thee. I will bring thee unto another place; peradventure it will please God that thou mayest curse me them from thence."

After the blessing pronounced upon them (Numbers, 24: 2, 5–9), Balak exclaims, "I called thee to curse mine enemies and behold thou hast altogether blessed them these three times."

So it seems to be with every effort to hurt or fasten a curse on those demonstrating Christian Science. From every varied standpoint or shift of error it has failed to defy, for "Surely, there is no enchantment against Jacob, neither is there any divination against Israel."

The dear Mother has said in "Retrospection and Introspection," "He appoints and He anoints His Truth-bearers, and God is their defence and refuge." E. F. E.

From Lisbon, N. H.

THE Methodist minister here has recently preached four times against Christian Science, calling Mrs. Eddy by name, and saying it was very strange that this revelation should have waited so many years and then come through a *woman*, and that woman from New Hampshire! also saying that we took Christ down and put Mrs. Eddy upon the pedestal. Since preaching against Christian Science he acknowledged he had never seen SCIENCE AND HEALTH. I can see a manifest change of sentiment in regard to Christian Science, and nearly every day we hear of some one inquiring about it. Some good healing has been done though there has never been a regular practitioner located here. Our meetings are very harmonious, all striving to work for the best interests of the cause. The Nashua Telegraph, the largest daily published in the city, has opened its columns to Christian Science, and offers to publish anything on either side over the writer's own signature. C. C. Moore.

Lisbon, N. H., February 11, 1899.

"Old Glory."

AT a Fourth of July dinner in Shanghai, the English consul toasted the British flag. He said: "Here is to the Union Jack — the flag of flags, the flag that has floated on every continent and every sea for a thousand years, the flag on which the sun never sets."

It was a strong sentiment, and the Americans were a little overawed until Eli Perkins was called to toast the Stars and Stripes. Looking into the proud faces of the Englishmen, he said: —

"Here is to the Stars and Stripes of the new republic; when the setting sun lights up her stars in Alaska, the rising sun salutes her on the rock-bound coast of Maine. It is the flag of Liberty, never lowered to any foe, and the only flag that whipped the flag on which the sun never sets!"

And may the Stars and Stripes and the Red Cross of Britain never clash again in mortal strife, but together, floating over millions of the same blood, form the bulwark of the world's hope and dictate peace to the warring powers of Christendom.

Chronic Complainers.

ON a tombstone in a churchyard in England, there is the following epitaph: "I was well, wanted to be better, took medicine, and here I am." All of us know people who seem determined to take medicine. They think they are ill. The one subject they delight to expatiate upon is the condition of their health In fact, they cannot contentedly talk on any other subject. They wear out the patience of their friends, their acquaintances dread to see them coming. They establish for themselves a reputation as nuisances and bores. It does not do much good to talk to them and speak plainly of their real condition. When a doctor tells them frankly that they are not sick, they think he does not know, and go to some other physician who will sympathize with and dose them. Many of them take to doctoring on their own account and keep a cupboard full of tonics and ointments. Such persons suffer from a diseased imagination or a perverted will. This of itself is a severe evil. However, its treatment does not fall within the province of drug treatment.

The Healthy Home.

Why Beer is Prohibited in the Navy.

OF his recent order prohibiting the sale of beer and liquor on the ships of the United States Navy, Secretary Long says that it was instituted mainly for the protection of the apprentice boys, on whose morals he considered that it exercised a bad influence. It was also found that there were many men in the navy who would drink if the liquor could be conveniently secured in this way, but would not take the trouble to secure it elsewhere. Secretary Long denied that the W. C. T. U. had anything to do with the movement, which originated with Captain Folger of the New Orleans and was reported on favorably by a number of other captains. It was in accordance with their suggestions that the order was issued.

Miracles.

MIRACLES did not cease with the ascension of the Master, nor with the passing of the apostles, but all down the centuries, through the history of his people, the loving Saviour has been ever present, with his infinite love and wonderful power, to heal the sick, to bind up the broken-hearted, to lift the burden from the weary soul, and to bring light and joy and salvation to the darkened, sad, and sin-stricken, human heart. Not only to Paul, on his way to Damascus, or to John on the island of Patmos, but to every seeking soul, through the rolling years, has been vouchsafed a vision of the living Christ. Christian Advance and Volunteer's Gazette, Philadelphia.

Bread-Pill Treatment.

DR. NEWCOMB says in the Sunday Post-Dispatch that many cases of neurasthenia are treated at the public dispensaries. "The usual treatment is bread pills and strong talk." This seems another way of saying that there is nothing the matter with them; that the malady is in the imagination, or, slangily put, "it's all in your eye." If this is true of neurasthenia, may it not be of other terrors? What do the doctors say?

Digitized by Google

Questions and Answers.

The Christian Science writings of the Rev. Mary Baker Eddy, as nearly as I can understand them, speak of God as Principle and Person. How can God be both Principle and Person: — Inquirer.

In the ordinary sense of personality God cannot be both Principle and Person. Christian Science does not so teach. God could not be divine Principle and person, as personality is humanly understood, unless He is both divine and human. Such a conception is unscriptural, for the Scriptures declare Him to be Spirit. If Spirit is divine, God would be both divine and human — if the theory that the human is divine were correct — and therefore humanity would be co-equal with God. This would lead inevitably to the Pagan doctrine of many gods, and destroy God's unity and supremacy. God, however, as infinite Spirit, universal Love, eternal Truth, and supreme Intelligence, is the highest conception of personality, for we cannot conceive of Intelligence apart from true personality, although we can conceive of Intelligence apart from fleshy embodiment.

In this sense Christian Scientists are always happy to place their conception of God over against that which would have Him to be a big man, or a magnified human being.

❧❧❧

How can God be at once Father and Mother, as Christian Scientists claim Him to be? — Same Inquirer.

In the first chapter of Genesis we read that God made man in His image and likeness — male and female.

Is it not a sufficient answer to this query, to say that if God can image forth, or create, male and female, He must comprehend in Himself the whole of Being; and could He create, reflect, or image forth male and female without Himself being both Father and Mother?

Testimonies.

SINCE my testimony appeared in the Sentinel I have received many letters both for and against this glorious Truth that is more to me than my meat and drink. After one feels the touch of life and health flowing through every avenue of one's being through the understanding of Christian Science, it is not an easy matter to get that one to turn away from the best thing ever given to mortals. When I was a Methodist I thought we had the best religion God had provided for man. I never preached a sermon on Christian Perfection but I always quoted from John Wesley, and I never heard any one object to that, but I had not taken up Christian Science over two months until your literature began to come to me with pencil marks when Mrs. Eddy was mentioned as "our Leader." I used to feel proud of John Wesley's teachings and loved to read the biographies of the best people in the Church, but all these years I grew worse with stomach and other troubles until life became a burden.

I carried my graham bread wherever I went in order to live at all. I did not turn to Christian Science until I had exhausted the M. D's. skill on some of my troubles; since I have been treated by one of our Leader's loyal students I do not know I have a stomach by what I eat. Where is there a system of ethics or religion since the days of Jesus Christ that will do that for a man? And beside this, one cannot be healed without being uplifted morally. I have had such an uplifting in spiritual things as I did not think possible on this stage of action.

It is not a mere belief about God based on human hypotheses but is a demonstrable fact — a real spiritual understanding of what God and man are. This is all made possible by the wonderful discovery of Rev. Mary Baker G. Eddy. Do you think I am ashamed to call her our Leader and admire her works? I hope I have not lost all the gratitude of common humanity. How I love this Truth as revealed through Christian Science, not because of the euphony of the word, for take the word Science away from its association and it is no more to me than any other so-called science, but Christian Science as it is means life, health. I have found something that satisfies every longing of the human heart. I feel sure I am with just as pure and holy people as ever trod the globe. JOHN C. HARNED.

Secor, Ill.

Surprising Change.

Looking over the past year of my life, the change is surprising. One year ago I was under the influence of liquor, which had become a strong habit. "Instead of my life being like the acorn, which pushed its way through the soil and grew into a shapely tree, I placed a large stone over the place where my acorn was planted, and then each year piled other stones and rubbish on it, making it impossible for the good seed to grow." But there was Life there. I chanced to attend the dedication service of a Christian Science Church in New York, and, finding it different from other churches, I went again.

In one of my "sprees" I was run over by a cab and my collar-bone broken, and, to my surprise, my wife said I told the police not to prosecute the driver for "it is all in God's hands." Those words set me to thinking, and I went to church quite regularly.

They said there was healing in those Christian Science services, and I found it, for the desire for liquor left me. But I was like the man, who, being asked if he could do a piece of work, answered "Yes, that is my trade, but I have no tools." Being supplied with tools and material, his employer returned in a few days but found nothing accomplished. "Can't you do this work?" "Oh yes, that is my trade, and I'll do it." Coming back in a few days he finds him in the same condition, and nothing done. Surely he cannot expect to be paid for his time.

Attending the services gave me my tools (The Way); and, with my life for the material, I should have gone to work at once. Now I have the blessed "Little Book," SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, and I am doing the best I can to earn my pay, and remove the rubbish of past years.

Feeling sick this morning, I declared that God did not make sickness, and after reading some in SCIENCE AND HEALTH I felt better and went to church, where all trace of illness vanished during the service.

New York City. Anthony Hessels.

Better Without Medicine.

In the year 1891 I became afflicted with a malady that caused me to be a great sufferer for seven and one half years. I had six different physicians (good men) and received no benefit whatever. Each giving me up in their turn by saying, Nothing will cure you but a surgical operation. Not willing to trust to so dangerous a method, I concluded to give up doctoring altogether, and for two years I did practically nothing. I found myself a great deal better off, but still in a very bad condition.

When in November, 1897, a gentleman called at my home that had heard of a new healing, he said, Why don't you try it? he not knowing what kind of healing it was himself. He said I know a young man that has been cured of hydrophobia by this healing. I thought if such were the case I certainly could be cured. I went at once to learn what it was, and was told that is was the Christ-cure as practiced by Jesus. I was perfectly willing to try it. Oh; such beautiful words of encouragement! My healer loaned me a copy of SCIENCE AND HEALTH, and I read almost all the time until I could buy one, and at the end of two months with only two treatments a week, I was well and able to go back to work.

Now the Bible seems like a new book. The Bible, SCIENCE AND HEALTH and the Journal are my daily companions, and such a change as Science has made in my life only those who know me best can tell. I have had the privilege also of

Digitized by Google

going through class. May the time soon come when all shall know that God is no respecter of persons, and know that He is ever present to manifest Love and support His children day by day, with the living bread.

Fort Wayne, Ind. C. Cran.

A Willing Surrender.

For three years I fortified myself against the action of Truth. I employed all my forces, but only succeeded in waging an unsuccessful warfare, meeting defeat on every hand.

Finally realizing that my position could no longer be maintained, I surrendered unconditionally to Truth; in whose camp I am now a willing prisoner, clothed with peace and harmony and fed by divine Love.

This capture means much to me; I had sought, found nothing, and lost all interest in the church. Drifting into superstition I became a follower of Ingersoll and then a believer in Darwin's theory, that "apehood preceded mortal manhood." I read and thought much but accomplished nothing toward solving Life's problem; and when I placed my theories against Truth, they were as chaff before a gale of wind. Just a puff and all was gone. My investigation confirms the merits of Truth; a new man has taken the place of the old; and joy, happiness, and contentment reign supreme within my home.

Kansas City, Mo. H. F. GANGWER.

Thanks for Motto.

I wish to thank our beloved Leader through the Sentinel for the motto engraved on the souvenir spoon. It has awakened in me a new and enlarged sense of the omnipotence of Mind. There is not an hour of the day that I do not have occasion to use it, and it satisfieth the hungry soul. May I also make a little confession?

When I asked the price of the spoons, mortal mind said, "*You* cannot afford to have one, you need that money for something else." But Truth responded, "What do you know of the real value of that souvenir? Would our Leader request all Scientists to purchase one, or more, if it meant nothing to us but simply a silver spoon? Can you afford *not* to have one?" I very soon ordered the spoon, and it was not long before it literally paid for itself, and like the widow's barrel of meal, my supply wasted not and the cruise of oil (heavenly inspiration) failed not, put rather increased daily.

Wentworth, N. H. E. M. DAVIS.

Much Gratified.

We were much gratified by an incident which occurred in our office recently. Two ladies from a suburban town came in to consult about treatment for one of them. It being a busy time, they were asked to wait, and were given some of our Mother's works to look over. When the time came to talk with them, there was a perceptible change in their mental attitude. One of them said, "We came intending to ask a great many questions, but while you were engaged we have been reading in this book — 'Miscellaneous Writings' — and in the chapter entitled 'Questions and Answers' our questions have all been answered satisfactorily." My heart turned in gratitude to the dear Mother who has given us the impersonal teacher — in "Miscellaneous Writings" — which always seemed to say to us the right thing at the right time.

Permit me also to express my delight at the new name of our Weekly. It means so much when we know what it is to be on duty as a sentinel — individually as well as generally.

New York City. L. G. C.

Convinced It was the Way.

About three years ago I first heard of Christian Science. I did not come to it as many are forced to, on account of physical suffering, but because its grand yet simple Truth and Love utterly convinced me it was the Way.

Since that time the healing power has been demonstrated in our home. One disease was met, that under materia medica would have sentenced my mother to a "living death" for the rest of her days on this plane of existence.

I have had many beautiful demonstrations of God's power to heal—and Christian Science has awakened me from a life of ease in materiality, to a labor of love in Christ's vineyard. I desire the pure self-less thought of a child, and hope to live this glorious Truth, knowing I have just touched the hem of the seamless robe.

Fairhaven, Mass. CORDIE F. HILLMAN.

One Item Worth the Price.

I WAS at a lady's home not long ago, and she asked me to read "What our Leader Says," which appeared in the Christian Science Sentinel of February 9th. I did so, and said, "that is worth the price of the paper for one year." I ordered the Sentinel at once. We cannot afford to be without such a paper.

Austin, Minn. WINFIELD S. STOCKMAN.

Notices.

Easter Services.

Will Mrs. Eddy attend Easter services in Boston or Concord? No, in neither place.

MARY BAKER EDDY.

WITH pleasure we announce that William N. Miller, Esq., C. S. B., 50 St. Alban St., Toronto, Canada, has been added to the Board of Lectureship. Mr. Miller is a prominent member of the legal profession and a Q. C.

The Church Manual.

The tenth edition of the Church Manual revised — containing the rules and by-laws of the Mother Church; also list of members, is now on sale. Address orders to the Christian Science Publishing Society, 95 Falmouth Street.

Christian Science Lecture.

The Rev. Irving C. Tomlinson, C. S. B., a member of the official Board of Lecturers, will deliver a lecture on Christian Science at Music Hall, Boston, April 5, next, at 8 o'clock P. M. Seats free. All are invited.

Regarding Free Subscriptions to Public Libraries.

Christian Scientists when sending requests to the Christian Science Publishing Society to have the Journal and Sentinel sent free to public libraries, should state that the consent of the librarian has been obtained and that the periodicals will be placed on file where they will be accesible for readers.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen. Send order to Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to the The First Chuch of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We wish to state that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—Jesus.

Published Weekly at 95 Falmouth Street. BOSTON, MASS., MARCH 23, 1899. Vol. 1 No. 30

Ambassador Choate.

His First Public Address in England.

UNITED States Ambassador Choate made his first public appearance in England March 15, at the banquet of the Association of Chambers of Commerce of the United Kingdom in the Metropole Hotel.

Mr. Choate was highly welcomed by the chairman and officials of the association. He sat in the place of honor, on the right of the chairman.

✤

Rear Admiral Lord Charles Beresford replied to the toast to the navy. He declined, however, to be drawn into a discussion of the Chinese situation. He concluded his speech by saying:

"The company is waiting to hear a distinguished guest, the new ambassador of the United States, whom every man of the Fore and Aft in this country is delighted to see; but I cannot be seated without saying that I took every opportunity to see the fleet of America in both the Pacific and Atlantic. I saw a very excellent fleet, not only in the way the ships are built, but in respect of general organization and preparedness.

"I need not extol its officers and men. They are of the same blood as ourselves and have proved what they could do when called upon. I hope the time will very shortly come when there will be such an understanding between the two countries that if anything occurs disagreeable to us, or affecting our honor and safety, those two fleets will be together. That will make for peace."

✤

Mr. Choate, on rising to respond, received an ovation. He began jokingly, protesting that he was overwhelmed with embarrassment at being called upon to respond in priority to the lord chief justice. He felt that when the British lion was about to roar even the American eagle should hold his peace.

He was delighted, he said, to receive and accept the invitation to the banquet, although he was not at liberty to discuss British commerce. His general instructions from his government were not to discuss politics, or only at extraordinarily festal occasions. (Laughter).

After a few words on the subject of commerce, which he characterized as truly the "mainstay of the British empire," he continued as follows:

"I have felt, however, that I might properly avail myself of this first public occasion to express the appreciation of my countrymen for the forbearance, good will and friendship manifested to them so freely by the British people. It is true, gentlemen, that peace between the United States and Great Britain is the first interest, not only of those two nations, but of the whole world."

In expressing his gratitude for the cordial greeting he had received from all sorts and conditions of men since his arrival in England, Mr. Choate said:

"Everywhere I have been treated as a friend and as the representative of your friends and brothers. In fact I have actually discovered the open door — open to such an extent as would satisfy even the yearnings of the rear admiral who had made the circle of the globe in search of it. I think I may say, as a testimony to the good feeling sought to be encouraged on our side of the water, that the President gave the best illustration of it when he said, in my letter of credence, that he relied with confidence upon my constant endeavor during my stay in Great Britain to promote the interest and prosperity of both nations." (Cheers and cries of "bravo.")

✤

After another reference to the open door and the "enlarged sphere of influence which a cordial brotherhood had opened up," the ambassador continued:

"I beg that you will not mistake my meaning. I do not believe that, although friends, we shall ever cease to be rivals. In the future, as in the past, we on our side and you on yours will still press every advantage that can be fairly taken, but it shall be a generous and loyal rivalry, and all questions, disputes and controversies arising shall be settled by peaceful means, by negotiations, by arbitration, by any and every possible means except war."

After pointing out that this was new sentiment, Mr. Choate remarked: "While the last great conflict between Great Britain and America failed to settle any of the great questions upon which either side took up arms — showing that between brethren war is the worst possible means of settling any controversy — yet in the eighty-four years that have since elapsed what tremendous questions, heated words, threatening demonstrations, which would inevitably have brought any other two nations into open conflict, have occurred on either side, and all been arranged and adjusted without resort to arms."

✤

Referring to the Venezuelan imbroglio, he observed:

"You know that on our side of the water we love occasionally to twist the lion's tail for the mere sport of hearing him roar. (Laughter.) Well, that time he disappointed us. He would not roar at all. He sat silent as the Sphynx, and by dint of mutual forbearance — our sober second thought aiding your sober first thought — we averted everything but a mere war of warm words."

Alluding to the "satisfactory dispelling of the cloud between Russia and England over the Niu-Chwang railway extension loan by means of peaceful diplomacy," Mr. Choate said:

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

"That is the kind of diplomacy which I, just entering upon a diplomatic career, desire very much to understand; for I am fresh enough to believe that if these two countries, laboring together for peace, unite their voice in demanding it, it is almost sure in every case. (Cheers).

"I would like to quote my President again, for the last words I heard him say were that the United States today was on better terms with every nation on the face of the earth than it had ever been before. (Cheers).

"Now, I have little more to say of my own country. (Cries of "Go on"). Our young republic had hard work during the past century to subdue the continent and to turn a wilderness into a smiling and wealthy garden. But that business is now pretty well finished, and so last year your brother Jonathan started out to see the world. He donned seven-league—nay, seven hundred-league—boots, and planted his footsteps on the isles of the sea. And what gigantic strides he made —Hawaii, then Manila, and another step, my Lord Charles, would have brought him to Hong Kong.

"Well, our interest and commerce differ only in degree, and it is — I wont say, as Lord Charles Beresford did, by putting fleets side by side — but by a common purpose and a united voice for us to command peace for the mutual support of the commerce of the two countries."

After paying eloquent tributes to the late Baron Herschell and to Rudyard Kipling, Mr. Choate concluded as follows:

"Gentlemen, we are almost one people. What I say is, let our voices always be lifted together for the cause of human progress and the advance of civilization."

Items of Interest.

The Queen Regent has affixed her signature to the treaty of peace between Spain and the United States. The signed treaty of peace will be forwarded to the French ambassador at Washington, M. Jules Cambon, for exchange with the one signed by President McKinley.

President McKinley may be able to issue the formal proclamation of peace between Spain and the United States upon his return from Thomasville, as the exchange of ratifications will probably be made within a fortnight. As soon as proclamation is made of the exchange of ratifications, the Spanish government will receive the $20,000,000 promised in the treaty.

It is believed the Duke d'Arcos will be the new minister from Spain to the United States when diplomatic relations are resumed.

The news from Manila of the beginning of the forward movement against the insurgents is regarded by the President as the beginning of the end of the rebellion. Every effort is to be made to capture Aguinaldo and break up the rebellion before April 1, so that the fighting may be over before the rainy season begins.

The action of General Otis in declining to allow the Spanish prisoners held by Aguinaldo to be ransomed, has been approved. It would be an affront to our authority and would also give Aguinaldo money and enable him, perhaps, to secure additional arms and ammunition.

The Cuban Military Assembly has impeached General Maximo Gomez and removed him from his command as general-in-chief of the Cuban army. The action of the Assembly was strongly condemned by the people. In his statement to the army he said: "I retire contented and satisfied at having done all I could for the benefit of my brothers. Wherever destiny rules that I may make my home there can the Cubans depend upon a friend."

General Gomez enjoys the full confidence of the American military authorities.

Extensive changes in the relations between the United States and Japan will be brought about on July 17 next, when the new treaty between the two nations goes into effect.

Similar treaties have been made by Japan with most of the other first-class powers. Their essential feature is to give Japan a status as a modern nation, instead of imposing the restrictions which she was under, along with China and other Eastern countries, before her advance to modern methods.

The Rev. Dr. Byron Sunderland has been appointed pastor of the First Presbyterian Church, Washington, D. C., to succeed the Rev. Dr. T. DeWitt Talmage.

Dr. Sunderland has already served the church forty-five years, and since his resignation, last June, when Dr. Talmage took charge, has been pastor emeritus. He will now resume full pastoral charge, and his congregation insist that he shall remain pastor the rest of his life.

The distinguished insignia of Dewey's rank as admiral will be as follows: On the lower end of the sleeve there will be three stripes of gold lace. Two of the stripes will be two inches wide. Between these will be a stripe one inch wide. Just above the three stripes will be a gold star. On each side of the coat collar will appear two gold anchors, flanking four silver stars.

A resolution was adopted in the Assembly requesting Gov. Stone to name Monday, May 1, 1899, as "Dewey day," and designate the same as a legal holiday. The preamble to the resolution recites that the victory of Admiral Dewey and his brave followers in Manila harbor on May 1 last, was one of the greatest achievements in naval warfare the world has ever known.

Information is received from Manila that General Wheaton has completely routed the Filipinos and has occupied Pasig, Taguig and Pateros. Several hundreds of the enemy were killed and as many were captured. General Otis says this is the greatest victory since February 5. The Americans will now press towards Aguinaldo's headquarters.

A census of Cuba is to be taken under the direction of the military authority of the United States Government. The Administration at Washington has concluded that such a census is necessary in order to determine who are citizens and qualified electors, before an election is held to establish a representative government.

General Rios protests against the action of Major General Otis in stopping the negotiations for the release of the Spanish prisoners in the hands of the rebels, and asks Spain to demand that the Powers compel the United States to permit him to treat with Aguinaldo for the release of prisoners.

Of the senators who retired with the last Congress, Murphy of New York and Roach of North Dakota never made a set speech during their terms, while Allen of Nebraska made the longest address ever printed in the Congressional Record. Allen was fifteen hours delivering it. Subject, silver.

About sixty Senators and Representatives will inspect the routes of the proposed Nicaraguan and Panama canals. They will go as the guests of the Panama Canal Company. The party will sail from New York, and return by way of Santiago and other points of interest in the West Indies.

The armor manufacturers will be given an opportunity to bid on the largest quantity of armor plate ever called for by the Government. About twenty-three thousand tons will be required for the three battleships and four monitors authorized last summer.

Digitized by Google

The Medical bill before the Kansas Legislature was defeated in the House by a vote of forty-three to twenty-three. It is said that the failure to pass was due principally to the medical lobby which has been working for the bill.

The General Assembly of Delaware adjourned *sine die* without electing a United States Senator to succeed the Hon. George Gray. The election, therefore, now goes over until 1901, unless a special session of the Legislature is called.

Dr. Wilhelm Rolf, the new president of the municipal council at Apia, will be recognized by the British and United States authorities. It is expected that his appointment will do much toward settling the difficulties at Samoa.

Chief Justice Fuller and Justice Brewer of the Supreme Court will leave the United States for Paris so as to arrive there about May 25 next, at which time the oral arguments on the British-Venezuela arbitration will be heard.

Governor Barnes of Oklahoma has vetoed the statehood bill on the ground of the expense of various elections and because he believes single statehood to be the ultimate end of the two territories.

The Spanish government has concluded a loan of thirty million pesetas with the banking house of Urquijo. The money will be used to pay the Spanish troops which served in Cuba.

Following the example of other nations, France has determined to give American locomotives a trial. She has sent a commission to the United States to negotiate for the purchase of ten.

It is said that General Gomez will proceed with the distribution of the three million dollars to the Cuban troops on disbanding, as though the Military Assembly did not exist.

The automobile cab is evidently a success in New York City. The local company which has three hundred automobiles, is about to place an order for fifteen hundred more.

Baron Russell, of Killowen, lord chief justice of England, has been appointed to succeed the late Baron Herschell on the Venezuelan arbitration commission.

The importations of sugar are beginning to be an important factor in the revenue of the government. The duties paid in February were $4,280,146.

The receipts from all sources under the war revenue act of 1898 from June 13, 1898 to January 1, 1899, amounted to $55,000,000.

Six transports will carry the regulars to Manila. It is expected to get all the regulars out of the country within the next six weeks.

The navy department has abandoned all hope of the recovery of the armoured cruiser Cristobal Colon, sunk off Santiago.

The war department has issued an order increasing the age limit for enlistment from thirty to thirty-five years.

The Hoadly-King Company has purchased the Rhode Island locomotive works for $3,025,000.

President McKinley is taking a well-earned rest at Thomasville, Ga., the guest of Senator Hanna.

The President has appointed Henry Putman, of Boston, Mass., to be librarian of Congress.

During the President's absence Secretary Long will visit the Pensacola Navy Yard.

Concord Items.

A MANCHESTER paper says that it is understood the Christian Scientists of that place have in contemplation the building of a temporary structure on their land, located on the site of the old Straw estate at the North End. The members of this sect have already in hand the assurance of enough money by subscription to build a structure, which will answer all purposes until the fund may be large enough to erect a handsome edifice. The Christian Scientists never have church debts nor do they raise any money by catch-penny devices. Before they build the money must be all in hand — or they do not build at all.

Concord Evening Monitor.

In his movement to stop the sale of liquor in this city, Mayor Martin was given material aid to-day by the city government, which passed an ordinance which requires that all screens, curtains or anything that obstructs a view from the street of saloon interiors, shall be removed.

Christian Science Wins.

CHRISTIAN Science scored a sweeping victory over the medical fraternity in the Oklahoma Legislature, after a sharp, decisive round in the Council, when McElrath's house bill, regulating the practice of medicine, came up for consideration. The bill, as it passed the House, was sweeping in its provisions, and prohibited anyone from administering treatment save graduates of medical colleges, approved by the Territorial Board of Health. In the Council committee of the whole Senator Gandy offered an amendment excepting Christian Scientists from the provisions of this bill, the author of the amendment taking the broad ground that the Legislature had no right to legislate against the religious belief of any citizen. The doctors in the Council, Senators Winkler and Magness, opposed the amendment, as did also Senators Biddison and Thacker. Their opposition was futile, though, against the solid majority favoring the amendment. In seconding the amendment, Senator Clark said he was in sympathy with the bill, but he was not willing to strike at the religious belief of some of the best people of the territory. Senator Havens said that he did not understand the Christian Science belief, nor did he believe in its claims, nevertheless some of the most reputable citizens and most prominent business men of his county were believers in Christian Science and he thought the Legislature had no right to deny them the right to their belief. Senators Huston and Garrison argued in the same line in support of the amendment, the latter citing a number of eminent people who have discarded medical treatment for the so-called metaphysical discoveries. Not only was the amendment adopted, but the entire bill was afterwards laid on the table.

The Wichita (Kan.) Daily Eagle.

Dr. Cyrus Edson, one of New York's famous physicians, was recently asked what are some of the ways in which the highest health may be maintained. He replied: "We find in religious teachings the soundest hygienic rules that have ever been devised. He who really lives up to the teachings of Christianity will keep his body in a perfectly healthy condition." — The Household.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

The Christian Science Sermon.

IV.

PRACTICAL ILLUSTRATIONS.

WHAT has already been said regarding the composition and character of the Christian Science Sermon will be further elucidated by a few specific illustrations. The first subject treated was that of God, on July 3, 1898. As God may be said to include the all of Christian Science it was quite natural that the first sermon upon this subject should cover a wide field of thought. When this lesson is studied its structure or outline as contained in the various sections is seen to be as follows:

I. God is the Creator. II. God is Principle. III. God is triune, Life, Truth, Love. IV. God is Good. V. God is omnipotent, omnipresent, omniscient. VI. God is Father. VII. God is Mother. VIII. God is Love.

This same subject again formed the sermon for January 1, 1899. Though on the same subject it is quite a different sermon than the former. The first lesson having unfolded in a broad way the thought of the Infinite One, this lesson helps us to know how He may be understood. The method of this lesson may be thus stated:

I. God is not corporeal but eternal Love. II. God is unknown by material sense. III. God is known by Spiritual Sense. IV. God as revealed by the Scriptures. V. God the only Cause and Creator. VI. God the Father and Mother.

Some earnest seeker may say: Why should we not have a sermon that would tell us more about God as Principle? This question does not imply that there is any fault to be found in the former lessons, but it does voice an eagerness to know more of an infinite theme. Those careful students of the Bible and our text-book will readily see from the above point of view that the sermon might come out this way. I. God is Principle. II. God as Principle is Good. III. God as Principle is Love. IV. God as Principle is the Saviour. V. God as Principle was manifested by Christ Jesus, VI. God as Principle is reflected by man. It is quite possible that just such a lesson may some time be found in the Quarterly.

The subject for February 26, 1899, was Man. The method of treatment here is quite as logical as the sermons above quoted, but is perhaps not as readily detected. This sermon on Man may be described as follows: I. The Immortal Man. II. The Mortal Man. III. The false testimony of the senses regarding Man. IV. The Old Man (the mortal Man, that of material sense) to be put off, and the New Man (the Immortal Man, that of Spiritual Sense) to be put on. V. Christ Jesus the perfect example of the Immortal Man. VI. The Unity between God and Man to be worked out by practice. In other words the method is this. I. God's man. II. The human man. III. The counterfeit man accounted for. IV. The counterfeiting disappearing and the genuine appearing. V. Christ Jesus the genuine Man. VI. Faith and works needed for man's transforming process realized through Christian Science.

Another might describe these sermons differently and better. Some one else might find a sermon which seemed devoid of any apparent structure. Let it be remembered that these illustrations are not intended to point out a rigid or fixed rule. They are hints which others may improve. Of this we all are certain, the Christian Science Sermons are given by Love, constructed by Love and made up of Love. They are the offspring of divine Intelligence, the Light from the Sun of Righteousness for the healing of the Nations.

Erroneous Rumors.

WE hear from various quarters, that the impression has gone out that the Board of Education at their recent session, established some new rule, or rules, with reference to the charges to be made by Christian Science practitioners. The only foundation for such rumors is this: that during the session of the Board, the question was considered as to the advisability or wisdom of charging a specified sum for a given length of time in advance of treatment. The Board took no official action upon it, but the members of the Board expressed it as their opinion, that it was not well to charge in advance for a particular time. To illustrate: — It has been a somewhat prevalent practice to charge five dollars in advance for one week's treatment. The Board thought that this was unwise, for the reason that it was, in a sense, declaring in advance that it would require at least one week to heal the patient, whereas the patient might be healed in a single treatment.

The Board did not change the prices or the rules in any respect whatever, as they had no authority so to do. The single point made by them was as above stated, and that only by way of suggestion to those present. Any statements or rumors other than the above are erroneous, and should not be further promulgated.

Also, statements to the effect that any individual member of the Board of Education has made official declarations, changing the price for treatment or rules referring to the same, are equally erroneous. No individual member of the Board has authority to speak for the Board as a whole. We trust, therefore, that all rumors or statements to the effect that we (the editor of the Journal and Sentinel) have made official statements of the kind mentioned, will cease.

Our Leader's Message.

We are glad to know that many newspapers in all parts of the country, are re-publishing our Leader's Message to the Church at Concord.

This helpful and inspiring epistle from her who is blazing for all a path through the wilderness of mortal confusion, that the way Truthward may become straight and the outlook clear and certain, should reach honest seekers and candid investigators everywhere.

Lecture in Parker Memorial Hall.

WE HAVE heretofore announced in the Sentinel that the Rev. Irving C. Tomlinson, C. S. B., by special invitation of the Rev. B. Fay Mills, would, on March 20, deliver a lecture in Parker Memorial Hall, upon the subject "The Claims of Christian Science on People of Liberal Thought," the lecture being one of a series of public meetings on public questions, arranged and conducted by Mr. Mills.

The lecture took place as announced, and Parker Memorial Hall was filled to its utmost capacity. Mr. Tomlinson was happily introduced by the Rev. B. Fay Mills, and delivered the lecture which we herewith publish in full. At the conclusion of the lecture fifteen minutes were devoted to ques

Digitized by Google

tions and answers, and thereafter thirty minutes to three minute speeches, in the nature of a free discussion of the lecture.

It is unnecessary to say that the whole proceedings were fraught with very great interest to all present, and especially to that part of the audience made up of Christian Scientists. Christian Scientists and those interested in our movement, appreciate Mr. Mills' kindly consideration in thus admitting their cause to a hearing before the audiences assembled at his meetings.

The lecture is a thoughtful and able presentation of some of the leading phases of Christian Science, and will be read with interest. It being a lecture outside of the ordinary course, we feel warranted in devoting to it the space it occupies in the Sentinel; hence its publication in full.

The Claims of Christian Science on People of Liberal Thought.

The subject for our calm consideration is "The Claims of Christian Science on People of Liberal Thought." People of liberal thought I understand to be people who think for themselves. People of liberal thought are people of liberated thought. Such persons wear no labels. They are to be found among Jew and Gentile, bond and free. There are people of liberal thought in Russia. There ought to be many in this land of the free press, the free ballot and the free school. People of liberal thought are open-eyed, open-eared, teachable, humble, ever-learning, ever-searching, confessing in speech and in manner that all they know is but as a grain of sand on the shore of a boundless sea. So when the Nazarine prophet was asked who made up the population of the Kingdom of Heaven and who was the greatest among its citizens, he answered in substance, People of liberal thought, for he took a little child and placed him in the midst of them and said, "Of such is the kingdom of heaven." It is a recognized fact that the people liberalized by our free institutions consider that they have a right to the whole of Truth. With them it is simply a question of whether a thing is worth the having. Convinced of this, no prejudices of antiquity, no false claims of social prestige, no counterfeit badges of pharisaic exclusiveness can rob the thinking American of his just rights. If Christian Science is worth the having, liberal Americans will have it, and illiberal denunciation and blind opposition will not stay its onward march.

Illiberal Criticism.

I was so slow myself in coming into Christian Science that I understand some of the difficulties which stand in the way of its instant appreciation by people of liberal thought. As I recall my own experience, I found a difficulty in getting at the full meaning, on the first reading, of the Christian Science text-book, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," by Mary Baker G. Eddy. There appeared to be an unfamiliar use of familiar words. I was helped somewhat by remembering a similar experience with the study of Herbert Spencer and Emmanuel Kent. It is only fair in reading a new author to suspend judgment until you are able to approach the subject from his view point. Once in sympathy with your author many supposed differences fade away. I was also helped by discovering, on consulting the best lexicons, that the author of SCIENCE AND HEALTH used words, not in their corrupted sense, but in their original and primary meaning. Honest study will show that no modern author is more precise than is Mrs. Eddy in her choice of the right word to convey her exact meaning.

Another seeming difficulty which, for a time hid from me the claims of Christian Science on people of liberal thought, was the frequent occurrence in SCIENCE AND HEALTH of statements that were opposed to all that heretofore I had supposed to be true. I was helped over this difficulty by remembering the experience of Galileo, of Copernicus, of Columbus, and of every great reformer by whom the world has been blessed. They made statements that were opposed to all that had heretofore been supposed to be true, and as it turned out, this was their value — that they did revolutionize all existing systems. As I beheld humanity's sickness and suffering, its sorrow and its sin, as I remembered our overflowing hospitals and asylums, our crowded jails and reformatories, within our nineteenth century civilization, I said, "It may be that the one thing lacking is a new school of thought which shall revolutionize present conditions through a revolutionary system." Now after a careful study and a clear understanding of this system, I see that a strong claim of Christian Science on people of liberal thought is that it proposes to effect a needed revolution through doctrines that are revolutionary.

A Liberator from False Gods.

Not an unimportant claim of Christian Science, on people of liberal thought, is the fact that it is a liberator from the bondage of false gods. Whatever one makes an object of worship, that is his God. He may make pious professions. He may recite the words of prophets and apostles, but his real God is that upon which his thoughts and affections are centred. "Where your treasure is, there will your heart be also," said the great prophet.

The God of this world is the God of matter. Then there are many lesser gods in this kingdom of mindless matter, gods of gold and gods of houses and lands. But in fact, the god most men worship is their body; upon this god all thought and affection is centred. Drink-offerings and meat-offerings they bestow upon this god without measure. All goes merrily until their god falls sick; then they look for help, not to the Lord of Heaven and earth "who healeth all thy diseases," but they apply to the god of drugs for relief. Soon they are in fetters to calomel or nux vomica, belladonna, aconite. Observe the conversation of the sewing circle, or the summer veranda, as people talk their gods over. The discussion will begin with reference to the latest fashionable malady with which they claim themselves victims; then it changes, and their children's maladies, their relatives' maladies and their neighbors' maladies consume their time. And then, having talked themselves out on the neighborhood's bodily weaknesses, if there is any time remaining it is spent in discussing the neighborhood's spiritual weaknesses. Observing the prodigal thought bestowed on sickness and sin, the wonder is, not that there are so many sick and dying, but the wonder is that there are so many still alive.

Fault is often found with Christian Scientists because they are said to be narrow. Now if breadth consists of saying very little of health, of life, of good, and very much of sin, sickness and death; if it be narrow to talk of God, of life, of peace and joy and not at all of aches and pains, of gossip and slander, then must it be confessed that Christian Scientists are narrow. They enjoy talking of their religion and the practical results it is accomplishing; they do delight to help one another to clearer views and a better understanding of God and the present help he is to them.

Does one say all this seems very narrow? Then because we are all so healthy and happy, we are in a mood to take the criticism very kindly.

A Liberal and Liberated Leader.

It is but natural to expect that a liberating system should have a liberal and a liberating leader. There are those who would have us think otherwise. There are those who profess to believe that the founder of a religion which has released its multitudes from the serfdom of superstition and ignorance and from the bondage of sickness and sin, is herself illiberal and unliberated. An appeal to the facts will reveal the truth.

At least it must be granted by the fair minded that Mrs. Eddy fulfills the Gospel injunction, "Physician, heal thyself." Before beginning the work of liberating others from bondage she first freed herself. For forty years she was a faithful member of the Orthodox church. As she read her Bible she read of a practical, helpful God. As she read her New Testament she read of a Saviour who actually saved people from sorrow and suffering, from sickness and death. As she

Digitized by Google

listened to his promises she understood him to say, "Ask and it shall be given you." As she read his commands she heard him declare, "Go, preach and heal." As she followed him in his journeys through the different towns of Palestine she saw that but a small portion of his time was given to preaching the gospel, the far larger portion was given to healing the sick, and the sinful. As she listened to this great reformer describe the legitimate work of his pupils and representatives, she plainly heard him announce to all, "The works that I do shall ye do also," or that is to say, "The work of healing the sick and the sinful which I do is the work which every Christian should accomplish."

Then as the founder of Christian Science noted the conduct of His worthy followers, she saw that they did precisely what they had been told to do. They, like their illustrious leader, healed all manner of diseases without drugs or material remedies of any sort. She saw also that the church for the first three hundred years of its existence did likewise. Then is there any reason why this earnest, liberal-minded woman asked if such was the work of the early church, under the direction of its founder, why should not the church be doing that work now. The Master said, "Go, preach and heal." If it be evangelical to obey one-half his command to preach, why is it not evangelical to obey the entire command and heal the sick and the sinful?

Then there were other serious questions that came to this deeply religious and pure-minded woman. When the Bible from Genesis to Revelation assures us that true prayer is answered, why was it that so seldom there was any satisfactory answer to prayer? And then other questions came. "If God was good, why so much that was bad?" "If God was all powerful, why did he not utilize some of this power to put an end to wickedness now?"

She had always been a prayerful woman, and yet she had always been a sickly woman, and she asked herself what we have asked, "Why are the saints so sickly?" Mrs. Eddy sought long and earnestly in the old way for the solution to these puzzling questions, but without avail. In her search for health she went from allopathy to homeopathy, in which latter school she was a practioner for many years. She tried massage, and the nearest approach then to mind cure, but without success. All known methods of the healing art were studied and given a fair trial and all proved failures.

The Power which Liberates.

Such was the situation when in the year 1866, one Sunday morning found her in bed in Lynn, an incurable invalid, as the specialists declared who were in attendance. On his way to church her pastor called, and so critical was her case that he bade her farewell, expecting that on his return he would find her no longer a member of his flock. When he had gone, the patient sufferer, still trusting God, called for her precious Bible and opening it to the third chapter of Mark, she read the command of the great liberator to the man with the withered arm, "Stretch forth thine hand. And he stretched it out, and his hand was restored whole as the other."

Then the emancipating Truth flashed upon her understanding, that the same Power which restored the withered arm was her restorative. She saw that the Christ-power which healed through Jesus of Nazareth is present here and now to heal us. Could that blessed fact be true? Yes, thank God, it is eternally true, for lo, her withered form was restored whole, and she rose from that bed of suffering healed and free.

What wonder that there was impressed upon her the necessity of spreading this liberating gospel. Let us use her words from the Christian Science text-book, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," page 122.

"I saw before me the sick, wearing out years of servitude to an unreal master, in the belief that the body governed them, rather than Mind.

"The lame, the deaf, the dumb, the blind, the sick, the sensual, the sinner, I wished to save from the slavery of their own beliefs, and from the educational systems of the Pharaohs who today hold the children of Israel in bondage, I saw before me the awful conflict, the Red Sea, and the wilderness; but I pressed on, through faith in God, trusting Truth, the strong deliverer, to guide me into the land of Christian Science, where fetters fall, and the rights of man to freedom are fully known and acknowledged."

A Burden-lifting System.

A candid investigation of the genesis of this burden-lifting religion will reveal that every incident and circumstance connected therewith has a rational and common sense explanation. We have in the first place a pure, true, liberal, cultured, consecrated woman. We have more than forty thoughtful years devoted to the profound study of the world's emancipation. We have a unique experience in a marvelous rescue from death and a complete restoration to health after every earthly hope had fled. From these premises there follows naturally, the perception of the active Principle of life, understanding which, all manner of diseases are healed. There follows the recognition that the healing recorded of Jesus and his disciples was not contrary to law but in full harmony with a known law, which all may understand and put into practice for themselves. There follows the instruction of others in the understanding of this Principle so that they also heal in accord with the higher law, and lastly there comes the publication of a scientific treatise on the subject, the study of which has fitted thousands to heal themselves and others afflicted like themselves.

Surely there is nothing of mystery, nothing incredulous in that simple story. The facts when once known, completely overthrow the base charge of selfish or sordid motives on Mrs. Eddy's part. Mrs. Eddy kept nothing secret, She gave all she had to help humanity. And today her whole life is spent for the welfare of others. The recent class which Mrs. Eddy taught in Concord, of which class it was my privilege to be a member, contained seventy members: for teaching those seventy Mrs. Eddy received not one single dollar, because she would not accept pay where it was her joy to give. In that class were scholarly professors, wise editors, liberated clergymen, gray-haired physicians, and learned judges, but in understanding and in knowledge Mrs. Eddy was so much the wisest of them all that she appeared the master teacher, they the willing learners.

The head of this movement is so manifestly fitted for spiritual leadership, her entire history gives such convincing proof of her right to lead a great religious reformation, that because of its wise and successful leader Christian Science makes a strong claim on people of liberal thought.

A Liberating Religion.

Christian Science has still further claims on people of liberal thought, because it is essentially a liberating religion. The world has seen much of liberal religions. It has seen, as yet, very little of a liberating religion. Christian Science presents no new God but it does present much that is new of the one living and true God. The claim has been raised against this religion that it takes away the people's God. If one's God be that of a scholastic trinity which is a mathematical absurdity, then the charge is true, for Christian Science declares with Moses' saying, "Hear O Israel, the Lord our God is one Lord." If one's God be an infinite corporeality of limitless form, which is an intellectual absurdity, the charge is true, for Christian Science says with Jesus, "God is Spirit." If one's God be a war God, who loves his favorites and hates his enemies, which is an ethical absurdity, the charge is true, for Christian Science affirms with the Apostle John that "God is love." But if one's God be that of reason and revelation, the claim is false, for Christian Science is but the unfoldment and the understanding of that God "in whom we live and move and have our being."

The Indians believed in electricity. When it flashed across the sky they stood in wonder and awe before it. Their belief was enslaving rather than liberating. They were none the better for their belief, for it made electricity of no use to them, for their belief was crippling and paralyzing through the fear created.

Digitized by Google

Edison also believes in electricity, but to that belief has been added understanding, and behold the transformation. What awed the Indian now lights our streets, propels our cars and runs our factories. What was once a fear transmitter, now that its science is understood, is a power transmitter. What was only a useless belief is now, through the discernment of its principle, a beneficent force for good.

Likewise of God. He has been to the world what electricity was to the Indian, only a belief. Their God has been of no practical value to them. They have gained no benefits, their enslavement and enfeeblement are often the only results from their crippling belief.

Every claim that a Morse or Edison could make upon the confidence of thinking people in the domain of electricity, a similar claim Christian Science makes upon people of liberal thought in the domain of God, for Christian Science gives such an understanding of this All-Power that the dark world becomes light, progress is hastened, burdens are lessened, sin and sickness vanish. The God which was once a fear transmitter has become, through Scientific understanding, a beneficent force of good.

God the World's Liberator.

Christian Science has claims on thinking people then, because of its liberating thought of God. Almost the first word the child lisps is the word "good." All that ministers to its welfare it calls good. And when of larger growth there comes a larger sense of good. He learns to call that truly good which does his soul good. And if he be a reflective man he will have had experiences which words faintly describe. It may have been in early spring when nature was taking on her fairest hues. Beside the rippling brook with the blue-eyed violets smiling up at him, there has stolen upon him a sweet sense of an ever-presence near at hand. Ah! who shall tell the story?

It may have been when reading the sacred pages of some beloved book or listening to the strains of heavenly melody, that there has dawned upon the waiting senses a peace and calm which words do not describe, but which he knows is good.

And of this good he can tell you this much. It cannot be measured. It cannot be weighed. His eyes see it not, his ears hear it not, his hands find it not, for this good is Spirit. As he reflects upon this rare experience he will declare that this sweet sense of good had for companions the beautiful and true. Amidst those surroundings which manifest the most of Truth, in them, was the most of Good. Nor on meditation can he separate Truth from Good, for they are one. Good is Truth and Truth is Good.

And if we will search through the centuries here and there we shall find those pure souls who have so liberated themselves from sordid care and sensual pleasures that they have resolved to know more of this Good, to be more in its sweet companionship and to express in their lives the Good they felt but could not touch. If you have gained the confidence of such an one he will tell you: Not gold or silver, not place or power, shall be my God, for the Good only shall I seek, the Good only shall I adore, for Good is my only God and God is my only Good.

Such is not a new God, but the old, old God, for in the old Anglo-Saxon language Good was the term for God. And the Psalmist said, "The Lord is good." And Jesus said, "Why callest thou me good; there is none good but one, that is God." Likewise said the Master to a materialistic worshipper, "God is Spirit, and they that worship Him must worship Him in spirit and in truth." And when the same reformer advanced the claims of his religion upon those who needed liberating, he said, "You shall know the truth and the truth shall make you free." The God of Jesus, the true God, is the spirit of truth which is good. All that is good is of God, and God is nothing else than Good.

A Liberated Man.

With a liberating God there is sure to be a liberated man, for what a man's God is that will the man become.

The man the world knows best is a slave, a slave to circumstances and conditions, a bondman to appetites and passions, a slave to superstition and to fear. Not more cruel was the Egyptian bondage than is that under which the majority of mankind suffer to-day. The man of Christian Science is a free man, because like Paul, he was free born.

Christian Science then, does not appeal to people of liberal thought because it presents man as a miserable sinner or a crawling worm, but because it has a man who is worthy of his Maker and not an insult to Him.

God is Truth, but Truth exists not for itself alone. Truth expresses itself in ideas and those ideas image the parent Truth. In mathematics the numbers express the truth, and each number is an idea of the truth of numbers. And each mathematical idea is the truth because it is like its parent, the all truth. The figures which represent the numbers may be good or bad, depending upon the intelligence or its lack which makes them. The figures may be rightly or wrongly combined, depending upon the mind or the mindlessness which combined them. But the numbers themselves for which the figures are only the signs, these numbers because of the truth are always good and true. The mistakes, the errors that appear are not of the mathematical ideas; they pertain only to figures. These errors are no part of the truth or truth's idea; these errors are traceable to ignorance in their combination.

Likewise of man. As the number is the idea of mathematical truth, so man is the idea of the spiritual Truth which is God. As each number has its figure which is its sign, so each man has his figure, the human figure, which is but the sign or symbol of the true man, or spiritual man. It is possible the ignorant schoolboy might consider that the multiplication table consisted of the figures in his arithmetic, and when distressed because of his poor figures, his errors and mistakes, he might think he would relieve his distress by destroying the arithmetic. Not so his elders. They know that the science of mathematics is quite independent of the arithmetic. They know that numbers are ideas of eternal truth and likewise eternal. They know that the poor figures and the errors are caused by ignorance which the presence of truth will destroy by setting things right. They know that to heal that schoolboy's distress the remedy is not to doctor the figures but to banish the ignorance. When he knows the truth, the truth will make him free from his distress.

On the same Scientific basis Christian Science takes its stand concerning man. It affirms that man is an idea of Truth, that this human figure is the sign of the spiritual reality, that the real man is no more the flesh and blood than the chalk or pencil mark is the real number. Man is an idea of Truth. Man then, the true man, is not material, but spiritual. Christian Science does not affirm that this body is nothing, but it does affirm that it holds the same relation to the real man that the printed figure holds to the eternal number. The human form is but the symbol of the divine idea. In itself it is not the man, it is but the sign of the real man whose builder and maker is God.

The Science of Liberation.

But, says one, of what avail this high conception of man, when the individual we have to do with is not up to the standard? You say, Christian Science tells me, I am good, I am true, I am spiritual. Well then, I do not recognize myself. You say I am good but that is not the way I feel. After this glowing account of myself I feel that I need an introduction to myself. You speak of the perfect spiritual man. I feel myself burdened with an imperfection.

Granted this be so, the question is, how are you to deal with the situation? Christian Science has a definite and exact answer. This science affirms that you are to treat the discrepancy as you would treat the discrepancy in numbers. You would remove the error by removing the ignorance which is its occasion. This answer is so simple, it commends itself with such readiness to the thoughtful that it is difficult to conceive of any other method of treatment. But is this the

Digitized by Google

method of treatment to which the world has been accustomed?

Consider the method of materia medica. It professes to deal with those errors which manifest themselves in bodily disease. Bear in mind we are treating not wood or stone; we are treating man; mortal man is represented to our material sense by a sign or figure, which human figure we call the body. The method of material medicine does not in any way consider the real thing in the problem. It gives the spiritual idea no thought, although it professes sole authority for dealing with the human life, yet it proceeds to effect harmony, treating only the sign, the human figure. Common sense would say, remove the discrepancy by removing the ignorance which was its occasion. Not so with the old fashioned dosing methods. They undertake to solve the problem by treating the figures only. As if in numbers you were to attempt to correct the schoolboy's mistake by drugging his faulty figures, instead, the scientific treatment is to remove ignorance with truth, and in the presence of the truth the figures will correspond with the numbers and the error is removed.

Scholastic theology has still another method for the removal of discrepancies. Having abandoned the platform constructed by its founder for dealing with the entire man, having forsaken the sacred work given it by healing both sickness and sin, it assumes to treat the discrepancy of sin, neglectful of its rightful work of caring for the whole of man. Ecclesiasticism professes to have sole authority for treating one-half of man.

Consider then the theologic method for treating errors in the human problem. It professes to eliminate the errors which manifest themselves in forms of sin. Having given over the material man to the matter doctors, it fixes its thought upon the spiritual man. Materia medica says illness is bodily sickness. Scholastic theology says that sin is soul sickness. The drugging doctors declare that the error of sickness is in the sick figures. The ecclesiastical doctors say that the error of sin is due to a sick idea. Science and common sense say that the error of physical sickness or moral sickness like all error, is due to no fault of the figures and no fault of the ideas, but is due to ignorance.

Christian Science is Common Sense.

Science and common sense take issue with the unscientific doctors and affirm that the sickness is not in the figures and is no part of the idea, but the error consists in wrong relations. They say, rightly relate the figures, let truth reign in place of ignorance, and error vanishes. The blunders of both theology and medicine are apparent. Medicine in treating sickness mistakes the figure for the thing it signifies. It regards the body as everything and the soul as nothing. Scholastic theology in treating sin, mistakes what is the imperfect figuring of ignorance, for an imperfection in the perfect, spiritual idea. Medicine attempts to heal the sick by treating the figures instead of treating the ignorance which puts the figures out of order. Theology attempts to heal sin by undertaking to treat the perfect spiritual idea instead of treating the imperfect figuring. Medicine believes its patient helpless, and mindless matter all-powerful. Theology likewise believes its patient helpless and teaches him to look to another for help when it should teach him how to help himself. Calm reflection will show that the failures of medicine and the failures of theology are due to their untruthful premises and their unscientific methods. Success in treating sickness and sin can only come by abandoning these faulty systems and adopting one which has Truth for its premise and common sense for its practice.

Thus Christan Science affirms that the scientific process for liberating error in the mathematical problem by removing the ignorance that made it, is the scientific process for liberating man from all error by removing the ignorance that makes it.

Christian Science then has claims on people of liberal thought.

Because it is a world-wide movement for the world's liberation.

Because, as a million witnesses testify, it has a liberty-giving system.

Because, as more than thirty years' of experience proves, it has a liberal and a liberating leader.

Because it holds a liberating thought of God and man.

Because it has a system of liberation which is scientific in facts and scientific in its processes.

Missouri Medical Bills.

On another page will be found a copy of a medical bill introduced by Mr. J. H. Hawthorne of Kansas City. This bill protects minority interests and has the support of many homeopaths. While no advocate of any medical bill, we should prefer to see the Hawthorne bill becoming a law rather than any of those infamous measures that place all power in the hands of allopaths. As the homeopaths may be said to be favorable to the Hawthorne bill, this measure will demonstrate to the public that homeopaths are not averse to a measure that really elevates the standard of medical proficiency but are unalterably opposed to one that places them in the clutches of their natural enemies.

We have just perused a copy of a medical bill that has been evolved by the committee of the lower house as a committee bill in substitution for the Wilson bill. The principal change in the original Wilson bill is that of the heading wherein it is designated a committee bill. Only two amendments are made to the Wilson bill as orignally introduced; one is to reduce the charge for examination from twenty-five dollars to ten dollars, and the other is to define what is to be regarded as practicing medicine so as to include everything that may be done for the purpose of healing the sick. The bill thus makes it a criminal offence for a Christian Scientist, an osteopath, or any other healer to practice their professed healing powers without first passing an examination before the State Board in the various branches of medicine.

It would be the approach to an ideal to have all physicians and professed healers thoroughly grounded in the various branches of medical study as usually pursued in medical colleges. On the other hand there are many people in the State of Missouri who have been restored to health by means that are not regarded as professional, after exhausting all professional means that seemed open to them. As honest physicians we should make no attempt at a denial of these facts. The power of healing is not confined to the profession, and the medical man who has the true interests of his patient at heart is not unwilling to have relief obtained after he has failed to secure it. The doctor who would prefer that his patient should die of his ills rather than be cured in the way that he might most desire, is unfit for the practice of medicine according to any system. In view of these facts there is a good deal of gall in the assumption that all cures must be wrought by licentiates of the State Board. As a liberal and honorable profession it is unbecoming of us to ask of any legislature that such laws should be passed. As men capable of seeing the future such a short-sighted and foolish policy ought to be abandoned before it receives serious consideration. As a portion of the community loving individual liberty it should never enter our minds to deny the right to our neighbor, whom we cannot cure, to call to his aid anything that may promise that greatest of all blessings — good health. We should not ask permission thus to trespass upon the dearest rights of others; the legislature should not permit us to do it and best of all, for our intended victims, and far worse for ourselves, the supreme court of the state stands ready to forbid that any such inalienable rights shall be delegated to any set of men.

But we should not feel safe in the protection of the supreme court. It costs much money, time and trouble to get a decision from the supreme court. Rather than expend

Digitized by Google

our energies in this way we are disposed to let such laws remain upon the statute books and yield obedience to their unjust demands. Minnesota has an obnoxious medical law that has been obeyed for many years and is generally regarded as unconstitutional. Very limited efforts will surely defeat the Wilson bill and we advise our friends to make it the personal business of each one to see to it that the Wilson bill, under any guise, never gets a place upon the statute books of Missouri. Medical Arena.

No Colds in Alaska.

Why People Cannot Catch Cold in the Land of the Midnight Sun.

Though the long-suffering, sneezing, sniffling Coloradoan may not believe it, yet there are places in this big wide world where colds cannot be caught simply because there are no colds to catch.

Nansen and his men say that it is impossible to catch cold in the Arctic regions, no matter how severe the exposure may be. During the three years they were in search of the North Pole not one of them suffered with a cold, but they all proceeded to have colds just as soon as they returned to civilization.

This interesting fact was related by Dr. Egbert Guernsey, one of the most prominent New York physicians. He says, in a word, that colds are a result of microbes, similar to the grip germ, which attack the body when it is in a depressed condition.

The microbe that makes colds has thus far eluded detection.

It hasn't had its photograph taken and put in the scientist's rogues' gallery, as has been done with wicked germs of bubonic plague, yellow fever, typhoid fever and the grip. But Dr. Guernsey believes that the "cold" microbe exists, because colds have been found to be contagious.

This microbe theory of colds offers a solution of one of the most curious incidents of epidemics of colds ever recorded.

On the rocky, lonely island of St. Kilda, lying some forty miles beyond the Western Hebrides, there are nigh upon a hundred inhabitants, who keep a few sheep and cows, cultivate some forty acres and collect the eggs, feathers and young of the numerous sea-fowl. Their coast is so precipitous and their seas so stormy that for eight months out of the twelve they are practically inaccessible.

Formerly they were visited only once a year by a ship from the mainland. Now several call there during the summer, including excursion steamers from Liverpool and Glasgow. The curious point is that whenever a ship reaches the island all the inhabitants, including the very infants at the breast, are seized with a cold.

This fact has been known for nearly two hundred years, and greatly interested Dr. Johnson when he and Roswell were making their famous tour of the Hebrides.

The problem of this St. Kilda cold long puzzled learned men, who seem never to have suspected the simple explanation of the mystery.

One solution suggested was that the steward always brought whiskey with him, and that it was the intemperance and jollity which took place on the occasion which caused the epidemic. Another explanation was that a ship could only reach the island folk from the mainland when the wind was from the northeast. "The wind, not the strangers, caused the cold."

This cold is still characteristic of the island, and called by the inhabitants the "stranger's cold." On the arrival of the first steamer every summer all the island folk fall victims; afterward many of them escape. The attack lasts eight or ten days, and is often accompanied by bronchial catarrh.

The inhabitants affirm that if the ship comes from Liverpool or Glasgow the cold they catch is more severe than if the ship comes from Hebrides.

All these instances, and there are many such, go to show that a cold is an infectious disease, prevalent widely, no doubt, but only where man, perhaps only where civilized man, exists. Also that in some favored spots, as in St. Kilda, the disease, when it has been introduced, rapidly becomes extinct. Denver Republican.

A Dangerous Example.

HONESTY in the performance of public duties is fully as important to the well-being of society as rectitude in private transactions. Corruption in high places is a demoralizing example for the youth of our land, who ought to be able to regard official station as one form of honorable success, and as the just reward of firm integrity and conspicuous ability. Unhappily, there is evidence too strong to be disregarded, that dishonesty is the rule, and not the exception, in the legislatures of some of our states, and that Congress itself is not free from the power of those who are willing to corrupt the very source of government.

Statute books, state and national, contain penalties for official bribe-taking, but these laws are largely dead letters; and in New York, the leading Commonwealth of the Union, almost any proposed enactment can be defeated or carried by money. Men go to Albany as legislators on a salary of fifteen hundred dollars a year, and accumulate fortunes. A New York daily newspaper has openly alleged that the ordinary cost of defeating or carrying a bill in committee is five hundred dollars a vote, and on the floor of the legislature, from two dollars and a half to five hundred dollars a vote. Every legislator who takes even one cent for voting, or abstaining from voting, is a criminal, and liable to severe punishment under the law. Yet few are punished, and the evil grows and flourishes under the stimulus of impunity and greed.

It is for the people to effect a reform. Lawmakers steeped in turpitude cannot be expected to frame their own indictment. Corrupt legislators should be driven from office, and others elected to their places who will give a wholesome example to the community. Corruption should be made dangerous, as it is already odious, and men should be sent to legislative bodies who would be content to live within their private means and the compensation provided by law. Agitation with these objects in view should be unceasing until the goal is achieved, the legislative halls are purified, and a political career ceases to be associated, in the public mind, with trickery, fraud, and ill-gotten wealth.

Editorial in Success, March 18, 1898.

Dillon a Christian Scientist.

I AM a Christian Scientist, pure and simple," said John Dillon to a reporter recently, "and believe in the doctrines of its healing powers. You and everybody know that I used to tip the bottle, and believed in nothing — absolutely nothing — that was for the good of man. And I never would have been healed till this day had it not been for my daughter, Mrs. R. E. Parker, of Chicago. She was ill and was cured by Christian Science after the doctors had given her up. Now I have been confirmed to the same way of thinking. Years ago I used to have two or three bottles of medicine in my dressing room; you don't see any now." Dillon looked about with pride. Then he asked in his inquisitive tones: "Are there many persons in Sioux City who believe in Christian Science? It is the best religion extant."

Dillon is a firm believer that Christian Science is responsible for his success, and points with pride to the hour when he became imbued with this religion.

The Lectures.

At St. Louis, Mo.

A man six feet tall, of magnificent physique, clear-cut features, and a large head, almost deserted by hair, addressed an audience of nearly three thousand persons at Music Hall Friday evening, February 10. He was Edward A. Kimball, C. S. D., one of the most noted and earnest advocates of Christian Science in America. He came to St. Louis at the solicitation of "First Church of Christ, Scientist." His mission was to tell what Christian Science means. Those who sat attentively for more than an hour listening to his words, left the hall with a much clearer conception of the theme than they had before they went there.

The audience was not only a large one, but it was representative. In it, occupying seats well down the aisles, close to the speaker, were a number of well-to-do and well-known people. They sought to learn the objects of the Christian Science people. They wanted all the information attainable that might lead them to discover a religion that overcomes sickness as well as sin.

Every seat in the parquet, dress circle and boxes was taken. In the balcony the first rows were nearly all occupied. It was an intelligent audience, one that would compare favorably with those to be seen in any of the large churches on a Sunday evening. Had the weather been less inclement, it is probable that every seat in the great hall would have been occupied.

Mr. Kimball's voice reached every point. His enunciation was distinct, every word being distinguishable. From the beginning he interested, and as he continued the interest grew. There were persons there who probably never knew much about Christian Science before. If they went away not filled with it, the speaker can not be blamed. He spoke of the misconceptions and misrepresentations, and disadvantages the science had labored under, but he believed the people were beginning to understand better.

The lecture did not begin until 8.30 o'clock. Delays in transportation facilities made the audience slow in assembling. Judge J. E. McKeighan had been selected to present Mr. Kimball. Judge McKeighan began his brief introductory remarks by saying that, however else the audience might differ, it would not differ in the opinion that Jesus Christ was a preacher of righteousness and a healer of physical ills. The redemption of sins and the healing of ills, were a unit with him.

"So it is," continued the speaker, "that the greater part of the three first Gospels of the New Testament are filled with recitals of his healing work. He did not assume that he was the only one who had the power of healing. When he sent out his diciples he gave them the power to heal sickness, and told them to preach and heal. He told them to tell John that the blind saw, the lame walked, lepers were cleansed, and that the poor heard the Gospel preached to them. After the resurrection he told them that they should follow the healing of the sick.

"For over fifteen hundred years the union of preaching and healing seems to have been lost. It was not recovered until Rev. Mary Baker Eddy recovered it. Christ's statement that others could continue the work of healing as well as himself had been ignored. The lack of power had been due to unbelief in the redemption. Mrs. Eddy, the Discoverer and Founder of Christian Science, learned the unity between preaching and healing. She has devoted her life to the restoration of the Science."

Judge McKeighan predicted that when the true principles were understood, all people would become Christian Scientists, and he believed that the time was not far distant when the truth of Christian Science would be accepted.

In introducing Mr. Kimball the judge stated that a Board of Lectureship had been established for the purpose of publicly expounding Christian Science, and for the purpose of refuting the misconceptions and misrepresentations concerning its principles.

"We have with us to-night," he said, "one of the members of that board, himself a witness of the truth of those principles. I introduce to you Mr. Edward A. Kimball, of Chicago."

St. Louis Daily Globe-Democrat.

At Racine, Wis.

As was announced last evening the lecture of Mr. E. A. Kimball on Christian Science, delivered at the Opera House Thursday evening, March 9, is published complete in this issue.

The members of the Christian Science church in this city, although possibly not as many in point of numbers as in the orthodox churches, include some of our most substantial and best people of the city; and beginning with a few menbers, they now have a large and increasing congregation and two services are held every Sunday in the Odd Fellows' Hall on Wisconsin street.

The building of a church has been in contemplation for some time, and another year, possibly the present one, may see a handsome edifice go up which will be a testament to the growth and permanency of the movement here. The speaker was introduced by Rev. A. C. Grier, who spoke as follows:

Ladies and Gentlemen: — Could one consider it anything but a delicate compliment to be called upon to officiate in this gracious place, by a society differing in thought from one's self, in a measure, but choosing one for this task because they realized, or at least they thought they realized, that he was broad-minded enough and charitable enough to do it? I do not wish to consider it all a compliment, and that may sound ungracious in me, but I think the thanks are on my part for being thus considered by you. Some have even wondered that I should accept this invitation with my own peculiar faith. To such I do not deem it necessary to offer an apology, but I would like to say a word, not of apology, but in the way of a lesson, and that word is this — that if there is any hope for truth on God's earth, that hope comes in a free and open discussion of every form of inspiration and faith that comes to the hearts and minds of honest men. (Applause).

I have no fear for the truth. Truth is a self-evident thing. Truth is a thing to be trusted; not to be feared; not hedged around by ecclesiastical or other restraints. It needs no covering up. It needs no apology. It needs no iron bands to protect it. The truth is the safest thing in all God's earth, and I believe that the wise and free discussion of every form of faith that comes to man ought and should and must be given in this new and glorious day, and so I want to see this truth have this wide hearing, to have truth always have a wide hearing. If my truth is better than your truth, my truth will prevail; and if your truth is better than my truth, your truth will prevail, or truth will prevail according to the verities of the same, and not according to any ecclesiastical precept. I now have the pleasure of introducing Mr. E. A. Kimball, of Chicago. The Racine (Wis.) Daily Journal.

At Minneapolis, Minn.

"Rarely, if ever, has the Lyceum theater held a larger audience than that which attended the lecture on Christian Science by Edward A. Kimball, Friday evening, January 27. There was not a vacant seat on the first floor or in the balcony, where there were many standing, and there were between two and three hundred in the gallery, a thing very rare in the history of Minneapolis lectures. The speaker appeared on a handsomely dressed stage, and throughout his long address held the most intense attention of his hearers. He was introduced by Abbot Edes Smith, C. S. B., First Reader of the Minneapolis Second Church of Christ, Scientist, under the auspices of which the lecture was given."

The above clipping from the Minneapolis Evening Journal, together with the fact that the same paper published the

Digitized by Google

lecture in full, shows how the supply furnished by divine Love is meeting the human need in our city.

The great audience of fifteen hundred listened not only patiently but eagerly to a lecture one hour and fifty-five minutes long, and men who are habitually bored by anything that can be offered in the way of entertainment (so-called) were seen to stand throughout the lecture.

Mr. Kimball's manner is exceedingly happy, being easy and conversational, yet not familiar; dignified, yet without aloofness; and he tells well some bright stories that point his remarks most effectively.

The fact of his having been known as a successful business man, who has had to deal with what the world calls the "reality of life," yet is now appearing as a "witness" to use his own word, for this spiritual Truth, seemingly so far out of the province of a practical man, has its weight with the busy men of this Western city.

A large number of people were present from St. Paul, some from Duluth, and from various smaller towns of Dakota, Wisconsin and Minnesota.

At Quincy, Ill.

Tuesday evening, February 7, 1899, Edward A. Kimball, C. S. D., of Chicago, Ill., gave a lecture in the Musselman Building under the auspices of First Church of Christ, Scientist, of Quincy, Ill.

About six hundred were present. In the audience were some who came from neighboring towns.

Mr. Kimball furnished a synopsis of the lecture to the daily papers and each gave a good notice of it. This we considered in the line of progress, as only two or three years ago these same papers refused to publish our church notices.

We feel that these lectures are meeting the need of this hour, and much good is being done. We are few in number, having only about forty members, but had no difficulty in raising the money for our lecture. We are very grateful to our Leader that she has provided this Board of Lectureship. In this way we were able to reach those who are strangers to the truth regarding Christian Science. By having a synopsis of the lecture published in the daily papers, the Truth was carried into almost every home in our city, and thus we were able to reach even those who did not attend the lecture.

M. I. Lambert.

At Jamestown, N. Y.

Carol Norton, C. S. D., a member of the International Board of Lectureship, of the Mother Church of Christian Science, at Boston, lectured before a large Jamestown audience at Samuels' Opera House Tuesday evening, March 7, under the auspices of the First Church of Christ, Scientist, of this city. The stage was made cheerful and attractive by the use of flowers and palms. Arthur Hills acted as chairman of the meeting and introduced the lecturer who spoke for nearly two hours in his presentation of Christian Science and Common Sense, holding the attention of his hearers throughout his discourse. Mr. Norton has the gift of presenting his arguments in a clear and concise manner which, as on the occasion of his first lecture in this city two months ago enabled him to make plain the tenets of his faith.

Jamestown (N. Y.) Evening Journal.

At Kankakee, Ill.

A large audience assembled Friday evening, March 10, at the Opera Houre to listen to the lecture on Christian Science by Mr. Edward A. Kimball, of Chicago.

The speaker was introduced by Mr. J. E. Jones, who stated briefly that the lecture was given for the purpose of placing this doctrine in its true light before the people of Kankakee. Mr. Kimball, he said, was duly authorized to speak upon this subject by the Founder of the system, Rev. Mary Baker G. Eddy.

Mr. Kimball spoke in a clear, convincing manner and impressed his hearers not so much by any attempt at flowery rhetoric, as by the thought that he was telling the truth as he understood it. The lecture occupied about an hour and a half, and was listened to with profound attention.

Kankakee (Ill.) Daily Gazette.

At Fairbury, Ill.

The lecture delivered by Mr. Edward A. Kimball on Monday evening, February 13, was listened to by a large audience, a number from adjoining towns being present. He began by stating that he stood there as a witness to the healing power of Truth as found in Christian Science. His fine presence, fluency of speech and most pleasing delivery, together with the indisputable truths he voiced, held the close attention of his hearers for an hour and forty minutes. A lecture of such advanced thought, culture and broad intelligence, it is seldom our privilege to hear, but to more than "touch the hem" of this illimitable subject in one evening, would be like attempting to number the stars.

The Local Record.

At Appleton, Wis.

Wednesday evening, February 8, Mrs. Annie M. Knott, C. S. D., of Detroit, lectured in Appleton to a very attentive audience. Christian Science is not appreciated here as in some places, but this lecture has set some people to thinking. The way our church people responded with donations to defray expenses, surprised even themselves. Only six families, in moderate circumstances, represent our church, but we raised $79.50, paid all expenses, and turned a balance into the church treasury. We are looking forward at all times and trust this demonstration will help others as theirs have helped us.

E. G. Wilson, Clerk.

At La Grange, Ill.

A large and intelligent audience was attracted to the Rink building last Sunday afternoon, March 5, to hear Mr. Edward A. Kimball explain the beliefs of Christian Scientists, and it is undoubtedly true that many left the hall with changed views regarding these zealous people. By special request the News prints Mr. Kimball's lecture in full.

The lecturer was introduced by Mr. Harold C. Shinnick, First Reader of First Church of Christ, Scientist, of LaGrange, under whose auspices the lecture was delivered.

The News.

At London, Ontario.

Carol Norton, C. S. D., lectured on "Christian Science and Common Sense," before an audience that filled the Auditorium, Friday evening, March 10. Mr. Norton is a lecturer sent out from the stronghold of the Scientists, Boston, to proclaim the religion which he states has now one million of believers. He has a pleasing delivery, and easily interested his hearers for almost two hours. Mr. Robb, of this city, presided, and briefly introduced Mr. Norton.

Daily Free Press, London, Ont.

Case Was Dropped.

The much-talked-of Christian Science case of the People vs. A. E. Curry come to a sudden end, when it was *nolle prossed* in the Circuit Court on recommendation of Prosecuting Attorney A. L. Chandler, Van R. Pond, of Owosso, and Philip T. Colgrove, of Hastings appeared in court to-day ready to defend the case, but it did not come up. Curry was convicted in Justice Court in Owosso, for not reporting a case of diphtheria in his family. Instead he had the case treated by a Christian Scientist healer.

Detroit (Mich.,)Free Press.

An Imperious Demand.

BY HON. JOSEPH R. CLARKSON.

SWEETLY and quietly, yet with imperious demand that it take the place of all else, Christian Science came to me. I had never been truly happy. The world had failed to afford a hope of any good end. Bauble after bauble had been captured only to become nothing. I was weary of the chase after the illusive. I wanted some place to *land*, some place where I could *moor*.

For nineteen years, with the exception of a short service as judge, I had been a lawyer in active practice. Practice of law brought no content. Judgeship brought no content. Judgeship resigned and practice resumed brought no content. Opportunity for political honors was not worth seizing. Amusements, except of an out-door, manly, kind were stale. Folly, sin, what might be called mild forms of dissipation and their accompaniments — cigars, tobacco, intoxicating drinks,— enhanced rather than lessened the abiding discontent with self and what self did. Something was needed. I did not know what could yield aid.

At an early age I became a communicant in the Episcopal Church, but for twenty years had scarcely entered its doors. While an attendant, and afterward, I had seen or learned nothing which led me to think that the lives of the church members were essentially better or happier than mine, or that their God gave them as much comfort as did the world, or that they preferred their God to the world, or that they meant a tenth part of what they professed. In short, to me, the ceremony, pomp, ritual, vestments, the wordy Sunday prayers and sermons, the never-ending schemes for raising money, the avowed love for God, and the actual love for about everything unlike God, were a travesty upon religion, a conventional sham of which I did not care to be a part.

I had known and respected many good people in the church, but, for some reason, they had never seemed *grounded* in their faith. They were as those who, by much protestation, sought to convince themselves of the truth of that which duty required them to believe, but which in their inmost hearts they doubted.

"Why," I asked myself, "if they know and love God do they not so act?" A pertinent question, easy of answer by a Christian Scientist, never answered to my satisfaction until I began the study of Christian Science. I then learned that my orthodox Christian friends did not know God or have any correct conception of what He was to man, or else their actions and lives belied their knowledge. I then learned that during all the years of rebellion against the worship of God in the form the church demanded, I had not been what I was popularly supposed to be, an agnostic, but one heart sick from want of a God to adore and obey.

Christian Science gave me that God, and to that God at once, without reservation, I gave myself. *Now*, in part, I know what it is to worship God. *Now*, in part, I *know* what it is to love God. *Now*, in part, I *know* what it is to be loved by God. Now, I know that one day with God is incomparably longer, sweeter, holier, more content-laden, than a thousand years of immersement in any imaginable bestowals by the princes of the world, and I hold sincere pity for those who fail to obey the scriptural injunction, "Acquaint now thyself with him, and be at peace."

How can one acquaint himself with God? By studying SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, and other works by Mrs. Mary Baker G. Eddy, and, with God's help, living the life they teach, for they teach what Jesus taught, and enable mankind to follow in Jesus' footsteps. They tear away the veil which has more or less darkened the pages of Scripture and endue them with the brightness which God's words should reflect.

Mrs. Eddy's writings arouse an insatiate hunger for more of the Bible, more of God, more of the Christ, more of Jesus, more of the Holy Comforter; incite a glorious zeal for strife in God's cause, after His way, and beget a quiet scorn for that life which deems itself complete in mortal man.

The first glimpse of God, gained by an acquaintance with the premises and conclusions set forth in Mrs. Eddy's inspired and inspirational book, assured me that by no possibility could her maintenance of God as All, and evil as nothing, Spirit as All, matter as nothing, be aught but Truth. "Were she not the herald of Truth, why should such Light follow upon her proclamation?"

"Results, *good* results, are what start reverberations among the hills and valleys of mortal thought."

"The best method for the production of fruits is what poor, sick, sinning, tired humanity seeks. Talkers are numerous. Doers few. Preachers swarm. Practicers are lonely. Mrs. Eddy teaches *and* practices. Her followers seem to emulate her example." Thus I reasoned.

Now, reasoning upon Mrs. Eddy's statements and the evidence in their support, especially, if that reasoning and evidence be coupled with demonstration, in one's own case, of the Truth which she trumpets, make a combination all too strong for the ordinary mortal to successfully resist.

I have heard the good wife of a bishop say, "Don't read that book (SCIENCE AND HEALTH) or it will make a Christian Scientist of you," and the most awfully, utterly, indescribably horrible thing a Christian Scientist was, she refrained from explaining, undoubtedly out of consideration for the writer, whom she knew to be one of the diabolical (?) persuasion.

With me, the Light seemed almost at once to come. With the Light came ineffable peace. With the peace, the *certainty* that all sickness, sin, woe, and even death, must inevitably retire before the all-presence of Almighty God.

It is nearly two years since I purchased a copy of SCIENCE AND HEALTH and was given a hint by my healer of what it contained. In that time life has taken a new hue.

I am enjoying the cleansing process. I feel the impurities are gradually, but surely coming to the surface and evaporating, or encrusting and sloughing off. I feel that I am cleaner, purer, better, but do not rest satisfied with the comparative.

I want to immolate self, crucify the flesh, since by self-immolation, flesh-crucifixion, alone, can one know his selfhood in God, his superlative self-God's man. I have been in many ways physically benefited, but shall not, in this paper, more than advert to such healings.

My heartfelt gratitude to God is because He sent His Word, in Mrs. Eddy's book, to me, a sinner, and enabled me to take the first feeble steps in the path which leads to reformation, and, with reformation, to pardon, cancellation of sin. Sin destroyed; fear put to rout by Love; ignorance supplanted with understanding, slight though it be, physical complaints must wither away. They have no sustenance.

Omaha, Neb., Mch. 10, 1899.

As A Corrective.

AT the Church of the Messiah February 26, Rev. Dr. A. B. Curtis spoke on "What is Christian Science?" His text was: "Ye shall serve the Lord your God, . . . and I will take sickness away from the midst of thee." Exodus 23 : 25. He said among other things: —

"I desire above all things to speak fairly and sympathetically of this new science. I shall not use its technical terms, but I shall try to be true to its thought. I confess myself deeply in sympathy with it, especially as taught by some of of its best known exponents. It has hold of some grand truths and is eagerly feeling its way toward others. It is a splendid antidote to the gross materialism and fleshly idealism of our own age. We need it as a corrective and it in turn on its side needs as its corrective the sympathetic and generous criticism which the outsider can give it. Every live religion covets such criticism and profits by it. Let us, then, investigate it impartially.

"I suppose there is no sect of the church that can summon more texts to the support of its leading doctrines than Chris-

Digitized by Google

tian Science. Perhaps it is for this very reason that the doctrines have been so generally overlooked. Many of God's best truths we allow to cloy upon the sense. He has revealed His saving health among all nations but His remedies are so simple that like Naaman before the Prophet we shake our wise heads and turn away for something harder, for something hid, for something more earthy than those life-giving boons of the Spirit which are love, joy, peace, gentleness, truth; against which no earth-born law ever has or can prevail.

"There are many Christians today who are skeptical as to some of the miracles of the Bible. But so far no rationalist has ventured to deny that Jesus had remarkable power as a healer of disease, and, as we know, he wrought these cures without the use of drugs. The Scientist denies that these cures are in strictness miracles; that is, he believes they were wrought by Jesus in accordance with law and not contrary to it. These laws are laws of the mind, as the author of Proverbs put it; 'wisdom is life to those that find it and health to all their flesh.'

"More and more physicians of all schools are coming to see that the real cause of the cure that cures is mental and not physical. It is the mind that needs healing in most diseases. It is healing of the mind which is needed in all diseases say the Christian Bible and the Christian Scientist; for sin and disease are the same thing in different stages of development as are also righteousness and health. The Christian Science remedies are sympathy, courage, cheerfulness, hope, love, God. 'Fear,' says Mrs. Eddy, 'is the great source of disease.' The Christian Science philosophy of healing grows naturally out of its theory of the essential non-existence of the present material universe, with all its error, sin and sickness. Our English word 'naughty' means possessing the qualities of naught, that is, nothing, zero. In old English to be naughty is to be nothing. When the author of Ecclesiastes says all the present phenomenal world is vanity he uses a Hebrew word which like our English word contains the companion ideas of 'nothingness' and 'wickedness.' The most common word in our Bibles for the expression of wickedness in fact has in the standard lexicons the following definitions: 'to be nothing, to be naughty, to be wicked.' Isaiah in a famous sermon called the idols which led his people into sin 'nothing.'

"How thoroughly Biblical Christian Science is it does not itself fully realize. But Christian Science is not a creed, it is an enthusiasm, and like enthusiasm it has God in the middle of it. It cannot be adequately set forth in words, it can only be expressed in terms of life. Thus what was dead grows life, grows love and becomes a regenerating power in the world. In conclusion let me adapt from the German idealist Fichte the following lines: —

The Eternal Mind
Thinks in my thought, and sees in my beholding.
Nothing is but God, and God is naught but mind.
Darkly the vail of things rises before me,
'Tis mortal mind. But when the error dies,
Henceforth there'll live but God in my endeavors.
Ah, could I look through that which fleshes sight,
The vail of things would be to me but vail,
And unveiled, I should look upon the life divine."

Binghampton, N. Y., Republican.

Marvelous Testimony.

AT the Wednesday evening testimonial meeting at Christian Science Hall last week the following letter from Mrs. Daniel G. Saunders, 2449 Forest Ave., Kansas City, Mo., was read, it being addressed to the Rev. Mary Baker Eddy:

"Thinking that it would be of some pleasure to you to know of some few things which I have been able to demonstrate over from studying the blessed book, 'SCIENCE AND HEALTH,' which you have so lovingly given to the world. * * * I want to tell you of one demonstration of love which will be no new thing to you, I know, but which I felt it would be a pleasure for you to know.

"My cousin who lives here in the city had a little baby who was, 'to belief,' in pneumonia. I had not been informed of this until, one afternoon, they came in great haste for me, saying that the baby was dying and for me to come immediately. I went: and soon after I reached the house the baby passed on. All of the relatives were there — one physician (who was a brother to the mother of the babe and my first cousin); also a trained nurse and other physicians were in attendance. I was not called to demonstrate, but only as a relative.

"The thought of Life came to me with such power as I had never realized before. I could not keep from declaring that 'God is Life' and that Life never died, and that this babe had not died, for it reflected Life and could not die. I had no intention of treating the baby — only making the sense of death unreal to myself. Next I found myself standing over the cradle where the baby had been laid. The eyes had been closed by the nurse, the limbs straightened, the water was being made ready to bathe the babe, the clothes had been brought, etc. etc. All had ceased their weeping and said all was done.

"When I reached the cradle, I saw the babe breathe, then the little eyes opened and were clear and bright as could be, which before had been, as they said, covered with a death glimmer for two days. My cousin, the doctor, came and kneeled on the other side of the cradle, and he took the baby's hand, felt its pulse, and exclaimed, 'Cousin Sallie, this baby has pulse!' I kept holding to the 'Truth of Being.' Then I said to the mother of the babe, 'May I take baby up?' She answered, 'Yes' I took the baby and walked to the register, thinking I would warm his feet; but, to my astonishment his hands and feet were warm. Then I asked the mother if I could treat the baby, and she replied, 'I wish you would.' They knew of Christian Science, but had never accepted it. When I was through treating the child, my cousin, the doctor, who was kneeling in front of me, and who was still holding the baby's little hand, looked up into my face and asked, 'Cousin Sallie, what did you do to this little baby to bring it back to life? My reply was, 'Willie, I realized that Life is God and that baby reflected Life, and I knew that Life never died.' He replied that he had been trying to do that all day and said, 'I have been praying, for I knew that my medicine would never heal the little one.'

The nurse and all of the relatives witnessed this, and, it being so impersonal, it made us all feel more humble. I think, too, that I never had more gratitude for you, Mother, than in this instance. It gave me a faint glimpse of what you are to us, 'a way-shower.' My prayer daily is to be more spiritual, that I may do more as you would have me do, and my heart overflows with gratitude for 'SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES,' for MISCELLANEOUS WRITINGS' and all the words you have given us; and may we all love you more, as you have said, and so live it that the world may know that the Christ is come."

Independent Statesman, March 9. (Concord, N. H.)

The Hungry Fed.

I desire to express my gratitude for those truly inspired words, "What Our Leader Says," which appeared in the Christian Science Sentinel of February 9th.

Only those who are hungry can appreciate being fed, and *I* was hungry. Those words came to me when I felt a great need, and I was lifted completely out of the sense of error which was disturbing me, by reading them.

Our Master who taught on the shores of Galilee said, "Blessed are the pure in heart: for they shall see God." Our Leader says, "The right thinker is safe, and abides under the shadow of the Almighty."

I desire to so partake of the true animus of these sayings, that I may become more child-like, and so be fitted to know God, whom to know is life eternal.

Kansas City, Mo. Mrs. Emma B. Smith.

Questions and Answers.

What should Christian Scientists do, with reference to reporting to the authorities, contagious diseases? A practitioner.

This is a most important question. It is not the office of the official publications to lay down specific or iron-clad rules for practitioners. Circumstances are so variant, that it were unwise to attempt it. Jesus said: "Render unto Cæsar the things that are Cæsar's." Our Leader, the Rev. Mary Baker Eddy, re-emphasizes this statement, in SCIENCE AND HEALTH, and elsewhere, in such a way that she clearly makes it a rule for the guidance of her students. There is no one who has greater respect for the laws of the land than she. There is no one who more desires to avoid unnecessary antagonism with the established authorities. This is evidenced in all her writings and sayings.

As we understand her attitude, there is only one point at which the line might be drawn, — that is the sacrifice of principle. Rather than surrender principle and refuse to do God's work in healing the sick, it were better to come into seeming conflict with established conditions; but the case must be very extreme indeed where this cannot be avoided. Love, justice, wisdom and mercy should guide Christian Scientists in all their labors. Thus governed there will be no conflict with human laws. God's law is supreme.

What constitutes a student of Science and Health? J. C. B.

We suppose, in a general sense, any one is a student of SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES who is earnestly and conscientiously studying this book for the purpose of ascertaining and applying the truth contained therein. More specifically speaking, we suppose that a student of SCIENCE AND HEALTH is one who has so understandingly studied and absorbed the teaching thereof, as to be able to apply the same in healing disease and overcoming sin in himself, and to aid others in so doing. When this student accepts SCIENCE AND HEALTH as divine revelation, and its author as the revelator, and is able to prove such acceptance by doing the works therein commanded, to that extent, we believe, he comes within the definition concerning which the above question is asked.

Testimonies.

That the practice of Christian Science is not dangerous to human life and that it can be relied upon in cases of acute inflammatory diseases I learned by experience.

In August, 1896, I suffered with what the doctors pronounced a dangerous attack of appendicitis. The first doctor told me that I must be careful and eat nothing which contained seeds, but a second doctor assured me that I might with safety eat as many seeds as I liked as they were never the cause of appendicitis. He added that, in his opinion, every child as soon as he was old enough should be operated upon to prevent the development of this disease at some future time. A third doctor declared there was no such disease.

I recovered from this attack, but after hearing constantly for several months, from many people, that I might expect at any time a return of the disease which would probably prove fatal, I decided to consult the doctors again.

They decided that an operation was necessary and that it must take place at once, as my health would ensure a successful operation and speedy recovery.

In February, 1897, I went to the city hospital where the operation was performed by a well known Boston surgeon, was pronounced very successful, and in three weeks I was brought home in an ambulance.

I had suffered much, especially from a pain in my side, but this was considered nothing serious. However, instead of gaining in health and strength, I grew weaker, the pain increased and many complications set in. Days and weeks went by, the suffering continued, and all the medicines, opiates and material remedies that could be procured were powerless to afford any relief. I took scarcely any food and grew so weak I could neither raise my hand or speak without great effort.

I was in this condition when a Christian Scientist was brought to my bedside. With the blessed assurance that I need not fear for God could and would take care of me, and that I need take no more medicine I went quietly to sleep, for the first time in many weeks.

Christian Science did for me all that medicine had failed to do, and in a very short time the pleurisy, pneumonia and fever with many other troubles disappeared; also chronic dyspepsia and a trouble with my eyes.

With no other support but Christian Science, I was enabled to do in two or three months all those things I had not expected to do for over a year, among others riding a wheel.

That was nearly two years ago, and since then, through the wonderful unfolding of the Truth, I have rejoiced in a sense of health, strength, happiness and freedom of which I had never conceived. My desire is to gain more understanding. Susan P. Poole, West Roxbury, Boston.

Mental Surgery.

It is some ten years since I became interested in Christian Science through two associate teachers of the schools of this city, and a gentleman who had been healed of a supposed incurable stomach trouble.

We have a church here with a membership of over thirty, all earnest, faithful workers and seekers for Truth, and most of us are members of the Mother Church. For some reason there has never been a demonstration sent to the Journal or Sentinel from this far off western city. It is my great pleasure to be able to give one at this time.

My mother went to visit my sister who lives fourteen miles from Eureka. While there she helped care for the babies. A week ago she lifted one of the little ones and hurt her back so badly that the pain prostrated her. My sister was up stairs and was shocked to see mother come up, creeping on her hands and knees and looking so pale. She got her into bed and at her request went to the telephone and sent word for us to treat her — stating the trouble. She did not get relief.

My brother-in-law scorns Science and wanted to send for his brother who is an M. D. To this mother would not listen, although suffering so much that she could not move without great pain. She continued in this condition for nearly a week and finally requested to be brought home where she could be surrounded by (good thoughts) as she expressed it. By this time the trouble had settled in her hip. This was on Wednesday.

With much difficulty she reached home. That night and the following morning she thought she could neither lie, sit nor walk. Another sister who is a Scientist came in, and by that time (Thursday morning) mother had decided that she had dislocated a joint and told her so. My sister replied, "If that is so, Truth can put it in place," and then went home. After lunch mother picked up a Journal and read of a demonstration similar to the one for which she was asking, and after reading the article said, "She did not see why she could not be helped." She went to sleep and in a few moments was awakened by a shock — as she called it, in her hip; and turned over — something she had not been able to do since being hurt. She turned again to make sure she was not mistaken for she had no pain; and at last got up and walked across the room.

At this point I came in from school and she began to tell me of the wonderful change. I said, divine Love has done the work. One of my Science friends said "Your mother sought the Truth and Truth helped her as it always does when we seek aright?" There was great rejoicing that a victory had been won. She was able to take dinner with my brother the next day, and was out to service Sunday. She gives all the glory to Science and is today a well woman.

Emma Sarvis Young, Eureka, Cal.

Troy, N. Y., March 5, 1899.

REV. MARY BAKER EDDY.

Our Beloved Leader:—We desire to express to you our deep appreciation of the favor shown us in the publication of your address to the First Church of Christ Scientist in Concord, in in our city paper "The Troy Record."

The tender and beautiful words will waken a responsive answer in many a heart already turning toward the light of Christian Science.

They are a gentle benediction to the faithful workers who have borne the "burden and heat of the day" during a long time of working, watching and praying.

This has been to us a week of blessing; on Monday, the large intelligent audience that gathered to hear Mr. Norton lecture, and the respectful and thoughtful attention, almost exceeded our expectation. Then we rejoiced for the number of Christian Scientists who came from many cities to help us make glad holiday.

The daily papers gave clear reports of the able lecture, and most kindly editorials were added, so that Christian Science was shown in a better light to many thousands.

And now has come this communication from our revered Leader, to be given to this people whom we want to serve, teaching them the beauty of the Science of Christ in words that cannot fail to perform their mission and impress the people with a better sense of the dignity, purity and Truth of the cause.

These events greatly encourage us and we shall go like Elijah in the "strength of that food for many days."

Gratefully your loving students,

Troy, First Church of Christ, Scientist.

E. K. Betts, Clerk.

What Christian Science has done for Us.

Seven years ago I had my spine fractured by a fall in an elevator. As a result of this the circulation in my legs and feet almost ceased. I never knew a day without some pain, and was unable to do any manual labor. I had also been afflicted with a weak or lame leg from infancy, which caused me untold miseries. I also had dyspepsia so bad that I was always in fear of eating something that would cause me suffering. It was proved during this time that there was no healing in material remedies. Last May, we procured SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, by Mary Baker G. Eddy, which we commenced to study, but did not seem to gain much understanding at first. Last September we met a Christian Science healer, Mrs. C——, who gave us one week's treatment. During this time my back was healed and straightened, and I could dig and pick up potatoes which I had not done since I was injured. My circulation was restored so that my feet were warm where before they were like ice, and my dyspepsia also disappeared.

The lame leg is gaining strength every day as I am gaining the understanding of God and His harmonious works.

My wife, when a girl fourteen years old, had the misfortune to run a piece of a cornstalk into one of her eyes, and injured the left eye so badly that she could not distinguish one letter from another, besides having the other eye injured. The physicians seemed to do her no good, but through Christian Science her sight was restored so that she laid aside her glasses, and can read and sew as well as anyone. She was also troubled with female complaint, which has all left her. We are both now enjoying the best of health, and the peace of mind, and the spiritual uplifting in all our family is wonderful. Words cannot describe it, we cannot live without it now.

Michael Hausz, in the Hoopeston (Ill.) Herald.

Help for the Sorrowing.

When Christian Science was first presented to me, I scorned it, would not investigate, would not even allow it spoken of in my presence. I looked upon it as one of the many new beliefs, springing up to deceive *God's elect*. My sister was a loyal Christian Scientist and had been healed several years before I would investigate it. I did not come to Science for the healing for myself; my health has always been perfect. But all of my family, a husband and three children had passed away, and I had only one little one left. It was then I gave up and cried out, "Save Lord, or I perish." I first commenced to read Science for relief of mind. I was so burdened with anxiety and grief that I felt I should become insane, if I did not find relief. I asked my sister to read some to me and though I did not understand it all, still I felt very much relieved. Soon after this my little girl was taken with a fever. I took her to our leader in the work here for treatment, and in a week's time she was healed. Since that time she has been perfectly well and happy.

Oh! how grateful we should all be for "the little book," "SCIENCE AND HEALTH."

Many times the way has seemed dark, but I know if I cling steadfastly to Truth, the light will appear and the way be made plain. Every day I repeat and receive so much help from that beautiful hymn, written by our dear Mother, "Shepherd Show Me How to Go."

Mrs. Elizabeth Van Hoose Glover, Macon, Ga.

Notices.

The Church Manual.

The tenth edition of the Church Manual revised—containthe rules and by-laws of the Mother Church; also list of members, is now on sale. Address orders to the Christian Science Publishing Society, 95 Falmouth Street.

Regarding Free Subscriptions to Public Libraries.

Christian Scientists when sending requests to the Christian Science Publishing Society to have the Journal and Sentinel sent free to public libraries, should state that the consent of the librarian has been obtained and that the periodicals will be placed on file where they will be accessible for readers.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen. Send order to Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Christian Science Lecture.

The Rev. Irving C. Tomlinson, C.S.B., a member of the official Board of Lecturers, will deliver a lecture on Christian Science at Music Hall, Boston, April 5, next, at 8 o'clock P. M. Seats free. All are invited.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston,

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We wish to say that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MARCH 30, 1899. | Vol. 1 No. 31

General Miles at Boston.

In his recent visit to Boston General Miles received an enthusiastic reception. His early identification with Boston rendered him an especially interesting figure here and his presence on the streets invoked genuine enthusiasm. He was entertained at dinner by the Merchants Club. In his address on that occasion he spoke in part as follows: —

Mr. President and Gentlemen: It has been said that it was thought I would be happy to be once more in the atmosphere of this company — once more in Boston. I assure you that I am happy to be again in such a company, and in the atmosphere of Boston and the Commonwealth of Massachusetts.

A welcome home thrills the heart with the sweetest emotions one can enjoy, It recalls the happiest hours of youth, joyous recollections of childhood and boyhood days. We remember the greetings of those who were nearest and dearest, the scenes and thoughts of a time when we could say:

> 'Tis sweet to know there is an eye will mark
> Our coming, and look brighter when we come.

All come back again with sacred memories of the past.

In days of trial, responsibility and earnest effort, the approval of those whose companionship we most cherished, whose friendship was most true, was the greatest gratification and richest reward that the patriot or soldier could enjoy.

After many years in the public service in every section of our great republic, as well as in other and distant lands, it is one of the happiest moments of my life to return to my native state, and to be assured of such a reception in this commonwealth.

Especially is it gratifying to be so cordially received by this distinguished body of gentlemen, engaged in the great marts of commerce, for it recalls to my mind days when I was being instructed in the principles, duties and responsibilities of commercial affairs.

The honor, the integrity, of the merchant was a sacred obligation, handed down through thousands of years from merchant prince to apprentice, or from father to son, and as a principle ever worthy to be honored and respected. The character that a commercial house maintained for honesty of purpose and for honorable business relations was something to be highly respected, and should be an example to be forever followed.

Grasping avarice, sharp practice, the taking of merciless advantage, forming of unscrupulous combinations, for the aggrandizement of a few to the injury of all others, is something lightly considered today, yet unknown at that time, and should be forever discountenanced.

It was the time when the boy or young man could enter the service of the merchant with absolute confidence that his employer was his best friend, and that he would take a fatherly interest in his welfare. Simplicity of life, economy of expenditures and a sterling, unswerving integrity were of daily practice and constant adherence. I have never ceased to respect the kind admonitions, the excellent words of counsel, the commendable example given by the head of the house in which I spent some years of my early life in the city of Boston. We were advised that in all our relations with men frank honesty of purpose, kindness and civility were principles never to be forgotten, and they are principles never to be forgotten, and they are principles that are beneficial in every sphere of life.

✤

As the political affairs of the nation became more serious, and the great questions finally resulted in civil war, we believed it a duty to give our best efforts to the service of our country. It was my good fortune to be a member of that great body of patriots that responded to their country's call in 1861, and to take an active part from that time to the close of the great drama.

No one who has not experienced the duties and responsibilities of the camp, the hardships of the campaign, the terrible scenes of the battle, can appreciate, much less describe them. The recollections of disaster, misfortune and retreat before an exultant foe, the witnessing of acts of splendid heroism, fortitude and sacrifice, consciousness of success fairly won, the glorious exultation of victory, the sublime realization of the cessation of hostilities, the triumph of a just and righteous cause, produced emotions enjoyed only by the soldier engaged in the service of our government and in maintaining the honor and perpetuity of a country we all love and revere.

The army of the United States has its inspirations from one of the loftiest characters in history. In fact, the cause that kindled the most heroic emotions in the breasts of patriots made its first positive demonstrations in this vicinity and called our fathers from their farms, forests and industries to the fields of Concord, Lexington and Bunker Hill. This is indeed hallowed ground.

It was near this spot that John Hancock lived, Warren fell, and where Washington first assumed command of the colonial army. From that time to this Washington's influence, example and principles have been the chart, compass and beacon light to the American army for more than a hundred years. In its service, whether against the power of the strongest nation of the world, in helping to achieve the independence of a suffering people, protecting the life and property of the pioneer or home-builder, or in carrying our flag to other and distant lands for the benefit and welfare of millions of people, the army has fulfilled all the requirements of a confiding, loyal and patriotic people.

We may well expect that it will ever be thus; that in every enterprise requiring skill, fortitude and patriotism, Massachusetts will hold a conspicuous place in the interest of progress and the welfare of mankind.

As a son of Massachusetts, I believe that the same principles of truth, integrity, independence and patriotism that have prevailed in this grand commonwealth for centuries will continue and be perpetuated in every sphere of life, be it civil, political or commercial.

The Unitizing of the World.

THE Rev. John H. Barrows, the newly-elected president of Oberlin College, Oberlin, Ohio, received a large company in the Plymouth Congregational Church, Toledo, Ohio, recently and delivered an address on "Greater America."

Dr. Barrows was president of the World's Parliament of Religions in Chicago, and since then has travelled and lectured in eastern countries. In the course of his remarks this evening he said :

"I believe that Manila and Santiago are names that will rank in history with almost any of the greater battles of the past. Ours was a war for humanity, which the greater statesmen for fifty years felt was inevitable. In our complacent prosperity we give little heed — that, most of us — to the hapless condition of the oppressed at our very doors.

"The horrors of the Spanish occupancy of the Antilles do not need to be pictured again. Other nations may have been unable to comprehend our motives, but England, bless her, was our friend, and has been drawn into closer fellowship with us than ever before in her history.

"I believe we are drawing into closer fellowship with the people of the western hemisphere. There must ever be peace and good understanding with Canada and Mexico and the South American republic. These are great areas for our commerce and for our ideas.

"I am glad that in Hawaii and the Ladrones and the Philippines we have stepping-stones for American ideas clear over to the greatest and most populous side of the world. My own observations in the Orient have deepened the conviction that the greatest event of the twentieth century is to be the uplifting of Asia, and thus the unitizing of the globe.

"The great conflict of the future ought to be between civilization represented by pure homes, free schools, free churches, popular enlightenment and political liberty, and the barbarism or semi-civilization of Asia, where womanhood is degraded, human rights denied, opportunities limited, deceit and impurity are universal, and where the popular mind has not expanded and been lifted heavenward by Christianity, which teaches the fatherhood of God and the brotherhood of men."

Items of Interest.

THE address to the natives of the Philippine islands, drafted by the American commission in behalf of the United States government and embodying the views of the President, has been made public.

It assures the natives that it is the intention of the Americans to develop the powers of self-government in the people.

It explains that the United States has assumed internal obligations, which make it responsible for the stable government of the Philippines.

The President's sole wish is to establish a system of government such as will render the natives capable of administering their own affairs, under American control, which is not to be exercised in any spirit of tyranny or vengeance.

To this end all insurgents are invited to lay down their arms and place their trust in the government that emancipated them from the oppression of Spanish rule.

President McKinley's appointment of Mr. Herbert Putnam, of Boston, librarian of Congress is one of the most notable instances in all the appointments by the present administration. In the first place it was a presidential appointment, without a political aspect, to a position that has always been of a good deal of personal and political concern to politicians at Washington. In the second place it denotes a new era — practically a non-political administration — for the national library of the United States.

The year 1898 was the first in which the domestic exports from the United States exceeded those from the United Kingdom. The exports of the former amounted to $1,233,564,828, while those of the latter were about $101,000,000 less. Only on two occasions prior to 1898 have the exports of the United States exceeded $1,000,000,000, while those of the United Kingdom have constantly exceeded $1,000,000,000 during the past twenty years.

The transport Meade, with the $3,000,000 to be paid to the Cuban troops, has reached Havana, but there is likely to be considerable delay in the distribution of the money. The preparation of satisfactory muster rolls will take some time. And then, too, the money is to be paid as a consideration for the disbandment of the Cuban army, and there is but little sign that the desirable outcome is near.

A committee of fifteen Washington business men have requested Secretary Long to order Admiral Dewey home to attend the Washington peace jubilee to be held May 23-25. Congress has provided for a sword to be given him and it is thought the jubilee time would be the most fitting for the presentation.

The first shipment of five hundred tons of steel rails for Scotland is ready at Baltimore. The Sparrow's Point mills are now supplying both Scotland and Ireland in competition with the British material. This is the first lot of an order for thirty-five hundred tons.

The Queen Regent has signed the decree giving M. Jules Cambon, the French ambassador at Washington, full power to represent Spain at the exchange of the ratifications of the treaty of peace with the United States.

Winfield S. Schley has successfully passed the physical examination for promotion to the rank of rear admiral in the navy. To complete the legal test, he must also pass a moral, mental and professional examination.

The Cuban generals reported to the Assembly that they have decided to accept the $3,000,000 for the soldiers, and also to help to organize a new Cuban army of ten thousand men under the American Administration.

Of the 18,463 bills and joint resolutions introduced in both houses of the last Congress 1,457 became laws. 942 of those which became laws originated in the House and 515 in the Senate.

The battleship Oregon has arrived at Manila. During the past year she has steamed about forty thousand miles, and has been at all times fit for any duty.

The gunboat Baracoa, formerly of the Spanish navy, was recently raised from the bottom of the Mayari river, and will be added to the United States navy.

Ambassador and Mrs. Choate have been elected life members of the Sesame Club in London. The objects of the club are educational and literary.

Residents of New York will soon have an opportunity to see the cruiser Raleigh, the first of Admiral Dewey's ships to return to the United States.

The gunboat Bennington recently arrived at Manila towing two small steamers and a brig, seized on suspicion of being filibusterers.

No more recruits are to be accepted for the regiments now in the Philippines, as their membership is now up to the maximum.

During the year 1898 Britain's trade with Canada was $13,000,000 more than that of the United States with Canada.

The transport Cleveland has sailed for Manila with thirteen hundred tons of supplies for the American troops.

The battleship Iowa is receiving repairs at San Francisco. She will go to Manila to relieve the Oregon.

Christian Science.

It is a queer thing that nearly everybody thinks it his duty to attack Christian Science. Editors who know but little about it, and preachers who know nothing regarding it, and laymen who do not know the A, B, C of Christian Science, still feel themselves competent to jump onto it rough-shod, and denounce everybody who believes that way as leather-headed, looney and watery-brained; while on other topics they feel that they should know the rudiments, at least, before discussing them.

Anybody thinks he can whack away at Christian Science; but we do not know that Christ anywhere taught his followers to denounce, except such as do evil. There may be nothing in the theory of Christian Science. It may be an utter delusion, but we do not understand that it is required of anybody that he should go about denouncing and ridiculing those who do believe in it. It may be that some folks die because they refuse to secure what we call rational, sane help; but we have also heard of several cases where people died who called a regular physician at the first signs of illness.

There are things about Christian Science that we cannot understand; but so there are about Christianity of the orthodox kind. We have never seen a preacher who could satisfactorily explain the vicarious atonement nor the theory of the immaculate conception, nor one single miracle, which it is heresy to doubt.

Good gracious! If we believed only what we, with our insignificant, little, finite minds can understand, we would very soon be through.

Not a single one of these self-appointed critics could believe that he is alive, for who understands life? who knows about existence? what is death? Who understands how a peach and a crab apple can grow side by side, and one is sweet, while the other is sour? How can a beautiful and fragrant flower grow out of a manure heap, and right by its side an ill-smelling smart weed? Yet, we say we believe these things, because we see them daily; but how much better do you understand them than you do Christian Science?

We can see nothing about Christian Science that can interfere with anybody else except its votaries, and if they make their own bed, they must expect to lie upon it. That is to say, it is nobody's business what they believe, and we do not believe it is incumbent upon any one to attempt to point out to them the error of their ways. We cannot see how orthodoxy can suffer by the inroads of Christian Science, any more than from infidelity, if it is all a mad woman's dream. It is our idea that tolerance is the first principle of Christianity.

Then, while we do not endorse Christian Science, we do not condemn it, because we do not understand it. That is the point we are trying to make. Too many self-appointed guardians of the people are trying to interfere in something which is none of their business.

Washington (Iowa) Democrat.

Local Option in Medicine.

It is related of Henry Ward Beecher that after being troubled with illness for some days he sent for a first-class regular physician. In the presence of so learned and distinguished a patient, the physician, in Latinized phrase and professional verbiage, diagnosed the trouble.

When he had finished Mr. Beecher said: "Your medical terms are perhaps as unintelligible to me as some of my theological might be to you, but the plain English of the whole business is: *Can you cure me?*"

"We cannot promise anything in medicine," said the physician.

"Then," said Mr. Beecher, "I prefer to take my chances between luck, prayer and some good old-fashioned natural healer. A science which knows so learnedly just what is the matter with me, and yet cannot promise to cure me, after an experience of four thousand years, is not sufficiently exact for my purposes."

Said the celebrated Dr. Abercrombie:

Since first cultivated as a science, medicine is fraught with the highest degree of uncertainty. We cannot properly be said to act upon experience, as we do in other branches of science.

Sir Astley Cooper, the famous surgeon, in a lecture before the students of Guy's Hospital, said:

The art of medicine is founded on conjecture and improved by murder.

Dr. Hoffman, the most celebrated physician of the last century, wrote:

As regards most medicines the physician is deceived, as their true properties are quite unknown, and we know of no general law of Nature for their remedial employment in disease.

Our own Dr. Oliver Wendell Holmes wrote:

If all drugs were cast into the sea, it would be so much the better for men and so much the worse for the fish.

The most damaging testimonies against medicine as an exact, reliable science all come from its own leading lights, and many more could be cited. We do not refer to these matters wishing to disparage medicine, or reflect upon the profession. But the question arises with a great mass of the public, whether a "science," admitted by its greatest professors to be so uncertain, should be permitted to drive all other methods of healing from the field, even where they are utterly harmless, though they accomplish no good.

Shall the patient himself be judge of whether he is benefited by one whom he chooses to call to his couch, or shall a company of farmers, lawyers and political miscellany on Beacon Hill decide for him? Boston Globe.

The position of Law Notes upon the standing of Christian Scientists before the law should not be misunderstood. Our observations heretofore made, upon the rights and responsibilities of these people, may be condensed into two propositions: First, even if the doctrine of Christian Science is pronounced a groundless superstition, its believers have a constitutional right to hold and follow what seems to them a system of truth, for no one has a right to judge another's belief; but second, so far as Christian Science is a system for the cure of diseases, its votaries cannot invoke the protection of religious belief to shield them from responsibility for acts which would otherwise be criminal. One who is in the possession of all his faculties and who applies for Christian Science treatment runs no risk of being imposed upon. He knows what he is going to receive, and it is his absolute right to believe, and to act upon the belief, that the treatment by that system will be of more benefit to him than drugs or a surgical operation. In the case of children or persons whose minds are so enfeebled that they cannot exercise rational judgment the law seems to be already plain, and acts no more harshly towards Christian Scientists than towards those out of sympathy with that belief. Criminal negligence and indirect homicide are and have long been well-defined branches of the law, and in the general theory of criminal liability, as observed by Judge O. W. Holmes, "all acts are indifferent *per se*."

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. — CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

The Lesson Sermons.

ALTHOUGH published as editorial matter, the articles which have appeared in recent issues of the Sentinel under the head of "The Christian Science Sermon," were written by a member of the Bible Lesson Committee. They were written, therefore, from an intelligent standpoint. The writer spoke with a knowledge born of experience in the preparation of the lessons, a careful study of their purpose, their method, their construction, and their spirit. The members of this committee, next to our Leader, are better able than others to point out these elements of the lessons, and we are glad to have had the privilege of presenting this series of helps to the Field. All must have profited by their perusal. If any have thus far failed to do so, they would do well to lose no further time. This is especially true of the Readers. Having familiarized themselves with the plan and order of arrangement of the lessons, they are better fitted to perform their function as instruments for voicing the healing Truth contained therein.

There is no more effective way of teaching the Word than by means of these sermons. They bring in review the spiritual import of Scripture in its entirety. Its content from Genesis to Revelation, is expounded. These sermons supply a Scriptural exegesis which the world needs, for which the world has long been looking.

No attentive, sincere student, or earnest listener, whether Scientist or non-Scientist, can hear or read the alternate passages from the Bible and SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, without seeing the unity of the two. Their inter-relation is unmistakable. Even their letter, though differing in phraseology, is the same in meaning; and as to their spirit, blunt indeed is the spiritual discernment that cannot apprehend their oneness. The blindness of prejudice or lethargy of indifference alone will stand in the way of such an apprehension. The unbiased student of these compilations will, soon or late, admit that if the Bible, in its spiritual essence, is an inspired Book, the Christian Science text-book in its interpretation thereof, is inspired also.

The inspiration, or otherwise, of sermons may fairly be judged of by the good they do.

The Christian Science ground is that salvation includes good health as well as good morals; that there must be a saving from sickness as well as sin; that there must be a redemption from all dis-ease and discord, not through the portals of the grave, but through the "triumphal arch of immortality" — that is, through Life.

Any sermons that fail thus to teach, fall short of the sermonizing taught and practiced by Jesus. On this ground, Christian Scientists sincerely invite comparison of their sermons and their results with those of other systems.

The Truth contained in the Christian Science Sermons *fully assimilated*, will destroy alike, sin, sickness and death.

These sermons further illustrate that the Christian Science text-book is truly textual. It is not a book which can be read as a story book or continuous tale. Each paragraph, often each sentence, is a study in itself, for it states an infinite truth, an eternal fact, that has in it the very essence of Life.

Let us then, with renewed energy and increased assurance continue our God-inspired work, regardless of opposition, ridicule, or ignorance. Let us *prove* the efficacy of Life and the power of Love.

Mr. Mills' Introduction of Mr. Tomlinson.

THE following are the introductory remarks of the Rev. Benjamin Fay Mills on the occasion of the lecture delivered by Rev. Irving C. Tomlinson at Parker Memorial Hall, Boston, March 20, 1899: —

Of the many subjects presented here, none could prove of greater interest to this congregation and all congregations, than the subject of this evening.

The liberal person in my estimation is one who has his head set on his shoulders in the right way. In other words, one who is looking forward instead of backward. Christian Science is a gospel of hope. It has been elevating and inspiring to the temper, body, and mind of many people. We are, therefore, very glad indeed to welcome this subject.

I take great pleasure in introducing to you the speaker of the evening, the Rev. Irving C. Tomlinson, of Concord, N. H.

Letter from a Lawyer to an Inquirer.

THE following letter, written by Hon. Nat Ward Fitz-Gerald to an inquirer, will be read with much interest.

A religion that wakens to wondrous activity the spiritual consciousness, as does Christian Science, even though that consciousness be apparently concealed beneath the *debris* of the hard-headed business man, man of affairs, or lawyer, surely is that for which the world is looking and longing.

Oh that all mankind might *know* that such a religion is here!

OFFICE OF NAT WARD FITZ-GERALD.

Attorney at Law and Solicitor of Patents.

— 1010 F St., Washington, D. C., Feb. 27, 1899.

San Antonio, Texas.

Dear Sir, and Brother: — Your very earnest letter of inquiry concerning Christian Science came duly to hand more than a month ago. You say that your attention was called to me, by the account of my having been healed through Christian Science, and you say "you are the man to whom I wish to apply for information, being a man of affairs, and also a lawyer."

After reading it carefully I put it aside, not knowing when, if ever, I should answer it, and had not thought of it again until a few moments ago, when I took up my pen, and began to reply. I believe that the Spirit is leading me and is doing the work through me. I am never so rejoiced as when dwelling in the consciousness that God is leading me. "Let thy will be done, in me and through me, Oh God," is my constant prayer.

I will now take up your questions in their order; for you have fired them at me, or rather at Christian Science, very lavishly, evidently expecting to hit something, or somebody in a vulnerable place, or to gain some valuable information.

If it was your thought, or hope, that you might perhaps discover a weak point in the armor of Christian Science, you are doomed to disappointment; for, as Mrs. Eddy, our Mother and Leader says; "Christian Science has no weak spots in its armor; it is strong in every part."

You say you have read Mrs. Eddy's works off and on, for almost a year, and have more recently begun investigating "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," and that you are not satisfied yet to admit all she claims. You certainly do not expect to grasp the meaning, and comprehend the whole truth, as set forth in her writings, in such

Digitized by Google

a short time, do you? You seem to be disappointed that you have not made as great advancement as you expected. My dear sir, if you could digest, understand and demonstrate, all of that book in a period twenty times as long as you say you have been reading her work, you would be entitled to great credit for your aptness and your spirituality. I read it through two or three times, in the first three months after I got it. I read it as I was accustomed to read other books,—a hundred pages or so at a sitting; but in that way I, of course, was unable to assimilate but little of its inspired truth. I had not yet discovered that the book is "textual," that every sentence is a statement of an immortal truth, upon which hours of silent and earnest thought may be expended with profit, and even then without having arrived at the full depths of its meaning. The intellect does not grasp the meaning and spirituality of "SCIENCE AND HEALTH," as it would the words of a novelist or a historian, a Dickens or a Hume.

Human intellect or mortal mind, is very slow in its efforts to assimilate the truths of Christian Science. Jesus said: "Except ye become as a little child ye shall in no wise enter into the kingdom of God." The little child assimilates spiritually, while the intellect, arrives at its conclusions through the material senses. When I read "SCIENCE AND HEALTH," with my intellect, I never grasped its spirituality. I thought it a book of "wordy words;" and even after having "read it through twice," I now perceived that I had acquired but a fraction of its "letter," with but little or nothing of its "spirit." I have since learned also: "It is not by words, but my spirit, saith the Lord of Hosts," that the work is done and Truth is revealed and understood.

"SCIENCE AND HEALTH, WITH KEY TO THE SCRIPTURES," and its revelation of the Truth, is the Second coming of the Christ to the world. When you have read it and re-read it, yea studied it, in the light of Spirit, you will then perceive that it is resplendent with God's light and love. Like Nicodemus, when inquiring of the Master about the spiritual birth, you may now be asking me, "How can these things be," and I only quote the words of Jesus in reply—"The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, nor whither it goeth: so is every one that is born of the Spirit. Marvel not that I said, ye must be born again."

My brother, when you shall faithfully, prayerfully and patiently study SCIENCE AND HEALTH, until the mists of mortal mind clear away, and the sunlight of God's love and wisdom break in upon you, then, you will have gotten understanding. That book tells us that it is only by a straightforward course, and a patient continuance in well doing, by turning neither to the right nor to the left, and by having no other mind than that which cometh from God, that we can hope to win and wear the crown of the faithful.

You say you do not doubt that cures are effected by the reading of Mrs. Eddy's works, and you ask if these cures prove the whole volume: and you then answer your own question in the negative. You say they do not, and you give as a reason that "a proposition may be partially, but not wholly correct." My dear brother, why do you stop to argue about proving the whole volume correct, when you admit that you do not understand the half of it?

I too, am a constant student of that precious volume, and as yet I do not begin to understand it half as well as I hope to do in days to come. Mrs. Eddy was the amanuensis of Spirit, a scribe under orders, when that book was penned; and I have no doubt that even she is a constant and untiring student, to this day, of its inspired pages, though written by her own hand, more than a quarter of a century ago.

She says that "Though rejoicing in some progress, she still finds herself a willing disciple waiting at the heavenly gate, for the mind of Christ."

"SCIENCE AND HEALTH" has a deep underlying spiritual meaning throughout, and that gives us the spiritual meaning of the Bible; and you need not worry yourself *now* about proving all of it correct. Wait, "Wait I say, patiently on the Lord." Wait till by patient and earnest study, prayer, obedience, and demonstration ot the power of Spirit, until you shall have assimilated more of its truth and beauty, and you will no longer worry about failing to understand it.

You ask, "Have the Christians of the world, they through whom the Bible has been preserved and handed down, been worshiping entirely amiss?"

I answer that question, by saying that they have no doubt done the best they knew how. If you mean by "amiss" that they are to be "lost" or "damned" in the orthodox sense, I say, No. But if you mean, have they failed to wholly comprehend and demonstrate the commands of the Way Shower, I unhesitatingly reply: Yes, they have failed in demonstrating the power and truth of the Gospel of Jesus Christ.

He taught, that "a tree is known by its fruits." His commandments were plain and unmistakable to his followers, in that and every age, and they have never been abrogated. He commanded them to "Heal the sick, cleanse the lepers, cast out demons, raise the dead." Have these commands been fulfilled, or obeyed, by the various sects of religionists who claim to be his followers? They make no pretension whatever, to be able to prove by signs following, their right to be called his disciples.

The Bible has both a literal and a spiritual meaning. The sects have done the best they knew; have followed the "letter" without imbibing the spirit of Truth. The spiritual idea was lost sight of in the early centuries of the Christian era, and the power of Truth, in the fulness of its spiritual import and interpretation, has been hidden from the world since the days of Constantine until 1866, when it was brought to light by Mary Baker Eddy.

You ask pathetically: "Why did not Christ straighten things out, and make the way plain, while here, instead of waiting eighteen hundred weary, bloody, tired and remorseless years, for the effulgence of his gospel, to break upon dying men."

I answer that he did make the way plain. He was the way shower. He left *the word*, of Truth, Life and Love, and if his teachings had been understood, accepted and followed, they would long ago have brought about the Millennium; the reign of peace, when all would have known God, from the least to the greatest, as foretold and promised by the prophets of old.

The teachings of Christian Science, when loyally and faithfully lived, demonstrate and bring to view, harmony, peace and life. It is the failure to follow Christ's teachings and commands that has brought all the trouble, sorrow, sin, sickness and death, which, to mortal sense, seem to envelop the world and all mankind. "Ye will not come to me, that ye might have life." "If a man keep my saying, he shall *never see* death." "I am come that ye might have life, and that they might have it more abundantly,"—that is more of it, here and now. These are the words of the Prince of Peace.

No tenet of the teachings of the lowly, but lofty Nazarene, were more strongly emphasized then are these positive declarations, setting forth the possibility, yea the certainty, of the attainment of eternal life by the overcoming of sin, disease and death. The child of God has dominion, and death and the grave will yet be overcome by all who are able to demonstrate that dominion. The apparent failure, in the power of Truth, to restore harmony to all earth's children, has not been through any fault or failure of the teachings of Christ; but it is due to the fact that his teachings have not been followed, in their spiritual import and interpretation. The promise is that they who do his will, shall know of the doctrine.

Knowledge of his doctrine follows obedience to his commands, and the power to demonstrate over sin, disease and death, is the reward: hence failure to demonstrate, implies either lack of wisdom, or disobedience to the commands.

You ask: "Does Christian Science interfere with the solid objects of Life." I do not know just what you mean by "solid objects of life." Do you mean man's peace and

Digitized by Google

harmony, his joy and happiness? Then I answer No. It does not deprive man of any of these God-given blessings, but on the contrary, Christian Science is the only channel through which they can be permanently secured by him. Christian Science gives freedom and joy; it relieves from sickness, pain, trouble, sorrow and death. It brings Good into manifestation, and destroys evil. Would you call that interfering with the solid objects of life?

You ask if a man who becomes a Christian Scientist loses his self-respect, and the respect of his fellows? I answer, No. A true Christian Scientist realizes that he reflects or or manifests God, and the knowledge of this fact, elevates enlightens, purifies and uplifts him; making him God-like. Can such a man lose his self-respect, or the respect of his fellows?

You ask: "Must a Christian Scientist remain passive under insult?" My answer to that is that Truth's man is always passive, and cannot be insulted.

Your next question rather amuses me. You ask: "Can a Christian Scientist maintain self-respect while believing a doctrine that the world respects so little, — if not, he must be miserable?"

To answer this fully I should want more space than this letter affords. There are a million Christian Scientists in the world, and I know a great many of them. I have never yet met, nor seen, nor heard of a miserable Chrsitian Scientist. The word "miserable" doesn't belong in Christian Science literature, as applicable to them. Christian Scientists know that the word "miserable" can only apply to those of earth's children who have not yet become partakers of its saving power. As to self-respect, man never has any real self-respect, until he has come to know God; until he begins to take on the divine attributes; until they have become a part of his being; then he not only respects himself, as a child of God, but the world respects such a character, without scarcely knowing the reason why.

Your next shot is straight at me, I take it, rather than at Christian Science. You ask: "Can a good Christian Scientist *also* be a lawyer and practice law?" My answer is positively, Yes: and I will state my reasons. All correct law is based upon the divine law. Law itself is a rule of action, made by a superior, which the inferior is bound to obey. The object of law is to enforce a right, and to repress a wrong. The lawyer studies the science of government, and the equities of persons, and how their rights can best be preserved. The study of law is elevating, as it leads the mind in the highest paths traveled by the human intellect. The practice of law teaches the highest human code of morals, and the most refined ethics.

There can be nothing purer, or higher, in the realm of intellectual and moral life than the principles of equity as laid down by the great authors. Some of the best men in history or literature, were lawyers.

Chief Justice Marshall, whose name is a synonym for exalted character and refined integrity, was a life-long lawyer of the highest type. Abraham Lincoln, the very mention of whose name makes the heart thrill with admiration for the splendid purity of his character, and whose noble life, like a bow of peace, spans our national greatness, was a lawyer. A Christian Scientist who is a lawyer, studies the rights of the parties, the equities involved, and seeks to do even-handed justice to all; and in all things will be guided by the great Law-giver, from whom all just laws emanate.

Again you say that you have received some benefits through Christian Science, but you are not satisfied with the results, because you are not entirely well. Let me say in reply, my brother, that you will be well in proportion to your power to assimilate and live divine Truth, for suffering and disease, are the self-imposed beliefs of mortals, and not the facts of being. So says our Mother in Israel, and you may depend upon it that her words are true. Christian Science is just as true as it is beautiful. It is God's glorious revelation to this age, and all ages, past, present, and future.

Your brother in the Christ-Truth,

Nat Ward Fitz-Gerald.

Christian Science, Evangelical Christianity.

FROM the Nebraska State Journal of Lincoln, Nebraska, we make extracts of a paper read by the Rev. Josiah Zimmerman before the Ministerial Association held there January 16, 1899. The meeting was well attended. Mr. Zimmerman urged that Christian Scientists should be recognized as evangelican Christians, giving his reasons therefor.

Mr. Zimmerman said —

"It is said by those who have the statistics, that there are over a million Christian Scientists. They are multiplying by the hundred, yea, by the thousand. They are building, and have built some of the finest churches in our large cities. Notably, the Mother Church at Boston, costing over $200,000, and another in Chicago costing over $100,000, and about four hundred more not so costly. These churches are filled by large and appreciative audiences. Their worship is of a solemn and impressive charaeter, and the attendance at their week-day meetings is almost as large as at the Sunday morning services. Now, what is the secret, underlying force of energy that produces these results? Is it a new phase of Christianity, or what is it? Let us without prejudice endeavor to examine this subject. They claim it is the restoration of early Christianity. Can their claim be sustained? I shall only claim that they are Christians and should be so recognized by us.

"My first proof is that their published statements as to their belief in Jesus Christ are Christian. A Christian is one who believes in the Lord Jesus Christ and accepts and follows his teaching and example. To prove that they acknowledge Christ let us examine the Christian Science platform. This is a summary or abbreviation of what is taught in their textbook. It contains thirty-two sections, and sections nine to sixteen contain its teaching in reference to Jesus Christ, pages 227–9 of SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES: —

"Mrs. Eddy says: 'Jesus was born of Mary, Christ was born of God. Jesus was the Virgin's son and her conception of him was spiritual. In the flesh he was appointed to speak God's word to human flesh and to appear to mortals in such a form of humanity as they could understand as well as perceive. The advent of Jesus of Nazareth marked the first century of the Christian era, but the Christ was without beginning of years or end of days. Throughout all generations, both before and after the Christian era, the Christ as the spiritual idea,—as the Holy Ghost or Comforter,—has come, with some measure of power and grace, to all those prepared to receive him. Abraham, Jacob, Moses, and the prophets caught glorious glimpses of the Messiah, or Christ, which baptized these seers in the spiritual idea, the divine nature, the essence of Love. The divine idea, or Christ, was, is, and ever will be, inseparable from its divine Principle, God. Jesus referred to this unity, saying: "Before Abraham was, I am." "I and My Father are one." The invisible Christ was incorporeal, whereas Jesus was a corporeal or bodily existence. This dual personality of the seen and the unseen, the spiritual and material, the Christ and Jesus, continued until the Master's ascension.'

"These specific statements of Mrs. Eddy about Christ, would, it seems, satisfy the most orthodox. They seem to harmonize even with the most specific statements of the Athanasian creed.

Let us now, in our further investigation, examine the tenets or articles of faith to which they subscribe. The published faith or belief of any denomination should be that by which their doctrinal standing must be judged. Consider the following statements: —

"'As adherents of Truth, we take the Scriptures for our guide to eternal Life. We acknowledge and adore one Supreme God. We acknowledge His son and the Holy Ghost, and man as the Divine image and likeness. We solemnly promise to strive, watch and pray for that Mind to be in us which was also in Christ Jesus, to love one another, to be meek, merciful, just, and pure.'

Digitized by Google

"I doubt whether any Church asks more of those who are candidates for membership, than what I have just read. Surely such a profession, such heart-longings to be like Christ, are only the characteristics of a genuine Christian, and therefore entitle Christian Scientists to be enrolled among Christian denominations. Again, Christian Scientists are entitled to be recognized and classed among Christian denominations because their experience corresponds with the state of mind, described in the Bible as belonging to Christians.

"I have frequently heard them say that the eighth chapter of Romans gives their experience, that that is eminently a Christian Science chapter. Now, where in the whole Bible, can we find recorded a higher Christian experience? They also refer to the ninety-first Psalm as another description of their experience. That commences, 'He that dwelleth in the secret place of the Most High shall abide under the shadow of the Almighty.' The whole Psalm shows unbounded trust in God. And this I truly believe represents their true character for I never mingled with people who manifested more confidence in God.

"But I will relate a few personal testimonies which I heard myself. A lady said, 'I had professed sanctification for some time, but my life was not satisfactory to myself, as I had not the right understanding how to live it, but since I came into Christian Science I now know the Principle, and my life is a state of peace and joy.' Another lady said, 'I am surrounded with opposing influences, and I came with great caution, into Christian Science, but now I see I have nothing to fear. I realize it is not only Christianity, but a high and spiritual Christianity.' Now what will we do with such testimony? Is it true, or is it false? Christian Scientists have a reputation for truth and veracity as good as any people, and if we can believe the testimony given in the Methodist class room, or Epworth League, or Christian Endeavor, or Y. M. C A., or at any other religious meeting, we must also receive the testimony of Christian Scientists, and if they say that they have witness that they are God's children, who will dare to reject their testimony and say they are not Christians? How sad to think that it has been proclaimed from the pulpit that Christian Scientists are lost to the Church and lost to Christ.

"Now, let us see whether their lives correspond with their profession and experience. They may not all live exemplary lives, but it is safe to say that they compare very favorably with other Christians. They take for their moral code the Ten Commandments and Christ's Sermon on the Mount. They have continually before them this text, 'To be carnally minded is death, but to be spiritually minded is life and peace.' They continually resist and ignore the carnal mind and put forth efforts to develop the spiritual man. They are faithful students of the Bible, and make constant efforts to regulate their lives by its teachings. They are not Sabbath breakers, but they faithfully use this day to attend their religious meetings. They find so much enjoyment in their religion that they have no inclination to frequent the theatre, the circus, the card table, or the club room, much less do they frequent the saloon and indulge in intoxicating drinks and the use of opium and tobacco. They even help poor Christians to be delivered from the use of all intoxicants and narcotics by giving them treatment, and thus remove from them the depraved appetite. They think it horrible to imagine that Jesus ever used any intoxicants or walked about smoking a cigar or sucking a bad smelling pipe. Their lives and their property seem consecrated to God. It is remarkable that they do not allow any debts to hang over their church property. In short, they seem to trust God fully for everything they need. I heard a man remark, 'I have long been carrying a heavy insurance policy, I am receiving a good salary and could easily keep it up, but it seemed to interfere with putting all my trust in God. I was leaning somewhat on my policy. I put away this idol, and I am now much happier in leaning wholly on the Lord.'

"The great aim of Christian Science is to reproduce in all men that life which the Great Founder of Christianity lived. Mrs. Eddy says: 'The vital part, the heart and soul of Christian Science is Love,' and this you see manifested in Christian Science circles as much as in any Christian churches. They don't complain of their sickness or sins, but praise God that they know now how to overcome them. Another reason why Christian Scientists should be recognized as Christians is because many were so considered before they became Christian Scientists. Mrs. Eddy, their leader, was a worthy and consistent member of the Congregational Church for years. She was religiously inclined from her youth, and joined the Church when she was twelve years old. After years of special study of the Bible, and special consecration to God, and writing her book, SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, which has proved a great blessing to many, should it now be said and publicly taught, that she has lost her religion, and that her views of Christ's character and mission are erroneous, and that she is a pantheist? Wonderful logic, indeed! And further on this line of thought, could it be reasonable that those who now are good and consistent and worthy members of Christian Churches and go into Christian Science that they at once lose their Christianity and are no longer worthy to be recognized as Christians? It is not considered so when changes are made among other denominations. If members from the Lutheran Church should join the Methodist, nobody would think they have now lost their religion, but many would think they have become more religious. And so it is in all the changes that are made among the different denominations. The persons making the change seem better satisfied than they were before, and never think of losing their religion by so doing.

"I would like also to show that Christian Scientists are Christians, because they more fully obey their Master's command and recognize that healing the sick was included in the original command. But I will exclude this argument from this paper, as it would only open the way for much criticism, and I already have had considerable experience in this line, when I presented a paper some time ago on 'Divine Healing.' I will, however, remark that healing the sick is the bugle call which arouses attention to this special system of Christian teaching. When an individual is healed without medicine, who has been given up by the doctor, or, if he has a friend whom he knows was in this condition and is now healed, he will naturally be aroused to inquire into the nature of this healing. Who is the healer? How is the sick man healed? Is it a miracle, or is it according to spiritual laws which are as yet imperfectly understood? He will finally see that God is the healer, and that man is only learning how to get into the right mental condition, so that he can receive God's gifts. Being healed, his heart is drawn out in gratitude to God. He can never cease to praise Him for His mercies, and he cannot help being attracted towards those who led him into the way of receiving his blessings. In conclusion, we wish to recapitulate. We have claimed in this paper that Christian Scientists should be recognized as a Christian denomination: Because their articles of belief are Christian. Because their experience is Christian. Because their life is Christian, and that many of them were Christians before they went into Christian Science and are yet Christians. Finally, allow me to repeat Gamaliel's advice, 'And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men it will come to naught: but if it be of God ye cannot overthrow it; lest haply ye be found even to against God."

The X. I. T. ranch, in the extreme northwest corner of the Panhandle of Texas, the largest ranch in the world, has an area of five thousand square miles. Its herds of cattle aggregate one hundred and twenty thousand head, beside fifteen hundred horses, and the calf crop branded in 1897 exceeded thirty-one thousand. Surprising as it may seem, all the work on the ranch is done by one hundred and twenty-five men, one man to every twenty-four thousand acres.

Cure for Lonesomeness.

To be doomed to lonesome insulation from the cheering love, sympathy and confidence of those about us, is one of the penalties of sinning. The dreariest form of exile is to mingle with many people daily, but never to meet one of them heart to heart, in sympathetic sweet accord.

Every sin a man commits helps to set him apart from his fellow men. He can not be at ease with those he would like to have for friends, because he cannot open his heart. It is tightly locked by guilty secrets.

Poor lonesome sinners get together and try to be merry, but the only society for each one of the miserable company is his own impure character. In the vain attempt to escape the society of their own thoughts, men busy themselves with folly.

There is only one way to overcome lonesomeness, and that is to be pure in heart. Jesus taught us, both by precept and example, how to become pure in heart, but we have been of dull understanding, and the very simplicity of his teaching has come to be a stumbling block. The sublime words of the Master have been repeated so many centuries without being interpreted through practical demonstration of their power to heal both sin and sickness, that millions of professed Christians do not seriously attempt to follow in his footsteps. They limit the application of his teachings, in this age, to the attempt to be honest in business, truthful and compassionate, and faithful in church attendance ; but even in these respects modern Christians are often unable to conform their lives to their faith.

Christian Science has no new message concerning Christianity, but it interprets anew, the old message, by practical domonstrations of its power to cleanse the heart, and to heal the sick, thus turning the attention of our race once more to God, as an ever-present help in every trouble. When the government of God is no longer limited to church meetings and existence beyond the grave; and His government is acknowledged here and now, in every act and every moment of our lives, then shall there be for us peace and health and harmony, and such fellowship as innocence insures.

But how can we take refuge under the government of God? By refusing to be the channel for expressing anything but good. When the colonies were agitated over the question of the unjust oppression of the parent government of England, there was a conservative or cowardly element, which desired to remain under the old yoke and try to get the driver to ease up on the lash. With sturdy reliance upon principle, our forefathers declared for freedom, and threw off the yoke that chafed. They refused to be ruled by an oppressive, immoral government. When we turn to Principle and unfalteringly follow its guidance we can throw off the yoke of sickness and sin.

The way to gain the protection of Principle is definitely and clearly shown, step by step, in "SCIENCE AND HEALTH, WITH KEY TO THE SCRIPTURES." If we are ready to take the first simple steps, the way will be found easy. If unwilling to try to do the little good that is shown to be possible for us at the outset, the text-book will yield no consolation or help, for suffering is the only school master for the sinner who is not ready to be saved.

When a child begins to study arithmetic he does not fill up on theory, but is set to work immediately, demonstrating, or proving the theory in practice. The demonstration interprets the theory and fixes it in his understanding clearly, as a proveable fact.

Christianity is the science of perfect being. It cannot be understood in theory unless the student works up to it through demonstration. It is useless to read the Sermon on the Mount and be soothed by the tenderness and beauty of the Master's speech, if we ignore his injunction, for he himself said:

"Why call ye me, Lord, Lord, and do not the things which I say? Whosoever cometh to me, and heareth my sayings, and doeth them, I will show you to whom he is like: He is like a man which built an house, and digged deep, and laid the foundation on a rock: and when the flood arose, the stream beat vehemently upon the house and could not shake it: for it was founded upon a rock. But he that heareth, and doeth not, is like a man that without a foundation built an house upon the earth: against which the stream did beat vehemently, and immediately it fell, and the ruin of that house was great." Denver Republican.

Traits of True Men.

THE Rev. Dr. Crane addressed a large audience in Central Music Hall recently. Dr. Crane's sermon was upon the topic, "Man and his Master," from the text, "One is your master, even Christ." He said, —

"When Mark Anthony came to the place where lay the body of the dead Brutus, the great dramatist makes him say over his fallen foe, —

> His life was gentle; and the elements
> So mix'd in him that Nature might stand up
> And say to all the world, 'This was a man.'"

Taking this passage from Shakespeare as a sub-text the spreaker proceeded to analyze the qualities of true manhood. Continuing, he said in part,—

"Manliness consists not in physical comeliness and strength, nor in that resentment and retaliation we sometimes call manly, but rather in the three attributes of bravery, gentleness, and obedience. Bravery is the fundamental virtue of virtues, universally admired, even by savages, the first element of the early men whom their fellows apotheosized. It is the masculine virtue; gentleness is the feminine and finishing virtue. Civilization is nothing but the womanization of brave men. The chief and crowning excellence of character is obedience. This is the greatest thing in the world. But is not love so-called? Love is, indeed, greatest when you spell it right. It is spelled l-o-y-a-l. Spelled any other way it means anything from folly to crime. No man is a man until he has given himself up to serve. The greatest are those who serve.

"Lord Chesterfield said no gentleman should ever go faster than a slow walk. He caught the faint shadow, absurdly contorted, of the truth that 'He that believeth shall not make haste' — that is, that one who is confident of the truth of his mission needs not add his impetuosity to the resistless power of truth. Jesus was never in a hurry. When we think of the magnitude of his task we are amazed that he took it up so placidly. He had a whole world to reform — rather to transform. Our impression of reforms is that of men burning up with fervent zeal, arguing, gesticulating, throwing themselves wildly against the evils they attack; but the Master walked and talked leisurely in Judea, stopping to hold converse with the woman at the well, strolling through fields, plucking the ears of corn, telling stories, and attending feasts.

"This was because one who is linked to the truth need not fret, 'The eternal years of God are hers.' Jesus knew just what he had to do, and consequently knew that time enough would be given him to do it. And how much more power would our efforts gain were we to work with the simple, quiet dignity of the Master! He seemed to shrink from clamor and contention. Above all there was no spirit of the quack in him; no anxiety for fame or for the multitude's empty wonder. He performed his miracles as though they were drops of his divinity slipping away from him by the theft of sympathy. He hastened to tell the one he healed. 'See thou tell no man.' It was as if he dreaded the reputation of being a miracle-monger. He did not want men to call him great. He wanted to be great and shunned the quick fame that always is followed by re-action.

"Nothing could disturb the placid deeps of his soul, The fiercest gusts of physical danger never fluttered the clear lamp of his spirit. When the disciples cried out in despair in the storm on Galilee he slept on, and, when awakened, he shook the rain from his hair, and, rising imperially calm, laid his hand upon the mane of the tempest and to the frantic

waves he said. 'Peace, be still;' so the storm caught its breath in the midst of a roar and whined like a frightened hound at his feet; so the waves bowed their heads and then lay by. For what else could Nature's quarreling children do when before them appeared 'the first Gentleman of the universe?'" Chicago Inter Ocean.

In Reply to Mr. Warring.

OUR friend and neighbor, Mr. Warring, says in the Eagle this morning that the teachings of Christian Science (according to his understanding) are the same as those of Atheistic France in the last century, and that "All violators of law, human or divine, hold these views;" and further that Mrs. Eddy's "followers profess great regard for the Bible, but it is not the Bible of our youth." Has the Bible changed since the days of our youth? Does Mr. Warring mean that the Bible of our youth taught that "infants were in hell a span long," and that in order to be converted we must believe that God would be perfectly just to consign us to everlasting punishment because we were born sinners; and that part of His creation were foreordained or elected to eternal happiness and the other part to go to hell, a lake of fire and brimstone, to suffer a continual death and never die? This is the teaching that I received in the church of which Mr. Warring is now a member. Does he hear this kind of teaching there now? No. If it is believed it is not spoken. "For those who have not been carried away by her sophistries, (meaning Mrs. Eddy), it may be a good thing to compare God's word and hers." Let me quote from the Bible and from the same writer as Mr. Warring does:

John 1st, 5, 18, 20.

We know that whosever is born of God sinneth not; but he that is begotten of God keepeth himself, and that wicked one toucheth him not.

And we know that the Son of God is come, and hath given us an understanding, that we may know him that is true, and we are in him that is true, even in his Son Jesus Christ. This is the true God, and eternal life.

Mrs. Eddy.

Three cardinal points must be be gained before poor humanity is regenerated. 1st. A proper sense of sin; 2d. Repentance; 3d. The understanding of Good.

Without a knowledge of his sins, and a repentance so severe that it destroys them, no person is or can be a Christian Scientist.

Miscellaneous Writings, page 107.

Clearly the Bible and Mrs. Eddy agree. God has no views as we understand views. God is Life, Truth and Love, and Light, and whosoever dwelleth in Him dwelleth in Light. There is no sin as substance. There is no sin when it has been destroyed, and good has taken its place. Again quoting from Mrs. Eddy's writing, Miscellaneous Writings, page 110: "Christ, Truth, saith unto you, 'Be not afraid; fear not sin, lest thereby it master you, but only *fear* to *sin*." In a talk to students in the same Work, page 115, she says: "Your means of protection and defense from sin are, constant watchfulness and prayer that you enter not into temptation, and are delivered from every claim of evil, till you intelligently know and demonstrate, in Science, that evil has neither prestige, power, nor existence since God, Good, is all in all."

We might go on at any length. True, it is written that the "human heart is deceitful above all things and desperately wicked. It is also written "For to be carnally minded is death, but to be spiritually minded is life and peace." Should we be told this if there is no way to become spiritually minded? No. Then let us become spiritually minded. If through the teachings of Mary Baker Eddy, let us say amen and amen. The day is far spent, the time is at hand. Let us all accept the Truth and so escape suffering.

Yours for the Truth,

Poughkeepsie (N. Y.) Daily Eagle. J. T. W.

The statue would have slept in the quarry forever but for the blasting, the hammering, the chiseling, the polishing.

Success.

Christian Science.

EDITOR PICAYUNE: In your highly esteemed paper of March 5, I read an article in the column of "Vox Populi," headed "Christian Science," by Henry Varley. The writer of this criticism shows in his article from beginning to end, his ignorance of what Christian Science is. Christian Scientists prove their religion by demonstration, as Jesus did, instead of relying upon a mere theory supported only by words. Christian Science is Christianity demonstrated, and thousands of respectable American citizens can, and will testify to that, because they have been lifted up from death-beds when all other curative agencies have failed and pronounced on them the death sentence.

When Jesus healed the sick, raised the dead and cast out demons, the orthodox of that time became angered because he did it contrary to their methods. Jesus came to demonstrate the one great fact — the oneness and allness of God — and so does Christian Science.

Does the writer of the article I refer to, call of "disordered brain" one who, through the understanding of the Scriptures, relieves thousands from the couch of pain and from the surgeon's knife; makes them better men and women physically, morally and spiritually; giving them a practical religion which they can use in everyday life, which is not simply a theory, but demonstrable in relieving human suffering and human woes, and thus prove the allness and ever-presence of God, Good?

The question why do Christian Scientists charge for instruction and healing, was answered by Jesus when he said that "the laborer is worthy of his hire." That the gift of God can not be bought with money is self-evident to every honest thinker. If all religions claim to teach Christ's doctrines, why do they charge for their services?

If the writer, who criticises Mrs. Eddy's writings, sees in them merely "a jargon of words," we answer: Could any one, utterly ignorant of the principle of mathematics, comprehend at a glance its practicability?

That gentleman says he "takes stock in common sense," but that the word Christian applied to Christian Science is not truthful. We answer, Christian Science is daily proving its Christian foundation by healing the sick aad reforming the sinner in obedience to the command of Jesus. There is but one Truth, and Christian Science has shown the world how to demonstrate that Truth.

In closing, we would refer the gentleman for enlightenment as to the allness of God, to the text-book of Christian Science, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," by Mary Baker Eddy. The spiritual facts of creation can only be discerned through the spiritual senses, and to the believer in the reality of matter and material law, this spiritual sense is obscured by the darkness of the carnal (material) mind. "Because the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be."

New Orleans, March 7, 1899. Fred D. Hurst.

Lectures.

At New York City.

The Rev. Arthur Reeves Vosburgh, C.S.B., of Rochester, N. Y., lectured in First Church of Christ, Scientist, New York City, on Thursday evening, March 16, 1899; the students, and members of the church giving up the large auditorium to the visitors, who came to hear what Christian Science is. The audience completely filled the house, and chairs were in requisition on the side aisles. As soon as all who could be accommodated had been seated, at the request of Mrs. P. J. Leonard, C.S.D., First Reader, of First Church of Christ, Scientist, of Brooklyn, N. Y., the meeting was opened with the hymn entitled, "Saw ye my Savior," by Rev. Mary Baker G. Eddy. Mrs. Augusta E. Stetson, C.S.D., First Reader of First Church of

Digitized by Google

Christ, Scientist, New York City, introduced Mr. Albert Metcalf, of Boston, who presented the lecturer in the following happy manner: —

Friends: I think that no words in any language, are claiming more attention today, than the words "Christian Science," and yet the great majority of those who have heard, or who use those words, have but an indistinct knowledge and understanding of their full import.

We are gathered here this evening for the purpose of gaining further knowledge of the grand subject represented by those words.

Some thoughts will be presented by one selected and appointed as a lecturer by the Discoverer and Founder of Christian Science, our beloved Teacher and Leader, the Rev. Mary Baker G. Eddy, whose *physical home* is in Concord, N. H., but whose *spiritual work-shop* is the *World*.

I have the honor and great privilege of introducing the Rev. Arthur Reeves Vosburgh, of Rochester, N. Y., who will now address us.

The speaker was listened to with interest, his subject, "Christian Science, its Worth and Work" proving instructive and helpful.

The New York Sun of March 17 had the following to say of the lecture: —

"At the First Church of Christ, Scientist, in West Forty-eighth street, the Rev. Arthur R. Vosburgh of the Board of Lectureship in Boston lectured last night on "Christian Science." In explanation of the name by which that belief is known, Mr. Vosburgh said that it was entirely logical.

"Science," he said, "is the highest vision of the human mind; Christianity is the highest vision of the human sentiment. Man to be satisfied must be true to both, and this will come through finding a Christianity that is a science and a science that is Christianity, both included in one perfect law."

In order to understand the teachings and works of Christian Science, Mr. Vosburgh went on to say it was necessary to understand the relation of God to man. "Generic man," he continued, "constitutes God's son." Jesus the Christ was the first who awoke to the consciousness of his sonship; hence he is the first-born among many brethren. The Bible reveals man as made in God's image, and the real man is therefore spiritual and perfect. Even today man is spiritual and perfect in his essential nature, and sin, disease and death are mortal beliefs about man.

"The mission of Christian Science to heal the sick and destroy sin is accomplished by bringing to the consciousness of the patient this knowledge of his perfectness and spirituality, with which disease and sin, are not compatible. Banish from thought all necessity of disease and in the power of supposed material law to cause disease; replace sick thoughts by healthful thoughts, selfish thoughts by loving thoughts, sinful thoughts by holy thoughts — in short, banish the beliefs of the mortal mind and let this mind be in us which was also in Jesus Christ, and sickness and suffering will disappear.

"The value of a religion is proved by three things — the fruits, the signs, and, best of all, by the personal witness of the individual consciousness. Christian Science has fulfilled these three demands. It has gathered the scattered gleams of the past into the clear focus of ideas. Faith is now understanding, and revelation and reason one and the same thing. It fulfills the prayer of Christendom. 'Thy kingdom come, Thy will be done in earth, as it is in heaven.'"

At Los Angeles, Cal.

An audience of about fifteen hundred people assembled in Simpson Tabernacle, Thursday evening, March 9, to listen to a lecture by A. A. Sulcer, M. D., C.S.B., delivered under the auspices of the Second Church of Christ, Scientist. The subject of lecture was, "The Science of Christian Science." The scholarly address was listened to with marked attention. A. W. Paine, M. D., C. S., introduced the lecturer by saying: —

"Friends: More than eighteen hundred years ago, Jesus of Nazareth healed the sick, as well as the sinful, through the understanding and realization of divine Love. He taught his disciples and they went forth and healed through the same understanding. He gave the command to all his followers to do likewise. This method of healing continued for about three hundred years and then was gradually lost sight of as mortals substituted material remedies for faith in God. Diseases so multiplied that there were but few who could say they were free from disease. About thirty years ago Mrs. Mary Baker G. Eddy, a New England woman, who was a graduate of medicine, and a practising physician, received an injury and was by her medical attendants given up to die. Being a devout christian, she turned to God for help, and was almost instantly healed. Then came the desire to know more of this Truth, that she might impart it to a sick and sorrowing world. After three years of faithful study, she was able to give to the world a statement of how she was healed. The understanding of Christian Science has healed more than a million people, many of whom had been given up to die, by the best medical skill of our country. More than three hundred Christian Science churches have been organized, among them The Mother Church in Boston, which has a membership of more than twelve thousand. This church has established a Board of Lectureship, and is sending out lecturers throughout the length and breadth of this land, to teach the people what Christian Science is, and what it is doing for sick and suffering humanity.

The gentleman who will address you this evening, is a member of that Board. He was for more than twenty-five years a prominent and influential physician. He found, as many others have done, that his remedies failed him when he most needed them; then he turned to God, and has for the past five years been a Christian Science practitioner. He comes to you well qualified to discuss this question. I now have the pleasure of introducing to you Dr. A. A. Sulcer, of Riverside, California, the lecturer for this evening."

Reuben Whitaker, President.

At Lancaster, Ohio.

Mr. Edward A. Kimball, C.S.D., of Chicago, appeared at the auditorium Thursday evening March 16, as a witness to the efficacy of the healing art as practiced by Christian Science proficients, he having been recalled from the verge of the grave by its aid some twelve or thirteen years ago. The house was crowded with a refined and intelligent audience, several ministers and many professional men being among the number of attentive listeners.

He was introduced by Miss Estella M. Rigby, a leader and earnest worker of the First Church of Christ, Scientist, in this city, and immediately launched into his discourse, the main portion of which was devoted to the reality of the healing work done by the church, that extends into fields not entered upon by medicine.

Lancaster (Ohio) Daily Eagle.

Healing Work in the South.

FRANCES J. KING.

Goodness, expressed in our daily lives, is the fruit of the Spirit bearing fruit after its kind. It heals the sick, cleanses the leper, casts out devils, and raises the dead in trespasses

Digitized by Google

and sins. To be good truly is to be God-like. Our work is to follow in the footsteps of our Way-shower by overcoming the carnal mind, and living the Christ-life, expressed in tenderness, meekness, humility, and love; for without this we are nothing. If we are obedient we shall not lose our way, but heaven will be nearer, and Love become dearer as we journey on from sense to Soul.

When first coming into Christian Science, I was healed of Bright's disease and chronic indigestion, by reading SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. For eight years I had been a great sufferer. During that time I tried every remedy that mortal mind could suggest and had little hope of ever being well again; but when Truth knocked at the door of my heart, and I opened the door, I found relief. Sweet indeed was its taste when it healed me, but to say that I have not murmured over its digestion, is more than I am prepared to do. Is the servant greater than his Master? Jesus drank the cup; our Leader is drinking it; can we ask to be spared? surely not, for only as we are tried and purified can we reflect the Father's image. I therefore rejoice with exceeding great joy for every pang of suffering, for every seeming evil that has come to me. By meeting these evils I have overcome much of self that constantly kept in God's way. Had the problem been an easy one, I might have found ease in Zion and been satisfied, but disease has aroused me to life and action, compelled me to watch my thoughts, separate the tares from the wheat, and now I shall not be satisfied until I awake in His likeness.

Shortly after my healing, my husband was healed of consumption. My child also had been an invalid, all her life. Physicians, travel, and change of climate had failed, but after the Light of Love came to my consciousness, I thought, Why not help them? Both were healed, and continue well and harmonious.

Demonstration after demonstration has followed in my efforts to overcome self and help poor, suffering humanity. Although at times error has pressed me hard, God has been at my right hand to deliver me. "He girded me with strength to battle." He is my strength and power, and by His omnipotent might the false thoughts in my consciousness are being subdued. Truly Christian Science is the axe "laid unto the root of the tree."

I shall give a few cases of healing, that may encourage those struggling in the belief of life in matter, and may be the means of turning some from *materia medica* to God the great Physician.

A patient with consumption of the bowels came for treatment, who had been suffering with this disease for about ten years, and had baffled the skill of noted physicians. The case was treated one week without success. At the end of the week the patient was so disturbed at the seeming failure, that she called the healer a humbug, said she had been deceived, and knew she would never be healed. She declared her intention of dropping Christian Science forever. She was told to decide for herself, but was assured that if she would be faithful, healing would follow. She, however, left the office, denouncing Christian Science. She returned the next day for treatment, which resulted as the first. She was even more disturbed. But this was all met with love, and she was told that Truth would heal her if she would only be patient and trust God, as for ten years she had tried drugs and physicians. She was, however, unwilling to listen and left. To the surprise of the healer she came *again*, saying her husband was unwilling for her to stop the treatment, and she came only to please him. The healer began with renewed efforts to reflect love and know the nothingness of the false sense that had so long bound her with chains. They worked on, and by striving to realize Love's omnipresence and omnipotence, the confidence of the patient was gained. When the fifth week came to an end there was still no sign of improvement; yet the patient had learned patience, and the healer knew that the leaven of Truth was at work, making a highway for the entrance of health and harmony. After this, conditions grew encouraging and relief came, but soon seeming reaction seemed about to undo all that had been accomplished. But never doubting, the healer worked on, and the seventh week Truth was gloriously revealed. The healing came and all praise was given to God and Christian Science. This taught the grand lesson to both patient and healer, to wait patiently on the Lord, "for in due season we shall reap if we faint not."

Another case is that of a young man who was stricken with paralysis one Monday morning. The following Thursday Christian Science was called for. During this time the man had not spoken, and lay motionless upon the bed. Two physicians had been in attendance, but from the first had utterly failed to reach the case. They had pronounced it hopeless and left, then Christian Science took charge. It was five o'clock when the healer entered the room, at six the man sat up, laughing and talking with the family. After the treatment the healer went up to the bed, and spoke to the patient, saying, "I know you are better." He opened his eyes, looked up, and replied, "You have been casting out a dumb devil." Truth had done its work, and while the patient was unconscious and knew nothing of Christian Science or the treatment, he felt the power of the spoken Word and realized that the dumb devil had been cast out. He testified at our next experience meeting.

Another case of paralysis was healed in six weeks. Two persons with similar troubles rose and walked after the first treatment. Two cases of cancer healed — one case in about three weeks, the other in three months. One case of malignant cancer healed in a few weeks' treatment. A patient suffering with lockjaw, whom physicians had failed to cure, was healed with one treatment, and attended the matinee the same afternoon. Deafness is yielding to the treatment, and two cases that were very deaf are now able to hear an ordinary conversation.

Brethren, friends, let us love one another, for "he that loveth is born of God, and knoweth God." I have found the secret of a happy life, and the success to all healing is in love for all mankind, and whatever else others may do, let us love one another, and, like Paul, we can say, "My God shall supply all your needs."

Memphis, Tenn.

Compensation.

IN the Christian Science Sentinel of February 16th, the claim that Jesus received no compensation for healing the sick was successfully answered by the statement that "he evidently was provided for." As showing one of the ways in which he was provided for, I quote from Luke 8: 1–3 "And the twelve were with him, and certain women which had been healed * * * Mary called Magdalene * * * and Joanna * * * and Susanna and many others which ministered unto him of their substance."

It may be urged that these ministered unto him voluntarily; but that does not alter the fact that they had been healed and afterward gave him of their substance. That they gave him the things he needed, instead of the money with which to buy them, was but a different means to the same end, and is accounted for by the different age in which he lived. The country, people, customs and wants should all be taken into consideration as they would be in discussing any other question.

When I first began the healing work I rebelled against charging for it. One day I was called to see a patient who had had a doctor and nurse for several weeks but was no better.

They told me of the heavy expense they had been under, and while they didn't seem to question the doctor's or nurse's right to payment, they seemed not to want to pay for the Science treatment. As I disliked to charge for my work I was so distressed that the patient received no benefit from the treatment.

I turned to my Bible for counsel, and read "God is faithful, who will not suffer you to be tempted above that ye are

Digitized by Google

able." Then it came to me that we had been told to charge for our services, and that she who had so advised, knew whereof she spoke. I was being tempted to "lean to my own understanding," That settled it and the patient was better at once, while I had learned another lesson in self-denial and obedience.

Sometime afterward I found the following on page 342 of "Miscellaneous Writings" "Seek Truth and pursue it. It should cost you something: You are willing to pay for error and receive nothing in return; but if you pay the price of Truth, you shall receive *all*."

Then I saw that my part was to be obedient, that the patient, loving Leader only asked us to tread a path she had already traveled and found to be safe. A wisdom that made my human sympathy for a false condition, seem mere emotional folly, has said "The laborer is worthy of his hire." I wonder if the sacrifice necessary to pay for treatment, is the "type and shadow" of the price we must pay for Truth.

Minneapolis, Minn., March, 1899. L.

The Child's Message.

LOUISE DELISLE RADZINSKI.

A SHORT time since a little girl of eleven years repeated to her mother some lines that "had come to her while she tried to think of God's love;" her mother requested her to write them down, and send them to the Journal.

In simple, child-like phrase these lines tell of the omnipresence of God, the nearness of heaven, and the nothingness of error, evil. The Journal for August published them, and they have been read by thousands of God's children, big and small, and who can estimate the help they have brought to them? In one household, the elder child, a girl of eight years, learned the lines at the request of her Sunday-school teacher; as she repeated them and sang them, as she went about the house at her play, her small brother of four caught the message and began to question his mother. "Mamma, is God everywhere? Is He all around us? What for? I don't see Him!" The mother is happy to be plied with questions for they teach her, she finds, as much as she can teach the little ones, and between the two there are not many moments in the day that she is not reminded that:

"God is all around us,
In our earnest prayer
He is close beside us,
He is everywhere."

Thinking of the preciousness of this child-message, I realize that today, as much as in King David's time: "Out of the mouth of babes and sucklings, God has ordained strength, because of His enemies."

These enemies, fear and, perhaps, selfishness, make us say like Jeremiah: "Ah, Lord God! behold, I cannot speak: for I *am* a child." The answer is for us now, as it was for the prophet then: "Say not, I *am* a child: for thou shalt go to all that I shall send thee, and whatsoever I command thee thou shalt speak. Be not afraid of their faces; for I *am* with thee to deliver thee, saith the Lord. Then the Lord put forth his hand, and touched my mouth. And the Lord said unto me, Behold I have put my words in thy mouth." Jeremiah 1: 6–9.

Our Journal and Sentinel carry refreshment to thousands hungry and thirsty for Truth; shall we not trust Truth, though we may be, spiritually, only babes and sucklings, to ordain strength out of our mouth?

Let us then send our brethren in Truth the messages that Love prompts; let us not fear the faces of any enemies that seek to frighten us with shadows, making us weak with beliefs of imperfect utterance or lack of spirituality, for;

"God is our strength. Behold!
Error is a coward
Although it looks so bold."

The Just Acknowledgment.

BY W. R. RATHVON.

Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men.— Psalm 107: 8.

FREQUENTLY beginners in Science, when disposed to tell of demonstrations they have had, are deterred by the wiles of mortal mind, which is ever ready to insinuate "it would have been so anyhow." So subtle is this suggestion that the Scientist himself, if not on his guard, is led at first to wonder and then to doubt, whether, after all, the good results that have followed his endeavors to demonstrate would not "have been so anyhow."

In uncovering this claim, the following homely illustration has proven helpful. We wake on a fine winter morning to find the ground covered with snow. It is expedient that we get our sidewalks clear and our paths opened, so we set to work without delay. We seize the shovel, use strength, promptness, perseverance and understanding, and before very long the work is done and our premises are clear of snow, solely because we worked faithfully to get them so. Later in the day the sun comes out clear and strong, the weather moderates, and before night all sign of snow has disappeared. But the warmer weather had nothing whatever to do with our clean sidewalk.

It is just so in demonstration. We give treatment to overcome and destroy some specific form of error through our understanding of the power of God — Omnipotent Good. In due season the good results follow as we would have them. So quietly and naturally do these beneficient effects come to us, that, unless on our guard, we may listen to the tempter, and question to ourselves, if, after all, the hand of God was manifested because of the treatment. Yet at the same time we would vigorously resent the insinuations of any one that our sidewalk was clean because of the thaw, or from any other cause than the right kind of work on our part. We know well what cleaned our sidewalks of snow, but we are uncertain as to what freed our bodies of pain. Yet both are simple eases of cause and effect, and when we acknowledge but the one Cause, there will be for us but one effect — Harmony. We can never be intimidated by that bugbear slur "it would have been so anyhow," when we realize that all causation is mental, and that there is but one mentality— one Mind.

Let us, then, not hesitate to make just acknowledgment of the Divine source of the blessings that follow our efforts to prove the allness of God here and now. (SCIENCE AND HEALTH, page 371, line 28.)

There is no such thing as giving too much glory to God.

Extract from Letter.

I remember very well just how I felt when I laid down my first five dollar bill for a pocket edition of SCIENCE AND HEALTH. I was in the frame of mind at that time wherein I measured everything from a material basis. It was not long after I purchased the first copy before I bought second and third copies, making a total investment at that period of fifteen dollars in cash. As a result of my first investment my wife was healed of consumption and my eyes were healed of astigmatism.

A lady who came to me something over two years ago was troubled with weak eyes and was obliged to wear glasses. This lady wrote a great many Christian Science letters for me, and asked that she might retain carbon copies of these letters for her personal benefit, and through this beautiful thought her eyes were healed several months ago, and I have her permission to mention this fact to you.

I have probably invested, directly and indirectly, in various copies of SCIENCE AND HEALTH and other Christian Science literature something over one hundred dollars and if every hundred dollars that I have spent in my life time had been productive of the same amount of genuine good that has come out of this particular investment, I think, without exception, that I would be the happiest man on this earth.

Digitized by Google

Just think, my dear boy, if all the money that I have put in my life time into wine, whiskey and cigars had been invested in this class of literature, can you or I measure the result?

I believe that you have a copy of SCIENCE AND HEALTH, as well as copies of other writings of that dear woman in Concord, who permits her followers to call her by the most tender word known to the thought of man, namely "Mother," and I want to say to you that if you will take up these writings of hers with that same childlike thought with which you took up your first primer, and will read her writings with the same childish faith that you read this primer, for a period of twelve months, I hereby agree and bind myself at the end of twelve months to refund to you the money you have invested in these books with interest at the rate of twelve per cent per annum if, at the end of the period in question you will write to me and say that these books have not been the best investment that you ever made in your life.

Ira C. Hubbell, Kansas City, Mo.

Resurrection.

THE resurrection of Jesus is the object lesson of the ages. It speaks of the triumph of Truth, the victory of virtue, the worth of wisdom, the utility of understanding, the majesty of manhood, the might of Mind, the labor of Love, the crown of Christianity, the loftiness of Life, the sovereignty of Science, the sureness of salvation, the sublimity of Soul, the anthems of angels, the reign of right, the oneness of Omnipotence, the glory of Good, the supremacy of Spirit, the bliss of Being, and the day of Deity. It points with the finger of prophecy to the time when mankind shall outgrow the grave, and prove the promise of Jesus, "He that believeth in me shall never die." It points to the possibility of fulfilling Jesus' demand to raise the dead.

The stone rolled away from the tomb of Jesus is a stone rolled away from sepulchres in the hearts of humanity—sepulchres where hope lay buried, yea, where health, and happiness and peace, and manhood and God-likeness, were buried from the sight of mankind; and his resurrection signifies the resurrection of these virtues in the lives of humanity.

Oh, Christian, has this resurrection come in your consciousness? Has Christ, Truth, rolled away the stone from your heart? Is all your buried hope and latent manhood coming forth from the depths of your heart, and manifesting its presence in your life among men? Then are you remembering Calvary no more, but rejoicing in the everlasting victory of Truth and Love.

Oh, child of the resurrection, thou of the Life new-born, hearest thou the music of the morning? Seest thou the gray of the daybreak of eternity? Hearest thou that "Holy, holy, holy, Love, Good, Omnipotent, which was, and is, and is to come?" Listen, and anon thou shalt hear; and thou shalt learn that theme, and blend thy voice with Life's everlasting song.

Waldo Pondray Warren.

Sowing and Reaping.

OUR consciousness is a garden. If we read and encourage *idle thoughts*, sinful thoughts, they will grow and be manifested in our experience even as mustard seed will spring up and manifest itself in a field of grain, and if not uprooted will crowd out the good seed and thus our field instead of being beneficial to a community is an injury, spreading the evil seeds of thought to adjoining fields. We are told that we reap what we sow. This being true, how careful we should be not to hold any thought of malice, envy, or hatred towards another, or hold a thought of dishonesty for them. If we do we cannot demonstrate over the claim of dishonesty any more than a claim of disease of any sort.

We used to think that if we paid one hundred cents on the dollar and gave sixteen ounces to the pound, that we were measuring out honestly, even though unrighteously judging our neighbor at the same time, but what a mistake! What we sow we will reap and not only what we sow but perhaps ten or twenty or hundred fold. St. John writes, "He that hateth his brother is a murderer." This being true, what is our reward for hating a brother but self-destruction? Christian Science teaches that the sinner is a suicide. The old saying, "The world is what we make it" has much meaning to Christian Scientists. We till the soil and sow the grain and then await the results. If we are sure the seed we have sown is absoutely pure, then our outlook is surely bright, but if we are sowing bad seed or mixed seed the prospects are not so bright.

Geo. C. Pennington.

Waverly, Neb.

Turn Your Back to the Lions.

HAVE you seen the picture of Daniel in the lion's den? The artist must have had a glimpse of the understanding of Christian Science. What a sermon it preaches! Every touch of the brush is Science. "The Love of God casts out all fear." "God is All." "Out of self into Thee." "Having eyes but see not." Daniel had eyes and did not see evil (the lions) but he did see God. "Ears but hear not." Daniel could not hear the growl of error (the lions) but he did hear the voice of the Lord saying, "Fear not." What a perfect understanding of God's power to protect His own. Let every Christian Scientist search himself and see if he turns his back to the lions when danger, sorrow, trouble or sickness presents itself. In my own case, try as hard as I may, I find I invariably face the lions and keep close watch of them to detect which one will spring first and then demonstrate to hold him back, frequently finding the lion is drawing nearer, I go to a healer for treatment. How different with the prophet. He calmly turns his back to error (the lions) with hands folded behind him, with his eyes turned to God, he sees the Light coming through the little barred window. He is lost to material self but is present with God. To material sense he is in great danger, but with his spiritual understanding there is nothing to fear. It seems to me all Scientists should have that picture where they could study it daily, and each day pray to be like Daniel that they may be able to turn their back to the lions.

F. B. Homans, Boston, Mass.

The Way.

Bare was the cross, and gray,
But in the dreary province of the tomb
The body of our Saviour lay,
Awaiting resurrection from its gloom.

Unto His tomb at dawn
Came worshippers with oils and spices rare,
To find their loved Messiah gone,
The stone rolled back, an angel waiting there.

"Fear not: He whom ye seek —
The Jesus crucified — He is not here:
For He is risen, and will speak
The deathless Truth where'er He may appear."

Life, Truth and Love are real,
While sin, disease and death are passed away:
A risen Christ doth yet reveal
The meaning of Ascension and of Easter Day.

The Principle Divine,
The sinless Joy, the perfect Harmony —
What mortal tomb can these confine
When death is simply *un*reality?

Man is the thought of God,
The deep expression of Eternal Mind;
And all the paths that Christ has trod
Are in God's kingdom for each one to find.

Keyes Becker.

Questions and Answers.

In compliance with requests we republish the following from the Christian Science Sentinel of February 2, the supply of that issue having been exhausted.

What do Christian Scientists mean when they say there is no sin?

Absolutely speaking, they mean just what they say. They do not mean, however, that sin does not exist as a human law and human belief, nor do they mean that mortals, as long as they are under the dominion of sin, are not sinners. As long as they believe in sin and give it power, mortals are sinners. Christian Scientists mean by the unreality of sin that where Good prevails no evil exists. To the extent that Good obtains in human consciousness evil or sin is ruled out therefrom. If the belief in sin predominates in the consciousness of the individual, he is more the servant of sin than of righteousness. If righteousness has the preponderance, he is more a righteous person than a sinner. If a man is less a sinner this year than he was last, he has to that extent overcome sin, and to the extent that he has overcome it he has proved its unreality to himself.

Let us suppose a community of persons, each of whom has so far destroyed for himself the belief that sin has power over him, that he is more the servant of righteousness than of sin. What would be the aggregate consciousness of that community? More righteous than sinful, would it not? If we can go thus far in our supposition, may we not legitimately go farther and suppose a community whose aggregate consciousness is entirely free from sin? In that community then, surely sin would not be real, for it would have no existence.

Now, a community that would submit itself absolutely to the teachings of Jesus Christ, working out their salvation according thereto, would sooner or later become a sinless community; but the community, of course, would become sinless only as each individual thereof had overcome sin in himself. If sin were real in the sense that it constitutes a part of God's divine plan, it never could be overcome, for it would be eternal and indestructible.

❖❖❖

Do Christian Scientists believe in punishment for sin?

Most emphatically. The sinner will be punished in due proportion for all his sins. As long as he continues to sin, the punishment will continue. If sin were a part of God's plan and therefore eternal, and the sinner never ceased sinning, his punishment would be eternal; but sin not being part of God's divine plan, sooner or later it must be destroyed in each human consciousness. As mortals awaken to the fact that there is no pleasure in sin, but that it brings certain punishment, they will turn from it; and the only way to overcome sin is to cease sinning. Jesus came to teach mortals how to overcome sin. Had sin been a part of the divine plan, and in that sense real, he would have been violating, instead of fulfilling, God's law, and would not therefore have been "about his Father's business," as he so often declared himself to be.

When the "last farthing" shall have been paid,— that is, when the last sin shall have been overcome by the individual,— the "eternal punishment" for sin will have ceased. Christian Scientists construe the word "everlasting," as used in Scripture, in its strict sense,— that it is age-abiding. When the age of sin ceases in each individual, the "everlasting punishment" will cease.

❖❖❖

Do Christian Scientists believe the Scriptures to be inspired?

Whatever is dictated of Good is inspiration. To the extent that Good or God, is reflected, either in words spoken or written, or in deeds, the person reflecting the same is inspired. The Biblical writers, as a whole, wrote from a high standpoint of spiritual perception, and were inspired in proportion. Their prophetic utterances were divinely inspired, as shown by the fulfilment thereof. God spoke through them of the past, the present, and the future, by virtue of their spiritual understanding. So it has been in all ages. So it is in this age. Spiritually interpreted, therefore, the Scriptures are inspired.

Testimonies.

HAVING read in the Sentinel of March 2, the just rebuke to Branch Churches for their failure to call a member of the Board of Lectureship, reminds me that no notice was sent of the lecture in Portland. Rev. Wm. P. McKenzie, C. S. B., of Boston, Mass., delivered a lecture, the 30th of last November in the Y. M. C. A. hall, under the auspices of both Christian Science churches of this city. The hall, with seating capacity of about six hundred, was almost entirely filled. The discourse was indeed helpful and uplifting; the subject being, "Christian Science, what it is, and what it does."

I would like to mention two demonstrations, where the healing was done without any special effort to treat the individuals; but by simply denying the existence of the error, and realizing the presence of God, Good.

A Scientist called at the home of a lady who was suffering severely from erysipelas in the face. At this time patches of red were quite prominent. The practitioner talked to the lady about Christian Science, what it was, and what it would do, and then went home. Once or twice afterward, the disease presented itself to the thought of the Scientist, but its reality was denied, as before, and thus dismissed from thought. It was afterward learned that the morning following the visit, the disease had disappeared.

The second case was an experience of the same Scientist. A friend visited her home for a few hours, being apparently over-burdened with care and trouble. Although possessing some understanding of Truth herself, she had been unable to rise superior to the sense of discord. The two conversed freely about Christian Science. Some questions in regard to it were asked and answered; God's presence, the reality of Life, Love, and Good was realized, but no treatment given.

Three days afterward the friend called again, only to tell her sister how much benefit, courage and light had been received during that visit. She had been "so happy," she said, during the three days following.

These demonstrations, although modest as compared to others which might be mentioned, positively prove the statements in our text-book, SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. M.

Portland, Maine.

Christian Science in Dawson City.

THE following extracts from letters received from Harold B. Lewis now in Dawson City, Northwest Territory, Canada, will be read with interest by his many friends. He is a young Christian Scientist, healed and taught by Mr. Carol Norton, and well prepared to go as a pioneer of the Truth in that great field awaiting the sowing of the seed. At this season of the year the mail is taken by sleds and dogs and is limited to very light letters, — no papers, — and the mother of Mr. Lewis sends the Journal, Quarterly, lectures, and literature, by cutting them up into pages and pieces.

* * * * * *

"I found a little band of Christian Scientists here composed of six men, I now making the seventh. One of them has established himself as a healer, and is doing good work. He has written for permission to organize a church, and for more literature. I found them studying the August lessons

Digitized by Google

of a Quarterly of 1897 — holding the meetings Sundays at 3 P. M. — and you can think of me nine o'clock at night, your time, enjoying with others this feast which is found in the study of SCIENCE AND HEALTH.

* * * * * *

While there is bickering among the physicians as to who is entitled to practice and who not, with several consequent legal entanglements, Mr. Allerdyce, the Christian Scientist, continues to practice undisturbed, and I should judge is doing good work. To show how little distance is considered here — several people were at the last Sunday 3 P. M. meeting from Bonanza Forks, sixteen miles away, — some coming by dog team, others walked and returned after the meeting. I understand there are about twenty Scientists, some ladies, in this country.

It is with a great deal of pleasure and happiness that Mrs. Ingram and myself read the Sentinel, and it has helped us in many ways. I only wish that every family in the land was a subscriber to this valuable little paper. The price is so small it seems to me that every family might economize on the so-called luxuries of living, and thus be enabled to subscribe to the weekly. Only the other day I said to my wife that the articles by Senator Mitchell, March 2, and "Business Men Healed," A. E. Stilwell, February 23, were worth the year's subscription to me. I sent a copy to my father, who is very strong in the old orthodox beliefs, thinking perhaps these two articles might turn his thoughts in the right channel. In a recent letter from him, he says he is sorry we (that is Mrs. Ingram and myself) are so taken up with Christian Science doctrines, or isms, as he called it, and isolating ourselves from the Church and Society. We are holding firm to the Truth as taught by Mary Baker G. Eddy in SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. This in connection with the Bible is our daily guide to health, holiness and happiness. Although we have only been interested in Science since July, 1898, we have had a number of helpful demonstrations, and hope to be able to give you some for publication, which may be helpful to others.

W. G. Ingram.

Hudson, Wis.

Consumption Healed.

"ELEVEN of my ancestors died with consumption, it being hereditary in our family. This dreadful malady attacked me and I was treated by the best physicians for several years. I was finally advised to try a change of climate. As my mother was in California I went to her, thinking if I died I could leave my little girl — then four years old — with her.

While there I met some Christian Scientists, and by reading their literature I was enabled to return home. Soon afterwards — now about six years ago — I had the pleasure of going through a class in Christian Science.

I am now entirely healed. Since gaining this higher understanding of the government of the one Mind, I have been able to demonstrate entirely over sick headache, neuralgia and chronic liver troubles. We have three children, and we are thankful for the light and blessings we have received in Christian Science."

Mrs. Ida Getzwiller.

San Antonio, Texas.

Recently a mother who lives at this place requested treatment for her baby. The child's face was covered with a rash. The mother had just that day learned that the children in a family for which she did the washing had the chicken pox. The Scientist gave one treatment about five o'clock and another about nine o'clock. The next day the baby was perfectly well. The mother said the manifestion of rash all disappeared about ten o'clock the night before. It made no appearance on the three other children who were with the baby constantly.

A little boy in the same family was instantly healed of a severe claim by listening to the reading of the experience and healing of another of the "little ones," given in one of the first issues of our dear "Sentinel." So our little messenger has proved a healing angel.

Sherman Wilcox, Sturgis, So. Dakota.

About two years ago Christian Science was brought to my notice through the healing of my wife. We at once purchased SCIENCE AND HEALTH. I became interested in its teachings, and when about half through the book, I lost my desire for tobacco. I had been a great smoker for ten years. I kept on with the study and physical claims began to disappear, until I found myself perfectly well.

The joy that has come to me spiritually, the English language has no words to express. We have now nearly all the works of our dear Leader and The Christian Science Publishing Society. Their value cannot be estimated in money.

In the degree that I rise above selfish motives and aims I find myself in the attitude of thought to understand the Bible and SCIENCE AND HEALTH. My constant desire is to so demonstrate over personality and all claims of sin that I may be led to Christ, Truth.

N. P. Libby, Bangor, Me.

Notices.

To Christian Scientists.

It is with pleasure I certify that after months of incessant toil and at great expense Mr. Henry P. Moore and Mr. J. C. Derby of Concord, N. H., have brought out a likeness of me far superior to the one they offered for sale last November. The portrait they have now perfected I cordially endorse. Also I declare their sole right to the making and exclusive sale of the duplicate of said portrait.

I simply ask that those who love me purchase this portrait.

(signed) Mary Baker Eddy.

Pleasant View, Concord, N. H., March 27, 1899.

All orders should be addressed to Mr. J. C. Derby.

It is the Company's desire to call in all pictures of Mrs. Eddy which they had sold before perfecting the portrait.

If those who have such will return them to Mr. J. C. Derby, 30 No. Main St., Concord, N. H., enclosing ten cents in postage stamps to defray expenses, and give full address of the sender, they will receive in return one of the perfected portraits without further charges.

Quarterly Lecture.

The quarterly lecture of The First Church of Christ, Scientist, in Boston will be given by Rev. Irving C. Tomlinson, a member of the official Board of Lectureship, in Music Hall, Boston, April 5, at 8 o'clock, P. M. Seats free. All are cordially invited.

Christian Science Board of Directors.

Journal Delayed.

Owing to a fire in the building in which is located the bindery that does the work of binding the Journal, there will be several days' delay in getting the April Journal out to the Field.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We wish to say that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

A Roentgen Ray Discovery.

From the New York Herald we cull the following regarding the recent invention of Dr. Kolle: —

THINK of one man being able to print seven hundred and fifty thousand copies of a newspaper in a single working day of eight hours. Startling, isn't it? Yet, if the calculations of Dr. Frederick Strange Kolle are correct, this is but a moderate estimate of what may be done by a new X ray process. But manufacturers of printing presses need not prepare to go out of business just yet, for it will probably be many a year before Dr. Kolle's discovery is brought to practical perfection.

When, scarcely more than two years ago, the X ray was discovered by Prof. Roentgen, an astonished world said, "Surely this is the limit." Yet, at that time not half the possibilities of that marvellous spark were conceived, even by scientists. Investigation and experiment are almost daily revealing new wonders. The latest discovery of the power of the X ray has been only recently made. Dr. Kolle is a young man, who has devoted most of his time for the last two years to studying Prof. Roentgen's spark.

Dr. Kolle has, after many experiments, succeeded in printing by means of the X ray. At present his discovery is scarcely out of its swaddling clothes, but its boundless possibilities may be seen at a glance. One of these possibilities is the displacement, in a measure of the printing press, and the accomplishment in much less time and with infinitely less labor and expense, of what those enormous and complicated machines are now called upon to do.

✤

Recently a representative of The Herald was permitted to be present at a practical test of printing with X rays at Dr. Kolle's residence, No. 273 Prospect avenue, Brooklyn. The rooms were not adapted to the purpose — in fact, the demonstration was improvised — but even with poor facilities, Dr. Kolle conclusively proved that he can do what he claims — print with the X ray.

A majority of newspaper reading people have become familiar through repeated description with conditions surrounding the use of the X ray. In this case all ordinary requirements were complied with. The coil, or battery, was placed on a table, while in an adjoining room a red bulb cast through the open door a dim light. Attached to the coil was an ordinary Roentgen tube, being a spherical glass globe, with a small platinum shield to reflect the ray.

The coil used by Dr. Kolle was one manufactured expressly for him. It contains one hundred and fifty miles of wire, and is capable of exerting a force of three hundred and twenty thousand volts. Not all this enormous voltage was used, however. When all was ready for the experiment, Dr. Kolle took a dozen sheets of sensitized paper, wrapped them in light proof paper and placed them in an envelope. To describe this envelope and its contents Dr. Kolle has coined a term — "senso-block" — which is merely meant to mean a block of sensitized matter.

This senso-block was placed upon the table. On it was laid the matter to be printed, which in this case simply consisted of the words "New York Herald," and just under the word "typoradiography," which is the name given by Dr. Kolle to the process of printing with X rays. The words to be printed had been prepared on an ordinary white business envelope. Dr. Kolle explained that it was necessary to use an ink entirely opaque, so the X ray could not penetrate it. He was some time in devising an ink which would answer the purpose, but finally produced a pasty substance of a deep pink color.

When the matter to be printed had been laid on top of the senso-block the tube was lowered so that the platinum disk would send the X ray directly downward and through both. Then the current was turned on, and for a few seconds nothing but the white bulb was visible.

The sheets of paper were then taken out of the envelope and placed in a bowl containing some ordinary developing fluid. After they had remained in the fluid for a few moments Dr. Kolle took one out and passed it to one of the observers. Sure enough, the words "New York Herald, typoradiography," were plainly visible.

✤

"So you see," said Dr. Kolle, "that the X ray can print. As yet, as you have seen, this possibility of the X ray is in its primacy What I have just shown you has been done with the crudest facilities, yet it amply demonstrates the fundamental principle. To bring printing by this method to practical use will require, beside certain scientific difficulties yet to be overcome, a mechanical inventiveness far beyond my knowledge or skill. But I have not the slightest doubt that within ten years, or perhaps even a shorter period, typoradiography will become an important and useful art.

"If it is desired to print a large number of sheets I have hit upon a plan which is entirely practical. This is to place a number of blocks around one tube. Say blocks of fifty sheets are used, and twenty blocks arranged about one tube; then we could get one thousand copies in ten seconds' exposure, or six thousand copies per minute, for each tube employed. Any number of tubes may be used, so if ten tables were used in one room of fair area, each holding twenty senso-blocks, sixty thousand copies could be made in one minute. The cost of printing would thus be enormously reduced.

"A man working eight hours could, with every facility for work, make at least two hundred and fifty exposures, which represents at a moderate estimate seven hundred and fifty thousand copies per day. By increasing the number of workmen and tables the entire edition of a great newspaper could be printed in a few minutes."

One practical use to which Dr. Kolle's process can be

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

immediately applied is the comparatively safe transmission of secret dispatches, where they are liable to seizure and detection. Sensitized paper can be used which will only yield to a certain developer, both to be kept secret by the government or persons employing them. Upon sheets of this paper elaborate dispatches can be printed, and if the messenger is detected only apparently blank sheets of white paper will be found in his possession. When the sheets are delivered to the proper person, an application of the right developing fluid will immediately bring the message clearly into view. This is one of the many interesting minor possible applications of the new invention.

Items of Interest.

It is reported that the troubles growing out of the election of a king of Samoa have taken a more serious turn, and resulted in the bombardment of native villages along the shore by the United States cruiser Philadelphia, Admiral Albert Kautz commanding, and the British cruisers Porpoise and Royalist.

As the provisional government continued to defy the treaty after the arrival of the Philadelphia, Admiral Kautz, after consulting with the various consuls and senior naval officers, issued a proclamation calling upon Mataafa and his chiefs to return to their homes.

The German consul issued a proclamation upholding the provisional government, and as a result of this the Mataafans assembled in large force and hemmed in the town. An ultimatum was sent ordering them to evacuate and threatening to bombard the town in case of a refusal. This was ignored and the rebels commenced an attack in the direction of the United States and British consulates half an hour before the time fixed for the bombardment. Much anxiety is felt in Washington as to the part the Germans took in the affair, if any.

Dr. Manuel Azpiroz, who will succeed the late Senor Romero as the Mexican ambassador to the United States, has arrived in Washington. The new ambassador is one of the most popular officers in Mexico, and has gained an international reputation as a diplomat.

Speaking of the commercial relations between Mexico and the United States he said that the trade of these two countries ran far into the millions, and was growing constantly. Mexico bought the bulk of her goods from the United States, instead of from European countries. He pointed out that the great mining, mineral and agricultural resources of this country created a large demand for American goods, and the people wanted our machinery and all the appliances of industry, preferring them to those of other countries. With the extension of the railroad systems between the two countries, this mutual exchange was sure to increase, and the nations would be brought into close trade relations.

As soon as Gen. Otis achieves a decisive victory over Aguinaldo the Philippine commissioners will issue a proclamation promising amnesty to all natives who lay down their arms, and self-rule to those who recognize the sovereignty of the United States. This is the programme which the state department understands has been adopted by the commission. As General Otis and Admiral Dewey are members of the commission, it is presumed that they are responsible for the delay in issuing the proclamation, believing its effect will be greater if published after the insurgents have been subdued.

Information is received from Madrid that Senor Silvela, the premier, has informed the Queen Regent that her ratification of the peace treaty, by accelerating the payment of the $20,000,000 promised by the Americans, has improved the commercial outlook abroad, and that there is nothing whatever to fear from the Carlists. He further declared that the relations of Spain with the United States were of the most friendly character. He expected that when the ratification of the peace treaty had been exchanged, the normal relations between the United States and Spain would be at once reestablished.

The steady advances of the American troops have brought them within three miles of Malolos, the insurgent capital. Aguinaldo and his family are preparing to leave the city, and it is thought the battle of the war must be fought at once as the Filipinos are massed about their capital. The rebel army has been retreating constantly and all its fighting has been of the defensive kind. The insurgent losses have been far in excess of the American casualities in every day's fighting. The American troops are holding out in remarkable vigor and good spirits.

The following cablegram was received by the war department on March 19, and has just been made public:

Manila, March 19, 1899.

To the Adjutant-General, Washington:

Have purchased all gunboats in Philippines of Spain, thirteen in number, now at Zamboanga. Half are in serviceable condition. Payment in cash from public fund upon delivery at Manila. They will be sent for this week. Otis.

A most interesting and impressive ceremony was recently witnessed at Santiago de Cuba by more than two thousand people. Two palm trees representing Cuba and America, symbolizing Cuban freedom and the Union of the two countries, were planted by the Cuban General Maceo's two sons, assisted by two American and four Cuban soldiers.

Notwithstanding the fact that General Otis has refused to sanction negotiations for the release of Spanish prisoners held by the Philippines, the Spanish Government has offered Aguinaldo one thousand dollars for the release of each Spanish officer held by him, one hundred dollars for each soldier, and five hundred dollars for each civilian.

A report recently issued by the chief of the Bureau of Statistics shows that the total exports of merchandise from the adoption of the constitution in 1789, to the present time, amount to $30,952,202,985, while the imports of merchandise were $29,979,961,487, leaving a balance of $1,460,473,261 in favor of the exports.

Miss Anthony will sail for England June 2, to attend the quinquennial meeting of the Women's International Council, to be held in London. Rev. Anna H. Shaw, Miss Lucy E. Anthony, Miss Howland and other friends are planning to go by the same steamer. It will be a merry party of suffragists.

The complete transition of the State of Nebraska from a portion of the great American desert to an agricultural commonwealth was signalized by the repealing of a law, enacted in the early days, providing for the payment of a bounty for the cultivation of timber.

Governor-General Brooke will issue a decree forbidding the arrest and prosecution of Cuban or Spanish troops for crimes committed by them during the war. He says that Cuba must forget the past, for such prosecutions disturb the country's reconstruction.

The London Times recently printed a one-hundred-word despatch which had been sent thirty-two miles by the Marconi system of wireless telegraphy. The Morse code was used and read as distinctly as if the termini had been connected by wires.

President McKinley has returned from his visit to Thomasville, Ga., and feels ready to accomplish all the work he has to do before he leaves on a longer vacation, which he hopes to take to the Pacific coast.

April 1 the postage rates now in force in the United States will be adopted in Cuba. At the same time free delivery will be established in ten of the largest cities.

Word has been received from General Otis that the entire casualities since February 4, have been one hundred fifty-seven killed, and eight hundred sixty-four wounded.

Senator Hoar attended the annual dinner of the Massachusetts Legislature. He received a cordial greeting and delivered an address full of praise for the State.

The United States gun boat Yorktown captured the Spanish steamer Mundara, which was attempting to run the blockade in the gulf of Lingayeno.

Information is received from Madrid that the Queen Regent will shortly sign the decree authorizing the payment of the interest on the Cuban debt.

President McKinley has appointed the son of Colonel Egbert, who was recently killed in battle, second lieutenant in his father's regiment.

An order has been issued by the Secretary of the Treasury for the free admission of binding twine to the United States from Canada.

The war department officials have promised that all the volunteers now in Cuba will be in the United States again by May 1.

The total circulation per capita in coin and paper money has increased from $23.83 March 1, 1898 to $25.51 March 1, 1899.

A Canadian fleet of thirteen sailing vessels have caught about a quarter of a million seals during the present season.

Ambassador Choate pays $12,000 annual rental for his house in London. This leaves him $5,500 for incidentals.

Joseph H. Choate, Jr., son of the United States ambassador has decided to study law in the Middle Temple, London.

Ex-Senator George Gray of Deleware has been appointed United States circuit judge for the third district.

Ex-Secretary of State John Sherman is again at his residence in Washington.

Christian Science in Baltimore.

ONE of the most common-sense and provable of the many religious organizations born of Christian evolution in the last century is that curiosly exalted quality called Christian Science.

This new sect, in the doctrine of their belief, have not only blended science and Christianity, but have established a sort of infallible union between the Bible and "SCIENCE AND HEALTH," which they use as a "key to the Scriptures," and a direct text to their faith. The author of this book is Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science.

To know this woman well requires, more than anything, a knowledge of her works, for her life has been devoted to Christian Science, and therein is revealed her great individuality. When a girl in her New England home, she was unusually intelligent and evinced deep religious tendencies. At twenty she was far beyond the average, and from that time proved that she was destined to teach new lessons in life. Only a few years later she was writing and lecturing, all of which was but a prophecy of what was to come. The first edition of her Christian Science text-book was published in 1875, and four years later she founded in Boston, Mass., what is now the Mother Church, with a general membership of thirteen thousand and nearly five hundred branches in Christendom.

The two branches founded in Baltimore are particularly strong and active. They are both young, both located within a square and a half of each other, and both are rapidly acquiring a large membership. First Church of Christ (Scientist), now at Cathedral and Preston streets, had its beginning four years ago in a private residence on Linden avenue, under the tutelage of Ellen E. Cross and Edward H. Hammond, the founders of Christian Science in this city. The new belief soon expanded beyond the confines of a parlor, and the following year a church was established in the Lyceum Parlors on North Charles street. The membership continued to increase, and the main auditorium in Heptasophs' Hall was secured as a place of more convenience. They all worshipped together four Sundays, and then it was deemed best to appoint another church, and the Lyceum Parlors were rerented, and a portion of the membership, under the care of Miss Cross, C.S.D., have since worshipped there.

In October, 1897, Second Church of Christ (Scientist) was duly organized, and in December of the same year, was incorporated. It now has a strong membership and over forty subscribers, and the Sabbath services in Lyceum Parlors are usually attended by from eighty to one hundred people. In addition to these services, there is a midweek meeting every Wednesday evening, for experience and testimonials of healing, and also for the discussion of all questions interesting to Christian Scientists.

The service is very simple and sweet, and is the same in all churches of this belief all over the globe. The sermon lesson is prepared quarterly in advance and sent out from the Mother Church. These quarterlies present a complete concordance of the Bible, and are invaluable to students of the Word. They have music of the higher order only. At Second Church, Sophia Hall, of the Woman's College, is soloist. They have a choir at First Church. They have no preaching of any sort, and the entire service is by reading. Every church has two readers. The Second Reader reads from the Bible and the First reads the spiritual interpretation from the book of Christian Science. The readers at Second Church are Ellen E. Cross, C.S.D., and Herman E. Hering, C.S. At First Church Edward H. Hammond, C.S.D., is First Reader, and Mrs. Gertrude L. Lawder, C.S., Second Reader.

The part of this new creed of science and religion which is of special interest, is the power to heal sickness and sin, which is supported by the testimony of many members.

The Sunday Herald.

"The greatest thing," says some one, "a man can do for his Heavenly Father, is to be kind to some of His children." I wonder why it is we are not all kinder than we are. How much the world needs it! How instantaneously it acts! How infallibly it is remembered! How superabundantly it pays itself back! For there is no debtor in the world so honorable, so superbly honorable, as love. "Love never faileth." Henry Drummond.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Dedicatory Address of Rev. Mary Baker G. Eddy.

THE following is a dedicatory message sent by Rev. Mary Baker G. Eddy, the Discover and Founder of Christian Science, to First Church of Christ, Scientist, Atlanta, Georgia, and read on the occasion of the dedication of a beautiful church edifice in that city, on Easter Sunday, 1899.

My Beloved Brethren: —

You have met to consecrate your beautiful temple to the worship of the only true God. Since the day wherein you were brought into the light and liberty, of His children, it has been in the hearts of this people to build a house unto Him whose name they would glorify in a new commandment — "that ye love one another." In this new recognition of the riches of His love and the majesty of His might you have built this house — laid its foundations on the Rock of Christ; and the stone which the builders rejected you have made the head of the corner. This house is hallowed by His promise, "I will put my name there forever, and my presence shall be there perpetually, and mine eyes shall be open and my ears attent unto the prayer that is made in this house." Your feast days will not be in commemoration but in recognition of His presence; your ark of the covenant will not be brought out of the city of David, but out of the secret place of the Most High, whereof the Psalmist sang, even the omniscience of omnipotence, your tabernacle of the congregation will not be temporary, but "a house not made with hands, eternal in the Heavens;" your oracle, under the wings of the cherubim, is Truth's evangel, enunciating, "God is Love."

In spirit I enter your inner sanctuary, your heart's heart, breathing a benediction for God's largess. He surely will not shut me out from your presence; and the ponderous walls of your grand cathedral cannot prevent me from entering where the heart of a Southron has welcomed me.

Christian Science hath a place in its court, in which, like beds in hospitals, one man's head lies at another's feet. As you work, the ages win, for the majesty of Christian Science teaches the majesty of man. When it is learned that spiritual sense and not the material senses convey all impressions to man, he will naturally seek the Science of his spiritual nature, and, finding it, be God-endowed for discipleship.

Where divine Love gains admittance to a humble heart, that individual ascends the scale of miracles, and meets the warmest wish of men and angels. Clad in invincible armor, grasping the sword of Spirit, you have started in this sublime ascent, and should reach the mount of revelation; for "if ye would run, who shall hinder you?" So dear, so due, to God is *obedience*, that it reaches high Heaven in the common walks of life,—and it affords even me a perquisite of joy.

You worship no distant Deity, nor talk of unknown Love. The silent prayers of our churches, resounding through the dim corridors of time, go forth in waves of sound, a diapason of heart-beats, vibrating from one pulpit to another and from one heart to another, till truth and love, commingling in one righteous prayer, shall encircle and cement the human race.

The government of divine Love derives its omnipotence from the love it creates in the heart of man; for love is allegiant, and there is no loyalty apart from love. When the human senses wake from their long slumber to see how soon earth's fables flee, and faith grows wearisome, then that which defies decay and satisfies the immortal cravings is sought and found. In the twilight of the world's pageantry, in the last drawn sigh of a glory gone, we are drawn towards God.

Beloved brethren, I cannot forget that yours is the first Church edifice of our denomination, erected in the sunny South — once my home. There my husband died, and the song and the dirge, surging my being, gave expression to a poem written in 1844, from which I copy this verse: —

> Friends, why throng in pity round me?
> Wherefore pray! the bell did toll,
> Dead is he who loved me dearly:
> Am I not alone in soul?

Did that midnight shadow, falling upon the bridal wreath, bring the recompense of human woe, which is the merciful design of divine Love, and so help to evolve that larger sympathy for suffering humanity which is emancipating it with the morning beams and noonday glory of Christian Science!

The age is fast answering this question: Does Christian Science equal *materia medica* in healing the worst forms of contagious and organic diseases? My experience in both practices — *materia medica*, and the scientific Metaphysical practice of medicine — shows the latter not only equaling but vastly excelling the former.

Christians, who accept our Master as authority, regard his sayings as infallible. Jesus' students, failing to cure a severe case of lunacy, asked their great Teacher, "Why could we not cast him out?" He answered, "This kind goeth not out but by prayer and fasting." This declaration of our Master, as to the relative value, skill, and certainty of the Divine laws of Mind, over the human mind and *above matter* in healing disease, remains beyond questioning a Divine decision in behalf of Mind.

Jesus gave his disciples (students) power over all manner of diseases; and the Bible was written in order that all peoples, in all ages, should have the same opportunity to become students of the Christ, Truth, and thereby God-endued with power (knowledge of divine law) and signs following. Jesus declared that his teaching and practice would remain, even as it did, "for them also which shall believe on me through their word." Then, in the name of God, wherefore villify His prophets to-day who are fulfilling his prophecy, and verifying his last promise, "Lo, I am with you alway"? It were well for the world if more of the wisdom of the ancient Rabbi survived, who said, "No man can do the miracles that thou doest, except God be with him."

Be patient towards persecution: Injustice hath not a tithe of the power of justice. Your enemies will advertise for you. Christian Science is spreading steadily throughout the world. Persecution is the weakness of tyrants engendered by their fear, and love will cast it out. Continue steadfast in love and good works. Children of Light,— you are not children of darkness — let your light shine. Keep in mind the foundations of Christian Science — one God, and one Christ — keep personality out of sight — and Christ's "blessed are ye" will seal your apostleship.

This glad Easter morning witnesseth a risen Saviour, a higher human sense of Life and Love, that wipes away all tears. With grave-clothes laid aside, Christ, Truth, has come forth from the tomb of the past, clad in immortality.

Digitized by Google

The sepulchres give up their dead — Spirit is saying unto matter, "I am not there," am not within you — behold the place where they laid me! but human thought has risen.

Mortality's thick gloom is pierced — the stone is rolled away — and death hath lost its sting, and the grave its victory. Immortal courage fills the human breast, and lights the living way of Life.

Mary Baker G. Eddy.

Pleasant View, Concord, N. H., March 20, 1899.

From the Boston Globe of April 3, 1899, we copy the following relative to the dedication of the edifice at Atlanta, Georgia: —

The first Christian Science temple erected in the South was dedicated on Easter Sunday, Mrs. Livingston Mims, the head of the faith in Atlanta, officiating.

The services were most impressive and almost dramatic. The exercises were opened by a short talk by Mrs. Mims, in which she welcomed the congregation to the new church and outlined the plans for the faith and the history of the movement which resulted in the construction of the temple.

Mrs. Mims made a striking figure as she delivered the opening address. She is an unusually handsome woman, of ideal figure, beautiful face, silvery gray hair and with inimitable grace in every movement. She is the wife of the president of Atlanta's most exclusive social club and has taken a foremost part in all woman's intellectual affairs there.

At the conclusion of her address she read a long dedicatory message sent by Rev. Mary Baker G. Eddy, above published.

The church, which is on West Baker street, is very handsome and imposing. It is built of Georgia granite so ranged as to give an impression of marble. On the inside the edifice is harmoniously completed, white and pink marble forming the material decorations, the organ loft and reader's desk being especially ornate. There is a handsome bronze pedestal just below the organ loft, where burn the seven lights which the Christian Scientists associate with those referred to in the fourth chapter of Zachariah.

The first Christian Science church was organized in Atlanta ten years ago. Since then, under the sagacious management of Mrs. Mims, the faith has grown by leaps and bounds until today it numbers some of the most prominent people in the city among its membership. The fund, with the exception of one thousand dollars, for the erection of the temple was raised among the immediate members of the congregation. The new religion has been attacked by pulpit and press, and openly expressed opposition accompanied every step made by the Scientists in the direction of their new church. When its necessity was fully appreciated the members quietly set to work to accumulate the required funds, and more than twenty thousand dollars has come into the church treasury in the last few years.

Of the members of the congregation few of them are wealthy people, but they have all given with a spirit and generosity indicative of their great earnestness and their desire to build a church that should for all time be a monument to the first congregation of Christian Scientists in this section of the country, as well as being a medium, as they hope, for the more general dissemination of the principles of that religion.

Mrs. Eddy's Answer.

Editor of The Commercial Advertiser:

SIR — Over the signature "A Priest of the Church," somebody, kindly referring to my address to the First Church of Christ, Scientist, in Concord, N. H., writes: "If they (Christian Scientists) have any Truth to reveal which has not been revealed by the Church or the Bible, let them make it known to the world, before they claim the allegiance of mankind."

I submit that Christian Science has been widely made known to the world, and that it contains the entire Truth of the Scriptures, as also whatever portions of Truth may be found in creeds. In addition to this, Christian Science presents the demonstrable Divine Principle, and rules of the Bible, hitherto undiscovered in its translations, and lacking in the creeds. In evidence thereof, I query; Do Christians who believe in sin, and especially those who claim to pardon sin, believe that God is Good, and that God is *All?* Christian Scientists firmly subscribe to this statement; yea, they understand it and the law governing it, God being the divine Principle of Christian Science, and "of purer eyes than to behold iniquity." On this basis they endeavor to cast out the belief in sin, or in aught besides God, thereby enabling the sinner to overcome sin according to the Scripture, "Work out your own salvation with fear and trembling, for God worketh in you both to will and to do of his good pleasure."

Does he who believes in sickness, know or declare that there is no sickness or disease, and thus heal it? Christian Scientists do this, and by reason thereof its divine Principle, demonstrated, heals the most inveterate diseases. Does he who believes in death, understand or aver that there is no death, and proceed to overcome "the last enemy," and raise the dying to health? Christian Scientists do this in Christ's name, and are striving to reach the summit of His words, "If a man keep my sayings he shall never see death."

If as this kind Priest claims, these things, inseparable from Christian Science, are common to his Church, we propose that he make known his doctrine to the world, that he teach Christianity thus, and send out students according to Christ's command, "Go ye into all the world and preach the gospel to every creature," "Heal the sick, cleanse the leper, raise the dead, cast out devils." The tree is known by its fruit. If, as he implies, Christian Science is not a departure from the first century churches — as surely it is not — why persecute it? Are the churches opening fire on their own religious ranks? or, are they attacking a peaceable party quite their antipode? Christian Science is a reflected glory; it shines with borrowed rays — from Light emitting light; it is the new old Christianity, that which was and is the revelation of divine Love.

The present flux in religious faith may be found to be a healthy fermentation, whereby the lees of religion will be lost, whereby dogma and creed will pass off in scum, leaving a solid Christianity at the bottom — a foundation for the builders. I would that all the churches on earth could unite as brethren in one prayer: Father, teach us the Life of Love.

I shall decline entering into newspaper controversy.

Mary Baker G. Eddy.

Pleasant View, Concord, N. H., March 22.

Personal Attacks.

ARE those ministers of the gospel who are so industriously hurling their anathemas at the Rev. Mary Baker Eddy, really so blind that they believe a personal warfare upon her will defeat the movement she established, and of which she is the honored and revered head?

The phariseeism of nineteen hundred years ago, thought that by crucifying the Teacher, and thus getting rid of him, his teaching and work would cease. Did it prove to be so?

The rapid growth of Christian Science, the thousands it is healing, the myriad hearts that are rejoicing over their release from bondage, the glorious work that is being accomplished as the result of Mrs. Eddy's labors — all this would seem to indicate that the success attending the efforts of our latter day Pharisees is about on a par with those of their ancient prototypes.

Publish Our Leader's Articles.

We request the workers in the Field to have all the articles from the pen of our beloved Leader as generally published as may be, in the large as well as the smaller places. The papers published in the smaller places appearing only weekly will, no doubt, as a general rule, be glad to republish the articles from the daily papers.

According to the reports received, the press have been very liberal in this respect as to her address to the Concord Church, and we have no doubt like liberality will be manifested in the future.

Churchianity and Christianity.

SINCE Adam and the serpent left the Garden of Eden and began to found "churches," the coil of Churchianity has attained a marvelous development.

The increase of churchianity marks the decrease of Christianity. There is not room, it seems, in the same world for both to reach their highest development. As the former stretches out its arms to clasp humanity in its deadly embrace, the latter recedes into the secret places of life and abides its time, sure of victory at last.

Churchianity follows the fashions; Christianity follows Christ. In one generation churchianity tells its votaries that the brightness of life is necessarily of the evil one, and indulgence in it will inevitably open the way to an eternity of darkness. By the time the next generation arrives the heart of man, turning naturally like the flower, to the sunshine, has risen above the superstition, and churchianity meekly follows, fearful lest it lose its houses, its lands, its living.

Churchianity tries honest men for heresy, because they do not express themselves as absolutely certain that Isaiah, with his own fountain pen, wrote every word of the prophecy which bears his name. Christianity provides for the eternal persistence of the moral force of the man who keeps the spirit of the law, regardless of the outward husk of the letter.

Among the many variant creeds by which the soul is trammeled in its journey toward the light, is one which for many generations has included the Divine doctrine of the eternal loss of the souls of infants who have not been piously dedicated to the machinery. About eight years ago a rigidly-respectable portion of churchianity met in solemn conclave for the purpose of remodeling its ecclesiastical mechanism in accordance with the sentiments of advanced society — and, incidentally, of putting on the rack of sanctimony an honest soul that had accidently become involved in the cogs. It prayerfully discussed the propriety of releasing the innocent victims of original sin from their lamentable condition, and in the name of the Lord decided to leave them to their fate.

The great founder of the world's highest code of morality said: "Let the little ones come unto Me, and forbid them not; for of such is the kingdom of heaven." Not, let the little ones who have been piously involved in the machinery, but "Let the little ones come unto me." "Except ye become as a little child ye shall in no wise enter into the kingdom of heaven." Not except ye become as a machine-consecrated little child, but "Except ye become as a little child."

Churchianity smiles upon the man who can rent the most expensive pew and make generous clerical offerings, regardless of whether or not he may have secured his wealth by dyeing his own soul black with crime and destroying the souls and bodies of men and women. It piously devotes such gifts to "the spread of the gospel:" that is, the dissemination of the principles which have evolved churchianity into the force of the fashionable world. Christ said: "Give unto Cæsar the things that are Cæsar's, and unto God the things that are God's."

Churchianity gave rise to the following incident from real life:

A woman who had given largely to the pastor's salary, to the founding of Sunday-schools, and the support of all those institutions which she had been taught to believe were necessary to the promotion of Christ's mission upon earth, had the misfortune to lose that wealth which had enabled her to devote time as well as money to the work she loved. She came to this city to take a position in which she might support herself and those dependent upon her. She brought with her a letter from her pastor in the city in which she had lived and worked for so many years. Her home was gone, but she hoped to find a spiritual abiding-place where her soul might rest while brain and hands toiled for her daily bread. She had the care of children, whom she wished might have the advantage of Christian environment. In her heart were both Christianity and churchianity, for she profoundly believed that the church was the visible exponent of the invisible spirit of Christ.

The pastor's letter recounted her efforts for the good of her church, but closed with the fatal words: "Her wealth alas! has flown." With it had flown her hope of a spiritual home. She could no more be depended upon to help swell the ecclesiastical revenues. The modest quarter slipped into the collection each Sunday was all the treasury could expect from her. No hand of welcome was extended to her in response to the letter she brought. After many months had passed she chanced to meet the pastor, who remarked upon the fact that he had not previously made her acquaintance.

"No," she said, "I have been in your church and heard you preach often enough to know that one 'cannot buy wine and milk without money and without price' and that you and your church have little interest in a soul that has only a quarter with which to bless itself."

"That hurts me more than anything else that was ever said to me in all my life," he replied, "for I see that you say it from earnest conviction."

It is not recorded that he was sufficiently impressed by the incident to live thereafter more in accordance with the precepts and example of Christ. Probably he did not. It would be a dangerous innovation. He stood very high in the alleged councils of the Lord and a fall would have been fatal.

Churchianity is a chameleon changing its hue with every substance it feeds upon and every support against which it rests. Christianity is a granite rock to which the soul may cling as the stormy waves of life dash against it in vain efforts to tear it away from its sure haven.

Churchianity is circumscribed with a circle of falsehoods, in which every soul must be moulded in order to fit itself for companionship with the elect and for holding a respectable place in good society. Christianity holds within its heart the elemental truths on which are founded life, that true life of the soul which is the life eternal.

The glimmer of the *ignis fatuus* lures the unwary traveler into the bog, where he sinks and perishes. Above in the eternal heavens a great white star shines down lovingly, and in its unchanging rays we read the holy words: "I am the way, the truth, and the life."

Impelled by a low and sordid ambition for worldly gain, a nation goes forth to make war against a feeble and defenseless people. Unarmed men, women and innocent children are murdered to remove incumbrances from the soil and make room for the population of the victor nation. All the other nations, with consciences seared and souls dwarfed by churchianity, cry out in holy admiration: "Behold the victories of Christian civilization." Wars are waged to create markets for poisons, and the people of a once prosperous country are starved that the land may be utilized in supplying those markets. The world is transfixed with holy awe in contemplating the Divine power of the Bible, as illustrated in the success of these pious methods. Through the battle storm of eighteen centuries comes the sweet music of a celestial voice: "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you."

Christianity is not dead; neither does it sleep. It lives and wakes in the hearts of men and women, who care more for the spiritual temple than for the piles of marble and

Digitized by Google

granite by which churchianity parades before the world its wealth and pride. It dwells in the soul that goes into the dark places of life and carries a ray of sunlight in which flowers of love and trust may bloom. It abideth with those whose work is for national honor rather than national wealth. It inspires the hearts that go out in loving sympathy to other souls that are struggling through the desert places of life. It opens occasional glimpses of beauty even to creed-blinded vision. It inspires the souls of men with an upward impulse that may be impeded but cannot be destroyed. It is eternal and imperishable force, and its truth and light and beauty must forever persist.

Talks with the People on Christian Science.

PEOPLE will continue to ask the same questions about Christian Science, I suppose; until the universal thought has gained a clearer conception of its aims and uses. Perhaps the easiest way to know what it is, is to go to a Christian Science healer and be healed of some complaint that is troubling you. Then you will see that there is "something in it." You will find you are not only relieved of the old pain, or sickness, but you have gained a new outlook upon life. You find that you are not only well, but you will want to know what made you well. Then you will be in a position to understand what is said and written about Christian Science, as you did not seem to be before.

We will suppose you are a Christian, and have been taught to believe the Bible. Now you will find that you have been a little afraid to even ask what this new way is, fearing it might in some way interfere with what you believe as a Christian. And this hesitation springs from a right motive, and is to be commended. Your healer will tell you not to accept anything upon hearsay, but as the Scripture directs, to "Prove all things." You will not therefore be asked to believe anything that is not first demonstrated, or proved, to be Truth.

When you now read your Bible, and find that Jesus' followers were taught and commanded to "Heal the sick," just as clearly as they were told to "Preach the Gospel," you will ask, "Why is this command of the Master disregarded?" And you will no longer be satisfied with the old answer that, "The healing in the time of Jesus was meant only to confirm his doctrine, and to prove his divinity," because you will fail to find anything in the Bible to warrant such a conclusion. When you look at the facts, you will find that wonderful works of healing were performed thousands of years before, and some three hundred years after the Christian era, and that there is nothing in Scripture to suggest that this power will ever be lost as long as there are those that believe in the divinity of Jesus Christ. Now Christian Science is the way, in this age, in which those who trust God's promises, are saved from sickness and suffering, and you, who claim to be a Christian, have the right to investigate, and the blessed privilege of being healed, by this way which belongs to the Christian world, but which it has so long been ignorant of.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, by Mary Baker G. Eddy, teaches us how we can gain health and happiness, and how to live better and holier lives by following more closely and more intelligently the path pointed out by the Master. He did not leave the world without this proof of love, which he gave so freely, while with us. The Truth of the healing is easily discerned, as there is no place so secluded that some have not been reached by its kindly call to health, and a holier, happier life. Listen to their testimony, instead of believing the words spoken by those who have no real practical understanding of the matter. It is easy for some to ridicule that of which they are ignorant, but it is not the part of wisdom to heed this opposition, and so to be defrauded of priceless blessings which Christian Science confers upon all who honestly seek to be healed by it.

I was, myself, in the position that I have here imagined, a Christian, fearful of doing anything contrary to what my religion taught. Circumstances brought me where I saw an old friend, whom I had known as a chronic invalid for years, but she no longer lay in a darkened room with the greatest silence preserved all about her and the assistance that the daily visits of the family physician could give, together with the anxious care of a loving sister, for, when I saw her, she was well, bright and happy, and able to enjoy what others did about her. When I was told that Christian Science had wrought this change in her, in about two weeks of treatment, I was astonished, and determined that I would investigate this new way if I should need a physician's help again.

This need soon came, and I was at once restored from a bad attack of a cold on the lungs which I then thought very dangerous. I then told my healer of all the other troubles to which I was in bondage, being an old school teacher, broken down in health; also having suffered for years from a spinal difficulty. All these troubles soon disappeared, leaving me well and strong, and very anxious to learn of this new and wonderful way of healing. I accordingly sought instruction from one of Mrs. Eddy's faithful normal students, but, not knowing what the Science would teach, I determined to watch my teacher, and if he said anything that I thought interfered with my religion I decided to drop the whole subject, and consider the one hundred dollars, which I paid for instruction, as so much for experience and never think of it again. Well, I watched in vain for anything but good, and after the sixth lecture was able to heal a friend from the effects of a fall on the ice. She was instantly restored, and I joyful and humble, listened to the remaining lectures in a different spirit.

I have always felt that this opportunity to prove the Truth of the teachings, was given me because I was honestly seeking to do what was right. Now when asked what is needed to make one ready to study Christian Science I reply, Honesty, for having this, nothing can prevent one gaining this great and good gift. It is twelve years since this blessing came to me, and the light shines brighter every day upon my path, and my desire increases to bring many into the understanding of Truth, whereby they can be well and happy themselves, and likewise become the means of lifting other's burdens, and pointing the way whereby they can follow the Master according to his command.

Josiah Rusk.
In the Hoopeston (Ill.) Herald.

Interesting and Suggestive.

DEAR EDITOR: — Being a subscriber to the "Journal" I take the liberty of sending you herewith a part of the editorial page of the New York Times of March 22, as it contains items interesting and suggestive from the Christian Science standpoint. The letter of Mr. Organ is a definite indication of his lack of faith in "Materia-Medica" — it would be interesting to learn more of his views.

The other marked passages are more in the light of "straws" showing the trend of the wind at the present time.

By the article headed or commencing "Round-trip tickets," it seems that John Hopkins University is not satisfied with the number and variety of diseases already "on the list" but must needs send to the uttermost parts of the earth to discover more if possible. Seemingly the University is under the impression that the diseases under investigation are *original* with the inhabitants of the Tropics, thus forgetting the teaching of history, that the Aborigines of almost all countries, when first discovered by civilized man have been found living in peace and happiness, almost absolutely without sickness or disease,— these latter together with envy,

Digitized by Google

suspicion, hatred, etc., being only acquired through association and intercourse with civilized (?) man.

Irving in his "Life of Columbus" expresses in his humorous way, serious doubts as to whether the Indians of the West Indies were much benefited when the peace, happiness, contentment and health were taken from them, to be replaced by sickness, diseases, vice, slavery, etc., which all came to them in the name of civilization?

John C. Turner, Noroton, Conn.

Following is one of the articles referred to in the above letter:

The Work of the Doctors.

To the Editor of the New York Times: — Your editorial on "Pneumonia and the Doctors" has, I am pleased to note, incited much comment more or less suggestive and instructive. The consensus of opinion seems to be that your intimation that doctors do not do their "level best" in the treatment of this ailment save as they are inspired by the assurance of large compensation in some form is perhaps unjust, and therewith I concur. It is my opinion that as a rule they do their "level best," which all too often is the worst thing possible for their patients. It is more than probable that Mr. Kipling would have recovered had there been neither doctor, nurse, nor drug within a thousand miles of his rooms. Mr. Kipling is "tough" and fortunately survived the attack of both disease and doctors. I am speaking from experience, for I have been "attacked" both by the pneumonia and by the doctors, and consider an attack by the former far less dangerous than the latter. I am the possessor of a sheepskin, but my shingle is not "up." It went into retirement long years ago. Years ago I became convinced that a doctor is no more a therapeutical necessity than is a saloon a social necessity. Both should be abolished by legislative enactment, and "the world would be the better for it." The coming man will neither drink wine nor swallow drugs. He will know better.

As to pneumonia, I know it to be one of the most tractable of all serious human ailments. It is less fatal to-day than forty or fifty years ago, for no reason save that the doctors do not interfere, as in the past, with doses either so murderously large or crude. Forty years ago scarcely a patient stricken with pneumonia survived the attack of one of the most noted medical professors of that generation. Read his "Materia Medica" and "Institutes," then standard authorities, and the "why" of this fatality becomes apparent. Although this was "medical science," protected as such by law, and by the ignorance that considers itself instructed, it was a something far more deadly than the pneumonia. Practice based upon Paine's "Institutes" is no longer fashionable. It was too horribly fatal to survive the attacks of the heretics. Such practice, professionally legal then, would now be characterized by the custodians of medical science as malpractice, and no doubt fifty years hence the same will be the conclusion of medical men regarding present-day practice.

It must be admitted that present-day practice is not so disastrous to human life as was the practice confirmative to the teachings in Paine's "Institutes of Medicine." But none the less, present-day practice is, as then, purely experimental. So has it ever been and so must it ever be. Prof. Henle, a noted German authority, in his work on pathology, presents the experimental character of "medical science" forcefully when he says: "After two thousand years of experimentation we still see the leaders in medical art pursuing diametrically opposite modes of treatment in precisely the same diseases."

"Experimentation" in this connection is to the intelligent mind abhorrently suggestive. The medical profession alone is responsible for the woeful mis-education which makes it possible for them to get compensation out of the victims upon whom they experiment. Experiment upon human vitality is all that medical science has been in the past and is all that it is now. And this experimentation, according to Dr. John Mason Good, "has destroyed more lives than war, pestilence, and famine combined."

Thomas W. Organ.

New York City, March 19, 1899.

What there is in Christian Science.

CHRISTIAN Science opens communication between mankind and God, the Source of life, health and intelligence, and by this means men receive the inspiration of divine Love which heals their diseases and saves them from sin and misery.

Christian Science stands for exact understanding of the relation of God to man and the universe. This exact understanding establishes a connection between the consciousness of man and God, the parent Mind.

As a medium of communication, a telegraph line would be utterly useless without a system of sound characters. Both would be useless if no one understood how to interpret the signals. Settlers in districts of the West remote from towns or from army posts, but near the reservations of ill-tempered Indians, feel fairly secure against attack if they have a military telegraph line handy. With no one among them who understood telegraphy, however, they could not call for help in an emergency.

Christians have known for centuries that prayer is the channel of communication with God, by which in times past, help came to those who were sick or in trouble, but like the settlers having a telegraph line they could not operate, Christians have not known how to call for help; how to use the channel of prayer.

The science of praying rightly, when understood and practiced, makes the power of God manifest. When all material means of help fail, and there is seemingly no chance of recovery, many invalids are healed through the prayers of Christian Scientists, which is proof of the presence of a power that is at least, extra-human. Christian Scientists believe it is the power of God, for it is always good and never evil in its effects.

Hypnotism is supposed to be equally as ready to serve an evil desire as a good one. The power which heals through Christian Science never can be used for purposes of evil. It only responds with help and healing, to the purest and best desires of the human heart.

Men have grown so far away from right thinking that they can not believe that God is the source of life and all good. They prefer to try, by materialistic methods of experiment, to trace life from man through the shifting forms of animals, birds, and fish, to the border land between animal and vegetable life, and satisfy their material sense of things by accepting a theory that from semi-sensitive, formless matter has sprung all the races of men and through these men of protoplasmic origin, religion, philosophy, music and art have been evolved. What a straining to avoid acknowledging God as Cause! The trouble is, that after the laborious, not to say ludicrous, effort to reduce all so-called organic life to terms of protoplasm, the main question remains unanswered: "What is the first cause and source of life?"

Christian Science holds to the Biblical explanation of man's origin; namely, that he was created in the image and likeness of God, divine Mind. Instead of seeking God, the infinite primal Cause in the lowest expressions of life, Christian Scientists seek God through Jesus, the highest human expression of Life, Truth and Love which has ever appeared to mortal consciousness. Jesus brought to men the inspiring thought of God as a present power of Love, and emphasized and illustrated his message by showing what this power would do for all who would call upon God in the spirit of humility and childlikeness. Although this divine power was not seen, he made them conscious of its presence by healing the sick, insane, and leprous, in raising the dead and stilling the tempest. Lest they should think the control of this power was his exclusively, the Master taught his followers to do the works through the power of Spirit which he had done, and

Digitized by Google

the record shows that they were able to prove their preaching as he told them to.

Through an instantaneous demonstration that this divine power had not been withdrawn from man, the Rev. Mary Baker G. Eddy became the instrument of God to awaken the race anew to the consciousness of His loving kindness which endureth forever. She was beyond human help, sentenced by her physicians to die in a few hours. In this time of need she turned to her Bible and read some of the life-giving words of Jesus, the Great Physician. Her heart responded to the divine message, and she arose healed.

Mrs. Eddy was so intensely impressed with this seeming miracle that she naturally longed to learn the secret of this wonderful cure, that she might enrich the race with it. With a heart overflowing with gratitude she began to study the Bible, and as she worked in her unselfish research, a new sense of Love filled her heart, and the Bible became richer in meaning. After years of study and purification of the affections, she discovered the Science of Jesus' demonstrations and gave it to the world in SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. Denver Republican.

Is Christian Healing

As Taught and Practiced by Christian Scientists an "Unreasonable Fad."

EXCEPT in so far, as the four questions asked by "Democrat Doctor," regarding Christian Healing relate to the writer personally, it is no doubt plain to many who have read my former articles, that I have already answered them. It is true however, there are persons who by constantly neglecting to develop the spiritual, are unable to free themselves sufficiently from the claim of materialism to discern the spiritual. In 1 Cor. 2:14, Paul tells us "The natural man receiveth not the things of the Spirit of God; for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

Without a study of spiritual things, it is as impossible for a person to comprehend the spiritual, as it is for him to understand a problem in higher mathematics, without study. Job said, "Acquaint now thyself with Him and be at peace; thereby good shall come unto thee." Jesus tells us that, "God is Spirit." In SCIENCE AND HEALTH, we are told "Mind is all that feels, acts, or impedes action." My answer then to, "What is sickness or disease?" in brief, is, that sickness is the result of discordant thought. Consider this answer for a moment in the light of Scripture. Without thought there is no sin or disease. When sin, through the triumph of Truth shall be overcome, then God's will, will be done in earth, as in heaven. Few, if any, believe that sickness exists in heaven (harmony.) The seeming realities which we call sickness, disease and death, are not of God's creation. The Bible declares that God alone is Creator, and that all He created *is good*. Paul tells us that "By man came death." John says, "Sin is the transgression of the law," and also states plainly that "The flesh profiteth nothing," that is, the flesh, or what we term body is *mindless* — not accountable: therefore sickness is an abnormal condition of thought.

In reply to his question, "To what are the cures effected by Christian Science healers due?" I reply to the power of Divine Mind — the Mind that was in Jesus. Through this Mind, Jesus healed all manner of sickness. The Mind that healed through the early Christians will heal to-day. That it does heal is clearly proven by the hundreds of thousands of cases that have been healed by Christian Scientists during the past thirty years.

The time has come "Doctor," when the followers of Christ must recognize the fact that Jesus meant what he said, and through the *understanding* of his word, demonstrate as he demonstrated. Jesus said of the believer in every age "The works that I do shall he do also." Paul said: "I can do all things through Christ which strengtheneth me." To such as were willing to become obedient, and free from sin, Peter says, "Ye shall receive the gift of the Holy Ghost," and then assures them, that "The promise is unto you, and your children, and to all that are afar off." In this day many are awakening to the fact that God is the same now that He ever was.

Replying to the questions as to whether I was not confined to my home two weeks because of sickness, and "Was he really sick, suffering pain, or did he simply think he was" I reply; To mortal sense I was *very sick*, and was confined at my home for over two weeks, and suffered terribly. I finally concluded that I could not overcome the disease without help, and while suffering with severe pain, I had a telegram sent to a Christian Science healer in Peoria for treatment. In a few minutes after she commenced to give me treatment, I was freed from pain.

The writer knows full well how many who have faith only in drugs and material remedies feel when they read such statements. Before you say impossible, humbug, nonsense, etc., let me call your attention to a case where an absent patient was treated by the power of divine Mind very successfully. See Matt. 8th chapter. What was it healed the servant "sick of the palsy and greviously tormented;" Do you reply "that was a miracle." The 13th verse reads, "And Jesus said unto the centurion, Go thy way; and as *thou has believed*, so be it done unto thee. And his servant was healed in the self-same hour." Is it a miracle to believe in the Christ power today? Jesus said Matt. 28:20. "Teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even to the end of the world."

Christian Healing as now practiced by over a million lovers of Christ, promises to bring about such a revolution of sentiment in favor of the Christ method of healing, that mankind in a few generations will be free from the drug delusion, and come forth to the enjoyment of life independent of the belief that *material remedies are greater than God*. God hasten the day when unitedly all Christians shall *teach* and *demonstrate*, that "God is the all sufficient help in every time of need. H. C. Baird.

In Woodford County (Ill.) Democrat.

A New Department.

THE Florence Daily Tribune, Florence, Col., having "recognized the popular demand for information regarding this new science," has opened a "Christian Science Department," and has the following to say editorially:

In this age of aggressive thought it is difficult to keep up with, and grasp the full measure of all the isms and ologies that are yearly arising, and yet many there are who are ever anxious to learn as much of every new discovery in science, every new theory for the mysterious, and every new religious doctrine, as it is possible to obtain.

At the present time much interest is being manifested in Christian Science, and doubters as well as believers are anxious to know more of its teachings. This desire is growing to such an extent that many of the largest dailies recognize the want and are conducting Christian Science departments at no little expense to the management of those organs.

The Tribune recognizes the popular demand for information in regard to this new science and has been successful in arranging for a Christian Science department to be edited by a Christian Scientist and appearing in each Wednesday's issue.

The Tribune is not a religious paper and endorses no religious creeds, doctrines nor dogmas; and nothing contained in this department will represent the opinions of the management of the The Tribune. The addition is made for no other reason than that The Tribune believes it will be appreciated by a majority of its readers.

Introductory Address.

Address of Hon. W. G. Ewing, at the Opera House, at Detroit, Michigan, introducing Mrs. Annie M. Knott, C. S. D., of the Board of Christian Science Lectureship, February 13, 1899.

Ladies and Gentlemen: —My position is somewhat anomalous, and not wholly free from embarrassment. It is said, that I, a stranger to nearly all of you, will introduce to this audience one whom you all know.

I hasten to relieve the situation by saying to you that I have no thought of attempting such a super-serviceable task, as would be a formal introduction, to a Detroit audience, of your distinguished fellow citizen, whom you have known for years, and whose talents, character, and high mission have assembled this magnificent audience.

Being in your beautiful city as a guest of the Detroit Bar Association, I have been invited to explain to you the reason for Mrs. Knott's lecture, the auspices under which it is given, the authority with which she speaks, and to say something by way of prelude to her address, of the absorbing interest of the subject she will discuss.

Something over a year ago the constituted authorities of the Christian Science denomination reached the conclusion that it would be wise to give the masses of the people an opportunity to learn something of the general principles of Christian Science, hoping thereby, that the ignorant assaults upon it would cease — even if the vicious ones should continue. To carry out this purpose, a Board of Lectureship was constituted, composed of persons learned in Christian Science and in the Scriptures, and whose actual experience in the healing of the sick would enable them to speak with confidence, because with knowledge, of Christian Science. Mrs. Knott is a member of that Board, and in her official capacity, is here today, by authority of the whole denomination, the world over, to tell you, as fully as the limited time allotted to her will permit, something of what Christian Science is, and what it is not; and something of what it has accomplished. If her time were multiplied into days, she could not tell you all. Christian Science can only be learned as the lecturer herself has learned it, by giving to it, patiently, years of honest, thoughtful study, and by putting into practice, day by day, its precepts as they dawn upon your apprehension. You can, with no more reason, expect to become conversant with this subject in an evening's lecture, or a week's study, than you could expect to become an expert mathematician, an accomplished musician, a profound lawyer, or an occult theologian in the same limited time.

Christian Science is no new religion that its friends are seeking to foist upon the world, but is simply a better and clearer understanding of the old one, sacred to the civilized world, of which the prophets wrote, and which Jesus taught and exemplified.

Christian Scientists enthrone no new God, proclaim no new Savior, go for authority to no new Bible. The God of Abraham and Isaac and Jacob, is their God; the God who dwells in temples not made with hands, is their God; the God who is so pure as not to behold iniquity, is their God; the God who so loved the world, that He gave His Son as a propitiation for the sins of the world, is their God; and the God-child who was born of Mary in Bethlehem, who taught in the synagogue, who preached the gospel and healed the sick, made the lame to walk, the blind to see, and the dead to spring into newness of life, is their Lord, their Savior, their Exemplar.

Mrs. Mary Baker Eddy, in my judgment, the most marvelous woman of all the ages, the Discoverer and Founder of Christian Science, claims for her marvelous discovery, *a healing Christianity*, not one single authority that she did not find, and that you may not find, in the Scriptures. Wherefore, it is evident that you cannot become an accomplished Christian Scientist, until you have become by long, patient, diligent and prayerful study, scientific master of the teachings of the Scriptures, both old and new, and it is also evident that the Christian Churches, even by the world's measure of common fairness, should cease their assaults upon our religion, until they at least know something whereof they speak.

The philosophy of life which Mrs. Eddy has given to the world, is called *Christian* Science, because it is the same philosophy, the same science, the same gospel that Jesus preached and taught to his disciples. The religion of this science is a religion of works, a religion of love; it magnifies and glorifies God, but does not fear Him; a knowledge of Christ's gospel drives out fear, banishes superstition, restores men and women to the moral stature of the children of God; it gives courage for cowardice, truth for falsehood, purity for vice, joy for mourning, hope for despair, roses for ashes, love and sweetness for anger and hate, and for the relentless clutch of death, it gives immortal life.

For this gospel of peace and love, I reverently pay the warmest tribute of my heart; it came to me in the very gloom and shadow of the grave, and for fifteen years, the happiest years of my life, I owe to Christian Science every breath I've drawn; and henceforth, all that I have or can, I will cheerfully contribute to give this dearest love of my life to my neighbor.

We live in the most splendid period of the world's history. I have no sympathy with people who constantly look mournfully into the future, depreciate the present, and find their only gleam of comfort in virtues that have perished. I believe in the sublime and beautiful now; in the progress of good; I believe in the Nineteenth Century; in its breadth of intellect, its conscience, its morality, its reach after God.

I champion this day as the brightest and best since the world began. Every yesterday was but the dawn of a grander to-day, and each to-day will pale in the sublimer splendor of to-morrow. There is more refinement, more learning, more gentleness and genius, more estheticism and common sense, more contempt for hypocrisy, more truth and courage, more homely honesty, more simplicity and virtue, more unfaltering Christian faith, more devoted Christian piety, more affection, love and charity in the world to-day, than ever blessed humanity in any yesterday in all the tide of time.

The world has learned that its great need is not a more intimate acquaintance with microbes and germs; not a science that will more accurately measure the sun and weigh the stars; not a loftier walk with the muse, or a more exquisite touch of brush or chisel, but rather a realization of the promise that flashed in splendor upon the world with the advent of the humble Nazarene.

Christian Science is hastening the fruition of that promise. Whatever enlarges the moral stature of man; whatever quickens the kindlier sentiments of his nature; whatever makes the husband and father more devoted and affectionate; whatever makes the wife and mother more tender and loving; whatever tends to the negation of self and the development of love for our kind; whatever moves the heart to pity and spreads the mantle of charity, is an inspiration that lifts the weary children of earth nearer to the great loving heart of God. Is it not patent, that by the evolution of mental and moral forces, woman hastens the dawn of the brighter to-morrow; in the republic of letters; in every forum of intellectual combat; in every profession; in all the arts, in all the sciences, in every walk of human learning, on every field where humanity struggles for humanity, woman panoplied with Truth and Love, moves to the shining goal of every laudable human ambition, confessedly the guardian of the "Holy of holies," *the spiritual thought of the world*. Surely, the beautiful to-morrow is dawning, when enlightened justice will have one code of morals for all God's children, and not as now, one for the man, and another for the woman; when man will be more just to woman, and woman will be more just to herself; when she will not shrink with loathing from her poor tempest-tossed sister, who, in the uneven struggle for existence has fallen, and leave her a helpless and hopeless waif upon a remorseless human sea; but in the spirit of the pitying Christ, will take the hapless one in her loving arms, and with that "Touch of nature, which makes the whole

Digitized by Google

world kin," lift her up into the sunshine, the gladness, the effulgent glory of redeemed womanhood. In the sublimity of that broader and better allegiance, into which the science of being, the genius of the age, evolves us, every good man and woman will be an integral part of its glory, just as every blade of grass, impearled by the dews of heaven, lifts its jewelled crest to greet the dawn, and reflect the splendor of the rising sun.

But I must not longer defer the pleasure you will have in hearing Mrs. Knott. The kingdom, whose messenger she is, comes not with great noise and the trappings of power, but comes rather as came the herald of "Peace on earth," in the silence of the stars, and the humility of the manger. Christian Science is either an eternal verity and of God, or it is a palpable manifestation of evil. If it is a lie, by the decree of God, it will "come to naught"; if it is Truth, it is indestructible and nothing can cover the beauty, grandeur and glory of its revelation, but the eternal substance it reveals.

And now, Ladies and Gentlemen, it is my privilege to become a part of this magnificent audience, and with you hear one who is worthy to speak something of the sweetest and holiest revelation to sin and sorrow-laden men, since, in the *tragedy* of the ages, Jesus, the Christ, with an exhibition of love that at once stamped and defined his *divinity*, said of those who thrust the spear into his side, and stung his brow with thorns: "Father, forgive them, they know not what they do."

I have the pleasure of presenting to you, the lecturer of the evening, Mrs. Annie M. Knott, of Detroit.

Lectures.

At Santa Barbara, Cal.

The lecture delivered by Dr. A. A. Sulcer of the Christian Science Board of Lecturers is herewith printed in full. The lecturer at Armory hall was introduced by C. H. Frink, who said:

Friends—It is my privilege to announce that Dr. A. A. Sulcer of Riverside, Cal., one of the Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., will speak to us this evening.

This is the first public lecture ever delivered in Santa Barbara on true Christian Science.

Some months ago The First Church of Christian Scientists (or the Mother Church) in Boston very wisely organized and appointed a board of lecturers, assigning to each one that territory which was most convenient for them. Dr. F. J. Fluno of Oakland and Dr. A. A. Slucer of Riverside were selected for the Pacific coast section, and it is in this capacity that we have the doctor here to speak to us this evening.

The object of these lectures is to intelligently explain a little of the principle of Christian Science, for it is a fact that Christian Science is very little understood by the world today. It is misstated, misjudged and very much counterfeited, all because it is not understood.

Christian Science is a principle which can be understood, lived, and demonstrated. We know that there is a principle in music, and those who understand the principle of music and demonstrate its harmony are musicians, and the more they understand of the principle of music, the more they see there is to be understood, and no one but the person who knew nothing about music would ever say that they had no use for music. We also know that there is a principle in mathematics, and those who understand the principle of mathematics and work according to its rules are of necessity mathematicians, and the more they understand the principle the wider is the range of possibilities before them, and no one but the person who knows nothing about mathematics would ever say that they had no use for mathematics.

So every one who is willing to honestly investigate Christian Science finds it has a principle which can be understood, lived and proven, and made practical to each one every day, and when we begin to see that Christian Science is a legacy, instead of a debt, when we begin to see that it is a legacy of health instead of inherited disease, when we begin to see that it is a legacy of freedom, harmony and good will instead of bondage to an unreal master, is it any wonder that the largest auditoriums are too small to accommodate the people who desire to hear these lectures on true Christian Science? It is for this purpose that we are assembled to hear our friend, and although I have never heard him speak in public, nor do I know what he will say, yet I will promise that you will be deeply interested, and I bespeak for him your careful and earnest attention.

Let me now present A. A. Sulcer, M. D., C.S.B.

The Santa Barbara (Cal.), March 17, 1899.

At Truro, N. S.

Rev. William P. McKenzie, C.S.B., of Boston, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, spoke in Gunn's Opera House, Wednesday evening, March 22, before a large audience, under the auspices of the Christian Scientists of this town.

It was the first time a Christian Science lecture has ever been delivered officially in this town, and that there is a great interest in the subject was plainly shown by the size of the audience. It was a representative audience in all ways.

Christian Science has been brought prominently to the attention of many through the healing, and the interest in this new religion is said to be constantly increasing here.

The lecturer, as has been said, is a member of the Christian Science Board of Lectureship, which Board was created for the purpose of presenting to the people the subject of Christian Science in a way to correct the popular misconceptions, that the people might judge fairly of it. The attention it is receiving today makes it necessary that it should have a fair show, and so the members of this official Board go wherever they are called by the branch churches of the denomination, and freely and publicly present the principles of the religion which they stand for.

Rev. Mr. McKenzie was presented by the Mayor of Truro, and spoke for an hour or more in a very interesting manner, holding the attention of his listeners from the start to the finish. He has a good delivery, and this added greatly to the pleasure of listening. Mr. McKenzie made it evident from the opening that he was thoroughly conversant with Christian Science, and he possessed the faculty of transmitting his understanding to others, so that what are thought to be the more complex questions were brought out clearly.

A noticeable feature of the lecture was that the speaker made no attack on or reference to any existing form or system of religion or medicine. He confined himself to telling those who had come what Christian Science is and what it is not, as well as what it is doing in the world today. In giving this information he spoke without a shade of bitterness against any of the seeming opposition which has been manifested at times. This seemed remarkable, inasmuch as any system criticised as this system of religion and medicine has been, usually makes its strong point by attacking its attackers.

There is no doubt that he corrected many misapprehensions of what Christian Science is and is not, in the minds of those present, for his clear and logical reasoning could but have that effect. The Colchester Sun.

At Columbus, Ohio.

The auditorium of the Board of Trade was crowded Friday night, March 17, by Christian Scientists and others who listened spell-bound to a lecture on "Christian Science" by Mr. Edward A. Kimball, of Chicago, Ill. Mr. Kimball himself is a convert and in his lecture recalled the time when he rejected, scoffed at and scorned that which is now his creed and religion. He once lay on his death bed, a relative con

Digitized by Google

dition, he said, relative to all phenomena save Christian Science by which his life was spared. He claimed to be a dead man brought back to life. The speaker then launched into a clear and concise exposition of the application of Christian Science to the healing of the sick. He could not tell all about this Science in one hour any more readily than a mathematician could tell all about geometry in one hour. He selected as his theme the application of the Science to healing the sick because he believed most people cared to hear about that first. At the same time he enunciated the fact that healing the sick is only an incident, or one of the many features, of Christian Science. The Christian Scientist cures by virtue of the same dispensation that Christ cured. Christ's cures were not miracles. They were natural. And it is as natural for faith and prayer to effect cures today as it was two thousand years ago. Christ's healing the sick was neither miraculous nor supernatural; it was lawful, scientific, and as possible now as then.

The speaker cited statistics to show that Christian Science is making more converts than any other religion today. Christian Scientists are building churches all over the land and disseminating their doctrine far and near. Their gains have been sixty per cent greater than those of any other denomination. Two mammoth Christian Science churches are now in process of erection at Chicago. The people want Christian Science, according to Mr. Kimball, because it is human, humane, sensible and because it appeals to man in all his moods.

In Mr. Kimball's audience Friday night were many prominent men and women who have not subscribed to Christian Science and whose presence lent such a color to the meeting as to impress the casual observer that Mr. Kimball's statements regarding the progress of the movement he represents can easily be borne out.

Mr. Kimball was introduced to his first Columbus audience by Mr. Spaulding, of this city. He was induced to come here by the Christian Scientists of Columbus.

Press and Post.

At Rochester, N. Y.

Wednesday evening, March 8, marked an epoch in the growth of the Second Church of Christ, Scientist, in Rochester, N. Y. The regular evening service gave place to a lecture on "Christian Science — Its Worth and Work," by our First Reader, Rev. A. R. Vosburg, C.S.B., recently appointed to the Board of Lectureship. Mr. Vosburg was greeted by a well filled hall. The interest and attention with which the audience followed the thought of the lecture, proved the ability on his part to present the truths of Christian Science in a simple yet clear and comprehensive manner, as well as the desire of the audience to learn somewhat of the real Truth as found in Christian Science. Already the good growing out of this lecture has begun to appear; its full fruition only time and Truth shall reveal.

N. B. M.

At Oneonta, N. Y.

A large and appreciative audience filled the new Theatre Tuesday evening, February 28, to hear our first public lecture on Christian Science by one of the Board of Lectureship, Mr. Carol Norton, C.S.D., of New York City. Everybody gave the most respectful attention throughout. Many compliments have been made regarding the gentlemanly and scholarly manner in which the lecture was delivered, and that the lecturer must thoroughly believe every word he said. The lecture has done much to clear away the misconceptions and stop the misrepresentations of Christian Science in Oneonta. At the close of the lecture over four hundred Christian Science Sentinels were given out and two hundred copies of the lecture have since been distributed.

T. Waldo Stevens, Clerk.

At Lima, Ohio.

Faurot's Opera House was filled Monday evening, March 13, through the efforts of an earnest little flock constituting the First Church of Christ, Scientist, of this city. The audience was a representative one and it came not out of curiosity, but to listen to a lecture on Christian Science, by E. A. Kimball, C.S.D., who was formerly one of the foremost business men of Chicago, and it was treated to an intelligent and clear exposition of this comparatively new Christian discovery.

Mr. Kimball has a striking presence and very much resembles ex-Governor Campbell. While not a fervent orator he possesses what is far better, a logical way of making his points.

The Times-Democrat.

The Completeness of Truth.

BY WALDO PONDRAY WARREN.

CHRISTIAN SCIENCE is absorbing the attention of sage and philosopher, but "the Christian alone can fathom it." The greatest thinkers of the age are pondering the problem: "What is Christian Science? Surely it teaches strange doctrines, yet it makes the lame to walk, the blind to see, the deaf to hear, and the dumb to speak. Can this be the long-sought Truth!"

The utility of Christian Science commands the attention of the whole world, of every individual member of the whole human family. It appeals to every class of persons. Physicians cannot ignore its healing, nor can the sick ignore it; clergymen cannot ignore its theology; philosophers cannot ignore its logic; historians cannot ignore its influence in human affairs; chemists cannot ignore its disclosures of the nature of matter; psychologists cannot ignore its metaphysics; jurists connot ignore its justice; educators cannot ignore its mental uplifting and development; reformers cannot ignore its methods and results; artists cannot ignore its concepts and ideals; authors cannot ignore its literature; architects cannot ignore its churches; statesmen cannot ignore its teachings of the duties of man to man; sinners cannot ignore its pointed rebukes; and Christians cannot ignore its practical interpretation and application of the teachings of Christ.

Who, indeed, can ignore Truth? It appeals to each inhabitant of the globe promising him a regenerated mind, a healthy body, a purer and happier life, a greater manhood, a nobler ambition, a broader philanthrophy, a wider sphere of usefulness, a practical religion, a reliable guide, a permanent treasure, a sure defence from harm, an illumined path — the path of progress toward the highest ideals.

Brother man, would you learn what is your birthright as an heir of our Father which art in Heaven? Would you come into the possession of your heritage? Then study Christian Science, and search for its infinite meaning. View it, not through the dim glass of prejudice and intellectual pride, but view it through the crystal lense of a pure life. It rolls away the stone from the sepulchre where hope is buried: it severs the chains that would hold the world in bondage to stupid conservatism; it is the one thing that humanity has to look forward to; the "Eureka," the great "I-have-found-it" of human destiny.

Kind Words for Our Literature.

The following letter was received by a Scientist from the head of a prominent institution in the South for the education of colored people, the writer of the letter being himself a colored man.

My Dear Madam: — The Christian Science literature which you ordered to be sent to my address at Fort Valley has just been received, and I hasten to inform you. Accept my sincere thanks for your noble generosity. I took it from the Post Office last night and sat up quite late reading it. It goes without saying that it was to my liking.

Digitized by Google

My previous reading of the literature which you have furnished me from time to time and my own serious reflection upon the subject which it treated, thoroughly prepared me for the reception of the new. Whatever may be the outcome of my reading the Christian Science literature, I can truthfully say that I enjoy and relish it so far. From what I've seen of it, it seems to be in keeping with the teachings of natural religion. It repudiates dogmas and denominationalism as being the teachings of bigots and pedants.

I regard them as the greatest enemies with which the Truth has to combat. I rejoice that they are giving away before science and intelligence. The disseminators of such literature as you have been furnishing me, have not the remotest idea of how much good they are doing. They are the true benefactors.

So, be assured that you are doing a great good. Would that we had more such friends as you. Not only am I reading this, but the other teachers as well, and they assure me that they are enjoying it. I didn't intend for any body to read it but myself because I thought they wouldn't like it. But they seem to enjoy it also: perhaps not as much as myself, but much better than I supposed they would.

I regret very much that I didn't see Mr. H. while he was down here. He got away before I had a chance to see him. I trust that you are well, and that I may hear from you whenever it is convenient for you to write.

Lincoln As a Christian.

THE Rev. Dr. Charles H. Eaton, in the Church of the Divine Paternity, New York City, preached recently on "Abraham Lincoln's Christian Character." Although Lincoln was not attached to any church, he said, he answered all the tests in his life that could be put to his Christianity.

"If Abraham Lincoln was not a Christian," said Dr. Eaton, "then all the worse for Christianity. If the platform of the Christian religion is not broad enough to furnish standing room for one so pure and lofty as the great emancipator then the Christian religion is fatally weak. And yet the discussion which was carried on with heat and some bitterness at the time of the death of Lincoln has lately been revived, and men are contending together as to the Christian character of the man who saved the Union.

"If we mean by the Christian one who accepts an orthodox creed then Abraham Lincoln was not a Christian. If we mean by Christian one who has associated himself with an established church, identifying himself with its work and dogmas, then Lincoln was not a Christian.

"On one occasion, when speaking of the duties of church membership, Abraham Lincoln said that he had never connected himself with any church because he could not accept without mental reservation all the many articles of faith that a church would insist upon. If ever he could find, however, a church which would write above its altar the substance of the law and the Gospels, the loving of God with all the heart and one's neighbor as one's self, he said he would unite with that church with great joy.

"But there are many who hold that to be a Christian is to follow the example of Christ and live a life like his. You may go into all churches and outside of churches and you will find this class, who believe so much in the personal Jesus that they are trying to show their Christianity by living his life daily. Among this class was Abraham Lincoln.

"Tested by Christ's own words, Abraham Lincoln stands as one of the best examples of a Christian character. When, on that Good Friday which commemorated the death of Jesus Christ he was shot down by a traitor, he went into the presence of God. What though he had never joined himself to any of the churches. he had been a member of the universal Church of God. He died a martyr on the day when the commemoration of the death of Christ took place. How like the great Son of God was he in his sympathy for all mankind, his devotion to a high duty, and his tenderness for the poor and afflicted."

Miscellany.

The Queen's Kind Acts.

Queen Victoria has recently given two additional instances of her womanly feeling which have made a very pleasing impression in southern France. While driving at the beginning of the week, she overtook a peasant's walking funeral and had no room to pass; the mourners stopped and stood aside, but the Queen requested the cortege to proceed, and her own carriage followed respectfully, at a walking pace, for half a mile, until the roads diverged.

Again, while driving through Nice on Wednesday, the Queen passed a child which was crying bitterly. She ordered her carriage to be stopped and sent a member of her suite to inquire the cause of the child's distress, and to give it a few coins, which had a magical effect. The little face brightened up and the Queen drove on, smilingly remarking: "As long as nothing serious is the matter, I thought a few sous would make the little one happy."

The American Consular Service.

[From La Revue Diplomatique of France.]

The Americans are practical men, and their instinct for business is marvellous. Nothing is more characteristic in this respect than the organization of their consular corps. The consular service of the United States is a remarkable instrument of expansion. It is unique, and resembles none other. Its duty is that of a sort of bureau of information at the expense of the State. It is recruited principally from journalists, who carry into their official careers the trained instinct of observation and the quick grasp of passing events which belong to their former profession.

A resident of Bristol, Pa., owns a curiosity in the shape of a copper button, the kind said to have been worn by the servants of George Washington when the latter was President of the United States. The button is about one and one-half inches in diameter, and is quite elaborately engraved. Around the edge are the words: "Long live our President." In the centre is a monogram, "G. W." There are said to be only about three of these buttons now in existence, and two of them belong to members of the Washington family.

A Globe reporter attended the morning services of the First Church of Christ, Scientist, recently, and can vouch for the truthfulness of the rumor that no coughing prevails during the services. There are at present seventy members of the church. The regular attendance is upwards of one hundred and fifty and about forty children attend the Sunday-school regularly. One of the best features of the Christian Science church is that the members pay cash for what they get, and do not hold services in a church with a debt on it.

The Atchison Globe.

The bill to require physicians to write their prescriptions in English should be defeated. Very often a person's sickness extends no further than the imagination, and if the doctor was required to tell him the truth instead of prescribing flour powders or bread pills under a high sounding name, the doctor would lose his fee and the man might become really sick, for want of a little judicious deceit.

Fort Scott (Kan.) Monitor.

A recent number of The Jewelers Review of New York, contains a beautiful illustration and a complete description of "The Mary Baker Eddy Souvenir Spoon."

In case Canada becomes a part of the United States, a native Missourian proposes the State motto for greater America: "United we stand, divided by Niagara Falls."

Questions and Answers.

What is the true distinction made in Christian Science between "Jesus" and "Christ;" Are they used synonymously or not? M. C.

They are not, as a rule, used synonymously. Jesus is used to designate the human personality, or him who appeared in the flesh. He proved to mortals the fatherhood of God, by doing God's work, thereby becoming God manifest in the flesh; that is, being the manifestation to human understanding, of Love, Life, Truth.

Christ, or the Christ,— "without beginning of years or end of days," is not used to designate the human Jesus, but the Spiritual idea, the Holy Ghost, or Comforter."

Let all who would be clear as to the distinction carefully and thoughtfully *study* "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" with reference to this point, and particularly the Christian Science Platform, pages 227–230.

Did those who appeared before the Board of Education for examination, but to whom certificates of authority to teach were not issued, thereby become students of the Board of Education under the auspices of the Massachusetts Metaphysical College?

No. It was distinctly stated to the class that those who did not receive certificates would occupy the status, as to their teachers, associations, and otherwise, that they occupied before the examination.

For whatever benefit those sitting in class received, the Board were glad; but there should be nothing more than this claimed.

In your remarks in answer to the last question — Questions and Answers, Page 14 — of Sentinel of March 2, did you intend to say that Branch Churches could have Sunday Schools, or Bible classes composed of adults, if they saw fit? An Inquirer.

No, we did not. We supposed it was generally understood that Sunday Schools were for children, not adults. The question of the age of the children, we suppose, remains with the Branches.

Expressions of Gratitude to Our Leader.

BELOVED MOTHER: — Since it was my privilege to attend that ne'er to be forgotten Class of January, 1899, at the Mother Church in Boston, I have desired to express my gratitude for the blessings received. Yet what can I say that would convey to you one tithe of the gratitude which floods my being, or what to those dear and worthy disciples who so ably represented you and your teaching?

Lillo has said,

> "When gratitude o'erflows the swelling heart,
> And breathes in free and uncorrupted praise
> For benefits received, propitious heaven
> Takes such acknowledgement as fragrant incense,
> And doubles all its blessings."

The best "gratitude" and "praise" must ever be consecration and devotion to the Principle which is the fountainhead of all benefits. And what sweeter incense could be offered at the shrine of that unselfish Mother-Love which has led us there, than a quick obedience to the precepts emanating therefrom, and an ever active response to the exhortations, counsel and beautiful example of your daily life, which is proving a source of blessings to thousands?

Dear Mother, this shall be my offering of gratitude to you, not only for the Class of January 1899, but for all the good which has blessed my life during the past nine years, — a patient endeavor to live as *you* live, and to love as *you* love, thus to "worship the Father in spirit and in truth."

And will not this be grateful incense also to the dear members of the Board of Education, who so nobly fulfilled the mission you entrusted to them?

Your grateful (student's) student,

New York. Perlita Wolff.

To Our Mother: — Last week while studying my lesson for Sunday I came to this passage in SCIENCE AND HEALTH, page 7, line 6, "The vital part, the heart and soul of Christian Science, is Love. Without this, the letter is but its dead body,— pulseless, cold, inanimate." It impressed me as never before. I bowed my head and prayed that I might feel it, know it, live and reflect it.

Just after I had finished my lesson the mail carrier handed me what *was* our Weekly, but which I found upon opening had a new heading, which I read at a glance and thought, how beautiful! Then my eyes fell on the words below, "What I say unto you I say unto all, Watch." And it seemed to me that you spoke those words directly to me, and I again caught a glimpse of the beauty, power and understanding of Christian Science.

The thought presented itself, Now write and express your gratitude. But the week slipped away and another "Sentinel" appeared at my door. I opened it to see first if there was a message from you, and found the article entitled, "What Our Leader Says," and have been feasting on it ever since, declaring I could hear and understand every thought in it. Truly, "Feast after feast thus comes and passes by" and it remains with each one how much of it he will take.

I have been a student's student. As my teacher was one of the twenty-one recently appointed, I feel I am drawing nearer the fountain that sends forth only Love.

Lovingly,

Minnie M. Stoddard.

Omaha, Nebraska.

Dear Mother: — This is my first letter, although I have long since had the desire to express my gratitude for the great blessings bestowed upon us through your wonderful devotion to the cause of God and man. I write now to express the most heartfelt gratitude for your latest message of Love brought to us by our Sentinel of the 9th of February. I have often thought of expressing thanks for the sublime literature that has been given to Christian Scientists through you, — a literature superior to any the world ever conceived of. Its pure, holy, uplifting thought expands as we reach up towards its source. It is a complete system of Divine classics, every part of which breathes upon us the benison of Love.

I have been one of those slow students who did not begin to conceive of the magnitude of your work. But recently, when almost forced to it, everything else was laid down and time and thought wholly given to "SCIENCE AND HEALTH" and "Miscellaneous Writings" as far as could be. The work was carried on day and night, — except for a short time, — when a seemingly terrible calamity caused me to devour SCIENCE AND HEALTH and reach out for God as never before. This brought unspeakable blessings, so the name "Mother" now signifies more to me than it could ever have done before.

Yours for Truth,

A student through SCIENCE AND HEALTH.

Sturgis, So. Dakota. Sherman Wilcox.

Dear Sentinel: — I long to thank our dear Mother for the beautiful words of cheer and comfort sent to us her children, through your columns recently.

What peace, what power, what comfort in these words,— coming to us in the midst of the storm,— coming as her words always come in the hour of greatest need. As our hearts went out to the snow-bound poor, whom to mortal sense we could not help, what joy to know that when our minds were filled with Truth and Love they *were* helped.

I have had many proofs of our power to thus bless others. And now comes a letter from one who was in my thoughts at this time, telling of her sweet protection.

So time and time again we find that "Mind is All."

Digitized by Google

How clearly our dear Mother teaches us that the words of Jesus Christ are spoken to us today, as they were to the multitude by the sea so long ago. But never before did I know this, as when in the midst of the tempest I heard the "Peace, be still!" Such calm, such peace! I felt the storm was over, and I saw that as we fulfill our promise "to have in us that Mind which was also in Christ Jesus," we shall always hear this "Peace, be still!" until the tempest of sin, disease and death is to us no more.

Lovingly in Truth,
Susan W. Whitelock.

Mt. Washington.

Our Beloved Mother:— Your message to the Christian Scientists, as given us through the pages of the Sentinel of Februrary 9, was gratefully received and appreciated, causing me to recognize at once the need of self-examination. Thinking how many times you have told us this throughout your writings, the question immediately arose, have I followed and obeyed? Then came the answer, No, or this kind and loving reminder would not have come to me. I can say truthfully, it has inspired my thoughts with a higher and nobler purpose, and caused me to see that I must be more obedient to the law of Truth if I would have a greater growth in wisdom and love. All blessings are ours if we are obedient. I thank you for your timely words to us: also for revealing to us the hidden meaning of the Holy Scriptures, thereby showing the only true way out of material darkness into spiritual light.

Affectionately yours,
Agga M. Lacy,

Buffalo, N. Y.

Beloved Mother: — I wish sincerely to thank you for your timely words in the "Sentinel" of February 9. While reading them aloud to my household, I could not help thinking of the thousands who were being benefited by them, through "The Sentinel," thus making an endless chain of Truth and Love to sweep over human consciousness and counteract the cold blasts of mortal mind's winter of discontent and fear.

Words seem empty when trying to express the feeling of Love and gratitude which I owe you as Truth's Sentinel, — ever watchful for humanity's good. That I may prove this gratitude by greater obedience to your teachings is my earnest wish. Lovingly yours,

Bloomington, Ills. Barbara M. Prince.

Dear Sentinel: — May I express my gratitude for those few words of our Mother in the Sentinel of February 9.

They seem to have lifted me along many a mile of the narrow way, and I can faintly hear the echo of the still, small voice of Love, that brought them forth. God seems very near us in this hour.

What a power for good is ours when we can still the mortal senses, and look into the spiritual reality of Being.

I thank Thee, O Father, Lord of heaven and earth, that Thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

Plymouth, Mass. J. G. L.

Dear Mother: — I want to express my gratitude for the message in "The Sentinel" of February 9, 1899. If you had never given to the world anything else but that inspiration you would deserve recognition as to its healing power, mentally and physically. It has been such a help to me in overcoming sin and sickness and putting away business cares and worry. To other followers of your teachings I say, Try it and prove it to be *another thing that is good.*

Lovingly your Son in Christian Science,

St. Louis, Mo. Edmund C. Moulton.

Work of one Christian Science Student for the year 1898.

SENT to various places all over the world: — One hundred and eighty copies Christan Science Journal. One hundred and fifty copies Christian Science Weekly, (Sentinel.) Three hundred and fifty copies Washington News Letter. Thirty-eight daily papers containing accounts of Christian Science work. Thirteen copies People and Patriot. One SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES, and five of the smaller works of the Rev. Mary Baker Eddy to a far off island in mid ocean.

Has placed a copy of Science and Health and two copies of the Bible in the ladies' waiting room of two large railroad depots, where they have been well used.

Has also constantly distributed Christian Science tracts, and the Christian Science lectures, and loaned Science and Health in local work.

Baby Was Healed.

Several months ago I received a telegram from a distant part of this State to treat a two-year-old baby for flux, and just one hour after I had received the telegram the baby was healed and at her play. The mother wrote me that it seemed like a miracle to her, and it frightened the family with whom she was boarding, and they watched results very closely, only to find that the baby *stayed* well and had a perfectly natural movement of the bowels, ate anything it wanted and was *not* weak from the effects of the flux; this they acknowledged. It was then in an advanced stage. Mrs. A. J. Roe, Forth Worth, Texas.

Notices.

To Christian Scientists.

It is with pleasure I certify that after months of incessant toil and at great expense Mr. Henry P. Moore and Mr. J. C. Derby of Concord, N. H., have brought out a likeness of me far superior to the one they offered for sale last November. The portrait they have now perfected I cordially endorse. Also I declare their sole right to the making and exclusive sale of the duplicate of said portrait.

I simply ask that those who love me purchase this portrait.

Mary Baker Eddy.

Pleasant View, Concord, N. H., March 27, 1899.

All orders should be addressed to Mr. J. C. Derby.

It is the Company's desire to call in all the pictures of Mrs. Eddy which they had sold before perfecting the portrait.

If those who have such will return them to Mr. J. C. Derby, 30 No. Main St., Concord, N. H., enclosing ten cents in postage stamps to defray expenses, and give full address of the sender, they will receive in return one of the perfected portraits without further charges.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen. Send order to Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We wish to say that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL, *WATCH.*" —Jesus.

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., APRIL 13, 1899. | Vol. 1 No. 33

The Sentence of the Saviour.

THE following is a copy of the most memorable judicial sentence which has ever been pronounced in the annals of the world—that of the death sentence against the Saviour, with remarks which Le Droit has collected, and the knowledge of which must be interesting in the highest degree to every Christian. Until now I am not aware that it has ever been made public in the German papers. The Sentence is word for word as follows:—

Sentence pronounced by Pontius Pilate, intendant of the Province of Lower Galilee, that Jesus of Nazareth shall suffer death by the cross.

In the seventeenth year of the emperor Tiberius, and on the 25th day of the month of March, in the most holy city of Jerusalem, during the pontificate of Annas and Caiaphas. Pontius Pilate, intendant of the province of Lower Galilee, sitting in judgment in the presidential seat of the prætor, sentences Jesus of Nazareth to death on a cross, between two robbers, as numerous and notorious testimonies of the people prove—

1. Jesus is a misleader.
2. He has excited the people to sedition.
3. He is an enemy to the laws.
4. He calls himself the Son of God.
5. He calls himself falsely the King of Israel.
6. He went into the Temple, followed by a multitude of people carrying palms in their hands.

Orders by the first centurion Quirilus Cornelius to bring him to the place of execution.

Forbids all persons, rich or poor, to prevent the execution of Jesus.

The witnesses who have signed the execution against Jesus are:—

1. Daniel Robani, Pharisee.
2. John Sorobabel.
3. Raphael Robani.
4. Capel.

Jesus to be taken out of Jerusalem through the gates of Tournes.

The sentence is engraved on a plate of brass, in the Hebrew language, and on its sides are the following words: "A similar plate has been sent to each tribe." It was discovered in the year 1820, in the city of Aquila, in the kingdom of Naples, by a search for the discovery of Roman antiquities, and remained there until it was found by the Commissaries of Art in the French army of Italy. Up to the time of the campaign in Southern Italy, it was preserved in the sacristy of the Carthusians, near Naples, where it was kept in a box of ebony. Since then the relic has been kept in the chapel of Caserta. The Carthusians obtained by their petitions that the plate might be kept by them, which was an acknowledgment of the sacrifices which they made for the French army. The French translation was made literally by members of the Commission of Arts. Denon had a *fac-simile* of the plate engraved, which *fac-simile* was bought by Lord Howard, on the sale of his cabinet, for 2,890 francs. There seems to be no historical doubt as to the authenticity of this. The reasons of the sentence correspond exactly with those of the Gospel.

Items of Interest.

A joint high commission to settle the entire Samoan question has practically been agreed upon by the United States, British, and German governments. This commission is to have practically unlimited authority, without the necessity of referring its decisions back to the several governments for approval. It is felt that by conferring such complete and final authority on the high commission, the danger of any further deadlocks and delays will be obviated.

Still another important provision under consideration is that King Oscar of Norway and Sweden shall be the umpire in case the three high commissioners should fail to reach a determination.

King Oscar was agreed upon between the United States and Great Britain as a final arbitrator in connection with the proposed Anglo-American arbitration treaty, as well as the Venezuela matter.

The belief is spreading among the residents at Manila that the effect of the capture of Malolos, the former rebel capital, followed by the proclamation of the United States Philippine commission, will be to convince the natives that Aguinaldo's bubble has burst. Dr. Schurman, president of the commission, said,—

"The Filipinos have been asking unceasingly, 'What do you propose to do for us?' The proclamation answers the question, and it should satisfy them."

Col. Charles Denby, member of the commission, and former minister to China, remarked,—

"It is the most important proclamation since the Declaration of Independence. Spanish, Tagalman, and English versions have been printed, and it is proposed to circulate them about Malolos, and at all the seaports.

The Russian embassy at London has sent to the press the following message from the Czar: "Numberless expressions of gratitude have reached the Emperor of Russia from all countries for the initiative which his imperial highness has magnanimously taken with a view of alleviating the heavy burden caused by the present armaments. The emperor has commanded his ambassador to convey his majesty's thanks to all who, either in addresses, letters, telegrams, or in any other way have expressed their adhesion to his humanitarian work."

Copyrighted, 1899, by Mary Baker G. Eddy.

The make-up of the United States delegation to the disarmament congress, which will meet at The Hague in the latter part of May, is as follows: Andrew D. White, United States ambassador at Berlin; Mr. Newell, United States minister to the Netherlands; President Seth Low of the Columbia University, New York; Captain Crozier, ordnance department, U. S. A., and Captain A. T. Mahan, U. S. N., retired.

Mr. Frederick W. Holls of New York will be secretary of the delegation.

Secretary Gage was the guest of honor at a dinner recently given by the directors of the Bank of the Manhattan Company, to celebrate the one-hundredth anniversary of the founding of the company under a charter secured by Aaron Burr. He spoke briefly of the work done by the New York banks in various crises. He said the unimpaired credit of the United States to-day was due to the patriotic stand taken by the banks of New York in 1896.

At an expense of eighty thousand dollars, the government is fitting up the prize ship Panama, now the transport Hooker, as a cable ship to connect all the points in the Philippine Islands necessary to aid General Otis in his campaign. This will be the first cable ship of the government. The vessel will carry about two hundred miles of cable, and will sail within three weeks.

Lord Salisbury has accepted the plan proposed by Germany for the settlement of the Samoan trouble by the appointment of a tripartite commission. As the United States has already accepted the general proposition there is no longer doubt as to the organization of the commission, though the details of the arrangement are yet to be agreed upon.

The Samoan Islands are located about two thousand miles southwest of the Hawaiian Islands. The group consists of ten inhabited and two uninhabited islands, with an area of seventeen hundred square miles, and a population of thirty-six thousand people. The principal products of the islands are cocoanuts, cotton, sugar, and coffee.

A largely attended anti-imperialist mass meeting was held in Tremont Temple, Boston, Tuesday evening, April 4, and addresses condemning the so-called colonial policy of the United States government were made by a number of distinguished gentlemen. It was declared the oceans are our lines and expansion beyond them is dangerous.

The United States Treasury receipts for the month of March amounted to $45,230,547, while the expenditures were only $43,290,000 leaving a surplus of nearly $2,000,000. The total war expenditures for the month were $15,075,000. This includes the $3,000,000 for distribution among the followers of Gomez in Cuba.

The army question in Cuba is now considered settled. The Military Assembly, by a vote of twenty-one to one, decided to disband the army and dissolve. The muster rolls were left in the hands of the executive committee of the Assembly, who will facilitate the preparation of copies for Governor-General Brooke.

That the Philippines are to be held indefinitely, unless Congress should order otherwise, is evident from the proclamation recently issued at Manila by the Philippine commission. It is believed that the natives will gradually come to a recognition of the good intentions of the United States.

The receipts in the Philippine Islands since the Americans have been in charge amount to $2,998,479. The Americans took possession August 13, 1898. Many of the ports have been in the possession of the insurgents and commerce has been necessarily restricted.

Members of the Chicago Board of Trade say they will be required to pay about two million dollars additional taxes yearly because of the recent decision of the United States Supreme Court that revenue stamps must be attached to all memoranda of sales.

The Post Office department has decided to establish a postal route in Alaska which shall cross the Arctic circle. The purpose is to provide the miners and missions with a winter service, giving them three deliveries from December 1 to May 1.

It is understood that President McKinley has decided to appoint two distinguished scholars, now connected with educational institutions in the East, as members of the American delegation to the Czar's peace conference at The Hague.

Native Vermonters, who now reside in other states, propose to present to the state a monument to commemorate Admiral Dewey's great victory at Manila. The monument will be erected at the entrance of the State House at Montpelier.

The American flag was raised over Malolos, the seat of the so-called insurgent government, on March 31. The Kansas and Montana regiments entered the city and found it deserted, the rebels having retreated toward the mountains.

It is reported that Aguinaldo has been supplanted in the control of the Filipino affairs by General Antonio Luna, commander-in-chief of the Filipino forces. Luna is described as being a typical belligerent.

Secretary Long has returned from his inspection of the Norfolk Navy Yard and expresses himself as being well pleased with the progress made in the construction of the great ships of war at that place.

Information is received from Manila that the natives are coming in all along the American lines, and seeing the promises of good treatment fulfilled, are inducing their relatives to return to their homes.

The Red Cross Society will close its New York office and ship all its supplies (between twenty and thirty tons) to the Philippines. A fully equipped Red Cross hospital has been established at Manila.

It is reported that a large number of Spanish officers who had been prisoners in the hands of the Tagals have been given their liberty and have taken up arms against the Americans.

After nine months of service in the volunteer army of the United States, the Fifth Massachusetts Regiment returned to Boston, April 3. Its reception was most enthusiastic.

Senator Depew has decided to lease as his Washington residence the Corcoran house on Lafayette Square. It was occupied by Daniel Webster while he was Secretary of State.

The total revenues received in Cuba for the first three months by the United States military authorities amounted to $3,500,000. Of this amount $2,100,000 has been spent.

General Otis has received the following message:

Digitized by Google

"Hearty congratulations on the most magnificent work of the army. (Signed) DEWEY."

The overland telegraph line connecting Havana with Santiago has been completed. The signal corps constructed two hundred miles of line in sixty days.

The Princeton-Harvard debate on the subject of an Anglo-American alliance was decided in favor of Harvard, who had the negative side of the question.

General Hastings, the new chief of the Bureau of American Republics, commanded the Eighth Ohio (the President's regiment) during the civil war.

President McKinley has issued an appropriate order relating to the reception at Arlington of the remains of soldiers who died in the war with Spain.

There are over five hundred millionaires in New York City who had never been heard of until a New York paper printed a list of their names.

As a result of the recent election at Beattie, Kan., the Mayor, Clerk, and five members of the Council will be women.

It is expected that wireless telegraphy will soon be established between Washington and Fort Myer, a distance of five miles.

The Detroit, now at La Guayra, has been ordered post haste to Costa Rica to protect the American interests there.

The American, an eight page daily paper now in its second volume, is published in Manila at eight dollars per annum.

Forty-eight pupils recently completed the course in the woman's law class of the New York University.

Mr. Herbert Putnam, the new librarian of Congress, entered upon the duties of his office April 5.

The circulation of bank notes declined over $1,200,000 during the month of March.

Carter Harrison has been re-elected Mayor of Chicago.

Concord Items.

The Fast Day proclamation of Frank W. Rollins, Governor of New Hampshire, which has just been issued, is attracting much attention on account of its unusual language. The Governor says,—

"I hereby appoint Thursday, the 13th day of April, as Fast Day.

"This custom was inaugurated at a time when all the people of our state placed their trust in the hands of a supreme being, and believed firmly in the efficacy of prayer. A goodly number of our people still hold this belief, I am happy to say, and will assemble, as their ancestors have for generations, to invoke the deity. The decline of the Christian religion, particularly in our rural communities, is a marked feature of the times, and steps should be taken to remedy it.

"No matter what our belief may be in religious matters, every good citizen knows that when the restraining influences of religion are withdrawn from a community, its decay, moral, mental, and financial, is swift and sure. To me this is one of the strongest evidences of the fundamental truth of Christianity.

"I suggest that, as far as possible, on Fast Day union meetings be held, made up of all shades of belief, including all who are interested in the welfare of our state, and that in your prayers and other devotions, and in your mutual counsels, you remember and consider the problem of the condition of religion in the rural communities.

"There are towns where no church bell sends forth its solemn call from January to January; there are villages where children grow to manhood unchristened; there are communities where the dead are laid away without the benison of the name of Christ, and where marriages are solemnized only by justices of the peace.

"This is a matter worthy of your thoughtful consideration, citizens of New Hampshire. It does not augur well for the future. You can afford to devote one day in the year to your fellow-men—to work and thought and prayer for your children and your children's children."

Easter services at Christian Science Hall were of more than ordinary interest and impressiveness. Scripture readings and the regular lesson were chosen with reference to the Easter season and were timely and of unusual interest.

The floral display occupied the entire north end of the hall, and was rare and beautiful. Rose trees were there in full bloom, while hydrangeas, tulips, palms, and ferns were intermingled in profusion. The flower of nearly every section of the country was represented, many rare plants and cuttings being loving tributes of the day, from friends in distant parts of the country.

Among the congregation were many from out of the city, one visitor being Miss Villa Whitney White of Providence, R. I., a vocalist of rare power and ability, who sang during the service a translation of three German Easter carols of the fifteenth century. So great was the pleasure afforded her hearers that by urgent request at its close she rendered several beautiful hymns from the Church Hymnal, which were listened to and enjoyed by the congregation, which completely filled the edifice.—Concord Evening Monitor.

Diseased through Sympathy.

As a result of reading a sensational article in a local newspaper about cerebro-spinal meningitis, Bertha Schreiber, seventeen years old, of No. 1526 Elliott Avenue, St. Louis, Mo., is dying of that disease at her home.

Hers is what is known in the medical world as a case of sympathetic contagion. According to her physicians, her malady is due solely to the strong impression made upon her mind by the article in question. It was printed about two weeks ago.

It was a story of the sufferings of victims of the disease, enlarged on the painful details of the ailment, told of its prevalence, and was accompanied with illustrations. Shortly after reading it the girl complained of feeling ill. The physicians attributed her illness to her imagination. She grew steadily worse. Hypnotism was employed; but it failed, as have all other remedies used.

Physicians not interested in the case say it is unusually rare. Sympathetic contagion is caused now and then where one member of a family is afflicted, but this is the first instance in which disease was produced by the impressions created by a newspaper article.—New York Herald.

Lyman Abbott says: "I have tried to interpret my own conviction that religion consists not in believing something about God, or thinking about God, but in trying to live the divine life. Religion is simply the art of living—not even the art of right living, for living that is not right living is the beginning of death. Religion means for the merchant honesty, for the journalist truthfulness, for the soldier heroism, for the minister sincerity and candor."

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. — CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

To the Public.

(THE following views of the Rev. Mary Baker Eddy upon the subject of the Trinity, are known to us to be those uniformly held and expressed by her. A reference to her writings will fully corroborate this statement.—ED. Sentinel.)

The contents of the last lecture of our dear brother, the Rev. Irving C. Tomlinson, on the subject "The Unknown God Made Known," were unknown to me till after the lecture was delivered in Boston, April 5.

The members of the Board of Lectureship are not allowed to consult me relative to their subjects, or the handling thereof, owing to my busy life, and they seek a higher source for wisdom and guidance. The talented author of this lecture has a heart full of love towards God and man. For once he may have overlooked the construction that people unfamiliar with his broad views and loving nature might put on his comparisons, and ready humor. But all Christian Scientists deeply recognize the oneness of Jesus —that he stands alone in word and deed, the visible discoverer, founder, demonstrator, and great Teacher of Christianity, whose sandals none may unloose.

The Board of Lectureship is absolutely inclined to be, and is instructed to be, charitable towards all, and hating none. The purpose of its members is to subserve the interest of mankind, and to cement the bonds of Christian brotherhood, whose every link leads upward in the chain of being. The cardinal points of Christian Science cannot be lost sight of, namely—one God, supreme infinite, and one Christ Jesus. The Board of Lectureship is specially requested to be wise in discoursing on the great subject of Christian Science.

MARY BAKER G. EDDY.

The Lecture at Music Hall.

AMONG the notable events in the history of Christian Science in the city of Boston, was the occasion of the delivery of the lecture of Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., at Music Hall, April 5, 1899. This lecture was delivered under the auspices of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and was one of the regular quarterly lectures.

Since the inauguration of the quarterly lectures they have been delivered (in Boston) in the auditorium of the Mother Church, but owing to the overcrowded condition of the auditorium at previous lectures, it was thought best to secure a larger place. Accordingly, Music Hall was secured for the lecture in question.

Although notice had not been extensively published, early in the evening crowds began to assemble in the hall, and long before the hour for the commencement of the lecture the hall was completely filled. When the lecture opened every seat was occupied, and not less than a thousand persons were standing in the aisles and by the doorways, and in the corridors, filling the doorways. Several hundred went away unable to find seats or standing room, such as would enable them to hear.

While there was a large representation of Scientists present, there was also a generous attendance of outsiders. On the whole, the meeting can truly be said, in all its aspects, to have been most encouraging and a very great success, strongly evidencing the growing interest in the subject of Christian Science.

If this meeting is a fair precursor of what is to come, the question of sufficient room for the audiences at future lectures will be a serious one, but no doubt it will be successfully met.

In addition to the local Scientists there were numbers present from surrounding cities, and some from New York and other cities outside the state.

One of the most valuable features of the lecture was the full and appropriate recognition of the life and labors of the Discoverer, Founder, and Leader of this great religious movement, the Rev. Mary Baker Eddy. Also the reference of the speaker to our text-book, "Science and Health with Key to the Scriptures." Much of what the lecturer said of our Leader and our text-book was entirely spontaneous, and not embraced in his MS., making it all the more convincing and effective.

Another pleasant feature of the affair was the generous recognition accorded by the local press of Boston; the Boston Journal and Boston Traveler having published a full synopsis of the lecture.

The First Reader of the Mother Church opened the meeting with some explanatory remarks, showing the necessity for having the meetings in a larger hall, owing to the crowded condition of the church auditorium in which former lectures have been delivered, as above indicated. In the course of his remarks he said,—

"Christian Scientists, in some sense at least, are Universalists. They are believers in universal salvation. They differ in this respect from that good old lady who declared she hoped for better things than that all *men* should be saved. We shall have the pleasure and the honor of having the Rev. Dr. Perin, pastor of the Every Day Church, as the president of our meeting this evening. Dr. Perin we all recognize to be a well-known and representative Universalist, and I have privately assured the Doctor,—and perhaps there is no objection to my stating it publicly,—that in case I ever make up my mind to change my denomination, I agree, in recognition of his kindly services this evening, to become a member of his Church, provided he will accept me as such. I now have the pleasure of presenting to you the Rev. Dr. George L. Perin."

Dr. Perin very happily presented his old friend and coworker Mr. Tomlinson to the great audience. He spoke as follows:—

"Ladies and Gentlemen:—I desire to state briefly, I hereby pledge myself that if the Judge will maintain his reputation, I will accept him as a member.

"If any explanation is needed of my presence here this evening as spokesman, it may perhaps be found in the philosophy of a friend of mine in the West, who used always to accost the Methodist minister of the place as "Brother Neal." One day the minister demanded an explanation as to why he, who was not a Methodist, should always accost him as Brother. 'Well,' said my friend, 'it may seem incongruous, but you see it is this way: though you may not be a brother, you are at least a brother-in-law, for my wife is a Methodist. So I may say to-night, that while I am not a Christian Scientist, and my wife is not a Christian Scientist, I have some very dear friends who are.

Digitized by Google

"If I may speak quite frankly, and I am sure I may, I will confess that I have often been somewhat confused by your strange and unusual terminology, I have been perplexed by what seems to me to be your rather ethereal philosophy, and I have been made fairly dizzy by what seems to me a tendency of your Christian Science logic to go in a circle. But after all, do you suppose that if I were to see a tired, troubled child clasped to a mother's bosom and soothed to rest until the tired eyes had closed and the tear-stained face had been lightened by the smiles of dreamland that I would feel like quarreling with the mother's philosophy of child-life? No, she has soothed the child, God bless her.

"Do you suppose that after a stormy, troubled night of fear, anxiety, and disaster, when all the world had been waiting breathlessly for the morning, I would too sharply criticise the sun when he came with the joy and the hope of the morning? God forbid.

"Do you suppose that after the tired, troubled, anxious, suffering centuries, when a new influence comes across the pathway of men to soothe their sufferings and drive their pain away, that I shall have it in my heart to quarrel with the crutches on which its logic goes, or the terminology in which their philosophy is expressed? No, I shall say once more, God bless the ministering influence. The world has need of it.

"But aside from all this, we live in the close of the nineteenth century when the spirit of tolerance and Christian charity is becoming very widespread. As an humble exponent of this modern spirit, therefore, it would give me great pleasure to be here to-night. I love honest, earnest men the world over, no matter what their creed. The speaker of the evening is an old friend, whom I have known and honored for many years. In presenting him not the least of my pleasure is that I am to have the privilege of hearing an exposition of his thought and that of the Church he represents. And let me add that it does contain one great thought which I can understand, the Omnipresence, the dominance, the final victory of the Divine Spirit.

"I have great pleasure in presenting the Rev. Irving C. Tomlinson."

Mary Baker G. Eddy—What She has Done.

IN that darkest hour of slavery, just before the dawn of freedom, how dreary must the future have seemed to many a negro mother, as she sat in the stillness crooning a cheerless song to her drowsy babe! The tears must have often dimmed her eyes, as she thought of the life of bondage into which her child had come, with no prospect of happiness before it, unless its owners should chance to be kind-hearted.

When the proclamation of freedom came, what tides of love must have flowed toward Abraham Lincoln from the grateful hearts of slave mothers! How fervently they must have blessed him, as they heard more and more of their good white brother, under whose earnest leadership, their bonds were being effectually shattered! Not their bonds only, but also those of their children and children's children.

Who would condemn the slave mother for her devotion to Lincoln? If she should link the liberator's name with her account of her liberation, would any one sneer and accuse her of making a god of him?

To the Christian Scientist who has been freed from pain, and vice, and despair, through the proclamation of Truth by Mary Baker G. Eddy, it seems natural and right to feel grateful. Deplorable as was the condition of the chattel slave, his yoke was easy, compared to the abject wretchedness of thousands of slaves to whiskey, morphine, lust, or wasting disease who have been cleansed and redeemed by the marvelous power of Truth, as unfolded in "Science and Health with Key to the Scriptures."

Should these liberated slaves be condemned for speaking reverently and lovingly of their liberator?

It is practically the unanimous opinion of all people now that Lincoln was a great, good man, and his character is universally admired. Everybody knows that he had many bitter enemies, who denounced him as a self-seeking demagogue. We of to-day, though we never saw Lincoln, know him better than his enemies did, who saw and talked with him. We listen to the testimony of friends and enemies and then we turn to his acts. Viewed at this distance, we find that his deeds correspond with the testimony of his friends, and we are convinced that he was the instrument of God. The enemies of Lincoln, some of them, at least, were sincere in their opinion that he was a charlatan, but they were blinded by their own hatred and could not appreciate the true character of the man.

The greater the service man or woman renders to the world, the more he or she invites hatred. George Washington was vilified by prominent men of his generation, and he met the most determined opposition from influential revolutionists at every step in his conduct of the war. When the great men of 1776 assembled at Carpenter's Hall in Philadelphia, now known as Independence Hall, to read the Declaration of Independence to the people, an old royalist lady, who lived across the street, made a record of the event in a letter to a friend, somewhat as follows: "The rebels met in the state house yard to-day and read their Declaration of Independence. There were no respectable people among them."

In the same city of Philadelphia, only about forty years ago, William Lloyd Garrison was refused the use of the churches and public halls for a speech on the horrors of negro slavery, and when he persisted in speaking anyway, the most respectable citizens formed a mob and broke up the meeting.

The fact that benefactors of the human race in all ages have been hated by the "best people," does not necessarily imply that all people who are well hated are benefactors, but it does show that hatred blinds men so that they cannot correctly discern the character of the one hated.

The followers of Christian Science, almost all of them, have received so many priceless blessings through the study of Mrs. Eddy's writings, that they feel, without having seen her, that she must be a good woman. Among these blessings are such as renewed health, oftentimes after the person had accepted the doctor's verdict of death; release from appetites that had well-nigh destroyed health, happiness, and domestic harmony; regeneration from seemingly confirmed degradation and crime, and more than all, the blessing of an awakened understanding of the deep problems of existence, which satisfies man's inherent longing to know himself, his origin, and his destiny.

When the study of Christian Science is taken up, the learner early discovers that its demands on him are imperative. The price he must pay for faith or understanding is to be faithful in practising all that he knows to be right, and he must begin with the ten commandments. As he persistently tries to put down evil in his own thoughts and acts, the understanding of Christian Science becomes ever clearer. Working in this way, day after day and month after month, he becomes convinced through his own experience, that she who laid down these rules must have worked up to them, just as the learner has through earnest self-denial and increasing effort to put them into practice. When adherence to the rules for casting out sin, makes the student more unselfish and softens his heart, so that he feels compassionate even toward his enemies; and this is followed by the disappearance of his physical diseases, he knows then that the one who laid down these rules must not only be a good woman, but that she must be a very wise woman; that her thought must be in harmony with the pure thought of the Master and his disciples, for the fruits are the same.

Jesus was far above the ambition to be rich, or great, as mortal men measure riches and greatness. He did not wish to be a temporal king or the leader of a religious

Digitized by Google

faction. Therefore Jesus had nothing to gain for himself (from a temporal standpoint) by winning adherents to his doctrine, and he had no selfish disappointment when people refused to believe his words. Undoubtedly it grieved him to see how stupid the priests and philosophers and their followers were, in hating him so much that they could not appreciate the grand message he had come to give them. Envious of the influence Jesus exerted over the multitude, and judging, out of the perversity of their own hearts, that he could have no higher ambition than to be a temporal ruler, the leading men of his time first ignored him, then jeered at his teachings, then bitterly assailed them; declaring that his doctrine was wicked heresy, contrary to the law of Moses and the teaching of the Prophets, and finally, in their blind hatred of the Prince of Peace, they led the angry mob to the crucifixion. They thought that they could suppress the teachings by killing the teacher, but they were mistaken.

Mary Baker G. Eddy is accused of being as bad, or worse than, the chief priests thought Jesus was. Because she has a million loving, grateful followers, who have a profound respect for her wisdom, and who therefore are satisfied to obey her suggestions, because her wisdom has been proven sufficient to enable them to throw off the bonds of sin and disease—because of this great following which is growing astonishingly, the leading men in the churches are envious because they think this white-haired, motherly woman is greedy for temporal power and wealth.

Nobody can assimilate the Truth of the Sermon on the Mount if his heart is filled with hatred of Jesus. Nobody can ever understand or assimilate divine Love while he is indulging hatred of any one. Then it follows that he who studies Science and Health, with his mind inflamed with hatred for the author, cannot hope to learn its secrets, which stand out plainly for those who read with mind untainted by prejudice and hate.

It is an astonishing fact that many persons who attended an orthodox Sunday School regularly in their childhood, and later became church members, do not know that the disciples of Jesus Christ before and after his ascension, made it their general practice to heal the sick. They have read the New Testament through many times, but they had not heard Sunday School teachers and preachers emphasize the facts about Truth-healing, and they simply read the Bible without taking those parts relative to healing into consciousness. They have read the Bible through theological spectacles, which obscure the text, instead of making it clearer.

When a man is accused of murder, especially in a community where he is without friends, his every act, from swallowing a glass of water to rescuing a child from drowning, will be construed as evidence of a guilty conscience. Mrs. Eddy and others who are trying to make earth's millions better in morals and health, through Christian Science, are watched in much the same spirit as the man accused of murder and their actions misconstrued.

People have so generally joined in the race for material wealth that they think avarice must be the motive of every reformer. Worldly minded people cannot conceive it possible for any one to be above the desire for money and power, and to them every act of Mrs. Eddy's seems to sustain their belief that she is seeking power and wealth, and that Christian Science is a money-making scheme. The rabbis had pretty much the same opinion of Jesus.

Mrs. Eddy is frequently accused of avarice. To meet this accusation, the following from an editorial in the Christian Science Weekly of December 1, 1898, is quoted:—

"I do not want this class to be an affair of money at all."

These were the words of the Rev. Mary Baker Eddy to the class recently taught by her at Concord, N. H. There were in the class sixty-seven members. They were taught by our Leader in her capacity as President of the Massachusetts Metaphysical College. The established charge for such teaching would, under the rules of said college, have yielded the Teacher a handsome sum, and all would joyously have paid the maximum charge and have felt that they were returning nothing for the benefit received and the privilege conferred. Indeed, some insisted upon paying, notwithstanding the announcement at the outset that no charge would be made; but came the answer: "I do not want this class to be an affair of money at all."

Mrs. Eddy, if she chose, could teach as many as she desired, and then would be obliged to turn thousands away annually. She could command her own price for her services. She could amass great wealth, if money were her object. So far from this, however, she not only taught gratuitously, but has given away for charitable purposes and in the interests of the Cause, large sums of money. She has conveyed to the Mother Church valuable real estate, and the entire property of the Christian Science Publishing Society—a rapidly growing and valuable business. She has donated to the erection of church edifices most liberal sums; and these acts are of frequent occurrence.

It is certain that every member of this class of sixty-seven would have gladly paid for the teaching, and they were persons who could have afforded to pay. All of them were tried workers, who had proved the precepts of Christian Science by years of practice in healing, and consequently were in a position to appreciate the privilege extended to them. Every Christian Science worker, without exception, can truthfully testify that his understanding of Christian Science, however slight it may be, is worth more to him than all the power and wealth the world might offer. How eagerly, then, would every one of them be to give of the material wealth he has, in exchange for the deeper draught of Truth he would get through the personal teaching of the Leader of Christian Science.

Money could not buy this teaching. Mrs. Eddy selected these few from among the thousands of workers, because of their good work. They were prepared to receive more of the Truth and were requested to assemble in Concord, without even suspecting what was desired of them, because it had been years since the Leader had taught. The members of that class accepted the teaching as a gift for which they could render no possible equivalent to Mrs. Eddy personally, and they returned to their several fields of labor with chastened hearts, doubtlessly feeling that the only acceptable compensation they could offer for their tuition, would be to consecrate every moment of existence to the Master's work of healing sin and disease, thus hastening the coming of the kingdom of God on earth, for which he taught us to pray.

In the peaceful seclusion of her country home near Concord, N. H., and in the yet more peaceful seclusion of her pure and unselfish thoughts, Mrs. Eddy cannot be harmed by envy or hatred. She had taken the shield of faith, wherewith she is able to quench all the fiery darts of the wicked. Those who hate this devoted woman are nursing a viper in their hearts, which will poison them and not her. She feels the deepest compassion for her enemies, because she knows that they are really not her enemies but their own.

To the confused and darkened sense of those upon whom sin and disease weigh most heavily, there seems no power so great as that which binds their load of misery upon them. When these poor sufferers are first told that Mary Baker G. Eddy has proclaimed their freedom, very likely they will not take the trouble to ask any questions even, for they cannot imagine that such a proclamation, especially from a woman, can have any power to break their bonds.

When the news was whispered among the Southern plantations, that President Lincoln had proclaimed freedom for the slaves, it is probable that many slaves did not hope for freedom as a result of that declaration. They had lived so long in subjection and had heard the boasts of their masters that the slave power could not be overcome, that they fully believed their bonds were proof against every power but death. As an individual man, Lincoln had no power to set

Digitized by Google

the negro free, but one with God is a majority, and back of him and his proclamation was the resistless might of God.

In like manner the slaves of sin and disease have lost hope and do not think there is any power but death that can free them, but they are mistaken, for one with God is just as surely a majority now as it ever was, and back of Mrs. Eddy and her proclamation of freedom for all the captives of sense, is the might of Omnipotence, which destroys sin and disease.

In concluding this article concerning the Discoverer and Founder of Christian Science, it may be well to repeat the kindly warning found in the first chapter of the epistle of James: "Do not err, my beloved brethren. Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning. . . . Wherefore, my beloved brethren, let every man be swift to hear, slow to speak, slow to wrath: For the wrath of man worketh not the righteousness of God. . . . If any man among you seem to be religious, and bridleth not his tongue, but deceiveth his own heart, this man's religion is vain."—Denver Republican.

Christian Science Church Dedicated.

THE first Christian Science church established in the South was dedicated in Atlanta, April 2, in the presence of a large congregation of interested people, among whom were a number of distinguished guests from a distance.

The services were conducted by Mrs. Livingston Mims, the founder of the Christian Science Church in Atlanta, and her beauty, grace, and evident appreciation of the beauties of Scriptures, imparted to the ceremonies an unusual and stirring impressiveness. She was assisted by Mr. E. H. Carmen, the Second Reader, and the entire programme embodied in the dedicatory exercises was replete with interest. The choir music was exceptionally excellent and the organ accompaniment equally fine. The music and the choir were under direction of Professor Theodor Saul.

The most interesting feature of the programme and that which will be of great significance to the Christian Scientists throughout the country, was the dedicatory address sent by Mrs. Mary Baker Eddy, and read by Mrs. Livingston Mims.

Mrs. Mims Speaks.

Previous to reading Mrs. Eddy's address, Mrs. Mims delivered the following impressive address of welcome:—

"With deep and tender love do we welcome all our guests; some who are walking with us in 'the joy of paths untrod,' who have come from afar to share and increase our gladness in this demonstration of our own 'vine and fig-tree,' under which to worship the one Supreme Good; rejoicing with us, because they know what it means. Equally welcome are our friends of other denominations. We love for them to know our work—that it is of God. This dear church represents to us and to the world that in this fair city is established the Science of Christ—or Scientific Christianity—the Comforter leading into all Truth; that in an age of gross materialism the power of the spiritual Idea of Life, as eternal, self-existent Mind; the spiritual Idea of Love, as infinite, universal, ever-present; the divine Idea of Truth, as omnipotent to destroy sin, sickness, and discord, have been proven and attested by word and deed among us.

"Not money, but the demonstration of Love, and trust in the ever-present Good have built for us this temple to the living God. Its unwritten history would astonish the worldly wise and prudent. Yet here it stands 'fair, royal, and square,' unfettered by any kind of debt, unembarrassed by a single solicitation.

"This Church of Christ, Scientist, is not a menace to any other church, nor to anything but to sin, and sorrow, and discord. It has a message of love, and peace, and joy, and good will to all who love Good—God. Its mission is not to establish another sect. Our beloved Leader in Science and Health tells us 'there are already too many sects and not enough Christianity,' but it brings the message of Spirit to the churches and to the world. It says, not by vicarious atonement are men saved, but by working out their own salvation in the way that Jesus, our great way-shower, taught and exemplified. 'If ye believe in me, the works that I do shall ye do also.' Christian Science brings the rebuke of Spirit to our modern lethargy and proclaims: 'He that hath an ear, let him hear what Spirit saith unto the churches.' 'To him that overcometh will I grant to sit with me in my throne, even as I am set down with my Father in his throne.' It inaugurates the grand warfare between Soul and material evidence, and this struggle and triumph casts out evil, heals the sick, and raises the dead in trespasses and sins into newness of Life in Christ.

"On this fair Easter morn—like the waiting women at the sepulchre, we, too, see the stone of mortal belief rolled away, and we begin to apprehend that Life is God—deathless, eternal Mind, and that man is God's idea, the image of His love, inseparable from the Father—Life—Principle. We do rejoice that we are risen with him to see the dawn of an eternal day, when the power and demonstrations of primitive Christianity shall redeem the whole world through the merits of Christ.

"Words cannot express our debt of loving gratitude to our beloved Leader, Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, who, through sore travail, untiring watchfulness, and unspeakable love, has brought to this age the revelation and recognition of the divine power and presence—Immanuel—God—Good with us now and here—the ever-present Love—the Divine, all harmonious Principle of man and the universe—inseparable from its ideals. We are safe in having the fortune to unveil more and more the immeasurable glory of her mission, her life, and her work. Her reflection of Love overflows in a message to us, which I now have the pleasure and privilege of reading to you."

[Mrs. Eddy's address was published in the Christian Science Sentinel of April 6.]

The Church without Debt.

Following Mrs. Eddy's address, Mr. Carmen, the Second Reader, briefly outlined the history of the Atlanta church, which was entirely paid for previous to the dedicatory exercises. He said,—

"Two years ago the members of this church saw that the time was near at hand in which a building must be erected in this city to the glory of the God who is Love. and as a testimonial of their gratitude for the many blessings received by them through the understanding of Christian Science. The work of raising the money wherewith to pay for such a building as would be a credit to the cause and to this beautiful city was inaugurated during the fortnight just prior to Easter Day, 1897. At the morning service on that day contributions to the building fund amounting to $204 were received. Since then the work has been progressing, not according to methods usually employed for the raising of funds wherewith to pay for church buildings, but in the way that is considered ideal, but not practical. By seeking first the establishment of the Kingdom of God and His righteousness, the members of this church have been able to prove the truth of the Christ promise, and all things that the Gentiles seek shall be added unto you.

"The financial aid of no one has been solicited, there have been no fairs, suppers, sales, or entertainments of any kind given for the purpose of raising money. The financial aid of friends outside of the immediate membership of this branch church amounted to less than a thousand dollars.

Digitized by Google

There is not a member of this church who, to human sense, possesses an affluence, and yet in two years free-will offerings have been flowing into the treasury in such measure as to enable us to announce that at this time the treasurer of the building fund is in possession of means wherewith to pay every bill that has been contracted.

"The building stands as an outward and visible sign of the inward and Spiritual grace wherewith are possessed all who honestly, fearlessly, and intelligently endeavor to follow the Christ made manifest in the flesh nineteen hundred years ago and in the Christian Science text-book to-day.

"This First Church of Christ, Scientist, is a branch of the Mother Church of Boston, and an expression of Love, a testimonial of gratitude to Mary Baker Eddy, the Discoverer and Founder of Christian Science, who has taught us to know God—Good—as Eternal Life. She it is through whom God has spoken to this age, in the little book 'Science and Health with Key to the Scriptures.' To us it is the Key that has unlocked the hidden mysteries of the Bible. Many of us who had closed this blessed Book years ago on account of its seeming contradictions, have, since utilizing the Key that revealed to us its hidden treasures, been enabled to rejoice that we can come to this fount and drink the Spiritual facts of being.

"Loving congratulations and expressions of joy have poured in like a stream from other branch churches of the Mother Vine. A word should be said about our beautiful candelabra, a gift from the children of our Sunday School. The fund was started by a little boy in an adjoining state, who was healed of blindness by one of our members."

Another Address.

A loving dedicatory greeting to First Church of Christ, Scientist, Atlanta, Ga., from William Bradford Dickson, C.S., April 2, 1899.

I.

Since naught is Matter, all is Mind,
And whatsoe'er on earth we bind
In heaven is bound.
This house of thine
Is Love's sweet shrine,
Where Life and Truth for aye abound.

II.

Love speaks, and lo! in every heart
Affection's buds begin to start.
Unfold and bloom,
For heaven make room
And shed abroad
The incense of a loving God.

III.

When 'neath this sacred roof you meet,
Let only loving glances greet
The sick and lorn,
The weak forlorn,
The lamb unshorn,
The broken heart, with crown of thorn.

IV.

Thus Christ will come and sup with thee,
And this Love's Home will ever be
God's house of rest,
Where every guest
May taste and test
And know Love's ways are always best.

V.

In silent prayer, on bended knee,
Give thanks to Him, who gave it thee,
Let Love's stream flow
In hearts below,
That earth may know
And feel the radiant heavenly glow.

VI.

Nor in thy happiness forget
That Mother Heart, wherein is set
Life's coronet.
A crown of Love
From heaven above
For Her who brought Truth's treasure trove.

VII.

Blest Easter morn! May thy fair light
Forever shine—dispel the night
Of matter's reign,
Destroy earth's pain,
The greed for gain,
Efface from all sin's scarlet stain.

VIII.

Dear House of God, forever blest,
Beneath Love's wings forever rest.
The house of Soul,
Sweet heaven's goal,
Where love songs roll
And heal the earth from pole to pole.

From the Atlanta Constitution.

The Medical Bill in Missouri.

THE following from Judge McKeighan will be read with deep interest:—

St. Louis, Mo., March 21, 1899.

Septimus J. Hanna, Esq., C.S.D.,

Dear Sir and Brother:—You have already been advised of the pendency of a bill in the Lower House of the Missouri Legislature, so drawn as to be apparently directed towards the prohibition of the practice of Christian Science. The bill was styled "Committee Substitute for House Bill 12." Section 1 of the bill was as follows:—

Sect. 1. It shall be unlawful for any person not now a registered physician within the meaning of the law, to practise medicine or surgery in any of its departments, *or profess to cure and attempt to treat the sick* and others afflicted with bodily or mental infirmities in the State of Missouri, except as hereinafter provided."

Section 2 provided for the establishment of a "State Board of Medical Examiners" for the State of Missouri.

Section 3 gave the Board general supervision over all practitioners of medicine and surgery in the state.

Section 4 provided for the details of examination of persons desiring to practise medicine and surgery.

Section 6 provided for temporary certificates.

Section 7 provided for the recording of the certificates issued by the State Board.

Section 8 made it a misdemeanor to practise "medicine or surgery in this state," and further provided that "any person *treating the sick* or others afflicted with bodily or mental infirmities, and professing to cure them, without first obtaining a certificate from the State Board of Medical Examiners," should be deemed guilty of misdemeanor, and punished by fine or imprisonment or both.

There had been pending previous to the introduction of this Substitute Committee Bill, a bill numbered 419, which was even more directly and unequivocally intended to prohibit the practice of Christian Science, but the substitute bill, hereinbefore referred to, took its place.

A committee was appointed by the Trustees of the First Church of Christ, Scientist, of St. Louis, viz.: James A. Logwood, William A. Morgan, and George W. Kurtzeborn, to look after all pending or future bills in the Missouri Legislature affecting Christian Science. The writer was made legal counsel of the committee. Concerted action and effort was established between the St. Louis, Kansas City, and St. Joseph Scientists. It was resolved not to make any

Digitized by Google

open fight directly on a Christian Science basis, in the Lower House, reserving a determined and direct effort for the State Senate, in case the bill should ever pass the House. Nevertheless, communication was opened with Charles Opel, a Christian Scientist, of Jefferson City (the state capital) and he undertook to watch closely the progress of the bill in the Lower House, and, with the aid of Hon. G. F. Chilton, a Christian Scientist and a member of that House, and also the aid of Joel P. Tribble, a member of that House, to interpose all general obstacles that could be thrown in the way of the passage of the bill on general principles of the right of the people of Missouri to select their own mode of bodily healing. It was thought possible that the bill, for various reasons, might not come up for passage before the House, but in this we were, as it turned out, happily mistaken. The bill was called up for engrossment on last Saturday, March 18, and was practically defeated by being laid on the table by a vote of 38 to 26. It now requires a two-thirds vote to again bring it to the attention of the House, which is not thought at all possible, considering the large vote in favor of tabling the bill.

The Republic of Sunday had the following account of the contest over this bill:—

"With less than a quorum voting on propositions, the House went ahead with business. Out of fifteen Representatives, St. Louis had three present, and Kansas City was represented by two. After a bill for the establishment of a state fair had been ordered to engrossment, a royal battle took place over an effort to engross the bill introduced by Dr. Wilson to provide for the regulation of the practice of medicine and surgery.

"All the doctors who had anything to say warmly advocated the enactment of such a law. They said it was eminently fair to all the schools of medicine, but they could not convince the House of this, for, in the end, it was tabled by a vote of 38 to 26.

"This measure was advanced yesterday by the Steering Committee, and came up as a result of so many bills being laid over. Dr. Pettijohn of Linn made a speech, in which he expounded the various provisions of the bill as an act to elevate the practice of medicine and surgery and to protect the public from quacks.

"Mr. Aydelott of Warren offered an amendment under the terms of which the proposed Board of Medical Examiners would have been shorn of their power of discrimination. This opened the fight in earnest. Mr. Bohart of Clinton made a speech in which he violently attacked the osteopathy doctors. He had seen their advertisements in the newspapers, in which they purported to treat nearly all the diseases that the human system is heir to, and, in his opinion, they should not be allowed to practise in this state.

"Davis of Pike, Sickles of Putnam, Prather of Atchison, and Praisewater of Andrew, followed with speeches, in which they raked the bill with broadsides from stem to stern. Mr. Sickles, in particular, denounced the bill in unmeasured terms as an attempt of one class of doctors to prevent another class from following their calling in this state. Mr. Tribble of Dunklin declared that under the terms of the bill Jesus Christ, should he return to earth and attempt to heal the sick, would be subject to prosecution.

"By this time the friends of the bill were beginning to think that it would be a good plan to have it laid over informally, and a motion to this effect was made. But those who opposed it had their fighting blood up and, realizing that its supporters were on the retreat, they pressed their opportunities.

"Mr. Mackensen of St. Louis closed the debate with one of the most picturesque speeches ever delivered in the House. He wanted everybody to understand that he was a German and that he did not like the way some of the newspapers spell his name so as to make it appear Irish, that is 'McEnsen.'

"Under the terms of the bill, he said, one would have to pass a satisfactory examination in English grammar, history, and geography before he would be allowed to practise medicine. These requirements, he said, would exclude any foreign physician, no matter how learned, from practising in Missouri, unless he possessed the prescribed requirements. He thought the people had sense enough to employ the kind of doctors they wanted. Warming up to his subject he recited the first verse of the national hymn, 'America,' which caused great applause.

"At this point Mr. Ehrhart of St. Louis presented him with two heads of cabbage supported on sticks. With one hand resting on a cabbage-head and the other waving a small American flag, Mr. Mackensen declared that if the American people would eat more cabbage and less meat they would not have so much need for doctors. The House cheered wildly, and Mr. Mackensen concluded with a peroration on liberty delivered in German.

"Mr. Davis of Pike moved to table the bill. The motion, after some skirmishing, was carried by the vote stated. It is not believed that the measure can be resurrected in the future, as that would require a two-thirds vote."

We have a very interesting report from Mr. Opel, giving some additional items of information. The following is a copy of his letter:—

"Jefferson City, Mo., March 18, 1899.

"Mr. J. E. McKeighan.

"Dear Sir:—Following telegram sent to you to-day. 'Substitute twelve dead beyond resurrection. Will write history of fight,' is hereby verified and repeat the fact because it sounds well Substitute twelve is dead 'Poor thing.'

"I will give a brief outline of the fight as I remember it. The writer was present during the morning hours soliciting a number of the members to oppose the bill. About 11 A.M., March 18, 1899, the Reading Clerk of the House called from the calendar Substitute for House Bill 12 for engrossment.

"Immediately Dr. Alonzo Tubbs of Osage Co. (a practising physician) introduced an amendment to strike out Section 8 of the bill, stating his reasons for the amendment in broad and liberal terms. This amendment was heartily supported in turn by J. P. Tribble of Dunklin, lawyer; J. D. Ellis, farmer, of Vernon; and Frank C. Sickles, farmer, of Putnam.

"S. T. Aydelott, farmer, of Warren, offered substitute for amendment seeking to strike out only a part of Section 8 (the exact wording not obtainable at this writing, but not material), which was, with the object of the bill generally, attacked by G. W. Praisewater, farmer, of Andrew Co., then by F. Mackensen, teacher, of St. Louis, 809 Rutger Street, finally by Tribble of Dunklin. A motion to table the substitute was then made by Mr. Davis of Pike Co., seconded by F. C. Sickles, and upon vote carried 38 to 26, 11.45 A.M., March 18.

"It will require a two-thirds vote of the House to resurrect the bill this session. That does not now seem possible (as you doubtless know, a motion to table a substitute carries the bill with it).

"The above with a few minor exceptions is a history on paper, but of the inspiring sentiments expressed in the fight, it shows nothing, so I feel justified in referring to a few of the special features of the battle.

"To my thought the speech of Mr. Sickles upon the broad grounds of constitutional liberty was the best made, his clear-cut sentences referring to the rights of man, fitted his cognomen admirably, but the enthusiasm stirred up by Mr. Mackensen of your city by opening up against the whole bill in general, with the first stanza of 'America' was inspiring indeed. Standing in an impressive attitude he declared that his opposition to the bill was inspired by the immortal sentiments expressed in 'My country 'tis of thee, sweet land of *Liberty,* of thee I sing,' etc. It seemed to carry everything by storm. The response to the thought in that immortal song bore down everything before it. In

Digitized by Google

vain did the M. D.'s feebly rally, they made but a weak fight at best.

"Their main champion, Bohart (lawyer of Henry Co.), made an oration against frauds and humbugs, charlatans and what-nots, but in vain. The fight was mainly directed for and against osteopathy, but Christian Science and magnetic healing came in for a share.

"The fight revealed one thing beyond a doubt, and that is that men are growing in the thought of freedom and liberty.

"Mr. Chilton was absent, and did not therefore engage in the battle. He will feel badly. We have distributed fifty or more copies of Sentinel sent to us by the Publishing Society, containing your article. Each judge of the Supreme Court has a copy of the same, besides many citizens elsewhere. The Sentinel referred to contained Mrs. Eddy's articles, but we penciled both and sent them broadcast. Mr. Tribble read your article a week ago.

"Respectfully yours,

"CHARLES OPEL."

The foregoing impressively illustrates that the idea of freedom is so deeply seated in the heart of the average American that it may be safely relied upon, when appealed to, to resist all encroachments on individual freedom of thought and action, and that the advocates of any invasion of this right, no matter under what specious or subtle pretext, will always fail in their efforts, reflecting at such times the real feebleness of proposed restrictive legislation when directly confronted with the principle of liberty, which supplies the basis of our free institutions.

Very truly yours,

J. E. MCKEIGHAN.

The Lectures.

At Americus, Ga.

The Opera House was filled to almost its utmost capacity on Monday evening last, to hear a lecture on Christian Science by Mrs. Livingston Mims, C.S.B., of Atlanta, Ga., who is one of the Board of Lectureship appointed by the Mother Church of Boston. The audience was a thoroughly representative one and the profound attention given her every word was a just tribute to the culture and nobility of the woman and the forceful and spiritual character of her lecture. The stage was beautifully decorated with palms and tropical plants.

Hon. Charles R. Crisp, the son of the late eminent speaker of the House at Washington, Charles R. Crisp, introduced Mrs. Mims in the following well-chosen words:—

Ladies and Gentlemen:—You did not assemble here this evening to listen to a discourse from me, and I shall not inflict one upon you. You came to be entertained, delighted, and instructed by an address from one of Georgia's most distinguished and eloquent daughters, and I am confident I shall please you most by hastening that happy event. The honored and well-beloved visitor we have with us this evening is a lady of spotless character, whose reputation is national. Endowed from on high with a superb intellect, possessing rare attainments, many accomplishments, and great personal attractions, she numbers her friends and admirers only by the number of her acquaintances. I am certain I voice the sentiment of this audience when I say, while we may not all agree with her religious views, we applaud, praise, and commend her lofty and noble work in teaching mankind to emulate the life and character of our Lord and Saviour, Jesus Christ. I now have the honor, privilege, and sincere pleasure of presenting to you the orator of the evening, Mrs. Livingston Mims of the city of Atlanta.—The Evening Herald, Americus, Ga.

At Saratoga, N. Y.

An audience which nearly filled Theatre Saratoga heard Carol Norton of New York City lecture Thursday night, March 30, on "Christian Science and Common Sense." Mr. Norton spoke without notes and for over an hour. While not an orator he is an earnest speaker, and throughout the lecture commanded the attention of those present. The audience was a mixed one, all classes being present. If any one entered the hall with a view of being highly amused, they went away with different ideas.

Mr. Norton was introduced by Mrs. Betts, who said, "Ladies and gentlemen, and I would gladly say friends: I am here to-night to say but very few words to you before the speaker of the evening engages your attention on a subject that is engrossing, to a wonderful extent, the thought of the wide world. To my way of thinking no honor too great can be conferred upon man or woman who serves the human race, either publicly or privately by acquainting it with that which shall surely and finally liberate it from its sorrows, its sickness, and its sin, viz.: Christian Science. I speak to you as one who knows whereof she speaks. I stand here as a grateful witness of the healing power of divine Mind. I am convinced that no human means could have made me strong and well as Christian Science has done. Should I speak till you are weary, I could not speak the half of the blessings it has brought me. And so I shall detain you no longer.

"I have the honor to introduce the speaker of the evening, Carol Norton, C.S.D., of New York City."

Daily Saratogian.

At Marion, Ohio.

Thursday evening, March 23, 1899, Edward A. Kimball, C.S.D., of Chicago, Ill., gave a lecture in Grand Opera House, under the auspices of First Church of Christ, Scientist, Marion, Ohio. Fully eight hundred were present. In the audience were many from neighboring towns.

Each of our daily papers gave a synopsis of the lecture, one stating, "It can be safely said that a large number of people were won over to the cause of Christian Science by his learned remarks."

One druggist, on leaving the hall, stated that he would sell his drug store and buy a farm, as there was truth in this man's sayings.

We feel that this lecture has filled a long-felt want and much good will come from it.

We are few in numbers, having only thirty members, but we had no difficulty in raising one hundred and twenty-five dollars to meet the expense of the lecture; and we have a nice little sum left over to go towards our next one.

Words cannot express to our beloved Leader our gratitude for providing this Board of Lectureship.

JEANNETTE QUICK.

At Elgin, Ill.

Edward A. Kimball of Chicago was introduced by James G. Cameron to a fair-sized audience in the Elgin Opera House, Monday evening, March 28. The theme was "Christian Science: What It Is and What It Is Not." No admittance fee was charged.

The speaker opened his address with a brief reference to the misery of the world; its jails, asylums, hospitals, and the dead.—Elgin Daily News.

At Littleton, N. H.

The lecture on Christian Science, which was delivered in the Opera House on Tuesday evening, March 21, by the Rev. Irving C. Tomlinson, C.S.B., of Concord, of the Christian Science Board of Lectureship, was well attended. A large number of Christian Scientists from Woodsville, Lisbon, Lancaster, Groveton, St. Johnsbury, and McIndoe were present.

A Plea for the Birds.

BY HENRY A. MANNING.

LONGFELLOW writes in poetic song:—

God sent his singers upon earth,
With songs of sadness and of mirth;
That they might touch the hearts of men,
And bring them back to heaven again.

And a beautiful legend relates that St. Francis of Assisi preached sermons on God's love to the song birds, that they understood him, and that ever after Love was voiced in the melodious notes of these singers of the air. Certain it is that this good saint attracted the birds to his humble roof, fed them, talked with them, loved them, and was loved by them.

These are singers not of sorrow but of joy, and I am prompted now to make a plea in their behalf by reason of two recent incidents. The first an unfavorable impression received by one who has done some work here as a friend of the birds, in his first attendance upon a Christian Science service in our church. He told me he was much shocked to notice among such a people the great number of ladies who wore not only feathers, but wings and whole "carcasses" of birds on their hats, seemingly more than in any church he had ever attended. The criticism may not be entirely just. I hope his impression was not true; but it may well set us to thinking.

The other incident was an event that occurred recently in New York, reported in the following despatch:—

Special to the Chicago Record.

New York, March 23.—At the annual meeting to-day of the Audubon Society of the state of New York, which is devoted to the protection of birds, Lili Lehman, the opera singer, said,—

"I beg all women and girls not to wear birds and birds' feathers on their hats any more. Every year twenty-five million beautiful birds are slaughtered by this terrible folly. The farmers are already suffering from it, and yet women enjoy wearing feathers, like the savages. Flowers and ribbons are a thousand times more beautiful and more becoming. It is the duty of every woman and man to battle against this grewsome folly. For years my hats have had no feathers."

Let us be thankful that one sweet singer of the stage makes a consistent plea in behalf of her fellow singers of the "open temple," and let this sentiment be commended to all women everywhere. I wish that every newspaper in the land would publish it with a commendatory editorial. In this as in every other reform what is needed is an awakening of public sentiment.

Mr. William Dutcher, Treasurer of the American Ornithologists' Union in New York, has recently made a very strong plea for these songsters of the forest and field, both from the economic standpoint of the farmer and fruit-grower, and also as a lover of the bird race. He reminds us that birds are killed for two purposes, for food and for millinery ornaments. Comparatively few are shot as game birds, but the great annual sacrifice in this charming bird life is for what? Simply for gain in a grewsome and wanton traffic of that plumage which is so beautiful in life, and which the unthinking woman is willing to wear on her hat, as a sign that this beautiful life has been torn asunder to furnish her with an ornament, just for the fashion of a passing season!

Is this a radical statement? is it not true? Truth is radical, and will any Christian Scientist be the willing cause of the death of even one of these little ones? Our unworthy deeds are frequently our thoughtless acts. The thoughtful woman is not cruel, but it is for lack of thought in womankind that the birds suffer.

The Hebrew lawgiver provided for the protection of birds in his code for the children of Israel, nearly fifteen centuries before the time of Christ; and the gentle Nazarene said to the people of Judæa, "Behold the birds of the air . . . your heavenly Father feedeth them . . . not one shall fall to the ground without Him."

An appeal to the spirit of commercialism will do no good. So long as woman will wear this plumage of death, so long will the lovely birds be hunted to that death which is required by "the demands of trade." It is only by an appeal to the sentiment of sympathy and love that our birds can be saved. Women's clubs throughout our country, if so minded, could settle this question in a single season, and the birds would once more enjoy their "inalienable right to life, liberty, and the pursuit of happiness." But it occurs to me that no organized body in the world can do so much and so quickly to this end as the hosts of Christian Science.

We do not need meetings and resolutions to secure initial action. If this presentation commends itself to our women, the result among them, at least, may be as sure as Truth, as swift as thought. Will not the tender mother love in our ranks prompt such action? The good work will then spread, and in the near future we may listen to the glad melody in song from forest and field, from mountain and glen, from upland and meadow, which we may well imagine to be a grand chorus of praise that the hand of the slayer is stayed.

I am glad to plead for these sweet singers who cannot plead for themselves. And yet do they not plead in plaintive tones, even while the hunter is after them, and frequently with all the pathos of bird language when their young are in danger from any cause, showing that life is dear and that the parent love is strong? Let us remember the touching legend of St. Francis, that this bird language in the melody of their song may come to us as the harmonious expression of Love. Then will the bird life be sacred, and its freedom assured.

From Methodism to Christian Science.

But sanctify the Lord God in your hearts: and be ready always to give an answer to every man that asketh you a reason of the hope that is in you with meekness and fear.—1 PETER, 3: 15.

MY seemingly sudden transition from Methodism to Christian Science has been a subject of comment among many of my friends, and I have been frequently asked my reasons for this change.

I did not accept Christian Science because of physical suffering, but because I was hungering and thirsting after righteousness. From my earliest recollection I loved God; and was never so happy with my little playmates as when we were talking of God. But after years brought many doubts and fears. As I grew older I began to question within myself, Have I been deceived? Is the Bible true, or is it just like those fairy tales I have read? I was miserable, but told no one. I became very thoughtful over the matter, and began reading the Bible more diligently but with little or no understanding; I loved to read the Psalms more than any other portion of the Scripture; and at times my very soul would cry out in this one thought: "As the hart panteth after the water brooks, so panteth my soul after thee, O God." Yet where could I find Him? I joined the Methodist Church hoping to find Him there; I so often felt there was a work for me to do. I was reaching out for something, I knew not what. I realized I was in bondage. Thus it went on for years. At last in desperation I went to have a talk with my pastor at his home. I left him feeling that I was one most miserable, though I tried to feel comforted.

It was about this time that I met with a new friend, a Christian Scientist, and she invited me to attend services with her some Wednesday night at her church. I agreed, but must confess, it was with a prejudiced mind. However, the following Wednesday evening found me with that dear woman and her three little children going to a Chris-

Digitized by Google

tian Science service. Shall I ever forget that service? No, for there I was "brought out of darkness into his marvelous light;" I was caught up into that beautiful sunburst of God's love; and He was reflected in everything around me.

From that night I began the study of Christian Science, and the more I studied the more I rejoiced. In three weeks' time I was fully convinced that I could no longer remain in the Methodist Church, though I had said but a short time before, that it would just break my heart to leave it. I loved my pastor, for he was such a noble, generous-hearted man. I decided during Conference to withdraw from the Methodist Church, and when the new pastor came I applied to him for a letter, but he refused me a letter for the purpose set forth in my request,—to unite with the Church of Christ, Scientist. But the dear Scientists took in the wandering child who was so hungry and fed her; they desired no material recommendation.

At first it was hard for me to realize how much we owe our beloved Leader; but our First Reader soon enabled me to understand this as well as many other things. I shall never forget how patiently and lovingly she labored in assisting me to understand something of this great Truth; and when I see her struggling along with our little band against so many difficulties I can but say,—

Toil on! and in thy toil rejoice;
For toil, comes rest; for exile, home;
Soon shalt thou hear the Bridegroom's voice,
The midnight peal—"Behold, I come!"

Estelle Millard, Union City. Tenn.

The Coming Race.

BY WALDO PONDRAY WARREN.

THOSE who are familiar with Bulwer Lytton's famous tale of "The Coming Race," in which he pictures an ideal state in human progress, can readily appreciate how far his ideal is surpassed by every-day life in Christian Science.

Our "vril" is a thought, whose fleet wings are the ever-presence of Mind, whose power is the omnipotence of Good. It can destroy only the evil, and rules by Love instead of fear. Our perpetual light is not from the earth's internal heat, but is the infinite light of Spirit, God, in whom is no darkness at all. Our tasks are not performed by lifeless automatons aping intelligence, but by the utilization of Omnipotence.

Human wisdom is inadequate to grasp the divine concept. The highest flights of fancy are tame and tasteless in the presence of divine reality. How truly "above all that we can ask or think" is Love "abundantly able to do for us." Man cannot conceive of anythng so grand as the methods of Mind, much less can he improve on God's ways.

The coming race will be, and is, one that can see things as they are, recognize the allness of Good and the nothingness of evil, and demonstrate this by healing the sick, raising the dead, and casting out all that is unlike God. This higher order of mankind must supersede the present order of humanity, and grow into the fulness of manhood, revealing and demonstrating infinite possibilities. In the progress of future centuries man will daily tread on ground beyond the pioneer footsteps of fancy. He will outlive his ideals, in his progressive demonstration of the infinite capabilities of manhood. Future generations will fulfil the prophecies of Jesus, and "greater works than these shall they do." To them the marvelous promises of Jesus will grow clearer and nearer till "mountains be removed and cast into the sea," and Life which knows no death will be demonstrated. As progress unfolds the power of Good over evil, sickness, sin and death will be vanquished into vacuity, graves will become obsolete, and the things of Truth and Love will become as tangible to our consciousness as the things of sight and sound are to-day and "the earth shall be full of the knowledge of the Lord as the waters cover the sea."

Laying of the Corner-Stone.

THE corner-stone of the new Temple being erected by Second Church of Christ, Scientist, at 68th Street and Central Park West, New York City, was laid on Easter morning at seven o'clock. Early on this glorious resurrection morn, beneath a cloudless sky with both sun and moon to honor the occasion, a humble and happy body of earnest workers, comprising the members of the Church, and Readers from the other churches in the city, gathered at the church corner and quietly, "without pomp or pride," lowered the stone to its place.

The ceremony was simple and brief. In the top of the stone was placed a copper box containing a copy of the Bible, Science and Health, "Miscellaneous Writings," and all other writings by Mary Baker Eddy, the Christian Science Journal for March, 1899, the Christian Science Weekly, No. 1, the Christian Science Sentinel, No. 30, the Christian Science Quarterly, the Manual, The Mother Church, the Christian Science Hymnal, and a list of the names of the Readers, Trustees, and building committee of the Church.

This corner-stone is of Concord, N. H., granite. It is eight feet long by four feet square, and weighs eight tons. It is a fine specimen of this beautiful stone. On the front facing Central Park is the inscription, "Second Church of Christ, Scientist, 1899," and on the 68th Street side the word "Purity."

The order of exercises was as follows:—

1. Repetition of the Scientific Statement of Being.
2. Scriptural Reading.
3. Selection from "Miscellaneous Writings."
4. Placing of box in stone.
5. Silent Prayer, followed by Lord's Prayer with its spiritual interpretation, prayer in Church Manual, repetition of the Mother's Gift to the Big Children, and repetition of the last Church Tenet.

The ceremony was conducted by Mrs. Laura Lathrop, C.S.D., First Reader.

Letters.

From Mexico.

On Sunday afternoons, at three o'clock, Mrs. Butler and I hold Christian Science services at our home in this city, 4th Calle Providencia No. 10, corner of Bucareli Boulevard, the only Christian Science services so far held in the Republic of Mexico. We are desirous that Scientists intending to visit this country should know this so they may attend the meetings, and thus help themselves as well as encourage us. Mrs. Butler reads the Bible selections, and I read the correlative passages from the text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy.

The first service was held in this city by Mr. and Mrs. Adam H. Dickey of Kansas City, who were here last December. There were just seven at the initial meeting—seven is a symbol of completeness. We have kept up the services since Mr. and Mrs. Dickey returned to Kansas City to engage in active Christian Science work, and truly we have been blessed in the effort made in the name of the precious Saviour. Last Sunday there were fifteen present, and at our last Wednesday evening meeting there were sixteen present. Among those present were half-a-dozen persons who had been wonderfully delivered from the slavery of sin and sickness to the "liberty of the sons of God." We realize that God is here just as much as in our old homes in the North. Yours in the fellowship of Truth,

E. C. BUTLER.

From Italy.

Chicago, Ill., March 28, 1899.

Dear Editor:—I take pleasure in enclosing herewith

Digitized by Google

a letter which I received a short time ago from the Mayor of the City of Turin, Italy (my native place), in acknowledgment of the receipt of the book, Science and Health, which I had sent him to be placed in that Civic Library. As said letter is in Italian I enclose a translation.

With loving regards,

ERMETE VENNI.

Turin, Italy, February 27, 1899.

Mr. Ermete Venni, Chicago, Ill.:—

It was really a kind thought of yours to send as a gift to this "City Library," a copy of the book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy; and I make it my dutiful concern to render to you the most heartfelt thanks.

I beg to assure you that, according to your desire, the book shall be placed at once at the disposal of the large number of readers that frequent this Library, and I join with you in hoping that it be the messenger of *Life, Truth, and Love.*

Accept, sir, the expression of my highest esteem.

(Signed) THE MAYOR CASANA.

At Parker Memorial Hall.

Dear Mother:—As this will not engage your thought but for a moment and no answer is required, I wish to tell you with what perfect success "Parson" Tomlinson lectured and answered mortal mind questions in Parker Memorial Hall, Boston. Had you been present incog., your very heart would have loved him for his calm, true reflection of the one Mind.

Scientists were out in a good majority and added to the èsprit of things by their quick receptivity of the Truth. We appreciated the sad density of the groping mortals as evidenced by their dark questions and declarations.

I will quote some of the latter.

"The Holy Ghost is Hypnotism."

"Christian Science is Hypnotism."

"Jesus Christ was a Hypnotist."

Rev. Tomlinson's reply: "A man is possessed of ten thousand devils that falls into the hands of hypnotism" (Tremendous applause). Love stirred them up and the meeting was a good seed sower.

Faithfully yours,

BERT POOLE.

Miscellany.

A Unique Letter.

MISS ANNA BUCHANAN who is a stenographer in Eugene Hagan's office has received a unique letter from her brother John A. Buchanan, who is with the Twentieth in the Philippines.

The letter, which is dated February 15, came enclosed in a cartridge box.

The regiment was in the trenches at that time, returning the galling fire of the insurgents. The boys could not get back to camp to write letters and they carried no stationery with them.

Young Buchanan, however, wanted to write home. He knew that his relatives would be anxious to hear from him and he wanted to let them know that he was with his regiment doing business.

In his pocket he carried old letters which he had received from home. These he tore open and used the envelopes for writing paper. He placed the pieces in a cartridge box and fastened the box with a piece of his shoestring, in lieu of anything better. He had no stamps but wrote the address with his piece of a lead pencil and marked in one corner of the box, "soldier's letter."

The letter was sent back to the place where the mail was collected and came through safely in the same way that it was sent by the brave soldier boy.

Four cents postage was due when the boxed letter reached Topeka, but Miss Buchanan would have paid four dollars for it after reading the post-mark.

When John Buchanan comes marching home he will find his unique letter treasured at home as one of the proudest remembrances of a soldier boy in the Philippines.

Topeka (Kan.) Daily Capital.

The Coming Century.

I BELIEVE that the spirit of Jesus Christ will be the dominant force in the coming century; that as the Church understands more and more his mission and character and teachings and work, her conceptions of God will be more and more heightened, and her conceptions of man will be more and more broadened; that sectarianism will be swallowed up in catholicity; that ecclesiasticism will wane and Christianity will wax; that the standard of ethics—personal, domestic, social, educational, commercial, national, international, Christian—will grow higher and higher; that society will agree that chastity shall be as binding on man as on woman; that office will soar from ambition into service; that wealth and work, instead of quarreling, will co-operate; that culture will become more conscious of accountability to God and to man; that the Jew will regain the blessings promised in Abraham; that Christendom will disarm, that the whole world will become one neighborhood; that human units will grow into human unity—men into Man; the golden rule will become more and more the law of society; that faith, hope, love will be acknowledged the human trinity—in brief, that the twentieth century will be in very truth the century of Christocracy."

Rev. G. D. Boardman, in the Zion's Watchman.

The Violin.

Is not the Violin truly a miracle in itself? A simple wooden box having four strings ingeniously knotted across it, in which strange but scientifically contrived bit of handwork, is imprisoned the intangible but nevertheless living spirit of sound. Is it not altogether perfectly astonishing that out of such familiar, yea, despicable materials, as a few pieces of old wood, four strings of twisted catgut, and a bunch of threads of horsehair, the divinest music can be drawn forth by the hand of the master who thoroughly knows how to handle those rough implements? Can we not learn a truly suggestive lesson from this? If man can through his very imperfect skill and limited intelligence thus invoke the soul of music, or spiritual melody, out of such rude materials, then can God not contrive some remarkable harmony, some sweet and sacred tunefulness for Himself, even out of our poor, frail, sinful and common earthly discordances?

P. Davidson in "The Violin and its Construction."

Thoughts for Busy Men.

Forget your mistakes, but never what they teach you.

Watch your thoughts and your deeds will need no watching.

In Christian Science, love is as far from selfishness as the gates of heaven are from hell.

Never give a dime to a tramp or a dinner to a friend without giving with it some kindly, helpful thought.

If more people knew there are such things as headache thoughts there would be fewer people taking headache powders.

In Christian Science there is only one brand of honesty —the good old-fashioned kind. That which is known as "business honesty" is a delusion and a snare.

If you find yourself wishing for "lots of money" so that you might do good with it, ask yourself if you have done all the good you can without money.

Florence (Col.) Daily Tribune.

Questions and Answers.

Why did God create an almost endless variety of drugs, if not good, or intended for use? We are taught that nothing was made in vain.—A believer in Christian Science.

God did not make an almost endless variety of drugs, or any drugs. Drugs are of human invention. The first known drug-maker was a Pagan physician. Mineral, vegetable, and animal substances (so-called) have been made into mixtures called drugs, and these have been given out as possessing healing power. In fact they possess just the healing power the mortal law—or mind—has endowed them with; no more, no less.

God is not *in* these mixtures. If He were, the drugs would be divine, and would never kill people—no matter how large the dose.

If the potency of the drug were from God, and that potency *kills*, it would make God responsible for the death. Is God, who is Life, the author of death? Is it consistent to admit that the author of life should kill His own ideas, or children?

No! God never created drugs.

***

Is it a rank error to study a lesson-sermon, or the lesson-sermons in back numbers of the Quarterly?—L. B.

We do not think it is error—rank or otherwise—to study the Word of Truth. To hold that the study of *any* lesson-sermon in the Quarterly is error, would be equivalent to saying that such lesson-sermon was based in error.

So far as general study is concerned, we think the study of the current lesson-sermons the most helpful.

A Demonstration.

St. Louis, March 27, 1899.

Col. O. C. Sabin, Washington, D. C.

Dear Editor and Brother:—Noticing your call for cures that can be legally proven, I send the following:—

It was a case of Bright's disease and the man lay in his bed suffering untold agonies, although his physician administered morphine all the time.

The doctor had given him up to die, stating that one kidney was entirely eaten up and gone and the other almost gone, and that the patient could live but three or four days.

Such was his condition when Christian Science reached him, and his relatives grasped at it as drowning men grasp at straws, and quickly gave me orders to treat him. I treated him just three days, but only fifteen or twenty minutes each day. At the first treatment he sat up in bed and asked for something to eat. The second and third days he could walk around the room.

I did not see or hear from him again for several weeks, then he was out on the sidewalk and said he felt better than he had for twenty years, and was entirely well.

Later, I myself took his photograph with a kodak, which shows him a robust man, weighing over two hundred pounds.

I will be glad to show his photo and give full addresses of numerous persons who will substantiate all the above facts, as over a hundred saw this patient before and after his healing, he being located in a public institution at that time. I will cheerfully answer all inquiries.

Strange that his healer could be a lawyer, isn't it? Well, no; there are a number of lawyer healers.

There is yourself, my dear editor, a lawyer of many years' practice and high standing at the bar, also a healer of good repute, as we have read in the News Letter. See the account of "Locomotor Ataxia Healed" in March Christian Science Journal. (Healer was Lawyer Henley of Davenport, Ia.), and also the article by the healer, Judge Clarkson of Omaha, in Christian Science Sentinel, of March 23.

Nor can I forget to mention the first lawyer Christian Scientist and healer, Judge S. J. Hanna, now the beloved and able editor of the two publications last referred to.

I could also tell of healing a loathsome case of scrofula, another of syphillis, and finally one of organic heart disease.

"The Truth is mighty and will prevail."

JOHN C. HIGDON.

In the Washington News Letter.

Another Lawyer.

HON. JAMES A. D. RICHARDS, of New Philadelphia, Ohio, worshiped with the people of the First Church of Christ, Scientist, of this city, on last Wednesday evening. This was the second time Mr. Richards had ever been in a Christian Science Church. He gave briefly an account of his experience in being brought to a knowledge of the Truth, which was by having his attention called to the subject by a lady from Chicago who visited his family. He was led to obtain a copy of our text-book, "Science and Health," by Mrs. Eddy, and read the book through five times. There being no church of this denomination in his town, all he knew of Christian Science was what he found in the book. The reading of this book cured him of a long-standing case of periodical rheumatism and generally restored his health, which had been quite delicate for a number of years, giving him now perfect health and also the knowledge whereby he can heal the sick through Science the same as those who have had greater privileges.

Mr. Richards represented his district in the fifty-third Congress, is a lawyer of wide experience, and a man whose ability ranks among great men in this or any country. Christian Science appeals to men of brains, as they are usually willing to study. There are those of narrow intelligence, full of prejudice and a little pent-up religious bigotry, who are slower to conceive and whose capacity to comprehend the Truth when they see it is looking through a glass darkly. Of course that class is more difficult to reach than men of broader mind.

The editor of the News Letter, especially rejoices over Judge Richards' conversion, so to speak, because he is an old-time friend and business associate.

From the Washington News Letter, March 29, 1899.

Editorial Comment.

Regarding the death of the wife of Col. Charles C. Rivers, which occurred in Chelsea, Dist. Atty. Stevens says his office will take no action in the case. Mrs. Rivers was stricken with paralysis last Thursday. Dr. Hawes was called and prescribed for her and she made good progress. Subsequently Mrs. Alden G. Alley of Chelsea, a Christian Scientist, was brought to attend Mrs. Rivers, Dr. Hawes being notified to that effect. His medicines were not applied. Saturday morning, however, Dr. Hawes was again summoned, and he found the patient in a critical condition. She died Saturday evening. The attention of the district attorney was called to the matter but he sees no reason to act. He says the woman and her husband knew of the treatment a Christian Scientist would prescribe, and they had a right to permit such treatment if they chose. Inasmuch as the district attorney has stated the logic of the subject in a nutshell the Evening News desires to no more than express its approval of his position and its disapproval of the "regular school" of legalized man killers who are eternally claiming a monopoly in the kill-or-cure business. The News is not a Christian Scientist but it believes in a fair deal all round, and this persecution of "faith curists" by the "regulars" is not a fair deal by any means.

The Waltham (Mass.) Evening News.

Christian Science Services at Chelsea.

We learn from the Boston papers that scores of people have left the Chelsea churches to go over to "that peculiar people known as Christian Scientists," at the door of one of whom an effort has been made to place the responsibility for the death of a Chelsea woman who preferred Christian Science treatment, she being in her right mind at the time, to that of a regular medical practitioner. The question naturally arises in connection with this case: What is there in Christian Science to attract scores of people from the churches? Why don't the churches hold their own? It cannot be claimed that the growth of Christian Science is ephemeral, for it has been for years taking root. The thing for opponents of this sect to do is to find out wherein their own actions and teachings are at fault and stop picking flaws with the Scientists. If they have succeeded in laying hold upon a great truth we all want to profit by it. So far as proceeding criminally against these people is concerned, it cannot be done under any law governing the practice of medicine, for the simple reason that they administer no drugs.

Haverhill (Mass.) Evening Gazette.

Testimonies.

Tobacco Habit Cured.

I believe it is not only proper, but our duty, to acknowledge benefits received, from whatever source they may come, and in making this acknowledgment, it is with the thought it may meet the eye of some one who is bound with the same chains of slavery that I was bound with.

I had been a smoker for more than forty years, with perhaps three or four intervals of from one to six months when I "swore off." All lovers of the weed well know what this swearing off means, and with what pleasure the habit is renewed at the expiration of the time, if not sooner. I had more than once determined to stop, and with the intention of making it permanent, but the desire was with me all the time, and I finally gave up all effort to overcome it.

A little more than one year ago I became interested in Christian Science and my wife suggested that the study might cure me of the tobacco habit if I would try. I said, "No; I will not try again to quit it. If the study of Science and Health removes the appetite for tobacco, it will be good evidence that there is something in it, and I will give it the opportunity." I had procured a copy of Science and Health in July, 1897, and was reading more or less every day. On Saturday, November 6, I had as usual smoked all the afternoon,—it being a half holiday, and I was at home. On Sunday morning the appetite was gone and I had no desire whatever to smoke, and am glad to say I am sure it has gone forever.

More than this we threw what drugs we had in stock, out doors, and have had no further use for them, since we learned that God is All-in-all. To old smokers who want to give up the use of tobacco, I would say "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, is your sure remedy. It will not only destroy this appetite, but it will make a better man of you in every way. Try it.—M. K. Fleming, Kansas City, Mo.

Good Results from the Lecture.

Before our lecturer came, I was thinking of the good I knew it would accomplish, and how I hoped I should be ready for any work presenting itself, afterward. I found myself saying what Eli told Samuel to answer: "Speak, Lord: for thy servant heareth." I was able to overcome many difficulties that seemed to come up that day. After the lecture the atmosphere of our city was so much clearer it seemed that Love moved among us. Our lecturer seemed to give his listeners exactly the needed talk. I was glad for them to see they had not been finding fault with Christian Science, but merely with the misconception of it. The very next evening I had a call for help and was pleased to learn it was in consequence of what Mr. Kimball had said, and the patient wanted to learn more. He says he finds a marked improvement in his case, and that our textbook, Science and Health, meets his requirements.

Mrs. L. B. Clarke, Quincy, Ill.

Healed by reading Science and Health.

Four years ago I purchased a copy of "Science and Health with Key to the Scriptures." By studying it and the Bible, I was healed of what the family physician called catarrh of the throat. When he said he could do nothing more for me, I tried other physicians in Chicago and was finally advised to go to a specialist. I did so and he said he could not cure me but promised relief. He called my disease consumption of the throat.

The healing was perfect and not a symptom has appeared since. We are a family of seven, and not one drop of medicine has been taken by any of us in four years. Before that the doctor was a frequent visitor at our home. We all thank God for this Truth, and may His blessing be with the ones who brought it to us.

C. E. H., Buffalo, N. Y.

The Sentinel.

Dear Sentinel:—I have just finished reading the Sentinel of March 23. I cannot express the delight experienced at reading this most excellent number. From the editorial on the Lesson-Sermon, the Lecture by Mr. Tomlinson, the article by Judge Clarkson, the testmonials of healing, and the accounts of the lectures, I have received an uplifting. The great wonder is how did we manage to do without the Sentinel? How can any sincere student of Christian Science do without it? If the Christian Scientists were awake to the importance of this messenger it would show a subscription list of two hundred thousand subscribers.

March 27, 1899. H. T. H.

Notices.

Regarding Free Subscriptions to Public Libraries.

Christian Scientists when sending requests to the Christian Science Publishing Society to have the Journal and Sentinel sent free to the public libraries, should state that the consent of the librarian has been obtained and that the periodicals will be placed on file where they will be accessible for readers. Requests for Journal and Sentinel to be sent to libraries should come from those who are advertisers in the Journal or have their endorsement.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen. Send order to Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston.

We wish to say that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other number to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., APRIL 20, 1899. Vol. 1 No. 34

Militarism and Democracy.

AT the third annual meeting of the American Academy of Political and Social Science, of Philadelphia, the Hon. Carl Schurz delivered an address on the subject, "Militarism and Democracy." He said, in part:—

There has of late been much talk about the necessity of enlarging the field of our foreign commerce, and of large armaments, and even of the acquisition of foreign territory, to sustain our commercial interests in foreign quarters. But while that talk was going on, our commerce was very extensively enlarging its foreign fields without big fleets and without colonies, by its own peaceful action. We simply produced, in our factories, as well as on our farms, more things that other nations wanted, and could offer them at prices with which other nations could not compete.

This golden key of industrial progress and peaceful commercial methods opened to our trade many doors which seemed to be closed against it by all sorts of artificial obstructions; and this peaceful expansion of our foreign commerce went steadily on while other nations that had an overabundance of battalions, batteries, and warships, vainly struggled to keep pace with it. These are facts, undenied and undeniable.

But what will happen to us, commercially, if other nations seek by force to monopolize certain fields of trade for themselves, and in the course of that effort come to blows with one another? Then a sober and circumspect calculation of the advantages to be gained, and of the price they would cost, will probably lead to the conclusion that in such a case a strong neutral power would enjoy very favorable opportunities, and in the end have the best of the bargain. And when I speak of a strong neutral power, I do not mean a neutral power so fully armed that it might at once successfully cope with any of the belligerents, but I mean a neutral power strong enough in its resources and in its position to make each belligerent extremely anxious to abstain from anything that might drive it to the other side.

Such a neutral power this republic was not in its infant state during the Napoleonic wars preceding our war of 1812, when both belligerents, France as well as England, thought they could kick and cuff this republic with impunity; but such a strong neutral power this republic, with its seventy-five millions of people and its immense wealth, is now. No belligerent would dare to disregard its neutral rights; and at the end of the fight, the combatants well exhausted, it would probably be in fair position to exercise a very powerful influence upon the terms of settlement.

Such a policy, harmonizing with our principles as well as our traditions, safe as well as advantageous, would not oblige us to keep up large and costly armaments; and it would, at the same time, teach our business men to rely for profit, not upon benefits to be gained for them by force of arms, subject to the fortunes of war, but upon their own sagacity in discovering opportunities, and their own energy in using them—which, in the long run, will prove to be the only sound basis of a nation's commerce under any circumstances.

There seems to be, then, in all these respects, not only no necessity, but no valid reason, for our turning away from the old democratic policy and embarking in that course the pursuit of which costs European nations so dearly, and which they justify only on the ground that the constantly threatening dangers of their situation actually force them to follow it. On the contrary, there would seem to be overwhelming reason for doing everything to preserve our happy exemption from such dangers and necessities, as a blessing so exceptionally great that the American people could not be too grateful for it.

But we are told that there are certain populations in distant lands to whom it is our duty to carry the blessings of liberty and civilization, and that this may require larger armies and more warships. However laudable such a purpose may be, if sincere, it behooves us as sensible men soberly to consider the consequences of the attempt. I have already spoken of the armies of revolutionary France, that went forth to fight for general liberty and that conquered for despotism. It cannot be denied that those French armies brought to some of the peoples they overrun certain beneficial reforms. But with those reforms they brought foreign rule, and most of the "liberated" peoples found foreign rule more hateful than they found the reforms beneficial; and they availed themselves of the first favorable opportunity to throw off the foreign rule of the "liberators" with great slaughter.

We may flatter ourselves that, as conquerors, we are animated with purposes much more unselfish, and we may wonder why not only in the Philippines, but even among the people of Porto Rico and of Cuba, our benevolent intentions should meet with so much sullen disfavor. The reason is simple. We bring to those populations the intended benefits in the shape of foreign rule; and of all inflictions foreign rule is to them the most odious, as under similar circumstances it would be to us.

Items of Interest.

The war with Spain officially ended with the formal exchange of ratifications of the treaty and the proclamation of peace by President McKinley on the afternoon of April 11, just a year to a day since the President sent to Congress the message recommending forcible intervention in Cuba, which led to the declaration of war by Congress, and the opening of hostilities ten days later.

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

Immediately after the exchange of ratifications President McKinley issued the following proclamation:—

Whereas, a treaty of peace between the United States of America and her majesty, the queen regent of Spain, in the name of her august son, Don Alfonso XIII., was concluded and signed by their respective plenipotentiaries at Paris on the tenth day of December, 1898, the original of which convention, being in the English and Spanish languages, is word for word as follows:—

(Here full text of treaty is included.)

And whereas, the said convention has been duly ratified on both parts, and the ratifications of the two governments were exchanged in the city of Washington, on the eleventh day of April, one thousand eight hundred and ninety-nine,

Now, therefore, be it known that I, William McKinley, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this eleventh day of April, in the year of our Lord one thousand eight hundred and ninety-nine, and of the independence of the United States the one hundred and twenty-third.

WILLIAM MCKINLEY.

By the President,

JOHN HAY, Secretary of State.

Ambassador Cambon informed the President that Spain would resume diplomatic relations with the United States by sending a minister here, who, it is understood, will be Duke d'Arcos.

In acknowledgment of the good offices of the French government in bringing about peace, the President has written the following letter:—

Department of State,
Washington, D. C., April 11, 1899.

His Excellency Emile Loubet, President of the French Republic, Paris:—On this auspicious occasion of the consummation of peace between the United States and Spain, I beg in the name of this government and people, and in my own, to express my high appreciation of the part filled by the Republic of France in promotion of this happy result. In this kindly office so performed, my countrymen will see another link in the amity that joins the two nations.

WILLIAM MCKINLEY.

The following reply came from President Loubet:—

Paris, April 12, 1899.

To His Excellency, William McKinley, President of the United States, Washington:—I am deeply touched by the sentiments which your excellency was pleased to express towards me on the occasion of the signing of the ratifications of the treaty of peace between the United States and Spain, and I heartily thank you therefor. I especially desire to assure your excellency of the sincere desire of the government of the Republic and its president constantly to draw closer the bonds of traditional friendship which have so long united the two great republics.

(Signed) EMILE LOUBET.

It is felt that unless the American commanders can soon meet and crush Aguinaldo's army in force, the fighting will be prolonged indefinitely, interrupted by the rainy season. If the rebellion is protracted beyond the rainy season, the six months' re-enlistment of the volunteers in the Philippines, and of the three thousand regulars who enlisted only for the war with Spain, will not meet the needs of General Otis, and the administration will have to call for volunteers under the new army act. It is hoped that in that event a large number of the volunteers now in the Philippines will answer the call, and re-enlist as volunteers.

The New York democrats observed Jefferson's birthday at the Metropolitan Opera House, New York City. Addresses were made by the Hon. Perry Belmont, Judge Augustus Van Wyck, the Hon. R. B. Roosevelt, and others. The banquet was one of the most magnificent ever given. Jefferson was referred to as one "whose monument is the Declaration of Independence—the first Democratic President, the first Secretary of State, the constructor of the first Democratic platform, the founder of the Democratic party."

A representative of the Boston Herald recently made a "trolley trip from Boston to New York City in forty-nine hours, including two night stop-overs.

The trip was continuous excepting jumps by steam railroad aggregating fifty-seven miles, over territory that will be connected by street railway lines by the end of the season —when a person may travel from Boston to New York all the way by street cars. The Herald man's car fares amounted exactly to $2.30.

The French ambassador, M. Cambon, recently presented to the government, through President McKinley, two magnificent Sevres vases from the French national pottery at Sevres. The vases and pedestals stand six or eight feet high, and are of a deep blue. The gift was from the late President Felix Faure, and commemorated the opening of the new Franco-American cable on August 17 last, when President McKinley and President Faure exchanged the first messages.

The President has received a despatch from Professor Schurman, president of the Philippine Commission, in which he says in effect that the recent proclamation has done a great deal of good, that many natives are visiting the commissioners and proffering their allegiance to the United States. They say Aguinaldo is tyrannical, and they like the promises of our commissioners better.

The Canadian Government has decided to rush the Pacific cable between Vancouver and Australia and New Zealand, in order to forestall the prospective American cable between California and the Hawaiian Islands. It is apprehended that when the United States enterprise is once started the Americans may reach out with a network of cable over the Southern Hemisphere.

Information is received that on April 1, a party of two hundred and fourteen American and British sailors were attacked on a German plantation at Apia by eight hundred insurgents, and three officers and four men were killed. The owner of the plantation has been arrested on the charge of inciting a revolt.

The total number of prisoners in Massachusetts April 1, 1899, was 6,523. On the same date in 1898 the total was 7,848, showing a total reduction during the year of 1,325. Up to the beginning of last year there has been a constant increase in the prison population of the state since 1892.

During the calendar year 1897, the agricultural exports of the United States amounted, in round figures, to $730,000,000, and in the calendar year 1898 to nearly $852,000,000. The exports of manufactured goods during 1897 aggregated nearly $280,000,000, and in 1898, $308,000,000.

Ex-Judge Stephen J. Field died at his home in Washington, D. C., April 9. His retirement from the supreme bench in December, 1897, after a continuous service of nearly thirty-five years, marked the longest term of office ever held by a justice of the United States Supreme Court.

The returns for February show an increase of imports from Cuba, Porto Rico, and the Philippines into this country amounting to $374,408, and a corresponding increase of exports from the United States to the islands of $693,269, as compared with the same month a year ago.

At a recent meeting of the Boston Presbytery the question as to whether the use of tobacco was sinful or not was decided in the negative. A motion that the licentiates and elders receive no ordination unless they give up the use of tobacco was also decided in the negative.

The three new battleships will be named Pennsylvania, New Jersey, and Georgia, and the three armored cruisers, West Virginia, Nebraska, and California. The cruisers will be named Denver, Des Moines, Chattanooga, Galveston, Tacoma, and Cleveland.

Major-General Brooke and the Commissary Department have received instructions not to use the United States funds, hereafter, to purchase supplies for the starving people of Cuba, but to take the necessary funds from the custom receipts.

The Barry Dock directors of London have asserted that they can get locomotives on quicker delivery, with equal, if not better workmanship, and at a price of five thousand dollars less per engine, in America than they can in England.

Colonel William J. Bryan of Nebraska, was the guest of honor, and delivered the principal address at the banquet given April 13, by the Jefferson Club of Milwaukee in commemoration of the birthday of the founder of Democracy.

Governor Roosevelt of New York, was recently the guest of honor at a banquet given by the Hamilton Club of Chicago, to celebrate Appomattox day. His address on "The Strenuous Life," was received with great enthusiasm.

It is reported that Aguinaldo has issued a decree directing that Spanish shall be the official language throughout the archipelago, and protesting against the effort to force the use of English on the natives who do not know it.

The joint high commission to settle the Samoan difficulties has been practically agreed upon by the United States, Great Britain, and Germany. It is expected the commissioners will sail for Apia on the 19th.

It is said that less than seven thousand volunteer United States troops remain in Cuba. The War Department is endeavoring to remove these before the rainy season.

The "Greater Chicago" resolution to enlarge the Boundaries of Chicago so as to include all of Cook County, was defeated in the House of the Illinois Legislature.

The President has selected Bartlett Tripp of South Dakota, formerly minister to Austria, as the United States representative on the Samoan joint commission.

Malietoa has been crowned king of Samoa. The ceremony was attended by the United States and British representatives, but the German officials were absent.

General Lawton while scouring in the vicinity of Santa Cruz, secured a gunboat, six launches, and two cascoes, comprising the Filipino fleet.

The Chinese Eastern Railroad has placed an order with the Maryland Steel Works for seventy-five thousand tons of steel rails.

Rear Admiral Sampson's fleet will practise evolutions off the New England coast during the coming summer.

The British cruiser Wallaroo and the British gunboat Goldfinch have been ordered to proceed to Samoa.

The Cuban generals have decided to re-instate General Maximo Gomez as commander-in-chief.

General Lawton captured Santa Cruz without losing a man, while the enemy lost sixty-eight.

After eleven months' service the eighth Massachusetts volunteers has returned home.

The amount of money in circulation in the United States April 1, was $1,927,846,942.

The rolls of the Cuban army have finally been placed in the hands of General Brooke.

On the 20th of April, the state of Iowa will pay the last dollar of its indebtedness.

The invention of the typewriter has given employment to half a million women.

When Pa Gets Sick.

WHEN pa gets sick he always knows
He's gonter die and Tommy goes
For Dr. Quack, and 'fore he 'rives
I'm hurried off for Dr. Ives,
And ma and Bess and auntie, too,
For liniments and gruels go,
And plasters and the warming brick
And everything, when pa gets sick.

Not one of us is 'lowed to play,
The baby's sent across the way,
The 'pothecary's boy's about
The hull time runnin' in and out.
The house so with his groans is filled
Folks stop to ask who's gettin' killed,
And misery is piled on thick
For every one, when pa gets sick.

We never have no table set,
Cold vittles is the best we get,
For cook is busy to the brim
Contrivin' dainty things for him,
And, studyin' of it in my mind,
I'm good deal more'n half inclined
To think—although I dassent kick—
We suffer most when pa gets sick.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. — CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety cents.

Twenty-five copies or more to one address, one year, each copy, eighty cents.

Fifty copies or more to one address, one year, each copy, seventy-five cents.

Foreign subscriptions, one year, each copy, $1.50.

Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

"Reformed Christian Scientists."

THERE comes to us an account of a class of people calling themselves "Reformed Christian Scientists." The headquarters of this new star in the firmament of religion or metaphysics, is at Grand Rapids, Mich. It is said they represent the business and professional circles of that city, and the ladies are well known in society, literary, and art circles. They are reported as believing in certain portions of the Christian Science text-book, "Science and Health with Key to the Scriptures," but not in all of it. They employ medical men just as do members of other denominations. They believe, however, that the liability to disease is an abnormal weakness, which, in their present state, they have not power to overcome.

The following is said to be a summary of their creed, constituting their only text-book:—

"I am created in God's image and likeness. I am His handiwork and all of His works are perfect. Therefore in me, in my true self, there can be no discord, no fear, no disease. I am spiritual, harmonious, free, and fearless. The source from which I draw my life is inexhaustible."

In explanation of this creed one of their prominent members had this to say,—

"As you will understand from our creed which you have heard us recite, we believe that the human race was created in God's image and likeness, and that in its normal condition it would be free from disease, sin, and unhappiness. But the race has deteriorated. It has degenerated. It is now but a wreck, a caricature of what it was destined to be, although I believe that the race is now greatly improved over what it was several thousand years ago.

"We are trying to build up, to improve. We do not expect that we ourselves will be able to attain the primal standard of perfection, but we will make an advancement. We believe in heredity and in evolution. We believe that our children will take up the march of enlightenment where we ended it, and that each succeeding generation will bring us nearer to the ideal. We believe that the use of will power is of value to us in the prevention and cure of disease, but it is not omnipotent as it ought to be. We do not expect that any of us will ever get so nearly perfect that we can conquer disease by mere will power, the most that we expect is to make a very few steps toward that power.

"We are not radicals and we are not fanatics. We believe in nothing superhuman, occult, or theurgic. All of our beliefs are founded upon accepted natural laws.

"Why is it that we so often repeat our creed, 'I am created,' etc.? That is simply an exercise for the development of the will. It gives us confidence, strength, and inspiration. The best way to develop the will is to use it, to be determined and unwavering.

"Do we believe in mental telepathy, and hypnotism? Most assuredly we do. None of us are telepathists or hypnotists, but we believe in those sciences. They are beyond and above us, but there are others who are more advanced than we are. The sciences of telepathy and hypnotism are based upon the principles of the 'dual personality' or 'alter ego' theory, first advanced by Max Muller, the celebrated German philosopher. Read his works and you will become converted to our doctrines."

We have nothing to say as to the right of this or any other people to hold their own views, religious or otherwise. What seems remarkable and inconsistent to us, however, is the fact that they call themselves "Reformed Christian Scientists," or that they assume to themselves the title of Christian Science in any way whatever. The definition of their creed, as above given, clearly shows that they are as far removed from the teaching of the Christian Science text-book as possible. Believers in hypnotism, theosophy, telepathy, etc., do not claim to be Christian Scientists or to have any connection with them. Yet we are told by the person defining the belief of these "Reformed Christian Scientists," that hypnotists, theosophists, and telepathists are higher and more advanced than the Reformed Christian Scientists. Here seems to be a very glaring inconsistency. If the greater have no affiliation with Christian Science, how can the lesser?

Christian Science proper eschews medicine and all material remedies absolutely, basing its belief in curative power wholly upon the Divine will. It seems that the Reformed Christian Scientists, while using medicine, are nevertheless cultivating their own will power, with reference to making it a curative agent.

Their conception of the image and likeness of God seems to be the exaltation of the image and likeness to a level with God, rather than its subordination absolutely to the Divine will.

The distinction between Christian Science, which teaches the supremacy of God, and the new systems that are springing up over the country, teaching the supremacy of the human will, is becoming more and more clearly defined. It is becoming, indeed, a test as to the true and false. It is sharp and incisive.

Christian Science, as discovered and founded by the Rev. Mary Baker G. Eddy, and defined in her text-book, "Science and Health with Key to the Scriptures," invites the world to place itself at the feet of omnipotent Good in humble submission to the Divine will, as taught and exemplified by Christ Jesus, his apostles, and disciples. It declares this to be the only way; there is no other. There is no short road nor side track to the kingdom of divine Truth. Those who seek to climb up some other way will but meet the fate of all who have gone before them.

To attempt to exalt the human mind, with all its weaknesses and infirmities, to the altitude of the divine Mind, is as impossible as to transform darkness into light. Only as the human mind is brought into such relationship with the divine Mind that it reflects only the sinless condition manifested by the Son of God, can it in any true sense be said to be a healing power.

There is but one power—God—and that power must be reflected by the "Son of God,"—that is, by God's idea. Thus reflected, it heals sickness and sin, and will overcome death.

Those who are willing to meet the issue that is made by Christian Science and to demonstrate it in works, are entitled to assume the name of Christian Science but none others.

That "higher criticism" which accepts or rejects at will portions of the Christian Science text-book, will find itself as sadly adrift, as are the adherents of the higher criticism

Digitized by Google

of the Bible, who exercise a like privilege with reference to it. May the day soon come when all will be ready, from the least to the greatest, to accept and follow the Christ Way.

Reports of Lectures.

It is our purpose and desire to publish brief accounts of all the lectures delivered throughout the Field. If any are omitted it is because we have not received reports of them. It is likely that all the newspapers do not reach us. If those sending us newspaper accounts would cut out the part relating to the lecture and enclose it in a sealed envelope, we should be more likely to receive it. We think it would be well if the clerk of the branch churches would thus mail the *best* report of the lecture given.

It is also advised that the Sentinels which are given out after the lectures be neatly folded before they are handed to the people leaving the auditoriums and theatres. It produces less confusion if the distribution of literature is left until the close of the lecture.

A Correction.

In the Sentinel of March 30, in the article entitled "The Unitizing of the World," Rev. John H. Barrows, D.D., was referred to as president of the World's Parliament of Religions in Chicago. This was an error. We all remember distinctly that the Hon. C. C. Bonney, whose eloquent address on that occasion we have all read, was the president of the Religious Parliament. Dr. Barrows was chairman of the general committee on Religious Congresses.

The Washington News Letter.

The Washington News Letter appears in an entirely new dress and new form. It is now a thirty-two page newspaper arranged in convenient form to be read, and printed in type similar to that of the Sentinel. We congratulate our Brother Sabin on this manifest evidence of prosperity and progress.

Christian Science Better than Medicine.

DR. SAMUEL W. ABBOTT, secretary of the State Board of Health of Massachusetts, recently contributed an article to the Boston Globe, in answer to the question: "Is the practice of Christian Science dangerous to human life?" In this article, which was, of course, antagonistic to Science, he said: "The real reasons for the success of the thousand and one substitutes for rational medicine, which are constantly appearing in different parts of the world, are mainly two in number. First, the fact that the majority of all cases of illness—at least nine-tenths—tend to recovery, and the patient recovers under any system sooner or later, in consequence of what is commonly termed, 'the healing power of nature.'"

It may not be unfair to ask whether the success of "rational medicine" (such as it is), is not also mainly due to the same cause, to wit: the tendency to recovery of nine-tenths of all cases of illness?

In addition to this large percentage of cases of what doctors would call real sickness, that need no other physician than nature, there is a vast number of people who are always complaining of purely imaginary ills. It is all but universally acknowledged that many people who drag through life believing they are invalids, have nothing but imaginary disease, and physicians of all schools agree that this is so.

Then there is another very numerous class of people that are neither sick nor imagine themselves sick, who are tired of life, because they have lost courage. The outlook is dark and hopeless, and morbidly brooding over their shattered dreams of happiness, they yield to despair and throw their lives away recklessly in dissipation, and sometimes end with suicide.

With this enormous number of the civilized inhabitants of the earth, needing nothing so much as loving-kindness, cheerfulness, and hope, is there not a legitimate field for Christian Science, which supplies all these needs?

The doctors admit that nine-tenths of the people who are sick would get well without their aid, but it would be too much to expect doctors to refrain from giving medicine in nine-tenths of the cases they are called to treat. In some cases they do refrain, recommending air, sunshine, rest, etc., but it is the common experience that a call from a doctor of medicine usually means dosing with drugs. It is a pertinent question whether the drugs given to the nine out of ten whom nature would heal, hasten or retard the healing.

It might also be pertinent to ask, whether the unnecessary drugging of nine-tenths of the people who are sick does not tend to make the human family feel more and more dependent upon drugs, and whether this spread of the belief in drugs, instead of relying upon getting well without drugs, is not pernicious? Is it well for the race to become enslaved by the belief that drugs must be swallowed whenever any one is sick?

Even if Christian Science were not a cure for chronic diseases (which it is, however), it is just what is needed by nine-tenths of the sick, and by all who, being well, imagine themselves sick, and by all the people who are hopeless and morbid.

In the case of one of those who would get well without drugging, for example, what is the better mode of treatment? Is it reasonable to suppose that such a person will hasten to recovery if surrounded by medicine bottles, and if the oppressive odor of drugs is always in his nostrils? Christian Science silences all conversation about sickness; thrusts away the drugs and invites the sick man to talk and think about Life, health, purity, and goodness. It opens refreshing channels for his thought, luring it away from the morbid contemplation of symptoms, and the change of thought is quickly followed by a healthful reaction of the bodily functions.

Even granting that Christian Science would fail to cure in one case out of ten (and Dr. Abbott says nine out of ten may recover under any system), it is not shown that the doctors would do better. They fail to cure the tenth man, frequently, and some of these failures are redeemed by Christian Science treatment.

Supposing that two lots of sick people are to be treated, ten in each lot, each having nine persons who would get well under any system of treatment, or without any kind of treatment, and one who might not be cured by any system of treatment. Let one lot be treated by a doctor of medicine and the other by a practitioner of Christian Science, as taught in the text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, and what results might be expected?

The chances are that the doctor would administer drugs to all of his ten patients. He might believe that some of them would recover if let alone, but not being sure of it, and being in the habit of drugging, he would, more than likely, give all of them some medicine, if nothing more potent than salt and water. Grant that the drugs themselves do no harm and nine get well, while the tenth is not helped, has the best thing been done for the nine? They are released from the doctor's care, believing stoutly that drugs healed them, when in fact they recovered in spite of the drugging. They are, of course, no better morally than they were before taking treatment. In the case of some, possibly they are worse, if they shall have acquired the chloral, morphine, or chloroform habit. If nothing worse results, it is possible that some of them will fall into the habit of drugging themselves and every one about

Digitized by Google

them, every time there is any complaint of illness. Finally they will take such a morbid interest in discovering new symptoms of functional disorders that they will begin to regard the human body as a nursery for the propagation of disease, and will quite forget that there is such a condition as health. As a man's thought becomes centered on disease and he looks for it, he is certain to find it.

What would the Christian Scientist do with his ten patients, of whom, be it remembered, nine should get well under any treatment or with no treatment at all, and one might not be curable under any treatment, according to medical opinion? All are required to give up every kind of material remedy before the Scientist will consent to take their cases. They have therefore no ugly medicine bottles around them to remind them constantly that they are sick. All are encouraged to expect health instead of prolonged sickness or death. They are requested to quit talking about their symptoms to friends and are advised to quit even thinking about their symptoms.

This is the negative side. Now having, as far as practicable, put drugs and disease away, the Scientist tells the patients that God is Life, Truth, and Love, and that He is just as able and willing to heal men's diseases, as He is to cleanse them from sin. They are assured that Jesus and his disciples did really heal the sick, just as the Bible says they did—by the word of God and not with drugs. They are told that the same loving Father, the infinite Mind that rules the universe, who healed the sick eighteen hundred years ago, is healing the sick again in this age. The patients are given to understand in the beginning that they must try to put themselves in the right attitude toward God, if they are to receive help; that is, they must faithfully strive to be pure, unselfish, kind, loving, and honest. They gradually put malice, hatred, envy, selfishness, and deceit out of thought, letting more cheerful, healthy occupants come into consciousness to take their place, and as this process goes on the sickness fades away.

Not to assume any special advantage for Christian Science, let it be granted that one of the ten is not helped. Have the nine who got well been benefited more than the nine who got well under medical treatment? Yes. They have discovered, if not that God does now heal the sick, at least that it is possible to get well without drugs and to get well, too, under very cheerful conditions. They will not be so quick to magnify their ills in future and they will be less likely to look morbidly for symptoms of disease.

These are very valuable lessons to have learned, but above all in importance is the question, are they any better morally? Yes. They have learned that there is a certain relationship between sin and sickness, and know that often, if not always, the relationship is that of cause to effect. They are impressed with the necessity of being pure, honest, and good, if they wish to be healthy, and are advised to study the Bible earnestly, and to pattern their lives after that of Jesus. It would be contrary to the experience of Christian Science practitioners, if at least six of these nine should not take up Christianity with the zeal of men who wish to be doers of the will of God.

Let it not be forgotten that the results in the hypothetical cases described, are supposed to be what might be expected with people who would have recovered their health anyhow. Surely it must be admitted that common sense would dictate a similar course of treatment to that adopted by Christian Science for handling such cases.

Doctors say that they recognize the value of cheerfulness and hope in healing the sick, and declare that they try to employ these helps, but how can they hope for much success when they give a man one or more mixtures of drugs to be taken at short intervals, which remind him just that often that he is sick? The odor of iodoform and the taste of cod liver oil are not calculated to make a man feel cheerful.—Denver Republican.

Record of Physicians as found in the Bible.

In his last article "Democrat Doctor," quotes a number of Scripture passages referring to the use of medicines, and spends time trying to convince us that medicines were used at different times in the history of the world. "Doctor," permit me to say to you that no Christian Healer doubts that medicines were used by some people at different periods of the world's history, any more than they doubt that polygamy was practised and tolerated by certain people. The question is, did God authorize, approve, or use, medicines? I referred to the case of King Asa, who died because he applied to physicians instead of God, and the case of King Hezekiah, who was healed and had his life lengthened, because he applied to God, and not to physicians, purposely to show the difference between applying to God, and applying to physicians. Numerous instances could be cited from the Scriptures showing that before physicians were ever named or known, men lived to nearly a thousand years of age. There is abundance of good medical evidence on record to show, that in the judgment of many of the best physicians who have studied and practised *materia medica* during the present century, that drug medication is a failure and cannot be relied upon. The noted Dr. Benjamin Rush, of Philadelphia said, "It is impossible to calculate the mischief Hippocrates has done, by first marking Nature with his name, and afterwards letting her loose upon sick people." Your attempt to show that figs had anything to do in healing or adding additional years to the life of King Hezekiah, is not the first time in the history of the world, when the product of the fig-tree has been resorted to by those who were not satisfied with God's way of dealing with man.

Nearly twenty-five hundred years of the world's history had been recorded before we find any mention of physicians, then they are spoken of in a case of embalming a dead man; then nearly two hundred more years roll by before they are mentioned again. This time poor old Job tells them that they are "forgers of lies," and "of no value;" then near five hundred more years roll by until King Asa had his experience with them, and slept with his fathers. After that they are not mentioned again in the Old Testament. Only three times in the world's history from Adam to Jesus, are they referred to. In the case of the embalming they may have been a success, but so far as benefiting the living there is no evidence in their favor. Now for the New Testament evidence. In Matthew, Jesus says, "They that be whole need not a physician, but they that are sick. But go ye and learn what that meaneth. I will have mercy, and not sacrifice: for I am not come to call the righteous, but sinners to repentance," and Mark repeats the same thing practically—and also gives the case of a poor woman who "had suffered many things of many physicians, and *had spent* all that she had, and was nothing bettered, but rather grew worse." Paul in that noted fourth chapter of Colossians, the chapter that used to be so dear to the heart of the advocates of human slavery, speaks of Luke, as "the beloved physician," but please bear in mind that when Paul speaks in this endearing manner of Luke it was after Luke had abandoned drugs, and had been practising Christian healing for more than thirty years. This closes the history of physicians so far as anything can be learned from the New Testament. Summed up in brief, we fail to find a single case where mankind was benefited by physicians, while on the other hand, it is clear that one patient was left in a worse condition after taking their treatment than she was when they commenced to treat her. She no doubt felt toward them, much as Job felt when he said they were of "no value."

The "Doctor" endeavors to make it appear that Christian Scientists in their treatment, rely on material remedies, and accuses me of "juggling with words," when I state that they are not therapeutists. The definition given by the

Digitized by Google

Standard Dictionary to the word Therapeutic, is "a medicine efficacious in curing or alleviating disease." This same authority says that medicine is "a substance possessing, or reputed to possess, curative or remedial properties." It is very clear, then, that I am not engaged in the use of a therapeutic, as the "Doctor" would have us believe when I sit quietly at home to avoid tobacco-smoke or a chilly wind, if I am suffering with so-called disease. Paul had no thought of therapeutics, when he said (as Rotherham's translation gives it), "Let us approach, with a genuine heart; in full assurance of faith, having been sprinkled, as to [our] hearts, from an evil conscience; and having been bathed, as to [our] body, with pure water; let us hold fast the confession of the hope *without wavering;* (for faithful [is] *he that promised;*) and let us *attentively consider* one another for an inciting of love and noble *works*" (Hebrews, 10 : 25).

The attempt to associate Jesus as a physician with the practising physicians named in the Bible, "Doctor," won't do in this day of free schools. The dictionary referred to above gives the definition of physician as "one versed in or practising the art of medicine, or healing bodily diseases; a doctor; often used figuratively in a Moral Sense." Physicians then, as now, claimed to understand how to cure physical ailments. Their continued failure to demonstrate, to do that which they claimed they could do, gave rise to the saying quoted by Jesus, Luke, 4 : 23, "Physician, heal thyself," which simply means that inasmuch as you are not able to heal yourself, do not claim you are able to heal another.

The wonderful power of the unbelief of the people in the country of Nazareth where Jesus was raised, is shown in Mark, 6 : 5, 6. *"And he could there do no mighty work, save that he laid his hands upon a few sick folk, and healed them. And he marveled because of their unbelief."* Christian healers of the present day have this same unbelief to contend with. Is it any wonder, then, that our Christian healers sometimes fail to heal, when even Jesus himself was so influenced by this doubtful spirit on the part of the people he would bless, that "he could there do no mighty work"? The great wonder, when we consider the tremendous power that opposes them is, that they succeed at all! Jesus once said to a crowd of unbelieving orthodox Jews, "Many good works have I shewed you from my Father; for which of those works do ye stone me?" (John, 10 : 32).

The same question is asked by Christian healers to-day. How strange it is! Look at it! A Christian man or woman from a study of God's word comes to believe that God is a present help in every time of need, and that God's grace, or favor will enable him to overcome disease. Such an one humbly trusting in the promises of God to help, refuses whiskey, opium, and other drugs, and trusts life, health, and all that is considered of value to man, into the hands of his God. Observe the result upon his brethren in the church! The cold shoulder is turned to him. He is no longer honored with a place or position. Elders in many cases scarcely dare to recognize him in public. Pastors are admonished to give him a *wide berth,* and many of those who formerly enjoyed Christian fellowship with him, show plainly in numerous ways that they consider him a heretic. Does he love the Christ any less? Is he less prayerful? Does he study God's word less? Is he in any way less faithful in his duty as a citizen, a neighbor, or a friend? In a word, is he less Christ-like? There is but one answer to all these questions, "Doctor." The time draws near when all Christian ministers will be Christian healers. When the Christ Spirit will drive out the spirit of persecution from our churches. When God's power will be recognized as the *All-Power.* Then, and not until then, will God's will be done in Earth as it is in Heaven.

H. C. BAIRD.

In the Woodford County (Ill.) Democrat.

Reply to Rev. Wheat.

Editor Pantagraph:—I wish to reply to Mr. Wheat's article in your issue of March 15, which has just come to my notice.

Mr. Wheat says, "God made man's body out of the dust of the ground." The Bible does not say so. In the first chapter of Genesis we have given us the account of God's creation, wherein man was last created and created in the image of God; and all that God created was pronounced good. In the second chapter of Genesis we find what seems to be another account of creation wherein man is the first that was formed; and throughout this account everything is the reverse of the account given in the first chapter. But in the second chapter, it is the Lord God that "formed man of the dust of the ground." Now a lord is a ruling thought: and the Lord God is only the highest mortal concept of God, which may not be—in fact is not—God at all. We observe that this Lord God creation, or this mortal concept of creation occurs only after "there went up a mist." It is indeed a misty conception.

If "man is a dual being," an amalgam of both animal and angel as Mr. Wheat states, then God, of whom man is the likeness, must also be part animal. It seems to us that this is the double-minded condition against which the Scriptures warn us.

Christian Scientists hold that God is Spirit and Spirit only; and that man is the perfect likeness. We know no more of man than we know of God. When we "see Him as as He is, we shall be like Him."

Mr. Wheat says, "the God of Christian Science cannot hear and answer prayer." Christian Science prayers are being answered constantly in the healing of disease, as well as in the destruction of sin. But in prayer, Christian Scientists do not address an auditory nerve. When we desire anything of mathematics, our desire (or prayer) is answered only as we conform to the principle of mathematics. We do not expect to change the principle. When our prayers to God, the Principle of being, are answered it is because of our conforming to the Principle of being, and not because God is persuaded to do that which He otherwise would not have done.

As to the statement that Christian Science and hypnotism are identical, the highest authority among hypnotists, as well as Christian Scientists, all declare they are unlike in every particular. Who shall be accounted as authority? Hypnotism is the action of one human mind (so-called) upon another, all in the realm of belief, and God is entirely left out. Christian Science is based on the understanding of God and belief is left out; the only evidence that understanding is reached being the signs following. When understanding is reached, belief is necessarily destroyed.

We are pleased to note that although Mr. Wheat's former articles stated that "Christian Science is not Christian," he now says "when Christian Scientists insist on love as the dominant principle in human life, so far it is Christian." And as he further studies the subject, the more of the love and the Christian will he find in it.

I feel that much good has resulted from these newspaper articles, written as they have been in the spirit of love. And if there is anything in this article prompted by anything less than love, it is not Christian Science.

But we cannot accept Mr. Wheat's statement that Jesus' command to "heal the sick" was a "restricted commission" and "not passed on to the church, but left out." If so, Christians for three centuries after the ascension violated the countermand, by continuing to heal all manner of disease.

In John 14 : 12 we read: "He that believeth on me, the works that I do shall he do also." Are we believing? Are we doing the works? Do the signs follow our works which follow "them that believe"? If not, what must be the conclusion? What signs have we that we understand Jesus' teachings? for understanding is as essential in matters of religion as in anything else. "With all

Digitized by Google

thy getting, get understanding" (Proverbs, 4 : 7). Again, "The knowledge of the holy is understanding" (Proverbs, 9 : 10). Are not the works the only evidence of understanding? "Wherefore by their fruits ye shall know them."

Mr. Wheat says, "Christian Science denies the leadership of the Holy Spirit, and substitutes Mrs. Eddy as the Leader." We are surprised at this statement. If mortals are not in need of leaders, if they need not to have the Scriptures explained, why have we so many preachers? But how about substitution? The first tenet of all Christian Science churches contains these words: "We take the Scriptures for our guide." Mrs. Eddy constantly points to the Scriptures and says to her students, "Jesus meant all that he said."

Jesus said, "My words shall not pass away." Mr. Wheat says some of them "were not passed on to the church, but left out." In other words, "they have passed away." Is not this substitution?

The writer is not a theologian, but for a number of years tried, as a member of an orthodox church, to follow the teachings of theologians; tried to believe that Adam was God's likeness; that God's likeness was a combination of both good and evil, both Spirit and matter; that God was infinite and that yet there was much room outside of this infinity for something else; that God was all-power, and that there was yet another power about equal with God called devil.

These and many other such beliefs, this double-minded condition, this "house divided against itself," could not and cannot stand. As these beliefs were crumbling I seemed to have nothing left on which to stand. Christian Science was at this time brought to my notice through the healing of a near friend whom physicians, after consultation, declared could not be healed. Notwithstanding the evidence of healing, I spurned Christian Science, saying I would accept nothing which could not be scientifically accounted for. After being assured by a friend that it was Scientific, I promised to look into it. I bought a copy of the text-book, "Science and Health with Key to the Scriptures," by Mary Baker Eddy, and began its perusal. The more I study the book, the more I find it to be Scientific. I have since seen its rules applied in cases of disease and many cures affected thereby. This book throws a light on the Scriptures (when read not with a view to criticise) that is truly wonderful.

It is the Science of Christ, Truth, and its rules are as demonstrable as are the rules of mathematics.

FRANK P. CASEY.

In the Daily Pantagraph, Bloomington, Ill.

Beautiful Temple of Worship.

THE opening of the new Christian Science Church edifice in Toledo to-day is of deep interest not only to Toledo Scientists, but to all in Ohio, as it is the first building erected in the state wherein to worship God according to the doctrines of Christian Science.

This building while in process of erection was the subject of much interest and curiosity. The beautiful lot, which was presented to the society by Miss Sarah J. Clark, C.S.D., the pioneer Scientist in this city and the one in charge of the work, is one of the most sightly in the city. The small triangular park at the intersection of Monroe Street and Grand and Lawrence Avenues, is owned by the city. Just back of this park stands the church, an ornament indeed to Toledo. It is built of Amherst blue sandstone, an Ohio stone, and was designed particularly to fit the peculiarly shaped lot. Yost and Packard of Columbus are the architects.

In the rear, to enlarge the organ chamber and permit the finishing of two small rooms for the Readers, is what was intended as an addition, but which was so closely fitted into the building, in shape octagon, with heavy stone battlements, as to become an important part, in point of architectural beauty, of the structure.

Two large windows of opalescent glass, in ruby and all the shades of amber, enhance the harmony and beauty. The windows, given by friends from other cities, are in sections of four each, finished above with large rose windows. The lower sections are in straight lines to harmonize with the stone work outside. The soft toning and shading is remarkably beautiful, and the general effect most pleasing, departing wholly from the old idea of church windows. The rose windows each include three round ones, the center of one showing the cross and crown, richly finished with jewels. In the other we see the two books best loved by Christian Scientists, the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures," written by the Founder of this new sect, Mary Baker Eddy.

The porch is made of heavy stone, and is solid and enduring. Three arched entrances admit you to shelter. The floor is of white Italian marble mosaic, with a border of soft green and red. In the center of the floor is the monogram "C. S." in delicate green, in a shield. The ceiling of the porch is of dark Flemish oak. The massive doors into the vestibule are finished in the same wood and tone, with large hand-made hinges to represent the hinges used by our forefathers in primitive times. The rough hammer-marks are as they came from the anvil. Between the doors, in the center of the porch, fastened to the stone wall, is a wrought-iron lantern, its three sides rich in opalescent, ruby, and green glass. Within is a fifty-candle power lamp, and at night the effect is most pleasing.

Over each pair of doors is a heavy lintel, whereupon the eye rests. As we enter we read on the left lintel Jesus' words, that sweet invitation which has comforted so many sad hearts and burdened lives: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." On the other side are the words of John in the Revelation: "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ."

The vestibule has a marble mosaic floor; all the mosaic work a gift from a Michigan gentleman. On either side are commodious cloak rooms. Swinging doors of ivory colored leather, admit to the auditorium and parlors. The parlors are bright and roomy, lighted at night from above by a circle of incandescent lights. Steel rolling partitions separate these parlors from the auditorium. Above the parlor in the tower is a large room decorated in green, to be used for business purposes. Above the vestibule is a gallery decorated in ivory.

The auditorium is nearly rectangular and has a seating capacity of five hundred. By opening the parlors and gallery the seating capacity of the church is eight hundred. The color scheme in decoration is ivory and gold. All woodwork, as far as possible, has been eliminated. An enormous dome surmounts the room, in the center of which is a sunburst seventeen feet across and thirty-five feet from the floor. The sunburst is of opalescent glass in the amber shades. Within this sunburst is a large window, a seven-pointed, white beveled star. The dome is brilliantly lighted at night by two circles of incandescent lights in frosted globes, about two hundred in number. The sunburst was a gift from the little children of the Sabbath School.

The carpet, a gift, is a rich body-Brussels, made expressly for this church. It is in two shades of golden brown, and harmonizes perfectly with the windows and furniture. The chairs are of curly birch, natural wood, and are large and comfortable. The pulpit furniture is rich in beauty, and is a gift of friends outside the city. The wood is curly birch, its natural color. The two pulpits for the Readers and the sofa are colonial in style and upholstered in golden brown plush. On either side of the

Digitized by Google

pulpits is a lamp-stand, over six feet in height, of oxidized silver, carrying seven lamps, the gift of friends. Over the arch back of the pulpit is moulded by hand in old English letters in ruby and gold-leaf the beatitude: "Blessed are the pure in heart: for they shall see God."

There are five entrances to the auditorium, two from the rear and the others from the main vestibule.

Back of the organ chamber, in the extreme rear of the church are two small retiring rooms for the Readers, decorated and furnished in green, by loving friends, making charming little rooms for study and quiet.

The basement is fitted with toilet and wheel rooms. The building is splendidly heated, and has a fan system, run by an electric motor.

The electrical work is said to be more complete and perfect than that in any other public building in the city.

Mr. Packard, of the firm of Yost & Packard, has given the work his personal attention.

The Sunday Journal, Toledo, Ohio.

The Lectures.

At Berlin, Ont.

The largest audience in the history of the Opera House was present Tuesday evening, April 4, to hear Carol Norton, C.S.D., deliver a lecture on "Christian Science." Hundreds were turned away because of their inability to obtain seats. It is safe to say that almost every denomination in the Twin City was represented and they attended with the desire of hearing what Christian Science is, what it can do, and what it has done. The stage was adorned with flowers. There was a centrepiece of lilies and foliage, flanked with vases of cut flowers, calla lilies, and palms. On the platform were seated Mayor Eden, Mr. H. J. Bowman, and the lecturer.

Mr. Norton is a comparatively young man, of prepossessing appearance. He has a pleasing delivery, the characteristics of which are earnestness and dignity. He has the faculty of holding the close attention of his audience and conveying to them the meaning of his thoughts and arguments. The lecture occupied an hour and twenty minutes in its delivery. It was marked by a dignity that made it deeply impressive.

Mayor Eden, in a brief but pointed speech, introduced the lecturer. He said:—

Ladies and Gentlemen:—It was a pleasure when, a few days ago, I was asked to introduce the lecturer to this audience. From the press reports of the lecture, I can assure you there is a rich treat in store, and if the lecturer can demonstrate to us how to cure the many ailments of mankind we shall be well repaid for coming here this evening.

Our town is a cosmopolitan one, and wherever you find the people of a town composed of many nationalities, you find the men and women broad and liberal minded; you find a diversity of thought and motive. You see this illustrated here all along the line, even in our business pursuits. We have more diversity of businesses here than you will find in any other town of this size in Canada; and the prosperity of our town, in my opinion, has been due in no small degree to the diversity of thought and motive we have amongst our people. Though this may be apparent in connection with our business pursuits, it is certainly more noticeable in connection with the religious denominations of our town.

This town is noted throughout the length and breadth of this Dominion as having more churches and less drunkenness than any other town in it. We find from observation that we have over twenty distinct religious denominations here, and I have no hesitation in saying, without fear of contradiction, that every one of these denominations is influencing for good the people in their respective spheres. It would be impossible for us to do without any one of these denominations, as the object of each is the betterment of the manhood of the town. A few years ago we had a new religious denomination start in our midst, known as the Christian Scientists, and they, within a few years have grown so that they are contemplating the erection of a large church. This must show to us all that their religion appeals to the judgment, as well as touches the hearts of the people—as well as do all other denominations. No doubt many of us have criticised the doctrines of this denomination, but I can assure Christian Scientists here it was in all cases done innocently, through not understanding your doctrines. Many of us, no doubt, will be ashamed of the criticisms we have made, after we hear the lecture this evening. I am forgetting myself. It is not I that you have come to hear. And I am afraid you will have the same opinion of me, unless I introduce the lecturer, as the colored man had of the long-winded preacher. He, after preaching a long and tiresome sermon, met a colored gentleman whom he well knew, when passing out of the church door, and asked him how he enjoyed the sermon. His friend remarked: "Mr. Parson, I think you passed a mighty lot of good stopping places." In fear of passing another stopping place, I now take great pleasure in introducing to you the lecturer of the evening, Mr. Carol Norton.—The Berlin (Ont.) News-Record.

At Marshalltown, Ia.

Edward A. Kimball of Chicago, the eminent Christian Scientist, delivered an excellent lecture to a large-sized audience Wednesday evening, April 5, under the auspices of the local Scientists.

County Attorney Henry Stone delivered a short address of welcome in which he said,—

My attitude toward Christian Science is plain and simple. It is like that of the great Dr. Johnson who, when he was asked why he defined a certain word as he did in his dictionary, which every one recognized as incorrect, replied, "Ignorance, madam, pure ignorance." Hence I am not in a condition either to affirm or deny any principle or proposition taught by the apostles of Christian Science.

To me it is a dark country, far beyond the Alps, and though I may have no ambition to explore that mysterious country, and see for myself its grandeur and beauty, I am always willing to welcome with pleasure the traveler who, coming from thence, by his wider experience and broader knowledge, can dispel any illusion or prejudice I may have entertained.

We live in a very contracted circle. Our actual knowledge is cheap.

Alas! We know not anything. We are as

> An infant crying in the night:
> An infant crying for the light:
> And with no language but a cry.

He who enlarges the circle of our knowledge and helps to dispel the darkness in which we grope, is the true prophet and seer. In an earlier age than ours, the rugged intelligence of the world said: "If you do not think as I do I will kill you." The more refined intelligence of this age invites and insists upon the freest interchange of thought and opinion. And thus we grow and become strong.

> For I doubt not through the ages
> One increasing purpose runs,
> And the thoughts of men are widened
> With the process of the suns.

Mr. Stone then introduced Mr. Kimball who spoke on Christian Science.

Mr. Kimball is a pleasing, interesting, and finished speaker, who evidently knows what he is talking about.

Digitized by Google

His enunciation is perfect; every word is distinctly uttered. His reasoning is logical and convincing. The interest of his audience grows as he proceeds; there is not a wearisome moment during all his discourse.

Many went to the lecture who probably knew little about Christian Science. If they were equally ignorant of the subject when they returned home, it was their fault, not his. He spoke of the misconceptions, misrepresentations, and disadvantages under which the Science had labored, but gave as his belief that the people are beginning better to understand and therefore to believe.

The Statesman-Press.

At Cincinnati, O.

The Scottish Rite Cathedral was taxed to its utmost capacity on the occasion of a Christian Science lecture given by Mr. Edward A. Kimball of Chicago. The platform was beautifully filled in with potted plants and vases of exquisite pink and white roses, which, added to the delightful harmony of the pealing organ as the gathering people filled every available space, became an inspiration in advance of the lecture.

Mr. Kimball was presented to the audience in a felicitous and graceful speech by Hon. Charles W. Baker, the attorney. Mr. Baker said:—

Ladies and Gentlemen:—I cannot clearly comprehend why a committee waited upon me, requesting that I make this introduction. Neither by reason of profession nor theory of natural selection is a lawyer supposed to be especially Christian, and I do not see, either, exactly where the Science comes in. The Mosaic law has affirmed: "An eye for an eye and a tooth for a tooth;" but modern law would seem to indicate: "Two eyes for an eye and two teeth for a tooth." Besides, I have no use for doctors at all, and scarcely know the difference between allopathy and homœopathy. We have here one who has lectured a hundred times in a year in the United States, and one who is altogether competent to bear testimony to that whereof he affirms.

Mr. Baker alluded to various prosecutions of Scientists, which would better be called persecutions, and made an eloquent plea for individual rights, civil and religious, and for absolute liberty of conscientious action, and then presented the lecturer in the hope that the scattered seed might not fall on stony ground, but spring into a harvest of blessing for teacher and taught.

Mr. Kimball is finely proportioned and a most acceptable speaker, a thoughtful sincerity marking every utterance.

Cincinnati (Ohio) Commercial Tribune.

At Port Richmond, N. Y.

A lecture was delivered by Carol Norton, C.S.D., at Masonic Hall, Port Richmond, Staten Island, March 17, which has been rich in demonstration—particularly in brotherly love. We have a membership of only seven, and to mortal sense are not wealthy, but when we read of the demonstrations of our brethren in the west, one after another expressed a desire to contribute a share toward a lecture in Port Richmond. After one of our Wednesday evening meetings, it was suggested that we write on slips of paper, without giving names, the amount each one was willing to subscribe. The amount pledged was found to be sixty-two dollars, which was thought to be sufficient to start with. Our next question was the selection of a hall. We finally decided that Masonic Hall was the most suitable for the lecture, and upon applying to the trustees of the lodge through one of our brothers who is a member of the lodge, we were given the hall for the evening free.

The platform was surrounded by palms, and three large flags formed an effective background. Mr. Norton was introduced by the president of the Church, and for nearly two hours held the attention of the audience in a manner that proved the power of Truth, and also the desire of Staten Islanders to hear it. Many have been the expressions of pleasure on the part of those who attended the lecture and regrets have come from those who were absent, and from every quarter comes the desire to know when another will be held.

We have to thank our brethren throughout the greater city of New York and some from Newark who attended and encouraged us. Two of the local papers printed our notices, and when we desired to know our indebtedness, they sent us receipted bills. When all the contributions were received we had eighty dollars with which to meet expenses. We are grateful that we have been the means of helping to spread this glorious Truth, and to show the beauty of the Christ teaching.—R.

At Chelsea, Mass.

Rev. William P. McKenzie, C.S.B., a member of the Christian Science Board of Lectureship of the Boston Church of Christian Science, gave a lecture on Christian Science from the view-point of a Christian Scientist, at the Unitarian Church Monday night, April 3. About eight hundred people were present.

By reason of recent events in Chelsea which have been given much publicity by the newspapers, Christian Science has been the subject of a great deal of discussion in this city for the past several weeks. The announcement of the lecture was sufficient, therefore, to attract more than enough people to fill the church. Many of the audience stood throughout the delivery of Mr. McKenzie's lecture, and it is estimated that several hundred people were turned away because of the lack of seats for them.

The lecturer, who was formerly a Presbyterian preacher, spoke pleasingly. His delivery was plain, distinct, and so moderate that his hearers had ample opportunity to receive all that he said. A great deal was crowded into the lecture.

In the audience were many well-known Chelseans who are far from being Christian Scientists. After the lecture was finished, many favorable criticisms were heard.

Rev. H. S. Fiske, the First Reader at the church of the Chelsea Scientists, presided, and his introduction of the speaker was preceded by an organ voluntary by a former organist of the Boston Church of the Christian Scientists, Mr. Conant.—Chelsea Pioneer.

At Lansing, Mich.

Tuesday evening, March 28, Mrs. Annie M. Knott, C.S.D., of Detroit, gave a lecture on Christian Science in the Universalist Church under the auspices of the First Church of Christ, Scientist, of Lansing, Mich.

In spite of inclement weather, two political meetings, unexpected night-session of the legislature, and various social attractions, the house was well filled. Rev. Mr. Bard, the Universalist minister, introduced Mrs. Knott in a few well-chosen, kindly sentences. The audience gave the closest attention throughout the lecture, and at the end of the hour and a half surprise was expressed that the time had gone so quickly. Mrs. Knott voices the Truth in a clear, logical way that disarms prejudice and is convincing to the candid listener.

One lady who came with a feeling of opposition to Christian Science, said if the same lecture were to be given the next night she would go to hear it. Another who had been very antagonistic said to a Scientist, "Is this Christian Science?" Assured that it was, she continued, "Then I am converted." The pastor of the church remarked that to him the wonderful part of Christian Science was the constant and systematic study of the Bible which it required. He felt that the study of the Bible was the great need of the day, and the great lack of all the churches.

Digitized by Google

Many copies of the Sentinel were carried home by the people, and no doubt each one is doing its work.

Abbie H. Skinner, Lansing, Mich.

At South Bend, Ind.

Several hundred of South Bend's representative people gathered at the Auditorium Annex Wednesday evening, April 5, to hear Mrs. Annie M. Knott, C.S.D., of the Board of Lecturers of The First Church of Christ, Scientist, of Boston, Mass., deliver a lecture on Christian Science. Mrs. Knott handled her topic splendidly, skilfully, and intelligently, and seemed to thoroughly convince her audience of the true Christianity in this new and engaging religion. Mrs. Knott has been in Christian Science work for the past fifteen years, and it is plainly evident that she is an intelligent, refined, and thoroughly Christian woman. The stage was beautifully and tastefully decorated, and the audience one of South Bend's best. Mrs. Knott was introduced by Mr. William Bradford Dickson, C.S., First Reader of First Church of Christ, Scientist, of this city. In his remarks Mr. Dickson drew a clearly cut parallel between Christian Science and the teachings of Christ, claiming that Christian Science shows more by works than words, that this new old religion is founded on the Sacred Scriptures and pinnacled in revelation.

Daily Times, South Bend, Ind.

At Chillicothe, Ill.

Rarely, if ever, has Matthews Hall held a larger audience than the one which attended the Christian Science lecture of Edward A. Kimball, C.S.D., Friday evening, April 7, a very conservative estimate placing the number present at about four hundred and fifty. There was hardly a vacant seat on the floor, which since the removal of the opera stage and consequent enlargement of the audience room makes one of the finest lecture rooms in this part of the state.

The speaker held the closest attention of the audience, whom he seemed to carry along with him in his able presentation of Christian Science, throughout his long address which occupied about two hours. All whom we have since heard express an opinion concerning the address feel that he made a most favorable impression on the vast audience. We had expected to be able to publish Mr. Kimball's address in full, but owing to unavoidable delay in getting the type set we are unable to do so, but will have it in time for next week.—The Monitor, Chillicothe, Ill.

At Hamilton, Ont.

Basing his belief in Christian Science on the teachings of the Scriptures and on the words and works of Jesus Christ, Carol Norton, C.S.D., of New York, gave an eloquent and interesting address to a large audience in Association Hall, Wednesday night, April 5, on the "Religion and Healing of Christian Science." Mr. Norton is a clear and rapid speaker, and his style of delivery is pleasing. He made a good impression on his audience, which applauded him at the conclusion of his address.

He was introduced to the audience by Charles E. Wilson of this city.

During his address, in which he said the idea was not to establish a new sect but to get back to the manner of life which prevailed with Jesus, Mr. Norton referred several times to Mary Baker G. Eddy, the Founder of Christian Science in 1866. In conclusion he invited his hearers to attend First Church of Christ, Scientist, James Street South, on Sundays.—The Hamilton Herald.

At Richmond, Ind.

The lecture delivered at the Phillips Opera House Wednesday evening, March 15, was listened to by a large audience who received new light upon a subject that is now occupying the attention of thousands from the Atlantic to the Pacific.

Mr. Kimball has a pleasing address, his enunciation is clear and his argument very strong. He explained the many misrepresentations under which people labored in regard to Christian Science, and at no time was he uncharitable in his arraignment of those who had wilfully made misstatements regarding the tenets of his faith.

Sunday Courier.

At Utica, N. Y.

Mr. Carol Norton, C.S.D., of New York City, delivered a lecture on Christian Science in the New Century Auditorium Wednesday evening, March 29. Mr. Norton is a member of the International Board of Lectureship of the Mother Church of Christian Science, Boston, Mass., and lectured under the auspices of the First Church of Christ, Scientist, of Utica. The inquiries for the address have been so extensive that The Observer devotes a portion of its space to the matter, feeling that the interest will warrant the outlay.

The Utica (N. Y.) Observer.

At Kingston, N. Y.

Kingston people had an opportunity Monday night, April 10, to hear an exposition of the doctrines and claims of Christian Science from one of its advocates, Carol Norton, C.S.D., of New York. The Opera House was well filled with an intelligent audience of some of the best people of the city who listened attentively to the speaker as he discussed in detail what Christian Science really is—not what its enemies say it is.—Kingston Leader.

Reply to Mr. Purrington.

BY EVA S. LOMBARD.

In the North American Review for March, is an article entitled, "Christian Science and its Legal Aspects." As its author forgives Bishop Berkeley for not having understood medicine, he will forgive the writer for not dealing with "legal aspects." There are, however, other points to be defended from the standpoint of experience only, which in this case do not include law. Mr. Purrington begins by accusing Christian Scientists of "charlatanism," but acknowledges that "mental stimulus exercises enormous influence over the body." He also says the "wisest physicians admit they have not attained the limits of psychical knowledge." Are Christian Scientists then more "charlatans" in treating the mind and leaving the body out of the question than physicians are when they treat the body and leave the mind out of the question? Physicians must study metaphysics if Scientists must study medicine. Mr. Purrington says Mrs. Eddy acknowledges that Christian Scientists often give medicine, but in the foot-notes he quotes her statement that in so doing they are "departing from her instruction." Judges of Christian Science must discriminate between the Science and the Scientists. She, herself, says in "Miscellaneous Writings," p. 294, "A real Christian Scientist is a marvel, a miracle in the universe of mortal mind." No one knows this better than those who are making the bravest struggles along these lines. So it is that one is *not* a Christian Scientist when giving medicine.

Our critic says, "Science and Health is guilty of vagueness of expression, hopeless confusion of thought, vain boasting," etc. This is what most people think when first reading the book; more than this it seems a stupid repetition of the statement that Life, Truth, and Love will heal sin, sickness, and death; but after five years of study the sentences are full of meaning to the writer of this article, and the very paragraphs which seemed so much alike

Digitized by Google

give new illuminations to thought. It is a greater difference than one would expect in trying to read Shakespeare at the age of five, and understanding him in the riper years of experience. Mr. Purrington's statement that "the more ignorant the disciple, the more flattered he is to esteem himself a thinker wiser than all who have gone before," is a clever criticism, in fact, the most clever criticism of his entire article. Most Scientists have suffered from this very conceit, and it is a difficult matter to meet this sense of self-importance after a pronounced case of healing, but it must be met, or the work of healing cannot go on, and the healer who is inflated with the success of to-day may have his wings clipped to-morrow, and be shown a new field of labor in working out his own, or another's, salvation.

Laying aside, however, the subject of self-importance, Christian Science does develop the power of thought. Not that the most ignorant in Christian Science are superior to the highest out of it by any means, and this is, of course, not the case; but there is not one person who has learned to *remember* that God is Infinite Intelligence, and man reflects that Intelligence, who has not done better thinking than he did before. While the Bible teaches this, Science and Health calls our attention to it in a way that awakens slumbering thought and convinces us that in *mind only* is man the "image and likeness of God." The knowledge of this fact achieves greater results in developing noble thinking than the lack of it ever has achieved.

When some ancient philosopher, saint, or writer has given a truth to the world which approaches Christian Science, Mrs. Eddy gives him full credit for it in the most open way, and yet the world is hunting with all its might for some writer that she can be accused of having stolen from. When she says, "Bishop Berkeley was a great natural Scientist in his day and held opinions concerning absolute idealism which advance his memory to the borderland of Christian Science," Mr. Purrington accuses her of a "glow of self-satisfaction," "blasphemy to the pious," and "offense to good taste." Of course one's survey of this question depends upon whom one is placing upon the pedestal. Is Bishop Berkeley more entitled to this honor than Mrs. Eddy? If so, why? If both are seeking Truth, why should either monopolize it? Put away the pedestals and remember that many have received inspiration from the One Mind. We can also realize a brotherhood of man which will enable us to congratulate even our least brothers on their great thoughts without any feeling of patronage or detracting from the dignity of the greatest.

What superstitious eyes can see wrong in the statement that "Christianity is greater than its human founder"? Misunderstood tradition must give way to Jesus' own words, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Jesus and John both knew that this great Christianity would make every man perfect, from the "least unto the greatest," even as our "Father which is in heaven is perfect."

Science and Health enables us to understand the inspiration of Mary, which enabled her to bring forth the spiritually-minded Jesus. His wondrous teaching, his persecutions, and his resurrection are better understood. A new love is aroused for the man who solved every problem of Life. He overcame hate with love, and conquered death with the understanding of Life. A Christian Scientist *knows* that Jesus, the Christ, was not a myth.

It is too late now to say the book does not heal. One must accept the statement or, indeed, call many mortal men liars. It does not heal when the reader, like our critic, finds it "vague," or a "web of incoherent words," but it is not the fault of the book.

Those "well-paid lectures," also, have not been given for many years, and hundreds are awaiting permission to sit under her teachings at any price. A few months ago she did teach a few (seventy) well-tried and trusted friends, but without money and without price.

Mr. Purrington condemns her poetry. His condemnations are exactly like those usually applied to Browning in regard to rhyme and meaning, but no mother will find fault with the following couplet from "The Mother's Evening Prayer:"—

> Thou Love that guards the nestling's faltering flight!
> Keep Thou my child on upward wing to-night.

From the poem on "Love" we quote,—

> The arrow that doth wound the dove
> Darts not from those who watch and love.

Every word of "Shepherd, show me how to go," is full of meaning. A few lines will suffice:—

> Thou wilt bind the stubborn will,
> Wound the callous breast,
> Make self-righteousness be still,
> Break earth's stupid rest.

After all, literature as *literature* is a matter of discernment and taste. Wagner and Whistler in music and art waited long for apostles, and the test of years must also be applied to Mrs. Eddy's "vague" poetry as well as prose.

On page 351 of the Review it is plain that our critic is struggling with some of the higher problems, and all who have earnestly studied for five or ten years can see his difficulty and really sympathize with him when he calls it "jargon." Most Scientists have been through this period. So far as our "being ignorant of its meaning" is concerned, it is untrue, but love is a better interpreter than hate, and a receptive mind gets its meaning better than a resisting one (even as in our schooldays), and as its author expressly states, the book is to be *studied,* not read.

Would you take a week or two to read an Euclid or even a grammar for the first time, and then pretend to criticise it for the North American Review? But the critic does something like this and tells you *how* the healing is done. He accuses Mrs. Eddy of "lack of humor." We learn in her books that sarcasm is not humor. If Aristophanes found out that "health was harmony and love" he certainly learned one great truth. 1 Timothy, 4 : 8, says, "For bodily exercise profiteth little;" then Matthew, 23 : 25, says, "Ye make clean the outside of the cup and of the platter, but within they are full of extortions and excess." The critic knows this is what Mrs. Eddy means, and he is grasping at a straw when he tries to prove that she would not have us be clean because she says that the filth of an emigrant does not affect his happiness. He says, "bathing is deprecated." This is not true, and is wilfully misleading. As a fact, even the lowest charity patients begin to be clean after getting a slight grasp of her meaning.

He also blames Scientists for drawing a sharp line between themselves and other cults, and yet this very critic drags in a "Faith Cure" death as a "horrible and typical case."

He says "prayer is eschewed." He must have missed the page on which the Lord's Prayer is interpreted and the prayers among the poems. There is no prayer without love. Let us love and pray both. Mrs. Eddy herself prays "daily, importunately," and this will bring more honesty as well as charity into our writings as well as our lives.

Christian Science does suffer from "quacks" as well as other systems. There are "money changers" again in the Temple. Charity work has been tried and is one of its greatest dangers. The "tramp" thought is not a high thought. The thought that pays for what it gets makes the safest voter (even in a church), the safest healer, the best interpreter.

Jesus said not to cast "pearls before swine," and it *is* the *swine* thought that asks all and gives nothing.

The critic resents the increasing circulation of the book. Not only do many pay gladly the price but buy every

Digitized by Google

edition as it comes out, getting new light at every reading according to experience and growth.

The critic misconstrues the consent to call a surgeon into a demand. It takes high motives to appreciate high motives. Many Scientists do not call a surgeon, and broken bones have assumed their proper position without one. It was in love and mercy consent was given, not "sly advice" to "sham" metaphysicians. It takes the "perfect love that casteth out fear" to heal broken bones. Truthful "publicity will" *not* "destroy the cult," in spite of Mr. Purrington's prophecy.

Look to the Libraries.

WHEN in one of our large western cities recently, I visited the Public Library, and my curiosity led me to look through their subject catalogue to ascertain what they had on the subject of Christian Science, and great was my surprise to find but *one book* indexed under this subject, and said book was not one of the Mother's publications.

The library contained several copies of Science and Health and other of the Mother's works, but they were all indexed under the author's name,—Mary Baker G. Eddy,—in the catalogue of authors only.

Any one looking up the subject of Christian Science would naturally resort to the subject catalogue, but (in that library) they would not find the Truth.

Before leaving the city, I called the attention of several Scientists to the matter, and I presume ere this the error has been corrected.

It has since occurred to me that perhaps error is hiding the Truth in other places in the same way. Would it not be well for Scientists everywhere to see to it that our Leader's works are. properly indexed, so they can be readily found by seekers after the Truth?

W. E. Benson, Kansas City, Mo.

Miscellany.

Sees the Funny Side of It.

The orthodox churches of Geneva met in union service Sunday night, and imported a learned speaker to preach against Christian Science. The same week a committee of these same churches, after a careful and prayerful canvas of the situations personal, political, and moral, chose the representative Scientist of the town and urged him to lead our good people in the coming election as the only available candidate for mayor. There are enough funny aspects in the above to make one dizzy. One "Christian" church hunting for motes in the off eye of another "Christian" church, whose chief offense is a too-literal acceptance of Christ's words! But selecting for a leader a young man who loves everybody and whom everybody loves because he *lives* his *faith* among us sinners. Judged by its fruits of memberships—not only by this young man, but so far as I am acquainted, by the whole membership—the Scientist Tree has surely the best average in Geneva, for raising intelligence, character, *life!* Then think of the intellectual impertinence of one out of some two hundred and seventy sects, preaching "at" another band of truth-seekers! And so late in the century! In a land of penny papers! In 1899! I am not a Christian Scientist but I love a joke that has as many turns as a kaleidoscope.

The Patrol, Geneva, Ill.

Christian Science Reading-Room.

The Christian Science society of this city is arranging for a library and reading-room in the building adjacent to Mr. Luck's shoe store on Kemp Avenue. We are told the Scientists intend to have the room liberally supplied with Science literature of all kinds, and will furnish the room with facilities for allowing those so inclined to spend a profitable hour or so at reading.

The Christian Science society, by the way, has seemingly been growing in numbers quite steadily for the past few months. The principles which this society holds to be the true teachings of Christ, are probably as well understood by readers of this paper as they are understood by the paper itself. At all events, we lay no claim to definite knowledge concerning the tenets of the society. As generally understood, however, the society holds to the belief that the healing of the sick, without the use of drugs, or other means usually employed by physicians, is as essentially a part of Christian work to-day as it was in the apostolic days. This feature of the Christian Science belief is, perhaps, the distinguishing characteristic of this new denomination so far as its relation to other churches may be concerned. Public Opinion, Watertown, S. Dak.

"Shall Churches Disarm?"

The Rev. Dr. Gottheil preached recently in the Temple Emanu-El, Fifth Avenue and Forty-third Street, on "Shall the Churches Disarm?"

He said that notwithstanding the growth in liberality in recent years antagonism still exists among churches. Energy that ought to go to the bettering of humanity, he said, is worse than wasted in sectarian strife, and churches that ought to shake hands and compliment each other expend their resources in seeing how much harm they can do to each other.

"There is indeed religious freedom in this country," said Dr. Gottheil, "but this cannot properly be said to be due to the liberal sentiments of the churches, but to the Constitution of the United States. Although acknowledging a common Father, every church and every religion appears to have its own separate God. As to mutual sympathy and community of effort, the churches seem to have no idea of such a thing.

"Is it not time, in this closing year of the century, that this hostility of churches to one another should be made to disappear? Is it not time that we should disarm?"

Christian Science Doctrine made him Think.

Rev. Charles G. Ames lectured in the Church of the Disciples recently, on the subject of Christian Science. The speaker devoted most of his discourse to an examination of the books of Mrs. Eddy, which he said embodied the doctrine of Christian Science more completely than those of any other writer. While disagreeing with most of the theory of Christian Science, the speaker admitted that there was much in it that had made him think. There was no doubt, he said, of the power of the mind over the body. That has frequently been demonstrated in practical ways. He hoped that he might live to see a chair of mental medicine established in all first-class universities.

Boston Evening Transcript.

In West Virginia.

The society of Christian Scientists, which has become quite large and prosperous in this city, has rented the third floor of the Wetherell Building and has fitted up commodious quarters there. Nicely furnished reception rooms have been fitted up, and a library well stocked with all Christian Science literature, is a part of the place. Regular Sunday services, church and Sunday School, are to be held.

The growth of the society is something remarkable, many of the leading people, who have become attracted by cures or otherwise, having become active workers for the welfare of the organization.

Parkersburg (W. Va.) Daily State Journal.

The Christian Scientists have no difficulty in filling a very large hall. That is another token of the power of faith.—Boston Herald.

Questions and Answers.

What is the attitude of Christian Scientists toward material alms-giving, the support of charitable organizations and institutions, etc?—D. W. B.

We might answer this question by asking other questions.

What does the Bible teach upon this subject? What are we to understand from the parable of the good Samaritan, and many others of Jesus' parables?

What do common sense and common humanity teach on this subject?

What does the Christian Science text-book teach? Is it contrary to or in accord with the teaching of the Bible?

What do the many private charities of our Leader teach?

The best charity is that which removes the necessity for material alms-giving. This is the charity Christian Science is inaugurating. When the "glad day so long foretold" shall have come—the day when "all shall know Him, even from the least unto the greatest," this necessity will be no more; but mean time, let us not forfeit the confidence of our brethren who do not see as we do, by so deporting ourselves as to create the impression that we are neither charitable nor humane.

When the word "Love" is used in Christian Science literature, do we understand it as referring to divine Love or human love?—A Reader.

Love is used in "Science and Health with Key to the Scriptures," and the other works of Rev. Mary Baker G. Eddy in both senses; but where divine Love, or Love as a synonym of God, is intended, the word is capitalized. Where not capitalized the word means human, or the ordinary sense of, love.

Divine Love is immutable Truth. Human love is a mixture of human goodness and human badness; human love untempered with divine Love, often becomes hate.

The Decay of Faith.

THAT vigilant watchman on the ramparts of Zion, the New York Sun, a journal falsely accused of cynicism and Mitchellism, laments, as we have done many times, the decay of faith. The higher critics are boring like so many worms of erudition into the very heart of the Bible; eminent Biblical scholars are co-operating in furnishing the text for a polychrome Bible in as many colors as Joseph's coat, the design being to show the simple-minded reader what to believe hard, what to half believe, and what flatly to reject! Noble task for Christian clergymen, and how Renan would rejoice to see this subtle attack on the Scriptures in the name of criticism!

But to return to the Sun which shines for truth and righteousness and the fine old iron-clad Presbyterian creed. That journal calls attention to the recent resignation of the Rev. Dr. Van Dyke of the Brick Presbyterian Church in New York City, because he preferred to be a professor of English literature in Johns Hopkins University. Of course, the apprehension of the reverend doctor regarding the imminent peril of the human soul with the Pit blazing just ahead of it on the road of destiny is not so strong as it once was, else he could not descend from the sacred desk to teach English literature. He has deferred his going, it is said, but what can thoughtful people in his congregation think of him? He is plainly not at all worried about anybody's future.

The Sun says of another great Christian denomination (and we should like to hear from the Rev. Dr. Butler on this point),—

"The Methodist Church was formerly distinguished by its simple, unquestioning faith in the Bible, but when the Rev. Dr. Cadman, pastor of the Metropolitan Temple in this city, declared recently before a great company of Methodist ministers that 'the absolute inerrancy and infallibility of the Bible are no longer possible of belief among reasoning men,' he was applauded. The Baptists have not presented any such conspicuous example of a decline of faith, but it is discoverable among them also. Dr. Lyman Abbott probably expressed the frequent, if not the usual, sentiment of Congregationalist ministers when he went even further in his departure from the old theology, and Dr. Hills, who is to be his successor in the pulpit of Plymouth Church in Brooklyn, preaches vague sentimentalities only. In the Episcopal Church the radical distinction in belief and practice between the Protestant party and the Ritualist or sacerdotal party has not produced here the violent agitation which threatens the disestablishment of the Church of England as a State Church, but it is creating an increasingly wide and impassable gulf of separation. Meantime many of the Episcopal parishes seem to be substituting philanthropy for religion."

These churches and their pastors are suffering from the invasion of the microbe of disbelief; they are honeycombed with doubt and their end will be, if their downward progress is not arrested, a vague and sentimental religion with no more backbone than a jelly-fish. Positive religion such as reared the cathedrals of the Middle Ages implies an ardent faith, a belief in eternal realities, and no diet of moral mush, prepared by the cooks of the higher critical cuisine, will save the great denominations mentioned from attenuation. In the good old days, when Satan was held to be a Something, men went to the stake for their convictions, nowadays they would not leave their dinner-tables at the call of the Trumpeter Gabriel; they would allege it was a factory whistle belated.—Editorial, Mexican Herald.

Some Things Learned from Christian Science Practice.

A LADY came to me one evening after our Wednesday evening meeting, asking me to come to see her mother, a lady over eighty-five years of age, whom the physician had failed to help. He had pronounced her case to be incurable, declaring she had an inward tumor which pressed upon some nerve and prevented her walking, also she was unable to eat without great distress, and was in a pitiable condition mentally, being in constant fear of death. Her son dismissed the physician, telling him that as he did her no good, they had decided to try Christian Science treatment. Now this honest turning to Truth in the hour of need, fearing not the reproach of the world, which seeks to hold us still in bondage to material sense, is sure of a reward. Hence this aged lady improved wonderfully from the very first. Strength and appetite returned, and she was greatly uplifted mentally, no longer afraid she would die, and, filled with the "Love which passeth knowledge," she rejoiced in a new sense of life and freedom. At the end of the fifth day of treatment she called my attention to the fact that she could no longer find any evidence of a tumor, and in a week's time was about the house, making herself useful in many ways. A few days later her former physician called to see how she was, and she gave grateful acknowledgment of the help she had received from Christian Science treatment. This physician had said that when he could *see* a case of sickness healed by the Science, and be sure it was genuine, he was ready to lay down drugs and become a Christian Scientist. It may be that in this way Truth is leading him onward, and thus is inviting him to "come up higher." The honest acknowledgment of benefit received and the desire to pay for it, as far as the sacrifice of materiality could do, were pleasing in this case, showing the preparation of an honest heart which is so necessary in order to gain true healing.

Another case of a teacher in the public schools was

Digitized by Google

brought to my notice. She had been reading Science and Health for some years and had always thought of it and read it as "Mrs. Eddy's opinion," which she, being of an argumentative turn, questioned, and reasoned, and struggled over, not having a Scientist to tell her difficulties to. Finally she became worn and in a greatly debilitated condition, and hearing of my being in the place, laid her case before me for treatment. I read and talked with her, saw her difficulty, and endeavored to show her the better way while giving her treatment, but after some days found that the case was, as described by our dear Leader in "The Way". (Miscellaneous Writings), "Chronic ebbing and flowing." Then I realized that I must uncover the error for her, and cause her to see where she stood. I told her that Science and Health was not Mrs. Eddy's opinion, but was God's revelation of Truth which heals, to this age, and that she was His chosen one to give to the world, and that she, my patient, was keeping herself from receiving the benefit of Truth by holding this error in thought. She at once saw the Truth, and dropped the error, and was healed without delay, remaining well and joyful ever since. I have since found others in the same condition of mental darkness, and suffering physically in consequence.—Stella F. Sabin, Hoopeston, Ill.

From Germany.

In the Sentinel of March 16, is a notice relative to services in Berlin. The person sending it did not quite understand the situation, and it seems but just for me to say the Bible Lessons have been read at an appointed hour, without omission, for more than a year in my rooms, where the meetings are still held. My daughter and I never read alone. There are always a few friends present, who are sufficiently interested to meet with us, and from their number several have bought the "little book," and have joined our ranks.

Several copies of the Journal were gladly accepted by the president of the American Girl's Club, and placed on the magazine table in the reading room.

About the holiday time this year, there appeared among us six Scientists—all being sojourners, like myself, for a time—excepting one, a German resident who had just returned from taking a course of lessons with Mrs. Julia Field-King in London. Now our meetings have assumed a more regular form, and for the past six weeks we have had an attendance of from nine to nineteen. However, as the Readers are both young students, we have asked only those who claim to abide by the teachings of the Rev. Mary Baker Eddy. More copies of Science and Health have been ordered, also a few Quarterlies for April. Surely we have need of a competent leader, and I know this will reach the dear Mother, whose far-seeing eye will discern and supply the need of her hungering children over the sea.—Maggie Drake, Berlin West, Germany.

Words of Gratitude.

For nearly five years I have known of the "Way" to peace and holiness and I sought it; not because of the sufferings of the flesh, but because of the heart's longings for something higher than I had found in the Baptist creed and doctrine. After attending one of the meetings of the Christian Scientists, as one brother said, "I cut the shore lines and burned the bridges."

After two years, I received class teaching from a loyal student, and since then the world has indeed become new; the Bible more precious. I wish here to express to our Mother my earnest thanks for the continuous blessings outflowing from her loving watch care to the Field. Ingrate I must be, if heart did not answer to heart,—and although the world may call it "worship," we know from whence arises our joy. Higher than the heavens stands out the great fact "our God is one God," whom we worship understandingly. Words are frail wherewith to express our thankfulness to the workers at headquarters. The Lesson Committee is doing a grand work. What could be grander than the inspired words, which emanate from the Christian Science pulpit? Truth has free course there.

Our Sentinel, silent yet eloquent witness, finding its way into libraries and jails, into the minister's study and doctor's office, is accomplishing a work that cannot be measured.

There has been a great awakening in Ogden, since the lecture by Edward A. Kimball of Chicago; the increase of attendance at the meetings is very marked. The power of divine Love to heal *all* our diseases has been fully demonstrated. For myself I can say, for forty years I wore glasses but am now healed. I was also healed of a weak back that held me in bondage until the Christ-Truth dawned upon my waiting heart. At our Wednesday evening meeting one after another testify of the healing of consumption, cancer, tumors, rheumatism, neuralgia, tobacco habit, and the weary heart turned from the darkness of infidelity to the sunshine of God's dear love. Is it any wonder we are a happy people? I consider "Science and Health with Key to the Scriptures," by Mary Baker Eddy, the greatest blessing the world has received.

Mrs. Margaret Umber, Ogden, Utah.

A Tribute to the Lectures.

Nothing has impressed me so forcibly of late in the Christian Science movement as the immense benefit that is to result to it, from the work of the Board of Lectureship. It proves as nothing else can at this hour, the wisdom of our beloved Leader. not only in providing the Board but in the choice of its members. Each lecture seems to be as good as it can be, and to have a distinctive individuality of its own; but when the next is read it seems better than the last. These lectures contain such clear, forcible, deep, and convincing statements of Christian Science, that the closest student can gain a clearer understanding therefrom.

Thinkers must be impressed with their simple and yet profound thoughts, and none can read them without being deeply impressed and incited to an investigation of the momentous facts they so ably set forth.

Eliza Thruston Houk, Dayton, Ohio.

The Souvenir Spoon.

I wish to tell of a demonstration with the souvenir spoon. while a lady was calling on me one evening. She had not seen the spoon before, and while examining it, asked me to read the motto for her, as she had left her glasses at home and could not possibly see it without them. I reminded her that Mrs. Eddy had told us to read it for ourselves and not ask another. I said, "You *can* read it, now try." Finally she did so, and said it was wonderful that she had been able to do it.

I met her a few days afterwards, and she told me that she had not put on her glasses since that evening.—E. B. R.

As to Newspapers.

The Publishing Society wish it understood that the newspapers recently sent out and recalled are not to be paid for. As to those who have paid, the money will be refunded. As to those containing our Leader's article, the usual price will be charged.

Notices.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.
Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., APRIL 27, 1899. | Vol. 1 No. 35

The Hon. Geo. F. Hoar

Stands by the Principles for which Our Fathers Battled.

THE Massachusetts Society of the Sons of the Revolution celebrated, as is its custom, the anniversary of the birth of freedom in America. On this occasion Senator Hoar delivered the following address:—

I deem it a high honor to be the guest of the Sons of the Revolution on this our great Massachusetts anniversary. In the beginning, when your society was first established, I shared a little the doubt whether it were wise to create an order or brotherhood, even for this patriotic purpose, in which all American citizens could not have a part. But I am satisfied that it is all right. Every one of the great races that are blended in our national life has its own glorious traditions which it delights to cherish. The Englishman and the Irishman and the Scotchman and the Frenchman and the German and the Scandinavian each has something to tell of what his fathers did for humanity and freedom in the days that are past. He is no worse but all the better American, as he feels that in making up their account of debt and credit with the republic he and his race have had much to give as well as much to receive. So the sons of New England, the sons of Massachusetts, the sons of Middlesex, the sons of Lexington and Concord have an honest right to gather on the 19th of April, as the years go round, to revive the tender memories of what their fathers suffered, and the glorious memories of what their fathers achieved.

It is an important purpose of your society, as I understand it, to gather and preserve the history of the revolutionary time, especially the local tradition and material which otherwise would be in great danger of being lost. But, more important than this, you mean to keep alive the spirit of the revolutionary time, which I am sometimes tempted to think—although I do not in the least yield to that temptation—is in still greater danger of being lost. The greatest of all conservative forces in a republic is a great history. The War of the Revolution was no vulgar contest for empire or for glory. It was not even a contest for liberty alone. Our fathers fought for two things:

1. To secure the blessing of liberty for themselves and for their children, and,

2. That they might found on earth a government on righteousness and on the law of God.

Captain Charles Miles, one of the Concord captains, told Dr. Ripley afterward that he went to the bridge on the morning of the 19th of April, 1775, with the same sense of responsibility to God with which he went to church. That has ever been the spirit of the American soldier, from Concord to Santiago. It is for this, and not for glory or for empire, that the New England soldier has been ready to consecrate his life.

"I heard the voice of the Lord saying, Whom shall I send? Then said I, Here am I. Send me."

It is this which has given to our fathers of the Revolution their peculiar glory, and which has given to the republic they founded its power, its supreme and unequaled power, among the nations of the world. It is this which separates them from the cheap, vulgar, commonplace soldiers and warriors of mankind. You would think from some recent utterances that some people were of the opinion that if the American soldier is to be respected in the world hereafter he must be half a savage and half a beast, fighting to impose his dominion upon unwilling peoples and subject races, and that in that way only the sons of the Pilgrims and the men of the Revolution are to become a world power. Why, my friends, there have been empires enough, and wars enough, and conquests enough, and heroes enough. Some of them are left, and some of them are, thank God, dead as Julius Cæsar. The unerring judgment of history, the unerring instinct of mankind gives them their true place sooner or later. The men or the nations who fight for freedom and justice, who fight for the great doctrine of the opening sentences of our Declaration of Independence, are the men and the nations that live in the grateful memory of mankind, and not the men or the nations who fight for dominion or empire. The garlands with which Leonidas and his three hundred dressed their brows are as unfaded and as fragrant to-day as on the morning of Thermopylæ. But who cares to-day for Alexander the Great, or who knows to-day the names of his generals?

The last time I had the pleasure of meeting Mr. Taylor was in 1896, at the great banquet given to Mr. Collins by our consuls abroad. It was an occasion not likely to be forgotten by anybody who had a part in it. Every man who was present was proud to be a representative of the great republic. He felt that he had over him a flag honored everywhere, by land and by sea, representing everywhere, not only the power and the glory of seventy-five million of Americans, but representing also the hope of humanity the world over. Nobody thought then of doubting that we were a world power, or thought of his country as isolated and hemmed in and hampered in her continental home. The whole tone and thought of that meeting, without dissenting voice, without a break in its harmony was that the mission of the United States was moral, and not a mission of force; that our country stood among the nations of the world as the great peacemaker and the great peacekeeper; that wherever that flag floated, it floated to represent peace on earth and good will to men. We should as soon have thought three years ago of asking the Saviour of mankind to come down from the Mount and take service under a Roman centurion, to go into the employ of Tiberius, in order not to be isolated, as to have asked the American

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

people to descend from its lofty height to engage in the diplomatic quarrels of Europe, or the scuffles for empire in Asia.

Mr. President, I, for one, do not believe that the temper and character of the American people have changed in a twelvemonth. I believe that the principles of the Constitution and the principles of the Declaration, the doctrine on which the Revolution was fought and won, are still dear to the heart of the American people. The Sons of the Revolution and the sons of the Sons of the Revolution will gather on the 19th of April for many a year to come, and, we hope, until time shall be no more, true to the spirit of the fathers who dared to found a great nation upon the moral law and the indestructible rights of human nature. If it shall ever be otherwise, their lips will speak the shame of the living, while they honor the memory of the dead.

Items of Interest.

The prevalent discussion aroused by Governor Rollins' Fast Day proclamation as to the condition of religion in New Hampshire has called attention to the fact that religious statistics show that in 1896 there were in the state 780 religious organizations with 854 churches and other places of worship, having a seating capacity of 258,376. Out of a total state population of 376,530 the number of church communicants was 102,945, and the value of church property was estimated at $4,457,225.

Information is received from Manila that a committee of twenty-two Filipinos has been appointed to confer with the peace commission for the following purposes:—

First, to obtain as large autonomic rights for the Filipino people as possible; second, to bring about peaceful relations between the insurgents and the American authorities; third, to insist that Americans and Filipinos only shall occupy public offices.

Governor Lee has written to President McKinley demanding the return of the South Dakota volunteers from the Philippines.

He recites the facts of enlistment to fight for humanity against Spain, declares that the South Dakota volunteers have fulfilled every obligation which they owe to their country and its flag, and should be allowed to return home.

A petition has been prepared by volunteer American soldiers on the island of Luzon praying for their discharge on the island and that they shall receive travel pay, the same as though they had returned to their homes in the United States after being mustered out. In return for this concession they promise to form a national guard there. The petition contains four thousand names.

The United States cruiser Raleigh, the first of Admiral Dewey's fleet to cast anchor in American waters, was recently given a royal greeting at New York, and paraded from Tompkinsville up the Hudson to General Grant's tomb. It will be remembered that the first shot from Dewey's fleet in the battle of Manila, was fired from the Raleigh.

One of the largest contracts for dressed beef ever placed by the United States government has just been arranged with a packing house of Kansas City, Mo. The contract is for seven hundred and fifty tons of the best export dressed beef, to be shipped to the Philippine Islands for the government.

It has been announced that Speaker Reed will retire from national politics and become a member of the Simpson, Thacher, & Barnum law firm of New York. For twenty-two years Mr. Reed has represented the First Congressional district of Maine, and occupied the speaker's chair longer than any other man.

Information is received from Manila that Lieutenant J. C. Gilmour and fourteen others have been captured by the insurgents. Their fate is unknown, but Admiral Dewey will endeavor to secure their release at once; President McKinley has cabled him to use any and every means to obtain their freedom.

Dr. Manuel Zeno, a prominent citizen of Ponce, has arrived in Washington to present to President McKinley the petition of the Porto Ricans for local self-government. They have nothing to say against General Henry, but request that they be given a chance to show their capacity for self-government.

The Secretary of State has directed the United States consuls, who were obliged to leave Spain on account of the war, to return to their posts. The sub-consular officers mostly remained in Spain throughout the war, and were undisturbed. They will also be continued in the service.

The Pennsylvania Legislature has adjourned *sine die* without electing a United States senator. The senatorial contest began on January 17. On that day Senator Quay received 112 votes, the highest he received at any time during the contest. Seventy-nine ballots were taken.

The government has brought suit to recover the purchase price of about thirty thousand acres of land sold by the Southern Pacific Company to settlers, which, according to a recent decision, belonged to the public domain, and not to the railroad company, at the time of sale.

Information has been received from General Otis that he will not need a larger army than the thirty thousand regulars promised him. This relieves the President from the necessity of calling for additional volunteers to take the place of those who will be returned.

Boston and the state of Massachusetts in general observed Patriot's Day, April 19, which is a legal holiday in this state, by festivities appropriate to the one hundred and twenty-fourth anniversary of the battle of Lexington and Paul Revere's famous ride.

The Postoffice Department is preparing to send a supply of stamps to Manila for use in the islands and to replace the Spanish stamps. The stamps will be similar to those used in this country but will have the word "Philippines" printed across the face.

It is estimated that twenty thousand Canadians have found their way to the States this season. The backward spring in Canada, higher wages, and improved outlook in manufacturing towns in the States, are the causes of the movement.

The latest monthly settlement of the paper currency of each denomination shows $87,000,000 in ones and twos; $228,000,000 in tens and twenties; $10,000,000 in fifties and one hundreds. No more gold certificates are to be issued.

The Duke of Arcos has been appointed Spanish envoy extraordinary and minister plenipotentiary to the United States. Consulates have been created at Havana, Manila, Iloilo, San Juan de Porto Rico, and Cienfuegos.

Rear Admiral Howison's flagship, the Chicago, has started on a twenty-thousand mile cruise. She is to circumnavigate Africa, showing the stars and stripes where the flag has not been seen for a long time.

Under the army re-organization act the volunteer organizations now in the Philippines may be kept in service six months if they so desire, but any volunteer who wants his discharge, can obtain it immediately.

The Dominion Government has responded favorably to the suggestion of the United States that a modus vivendi be agreed to in regard to the Alaska boundary, pending the settlement of the boundary controversy.

The United States transport Sheridan, which sailed from New York, February 19, having on board the Twelfth and a battalion of the Seventeenth Infantry, has arrived at Manila after a smooth passage.

Governor Roosevelt has appointed Mrs. Mary Harrison McKee, daughter of ex-President Benjamin Harrison, to be a commissioner to represent the state of New York at the 1900 exposition in Paris.

According to the Cuban army muster rolls there are forty-eight thousand Cuban soldiers; six thousand are commissioned officers and forty-two thousand non-commissioned officers and privates.

A petition signed by the parents of several hundred members of the First Nebraska Regiment, has been forwarded to President McKinley asking that the regiment be returned home.

The President has prepared a proclamation setting apart one hundred and thirty-six thousand acres of land on the south side of Lake Tahoe, California, as a forestry reserve and public park.

Information is received from Madrid that General Rios, the Spanish commander in the Philippines has been instructed to evacuate the archipelago immediately.

During the first eight months of the current fiscal year steel rails were exported to the value of $3,433,937, and railway cars to the value of $2,422,447.

The administration has notified the Cuban planters' delegation now in Washington that mortgage obligations in Cuba will be extended for one year.

The United States gunboat Nashville, which fired the first shot in the late war, has been ordered to proceed up the Mississippi to St. Louis.

A bill has been passed by the Arkansas Legislature providing for the erection of a new state capitol at a cost not to exceed one million dollars.

A movement is on foot to found a free public library for the use of the United States troops and the English reading public generally at Manila.

An electrical engineer of Vienna has made a discovery which makes it possible to telegraph sixty-thousand words an hour on a single wire.

Silver cups were recently presented to the cruiser Raleigh in behalf of Mrs. A. W. Haywood of Raleigh, N. C., who christened the ship.

It is reported that the Spanish minister of marine will submit to the Chamber a bill for the construction of ten ironclads.

Rear Admiral Schley has been assigned to duty as a member of the naval examining board of Washington, D. C.

The justices of the supreme court of Cuba will receive $5,500 a year, and the chief justice will receive $6,000.

General Otis has offered to surrender sixteen hundred Filipino prisoners through the Spanish officers.

A coaling station for the big ships of war is to be established at the Charlestown Navy Yard.

The ninth International Sunday School Convention will be held in Atlanta, Ga., April 26–30.

James P. Taliaferro has been elected United States senator from Florida.

The cruiser Raleigh will make a tour of the ports along the Atlantic coast.

Suit about Vaccination.

Miss Martha Willet and her father, George H. Willet, 608 Cumberland Street, have sued the city for $3,000 and $1,000 damages, respectively. The suits were filed yesterday in the Court of Common Pleas by Attorney Isidor Goldstrom. The action is taken for alleged blood-poisoning caused Miss Willet by being vaccinated on March 3 by a vaccine physician. Miss Willet's arm has swollen considerably from her shoulder to the wrist and she is unable to attend to her duties. The vaccination occurred, it is said, at the factory where she is employed. She is under the care of Dr. Robert Fawcett.

Dr. C. Hampson Jones, commissioner of health, said Miss Willet is one of several hundred girls employed in a factory where also was employed a sister of a man living on North Central Avenue who was sent to the Quarantine Hospital a few weeks ago suffering from smallpox. The sister occupied a room adjoining that of her brother, and it was necessary for her to pass through his room twice a day to reach her own room. For fear that she might carry the contagion in her clothing to the factory and cause a spread of the disease, he caused all the girls in the factory to be vaccinated.

Benjamin Fuller, colored, 1424 Fairmount Avenue, says his six-months-old child died in convulsions Monday, March 13, one hour after the child had been vaccinated by a vaccine physician.

"When the physician came to my house," said Fuller, "both my wife and myself were out. The house was in charge of a woman who lived with us, and she and two other children were vaccinated before my baby was vaccinated. Shortly after the operation the child had convulsions, and my wife was summoned. When she got home she found our baby dead. The child had always been healthy, and since its birth we had never had occasion to call in a physician to it."

Dr. Jones says the death of the child was reported to him by the vaccine physicians the day it occurred and he directed them to inform the coroner. Dr. Jones said he is convinced that the death of the child was an unfortunate coincidence. He will investigate it.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. — CAMILLA HANNA, C.S.D. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

[From the Concord Monitor.]

Fast Day in New Hampshire.

ALONG the lines of progressive Christendom, New Hampshire's advancement is marked. Already Massachusetts has exchanged Fast Day and all that it formerly signified for Patriots Day, and the observance thereof illustrates the joy, grace, and glory of liberty. We read in Holy Writ that the disciples of St. John the Baptist said to the Great Master, "Why do we and the Pharisees fast oft, but thy disciples fast not?" And he answered them, in substance, My disciples rejoice in their present Christianity, and have no cause to mourn,—only those who have not the Christ, Truth, within them should wear sackcloth.

Jesus said to his disciples, "This kind goeth not out but by prayer and fasting," but he did not appoint a fast. Merely to abstain from eating was not sufficient to meet his demand. The animus of his saying was, Silence appetites, passion, and all that wars against the Spirit and spiritual power; and the fact that he healed the sick man without the observance of a material fast confirms this conclusion. Jesus attended feasts, but we have no record of his observing appointed fasts.

St. Paul's days for prayer were every day and every hour. He said, "Pray without ceasing." He classed the usage of special days and seasons for religious observances and precedents as not belonging to the Christian era, but to traditions, old-wives' fables, and endless genealogies.

The enlightenment, the erudition, the progress of religion and medicine in New Hampshire are in excess of other states, as witness her frown on class legislation, her schools, and her churches. In many of the states in our Union a simple board of health, clad in a little brief authority, has arrogated to itself the prerogative of making laws for the state on the practice of medicine! But this attempt is shorn of some of its shamelessness by the courts immediately annulling their bills and plucking their plumes through constitutional interpretations. Not the tradition of the elders, nor a paltering, timid, or dastardly policy is pursued by the leaders of our rock-ribbed state.

That the Governor of New Hampshire has suggested to his constituents to recur to a religious observance that virtually belongs to the past, should tend to enhance their confidence in his intention to rule righteously the affairs of state. However, Jesus' example in this, as in all else, suffices for the Christian era. The dark days of our forefathers and their implorations for peace and plenty have passed, and are succeeded by our time of abundance, even the full beneficence of the laws of the universe, which man's diligence has utilized. Institutions of learning and progressive religion light their fires in every home.

I have one innate joy, and love to breathe it to the breeze as God's courtesy. A native of New Hampshire, a child of the Republic, a Daughter of the Revolution, I thank God that He has emblazoned on the escutcheon of this state, engraven on her granite rocks and lifted to her giant hills the ensign of religious liberty—"freedom to worship God."

MARY BAKER G. EDDY.

Our Publications.

AT this time golden opportunities for doing good are being offered to Christian Scientists as never before. They belong to the time, and to this stage of the movement; and if ungrasped and unutilized may not return. In the end, all shall know the Truth, but they who labor for that end are blessed in their work. "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever."

The opportunity we wish to refer to is in connection with the distribution of authorized Christian Science literature. If any worker who examines the copyright insignia upon our periodicals would think for a moment what it implies—that the Discoverer of the Science of Christianity stands sponsor for these weekly, monthly, and quarterly publications, and is guarding them, with watchful look, from errors within and assaults without, this worker would be thrilled with a sense of the possibilities of blessing others by circulating these publications. When knowledge reaches its full circle among men, such agencies may not be needed; but now they are given us because of the human need for them. The Publishing Society has offered to send periodicals to public libraries where there are reading rooms, if assured that they will be willingly received and made accessible to the people. Such distribution as this can be guarded and controlled, but it would be impossible to know about the efficiency and results of promiscuous distribution, if from the Publishing House periodicals were sent to the refuges, asylums, old people's homes, literary societies, club libraries, and other institutions to which Scientists ask that they be freely sent. Manifestly the opportunity here belongs to the local workers who can watch results, and if the effort costs the price of the subscription, that sacrifice will flavor the kindness and deepen its effect upon the recipients. Those who ask the Publishing Society to do impossible things must remember that all the members of the Mother Church share in its work and rewards; and that there must be support given, and a margin of profit gained in order that beneficence may be possible. Asking others to do one's own work is like dropping buttons into the contribution box and thinking that the noise will be considered benevolence.

Requests have been made at various times to have the *Journal* and *Sentinel* sent regularly to certain newspapers. The Scientists who make these requests see for the Publishing Society "a fine opportunity to do good." Now in this land of the untrammeled press there may be found many thousands of newspapers. To send our periodicals regularly to every newspaper office in the land would incur incredible cost; yet if one newspaper were freely supplied with these from the Publishing Society, others could not justly be refused the same supply. Here again is an opportunity for local Scientists to make friends with the editors and publishers in their own towns, and prove their friendliness by bearing the cost of supplying their offices with such authorized literature as they will accept. The Christian Scientist, when he is true to the Principle he knows, is truly the friend of man. He cannot then take it for granted that any one is unfriendly to the Cause he represents. Going to them in the right spirit, he may find not only editors and publishers, but pastors and teachers, and other public men, ready to accept literature which tells the truth about Christian Science, and proclaims its healing work to the world.

In the above connection it may be well for us to remind

Digitized by Google

our readers that our official publications are, and must be as far as is possible, conducted on an impersonal basis. Personal methods do not belong to Science. We mean by this, that the showing forth of the personality of the writers and contributors to our periodicals in undue form, is not consonant with our principles and professions. So also is it with reference to the circulation of our literature. Only to meet the demands of Truth should effort be made. A step beyond this leads on to dangerous ground. At this point mesmeric rather than Scientific methods may obtain. This must be guarded against. The human will is prone always to assert itself in defiance of the Divine.

As to the matter of delay, or lack of promptness, at times, in getting out our publications on the time announced, that has been so often explained that further explanation seems unnecessary. The Field pretty well understand the cause or causes. No one better understands this than those who are, or have been, connected with the Publishing Society.

Beware.

LET us beware how we construe the action of our Leader which is intended only to be disciplinary and helpful.

When she sends out a word of loving admonition, even though it appear to relate to some particular person, we should be Christians and Scientists enough to know that it is intended only to teach us an impersonal lesson or to awaken us to the subtleties of some form of error that is manifesting itself through us. When our Leader rebukes she does it in love. Her language, however strong or pointed, is couched in words which temper and protect. If she seem to wound it is only that healing may quickly follow. She is never personally condemnatory. Can we say as much for all her followers?

If we were to judge from words of criticism and censure we often hear, we might be warranted in concluding that the love she has shown forth in admonition had, by the student, been turned into hate,—so harsh and unsparing are they.

Let us beware lest this be more than seeming. Let us cease our unwise and indiscriminate fault-finding, for we may be sure that in so doing we are but piling up "wrath against the day of wrath" for ourselves.

What if admonition be followed by a disciplinary by-law which seems peremptory on its face? He is a poor disciple, truly, who has not learned to see "behind the frowning Providence," the "smiling face" of love.

Religious Tide Out.

THAT the Methodist Church in cities had ceased to grow in membership; that the Christian Church at large was passing through a revolution, and was face to face with a crisis; that religious themes no longer interested men, and that ministers, as such, were no longer revered, were some of the statements made by Rev. H. D. Atchison of Wilmette yesterday morning in a paper which he read before the Methodist preachers' meeting. A heated discussion followed, but the correctness of his statements was not questioned.

The meeting was held at the Englewood First Church, as a part of the programme of the board of examination. Mr. Atchison's theme was "Church Life in the Twentieth Century—Not a Prophecy, but an Appeal," and his paper, which was both long and able, was listened to with deep and painful interest.

The Methodist Church, he said, was face to face with a crisis, and during the twentieth century would undergo startling changes. Of course, he said, the time limit on pastorates would be removed, and the presiding eldership would be abolished, but these were trifles. Other changes were impending which threatened the very life of the church. It might just as well be confessed that the church was not now winning men as it had done in the past, that it was failing to meet the spirit of the age, that the preachers were no longer revered for the sake of their office, and that multitudes of its members were dropping out and identifying themselves with literary societies or with Christian Science.

He said the indifference was not confined to the Methodist Church, but extended to all the leading denominations. There was a time when Colonel Ingersoll divided with Christianity the interest of the masses of the people. But the time had come when the people felt so little interest in religion that they had lost all interest in Ingersoll's attacks on it also. Themes that once used to set the world aflame no longer attracted attention. Revivals were few and spasmodic, and, as Froude said, "their spasmodic character was symptomatic of death."

Of these facts, the speaker said, every pastor before him had the evidence in his own church. He knew that his church contained mighty little vital Christianity, that even after he got men converted it was hard to get them into the church, and that if he got them in it was hard to keep them from falling out. If they ever moved away it would take a whole detective agency to watch one of them and get him to join a church in the place to which he went. The consequence was that in the Methodist Churches in seven cities of over five hundred thousand inhabitants in this country last year there was a net gain of only six hundred and thirty-five members, and that in the Methodist Churches of all the cities in the country last year there was a net gain of only one-half of one per cent.

Mr. Atchison said there had been an effort to account for this condition of things by referring it to a universal pruning of church rolls. But the question then arose: How came the church rolls to contain so much driftwood? He was willing to admit that the world, the flesh, and the devil had been at work, but he was afraid the trouble was in the attitude of the church. Had not the church narrowed the door too much by departing from John Wesley's formula for admission, "a desire to flee the wrath to come"?

In the twentieth century, he said, the church would pay less attention to non-essentials and more to essentials. Doctrinal preaching was no longer useful, for ministers who still pounded the Bible and preached the old doctrines could no longer make an impression. The emphasis hereafter will be laid on the ethical and spiritual teachings of Jesus. Certainly some new source of inspiration and enthusiasm must be found. The time had come when it was the mission of every man to rediscover Christianity. In the twentieth century there will be a tremendous reassertion of the essentials of Christianity.

In the discussion of the paper Rev. T. W. Strobridge admitted that for Christianity "the tide is out," and that the liberals had captured the field by proving that there was no need for any church. He thought the doctrine of hell ought to be preached more. Rev. W. E. Tilroe admitted that a revolution was in progress in the Christian Church, and said its movement was toward Christ. Rev. C. H. Zimmerman said it was true "the tide was out," and the reason was the church was shedding no light on the social and economic problems of the day. Rev. John Nate said the mistake was that the doctrine of the Holy Spirit was not preached.—*Chicago Times-Herald.*

Dr. Munhall and Christian Science.

THE writer of the following, which appeared in the London (Canada) Advertiser, is the editor of the Young Friends Review, and was chosen to represent the "Society of Friends" or "Quakers" at the World's Parliament of Religions at Chicago in 1893.

To the Editor of the Advertiser:—

I was interested and amused at Dr. Munhall's "warning against Christian Science," as reported in the Advertiser of March 15. The doctor's tirade very forcibly reminds

Digitized by Google

me of the Psalmist's query, "Why do the heathen rage?" Truth never did need the tones of thunder and the words of wrath, to uphold it. It ever prefers the sweet thoughts of charity, uttered in the spirit of love. He that rages, according to the Bible test, is the heathen. I wish it to be distinctly understood, out of regard for the Christian Scientists, that the writer of this is not a Christian Scientist. He attended, through invitation of a friend, the recent lecture of Carol Norton in this city, which, I presume, called forth Mr. Munhall's denunciation. I endeavored to possess my mind free from both the over-zealousness of a devotee, and the prejudice of a despiser. It is only when in that condition that the judgment can weigh correctly, and the truth be seen clearly, and such false accusations as appear in the doctor's address be evaded. We need only to refer to his characterization of the "votaries of this cult" to see how wide the doctor shoots from the mark. They are, he says, largely made up either of the "unsaved people," or possessed with "an inordinate vanity," or "know but little of the real truths of God's word." I had the pleasurable experience of meeting and mingling socially and religiously with the greater number of "this cult" in London at the time of Carol Norton's lecture, and while I do not pronounce here upon the philosophy of their system, I can state that there was manifested throughout, I will not say a Christian spirit—that would wrong them—but the Christ-like spirit, and a more intelligent, sensible, and conscientious body of people is hard to be found.

The doctor is mistaken if he thinks his threats will deter individuals from finding out the Truth and judging for themselves. The age of coercion in this enlightened land, thank God, is passed. We are descendants of a stock that overthrew priestcraft when they sought liberty of conscience in this western world.

The Scientists even rejoice for the popularity given by such public attacks. They seem to rest in the confidence that Truth must and will ultimately prevail. They are counseled by the founder of the sect, and the counsel was reiterated by Carol Norton, to possess their souls in patience and regard not the attacks of enemies. Persecution will cease when its service is no longer useful.

There was one admission the doctor inadvertently made that is true, a fact that, no doubt, Mrs. Eddy herself would freely admit. "Its rapid growth," he said, referring to Christian Science, "is indicative of a low spiritual condition in the churches."

Had the churches preached and practised the Truth and the whole Truth, there had been no call for any new sects to rise and emphasize some particular phase of Truth now neglected in the church's teaching. If, therefore, the church is accountable for Christian Science and other like "fads," Mr. Munhall had better devote his whole energy to reforming the church, and to reform the church he had better strike at the root and reform its so-called spiritual advisers, and the best place to begin at them is to begin at home and show a little more charity and love for those with whom he may chance to differ.

I write this not in any spirit of censure, but from a sense of duty as a lover of justice, knowing that no answer to the attack will come from any of the persecuted sect, for they are, as I stated, strictly and tenderly counseled to keep their peace under all provocation, following the example of Jesus.

EDGAR M. ZAVITZ.

Coldstream, Lobo, March, 1899.

Veto the Medical Bill.

GOVERNOR THOMAS should veto the proposed law limiting the practice of medicine to those who have obtained a diploma from "some reputable medical college." The measure seeks to establish a monopoly for a comparatively limited class of men, and in nowise adds to the safety of the community from the effects of disease.

It is not so very long ago that the members of the two schools of medicine whom this law would benefit to the exclusion of all others, were active competitors for medical control of the county hospital. The leading men in both schools appeared before the county commissioners and, with a mass of statistics and quotations from learned medical authorities, each side actually proved that the other murdered at least half the patients treated. The fundamental principles of the one school were shown to be diametrically opposite to those of the other. The drugs that cured in the hands of one physician killed in the hands of the other. Nevertheless the two schools now combine in a plan that promises to financially benefit them. They raise the same hue and cry against all other practitioners that they have so recently hurled at each other.

The intelligent people of this community are by no means unanimous that medicine as it is practised is a proven science. The physicians themselves are notorious for their fads. Just at present there is a wave of surgery sweeping over the country; in a year from now electrical treatment may be the only plausible method of cure for certain cases.

The Post does not believe that a majority of the reputable physicians of this state want the bill a law. Physicians of standing who are laboring for the good of humanity are not looking forward to medical monopolies arranged solely for financial gain.

There is yet a vast field for exploration in the science of medicine. Nothing can be of more benefit to the human race than the discovery of medical truths, many of which are still hidden from our knowledge. Shall we restrict the explorers to a certain select few, and permit these chosen ones to go ahead and experiment with life and death at their own sweet will? Is a college diploma a guarantee that a man is competent to cure disease?

In the face of Governor Thomas' radical anti-trust inaugural address, supplemented by his special anti-trust message to the legislature, he is now asked to sanction a combine infinitely more pernicious than any commercial combine in existence. The oil, the sugar, the leather, and the public utilities trusts strip the people of their means. The medical trust would take from them the right to say what methods they should adopt to preserve their lives.

We have grown somewhat calloused to the fattening of the rich through the slavery of the many, but heretofore even the most unfortunate have been permitted the exercise of some independence when the bare question of their existence was involved. Now, extraordinary and presumptuous as it may seem, we have a limited class of men who demand that they, and they alone, shall have the authority to say what means shall be used to prolong life and what methods shall be practised to prevent death or the encroachments of disease.

To sign the bill would set Colorado back a century in the march of progress, and The Post cannot think that Governor Thomas is either narrow-minded or bigoted enough to take such a step. What is sauce for the goose should be sauce for the gander. A trust is a trust. no matter under what guise it appears, and Governor Thomas' attitude with relation to them is so well known that he cannot afford to make any distinction, as he is asked to do by those who urge him to sign this bill.

Denver Sunday Post.

The Medical Trust.

IT is a fact which cannot be successfully denied that the medical bill, which was passed by the late legislature, seeks to establish what practically would be a medical trust. It seeks to give certain men an advantage over others under the guise of protecting the public health. It denies to invalids the right to call in the services of men without pro-

Digitized by Google

fessional degrees to cure their ailments. It would force them to seek relief within a certain class.

There is little progress within fixed lines. The healing art has made nearly all its progress by departing from old standards. Had the doctors of two generations ago established a trust like that which the doctors of Colorado are trying to establish in their own interest, it is doubtful if there would have been much departure from the crude methods of treatment which characterized the practice of medicine sixty years ago.

What right has any member of a certain school of medicine to say to-day that he and his associates have a monopoly of all the knowledge which exists in regard to the healing art? It is not so very long ago when allopaths condemned homœopaths as charlatans and innovators. At a later date the eclectics came and were subjected to like condemnation by the so-called regulars. But now we see these former conflicting schools uniting to keep out certain others whom they denominate quacks and charlatans. They unite because they want to make common cause for their mutual protection.

If the allopaths were right in the first instance concerning the homœopaths, why do they consort with them now? They will not consent to be called into consultation with a homœopath. If the latter is so base that the regulars cannot condescend to consult with him how to save a man's life, by what right can they consult with him about how to form a trust to maintain their hold upon the fees which men and women are willing to pay to be cured from disease?

This doctors' bill is a piece of impudence and presumption which Governor Thomas should rebuke with his veto.

Editorial in the *Denver Republican.*

From Oregon.

Editor Sentinel:—Although a trifle late, I hand you herewith a copy of the iron-clad medical bill presented to the late Oregon Legislature for enactment into law. In many respects it is similar to like bills offered in other states, but in the section intended to suppress Christian Science practice it is more far-reaching, and a remarkable sample of the bigotry evinced by a few would-be leaders of an honorable profession. The section referred to probably the most subtle and comprehensive ever invented by grasping quacks, reads in part as follows:—

Any person shall be regarded as practising within the meaning of this Act who shall directly or indirectly, personally or as a representative, claim to possess a knowledge of the cure of diseases, or a knowledge of physiological processes, and offer gratuitously or for a fee to apply such knowledge for the cure or treatment of disease or for the regulation or management of physiological processes, or gratuitously or for a fee prescribe, direct, or recommend, or offer to prescribe, direct, or recommend, for the use of any person any drug or medicine or agency for the treatment, cure, or relief of any wound, fracture, bodily injury, infirmity, or disease, or for the regulation or management of physiological processes.

This bill was introduced in the Senate by a highly respected doctor-senator, who disclaimed authorship, and upon his word it was adopted with but one dissenting vote. Before the bill reached the House of Representatives the bill was dissected by the press of the state and a storm of indignation was aroused such as is seldom produced even by attempts at political legislation. The leading papers of the state condemned the bill unmercifully, and were heartily seconded by the broad-minded men of the legal and medical professions, as well as by business men and the clergy of the state. It is needless to say that the bill never reached a vote in the House, where even doctor-members condemned its provisions. The probability is that no future attempts at legislation of this kind will ever be made in the Web-Foot state.

Yours truly,
A. F. Hofer, Jr.

The Lectures.

At Albany, N. Y.

Mr. Carol Norton, C.S.D., of New York, member of the International Board of Lectureship of the Mother Church of Boston, Mass., delivered a lecture upon Christian Science at the Empire Theatre, Tuesday evening, April 11, before a crowded house. Mr. Norton is one of the several Christian Science lecturers sent out by the Mother Church, his territory being the northeastern portion of the country. The object of his lecture was to present the subject in its proper light and to correct the many erroneous impressions and misrepresentations regarding it.

Mary Baker G. Eddy of Concord, N. H., is the Founder of Christian Science, and the Bible, as interpreted by her, forms the basis of all lectures upon the subject by members of the faith. It was in 1879 that this church was established, and since then it has acquired a following of one million in the United States. A church costing one hundred thousand dollars is being erected in Chicago by followers of this belief, and many other buildings of even greater cost are owned by them throughout the country.

In this city there are over one hundred members and they are now preparing to erect a church on the southeast corner of Quail Street and Madison Avenue, the lot having been purchased for five thousand dollars. The chapel, which will be begun this summer, will cost forty-five hundred dollars and within a year or two a twenty-thousand-dollar church will be erected next to the chapel.

The local congregation was started in 1892, and according to its leaders it has bright prospects for the future. Mrs. A. Vanderzee holds the position of First Reader, and Mr. Putnam is Second Reader. These offices correspond to pastor and assistant pastor of other churches. The correct name of the church is the First Church of Christ, Scientist.

Mayor Van Alstyne introduced the lecturer as follows:—

I do not appear before you to champion any scheme of industry, nor to stand sponsor for any faith or argument. Custom, to some extent, is the warrant for my presence here to-night. I come by invitation of my neighbor to preside at this meeting and introduce the gentleman who will address you.

It is possible that the subject of his remarks may not be familiar to you. It certainly is not to me. The topic is worded, "Christian Science."

Science is defined, "A knowledge of law, principles, and relations." Christian indicates "relating to Christ." Hence it seems a knowledge of laws and principles relating to Christ will be the theme of discourse. What, however, will be the treatment of the topic in trend and conclusion the lecture will disclose. Of one thing I am pleasurably assured: Christian Science is the exact antipode of faith cure, mind cure, animal magnetism, prayer cure, auto-suggestion, suggestive therapeutics, and hypnotism. Such is the statement of the speaker who will address you.

I presume you all will agree with me in the correctness of the assertion that there never was a period in all past time when thought was so diligently employed as at the present. Every possible domain of Nature, both of matter and spirit, is being invaded and investigated. Science in all its departments, philosophy in every avenue, and art in all details, have become a field for unremitting and exhaustive research, analysis, and correlation of newly discovered

Digitized by Google

facts and conditions. New theories are evolved, new conclusions deduced, new methods and appliances suggested. Many questions relating to matter and to mind, which had been supposed to be settled to a mathematical certainty, have become most seriously disturbed in their inertia, if not actually overturned.

The actors in the demolition of the old philosophy, ideas, and theories, the mythical legends of cosmic history and fallacious notions of the relation of man to his fellow and his Maker, are not iconoclasts by reason of innate desire and wish to destroy. Whatever fragments fall or from whence they come is more the result of accident than design.

The desire to know, understand, and rightly to appreciate is the motive, and advanced education is the weapon that shatters the pillars of the temples of the ancients. Education is the Phœbus that is making its way through every land, among every people, shedding light and cheer to mankind as does the God of Day give light and joy to the world.

Investigation, whatever may be the subject of inquiry, whatever the facts disclosed, and promulgation and discussion of those facts, so long as they do not contravene pure morality, good government, and proper living, is the privilege, the guaranteed right of every man and woman in America. It may happen—it does happen—that error is taught instead of Truth and correct principles, false doctrines instead of wise philosophy, Utopian notions of the impossible rather than rational thoughts and reasonable endeavor. No matter, agitation and discussion is the simile of the kite and string of Franklin—the Prometheus of the eighteenth century—who tapped the clouds and brought that fire to men which has been utilized as a blessing and a force that has revolutionized the industries of the age.

A word more, my friends. I am permitted to assure you that the bed-rock on which the structure of Christian Science is founded is Common Sense. The speaker may possibly tell you that "Common sense is mental dignity—the supreme court of a human mind—the essence of impartiality, actionality, and mental sobriety."

That the function of common sense is "to analyze, classify, weigh, and separate truth from error and fact from fable."

Let us, then, give that respectful attention to what the speaker shall say that we may fully grasp and comprehend his every premise and conclusion. Then try him by the standard he invokes.

As we find chaff, cast it to the winds, as we find sound wheat, treasure it for nourishment and strength.

I take pleasure in presenting to you, ladies and gentlemen, Mr. Carol Norton, the lecturer of the evening.

Daily Press-Knickerbocker and Albany Morning Express.

In Brooklyn.

Over two thousand people assembled in the Academy of Music, Brooklyn, on Sunday afternoon, April 16, to hear a lecture on "Christian Science: It is Christian, It Is Scientific," by Mr. Carol Norton, C.S.D., a member of the International Board of Lectureship. Judge Edward W. Hatch, of the Appellate Division of the Supreme Court, State of New York, introduced Mr. Norton in the following manner:—

Ladies and Gentlemen:—The lecture which you are convened to listen to this afternoon is delivered under the auspices of the Churches of Christian Science of what prior to a year ago would have been the two cities, but which now have been merged into one known as the Greater City of New York. This lecture is delivered under the auspices of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass. It would not be necessary perhaps for us to say anything in explanation of the lecture, its character, subject-matter, or the source from which it emanates were it not for the fact that the thought which the lecturer represents is quite modern. Scarcely is it known to all people, and if it be known to a number more or less large, it is so little known that instead sometimes of breeding respect for its scientific character it rather tends to make it the subject of ridicule. This is an age of progress; a time which in spiritual activity and in seeking after the Truth no age has surpassed. There has been no time in the history of civilization, or of the world, when men and women were not engaged in a search after Truth, and in their search after Truth they have always looked to something above and beyond them that they might lay hold of. During this period men have been brutal and blood-thirsty and sought to propitiate their God by the offering up of human sacrifice. Sometimes they have knelt and prayed with all the fervor of which the human heart is capable, and expected relief only subsequently to find that their God was of stone and then they incontinently cast him down from his pedestal and broke him into fragments. In this modern time it has been discovered, or at least attempted to be argued, by that learned author and metaphysician, Professor John Fiske, that evil holds place in the world as a part of God's providence, working out good in His divine economy. It may be that the justification of evil as of divine origin may be the only rational ground upon which the existence of some may be accomplished. This new cult of this afternoon presents a new feature. I do not know what it is. I do not know whether I believe in it now or ever shall believe in it. Certainly I cannot believe anything until I can understand it; and not understanding this subject I have no belief in it. I have seen enough of its workings to know that it finds some justification, because it makes men and women happier and better, and that, God knows, is enough to justify the existence of any organization. Whether it is capable of doing all that is claimed for it I know not. Whether it be true or false I know not. I do know that if it be true the gates of hell cannot prevail against it. If it be false no power upon earth can sustain it. I know another thing. I know that when it comes to this community it comes to a people who are willing patiently to listen, a people willing not only patiently to listen, but carefully to consider and be just in their judgments. So this afternoon for this new cult I know that the people of the city of Brooklyn will give it fair, candid consideration, weigh it carefully, and if it be true there shall be no prejudices to prevent its lodging either in the brain or in the heart. A hair perhaps divides the false and the true. Yes, and a single alias were the clue could we but find it, which leads into the treasure-house and peradventure to the Master too. This new scientific statement of thought may be the alias that shall lead you and me into the holier presence, into a happier life, into a better condition of mind and body, and bring us nearer to God.

I take great pleasure this afternoon, therefore, in having this opportunity to present the distinguished lecturer who shall give us information on this Scientific proposition, and may be able to satisfy us that he and his doctrine is the alias we are seeking for. It is my great pleasure, therefore, ladies and gentlemen, to present Mr. Carol Norton, C.S.D., who will lecture on, Christian Science: It Is Christian, It Is Scientific.

At Winchester, Mass.

Rev. William P. McKenzie, a member of the Christian Science Board of Lectureship of the Boston Church of Christian Science, gave a lecture on Christian Science, from the view-point of a Christian Scientist, at the Town Hall, Tuesday night, April 11. About seven hundred people were present, many coming here from surrounding towns, and from the opening to the close of the lecture the speaker held the rapt attention of the large audience. Christian

Digitized by Google

Science, as all doubtless know, has been and is to-day the subject of a great deal of thought and attention, therefore the announcement that the lecture was to take place was sufficient almost to fill the large hall and both galleries. Included in the audience were scores of persons closely identified with the life of the different churches in town, all anxious to hear and learn about Christian Science. The lecturer had, perhaps, the most cultivated and critical audience, taken as a whole, that has ever assembled in the Town Hall.

The speaker was introduced by Hon. S. J. Elder, who said,—

"I fancy, ladies and gentlemen, that many of you are in the same position to-night that I am—in ignorance of the principles of Christian Science. Of Christianity as a theology, as a scheme of ethics, as an inspiration to life, we have heard and known from our childhood up. But as a Science, and a Science defined by those who are known as Christian Scientists, we are many of us in ignorance and misapprehension.

"Truth about any subject is interesting, and the truth about this subject, which at this time is claiming the attention of so many, is most interesting. We have the good fortune to have with us to-night a member of the International Board of Lectureship, who is to speak to us about the truth of Christian Science. In your behalf, as well as my own, I welcome him to Winchester and a Winchester audience. I have the pleasure of introducing to you the Rev. Wm. P. McKenzie, C.S.B., of Cambridge, Mass."

The Winchester Star.

Talked on Christian Science.

It was because the church on Falmouth Street has twice proved itself too small to accommodate the people who wished to hear the tri-monthly lectures on Christian Science that the Christian Scientists elected to give their lecture of Wednesday evening, April 5, in Music Hall, and the audience which assembled there at that time gave evidence that the big auditorium was none too large. Every seat was filled some time before the lecture began, and a number stood during the discourse. Rev. Irving C. Tomlinson was the lecturer. He was formerly well known in this city as assistant pastor of the Shawmut Avenue Universalist Church, and the interest of the evening was not lessened when Rev. G. L. Perin, D.D., the pastor of the same church under the name of the Every-Day Church, appeared to introduce the lecturer. Both gentlemen were enthusiastically applauded.

Judge S. J. Hanna, First Reader of the First Church of Christ, Scientist, of this city, presided, and called on Dr. Perin, who said that though he himself was not a Christian Scientist, he had many dear friends who were. He spoke in commendation of the work that Christian Science is doing, and although he remarked that that form of religion was a little too ethereal for him, still, he said, this closing of the nineteenth century was a time of tolerance, and he was always glad to give a hand to honest, earnest men and women wherever he found them. "If I see a mother succeed in soothing and comforting a tired child," he remarked, "I am not apt to have any fears regarding her system of child-study." Dr. Perin presented the lecturer as a very dear friend whom he had known for many years. Mr. Tomlinson's subject was "The Unknown God made Known."—*Boston Evening Transcript.*

At Kansas City, Mo.

A representative audience which completely filled the First Church of Christ, Scientist, gathered, Wednesday night, April 12, to listen to a lecture by Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., who spoke on the Christian Science faith. Mrs. Knott is a student of Mrs. Eddy, and has spent, it is said, fourteen years in the work. The church was decorated for the occasion, and Mrs. Knott proved to be a speaker of great force and eloquence. She spoke of the great interest being shown in Science, and declared that it was not curiosity alone which has led the people to investigate the new faith.

Mrs. Knott was introduced by W. S. Farlow, who said,—

"It has become the custom of the Mother Church of Christ, Scientist, of Boston, Mass., to send out lecturers to her branch churches in different parts of the Field. We have already had two of these lectures, both of which have been given by gentlemen.

"To-night we are to hear one from a lady. Mrs. Eddy, the Founder of Christian Science, and author of Science and Health, speaking relative to the Christian Science movement, has said, 'This is woman's hour,' and 'femineity is the highest in the ascending order of creation.' Then may we not expect this Science to be presented in a higher, purer, and more loving light by a woman? We do expect this, and I know we shall not be disappointed. Therefore, I take great pleasure in introducing to you Mrs. Annie M. Knott, C.S.D., of Detroit, Mich. In Christian Science circles Mrs. Knott needs no introduction, but is well known as one of our Leader's most faithful and beloved students. Mrs. Knott will now address you."

Kansas City (Mo.) World.

At Duluth, Minn.

A lecture on "The Principles and Doctrines of Christian Science" was the attraction that filled the Armory, Wednesday night, April 12. The speaker was Edward A. Kimball, C.S.D., official lecturer of the church, and his interesting exposition of this belief was listened to with strong manifestations of interest by the large crowd. Admission was free, and there were many sorts of people among the audience that gathered. Naturally a very large proportion of the people who attended were adherents of the doctrines set forth by Mrs. Mary Baker Eddy. Many others inclined to them, while still others came to hear for the first time a complete explanation of what the belief means. By many the Christian Science faith is held to be among the "queer" religions, but a glance at last night's audience made it clear that it could not be dismissed that way. "Queer" religions are followed by queer people, and a better looking audience could not be found than that of last night. There were hundreds of the most prominent citizens, many of whom were clearly strong adherents of the doctrines set forth by the lecturer. It is a well-known fact that Christian Science is gaining believers every day, whether it is right or wrong, and Duluth has at least her proportion of them. In Duluth there is a pretty little church that is filled every Sunday by a congregation at least as large as those of many of the minor church edifices.

Mr. Kimball was introduced last night by John G. Owen, First Reader of the local Christian Science Church, in a brief but pointed speech.—*The Duluth Evening Herald.*

At Marquette, Mich.

Edward A. Kimball, who is the First Reader in the Chicago Church of Christ, Scientist, and who is prominent in the work of that new sect and recognized as a leader in it wherever Christian Science has a foothold, spoke at the Opera House Tuesday evening, April 11, in exposition of the views of those who hold to this particular form of religion. The audience which greeted him was a large one and its personnel was worthy of note, including, as it did, the best people of the city, particularly those who are known for their culture and desire impartially to investigate new and progressive forms of thought.

Mr. Kimball was introduced by the Rev. E. A. Elliott. Mr. Elliott disavowed that he held to the same views as the speaker, and said he came not as the champion, but as

Digitized by Google

the herald who goes before the champion who is himself capable of defending the cause he advocates.

After acknowledging what he termed his very cordial mental welcome, the speaker proceeded to the discussion of his topic.

The lecture occupied about an hour and a half in its delivery during all of which time the large audience paid the speaker the closest and most interested attention. Mr. Kimball's delivery had in it nothing elocutionary but was still strong and forcible and withal very pleasant to listen to. Following the address he extended an invitation to the Scientists in the audience to meet him on the stage. The invitation was accepted by all the local adherents of the faith.—*Daily Mining Journal.*

At New Bern, N. C.

"Christian Science, What It Is and What It Does," was the subject of the lecture delivered by Mr. Edward H. Hammond, C.S.D., at the theatre Wednesday evening, April 12.

The theatre was well filled by an audience representing all denominations and shades of opinion, and the speaker kept the close attention of his hearers during his entire lecture.

Mr. Hammond is a pleasant speaker, and delivers his sentences as if sincerely convinced of the facts concerning which he speaks, so that while his listeners may differ with him, yet no one can dispute the lecturer's honesty, as expressed in his speech.

The lecture was delivered under the auspices of First Church of Christ, Scientist, of this city. The church is a branch of The First Church of Christ, Scientist, of Boston, Mass., known as the Mother Church.

Mr. Edward H. Hammond, C.S.D., is a member of the Board of Lectureship of this Church.

Any synopsis of the lecture is omitted at this time as the full lecture will be published in next Sunday's Journal.

The Journal.

At Jackson, Mich.

Mrs. Annie M. Knott, C.S.D., of Detroit, lectured before a large and interested audience at the Athenæum Sunday afternoon, April 2. Mrs. E. C. Hickox presented her in the following words:—

Ladies and gentlemen:—Progress is the law of the Infinite. A little more than thirty years ago a new idea was born to earth. Our Mother named it Christian Science. Many isms have sailed under its banner, and because of this, a Board of Lectureship was instituted by our Mother Church of Christ, Scientist, Boston, to send out a few who are thoroughly versed in Christian Science, to tell the people what it is, and what it is not. The First Church of Christ, Scientist, of this city has secured one of these lecturers to present Christian Science to the citizens of Jackson. It is our Easter offering of love to you.

The Morning Patriot.

At San Francisco, Cal.

Our Leader's establishment of the Board of Lectureship brought tidings of joy to her loving children on the Pacific coast.

Under the auspices of the First Church of Christ, Scientist, of San Francisco, Cal., Mr. Edward A. Kimball, C.S.D., of Chicago, delivered a lecture on Christian Science, in Golden Gate Hall last September, to an audience of about twelve hundred.

Our second lecture was Wednesday evening, March 8, in Music Hall. "Christian Science and the World's Need of It," by Dr. F. J. Fluno, C.S.D., of Oakland, Cal., was attentively listened to by an audience which filled the hall.

And thus the grand movement of Christian Science advances, as elsewhere, in this fair city of San Francisco.

JULIA WINCHESTER, Clerk.

At Marinette, Wis.

Edward Kimball, C.S.D., of Chicago, addressed a large audience at the Scott Opera House Wednesday evening, April 12, on Christian Science. The audience was not only a large one but very representative and embraced many of the best known and most intelligent people of the city. Mr. Kimball is a pleasant speaker and for two hours presented his views on the Christian Science doctrine. He did not attempt to antagonize or combat any other form of religion, but simply devoted his time to a plain presentation of facts regarding his faith.

Members of the Christian Science congregation of this city were on the stage with him and occupied the boxes. He was introduced by the Rev. Anderson of the Presbyterian Church.—*The Daily Eagle.*

At Watertown, N. Y.

A lecture which involved a thorough discussion of the principles and doctrines of Christian Science was delivered Tuesday evening, April 11, in Washington Hall, by Rev. Arthur R. Vosburgh, C.S.B., member of the Board of Lectureship of the Mother Church of Christian Science in Boston, Mass. The speaker was master of his subject, vividly presenting the fundamental principles of the theme before him. His address was from the subject "Christian Science, its Worth and Work." Washington Hall was well filled with an attentive audience. The speaker was introduced by E. E. Elwood.

Watertown (N. Y.) Daily Standard.

At Rome, N. Y.

The Washington Street Opera House was well filled by a representative audience Wednesday evening, April 12, to attend the lecture on Christian Science by Carol Norton of New York city. Mr. Norton is a ready speaker and held the closest attention of the audience for an hour and a half, explaining in detail the theory and practice of Christian Science. He was introduced by Miss Lizzie A. Moore, the Christian Science leader in this city. At the close of the lecture reading matter was distributed to the audience.

Quite a large delegation of Christian Scientists from Utica attended the lecture.—*The Rome Daily Sentinel.*

At Gardiner, Me.

A fair-sized audience of Gardiner's best people gathered at the Opera House Thursday evening, April 13, to hear Rev. Wm. P. McKenzie of Boston, lecture upon "The Truth About Christian Science." The lecturer was introduced by Mayor Patten in a graceful manner. The gentleman is a fine speaker, with a clear voice, and was easily understood. The lecture is highly spoken of by many who were present, and in answer to a request we publish the lecture in full.—*Daily Reporter-Journal,*

At Ottumwa, Ia.

A Christian Science lecture was delivered at the Grand Opera House Monday night by the eminent Christian Scientist, Mr. Edward Kimball of Chicago. Mr. Kimball, although a lecturer, says he would rather be known as a witness to the efficacy of the healing art as practised by Christian Science proficients, he having been recalled from the verge of the grave by its aid some twelve or thirteen years ago. He was introduced by Mr. W. B. Bonnifield.

The Ottumwa (Iowa) Press.

At St. Paul, Minn.

A large audience which filled Conover Music Hall listened to our first lecture on Christian Science by one of the Board of Lectureship, Mr. Edward A. Kimball, C.S.D., of Chicago, Friday evening, April 14.

Mr. Kimball was introduced by Mr. Arthur D. S. Clark, First Reader in our Church, and his lecture was listened to with great interest and close attention.

HOWARD C. VAN METER, Clerk.

Brotherly Regrets.

THE following letters of regret received by Rev. Irving C. Tomlinson in response to invitations to attend his lecture at Music Hall, breathe a friendly spirit, and will be read with interest.

Cambridge, Mass., March 31, 1899.

My dear Brother Tomlinson:—I am in receipt of your very kind circular invitation to attend your lecture upon Christian Science, at Music Hall next Wednesday evening. I thank you for it. Only the fact that I have an engagement at my church on that evening, which I cannot break, prevents me from accepting the invitation. A friend sent me a paper containing one of your lectures a few days ago, and I read it with much interest, first, because it came from a man whom I have long known and most highly esteemed, and second, because it was in matter and spirit, an excellent lecture.

I shall always rejoice in your success.

Most sincerely yours,

GEORGE W. BICKNELL.

West Somerville, Mass., March 28, 1899.

My Dear Brother:—Your kind invitation to your Music Hall lecture, to be delivered April 5, is at hand. I sincerely regret my inability to be present. It is the night of our annual parish meeting, and it is necessary that I should be present.

Thanking you for your kindness in sending me the invitation, I am, with cordial regard,

Your friend,

THOMAS EDWARD PATTERSON.

Brookline, Mass., April 3, 1899.

The Rev. Irving C. Tomlinson, C.S.B.

My Dear Brother:—I thank you for your invitation to the lecture next Wednesday, and appreciate the courtesy of the remembrance.

It will be impossible for me to be present, inasmuch as we have an occasion at our own church in Brookline the same evening, and I feel that I must attend it.

With best wishes. Yours sincerely,

C. W. BIDDLE, D.D.

Boston, Mass., March 28, 1899.

Mr. Irving C. Tomlinson, C.S.B.

My Dear Sir:—Please accept my thanks for your kindness in sending me a platform invitation to the lecture of April 5. A previous engagement prevents my availing myself of the privilege. If the lecture is the same one you have used elsewhere, and which the papers have printed in full, I have read it through with care.

Yours,

FREDERICK H. HAMILTON.

Boston, Mass., April 4, 1899.

My Dear Tomlinson:—Because of my interest in you, I would have liked to be in Music Hall to-morrow (Wednesday) evening to hear your lecture. As it is, I cannot come, but shall hope to hear of its success, and, later, of your full happiness in your new environment.

Sincerely yours,

CHARLES FLEISCHER.

Why I Became a Christian Scientist.

BY JACOB Y. SHANTZ.

[THE Mennonites are followers of Menno Simon, one of the fourteenth-century reformers who came out from the Church of Rome. In the establishment of their faith they suffered severe persecutions, but to their honor it may be said that the history of the Mennonites has never been darkened by the stains of religious intolerance or the bitterness of sectarianism, for they have always accorded to other denominations the same liberty of conscience which they have sought themselves. In a general way it may be stated that they accept the Sermon on the Mount as the foundation of their religious faith, and as a manual of daily living. The name Mennonite is synonymous with honesty, humility, kindness, simplicity, and peace. It is regarded as contrary to the teachings of the Master to engage in military service, and on the ground of religious scruples they have government exemption from the same. It is an authentic item of history that the Mennonites voiced the first public protest against slavery in the United States. —ED.]

For fifty-seven years I was a member of the Mennonite Church, and there I served the Lord according to the light and understanding that I had, but when I found the clearer light of Christian Science, I was ready to follow it.

I was first led to investigate Christian Science by being warned against some of my neighbors who were Christian Scientists, as "dangerous people," and also through receiving pamphlets about the same time, opposing Christian Science. Then I thought it was time for me to look the matter up myself and see if what I had heard was true. So I borrowed "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, and began to read, comparing it with the Bible. I soon found that what I had heard against Christian Science was not true. I also found that Science is strictly in accord with the teaching of Jesus, and that it means the practice as well as the preaching of *all* his gospel. I discovered that my own church, as well as all other Christian churches, *preach* the gospel of Jesus, but that they put only a part of it into practice. The more I prayed to know the Truth, the clearer it became to me that the healing of the sick is just as much a part of Jesus' teaching as the healing of sin, and that the Christian Church to-day should be able to fulfil both these commands, and possess this power promised to all the followers of the Christian faith.

When I found that Christian Science, or the Science of Christianity, could do all the works commanded in the gospels, it was reason enough to leave the Mennonite Church, and I so told our minister, when he "reasoned" with me upon the subject. There is much in that Church which is similar to Christian Science teaching, but I have left nothing that is good, only gained a higher sense of good. Christian Science does not take away anything that is really good, but adds to it.

As I was in need of physical help I went to a Scientist and was healed of several troubles for which I am very thankful, but I am still more thankful for the spiritual sense of Truth, Life, and Love, as revealed to me in the Bible, through the study of Science and Health, which is indeed a Key to the Scriptures. According to the Bible, God is Spirit, and man is created in the image and likeness of God. (Genesis, 1 : 26, 27.) As stated in "Science and Health with Key to the Scriptures," "God is one God, infinite and perfect; the all-knowing, all-seeing, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; Substance; Intelligence."

A selfish, wicked mortal, or a sick and helpless one, cannot be the image and likeness of Spirit or God—Good, and is not therefore a true conception of man, but only a mortal belief, ignorant of divine Love. God, in His infinite love, gave the world the true model of man in sending His Son to redeem the world, that whosoever should follow his example, live his life,—resist mortal mind or the error of belief,—might be saved now from sickness, suffering, and sin. As the word of God says: "That ye put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; And be renewed in

Digitized by Google

the spirit of your mind; And that ye put on the new man, which after God is created in righteousness and true holiness" (Ephesians, 4 : 22–24). Paul says, that as we become new creatures in Christ Jesus, old things pass away, and all things become new.

Jesus the Christ came to destroy the works of the devil, —sin, sickness, and death,—and he commanded all his followers to preach the Gospel, heal the sick, and cast out devils through the power of God. Now Christ—Truth—is the same yesterday, to-day, and forever, and Christian Science proves this by demonstration, doing the works by understanding, as commanded by Jesus. Whoever, therefore, believes in the Lord Jesus Christ, obeys his commandments, and follows his footsteps,—the way that he shows us in God's Word,—by faith, with understanding of Truth and Love, his sins will be destroyed, and then he will be healed of all his diseases as we read in Psalm 103: "Who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies; who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's."

The Bible, and also Christian Science, teaches that man is spiritual, that the Adam man is not the real man; this Adam man goes back to the dust (nothingness), but the real man is immortal, as the following passages from the Bible show. "One God and Father of all, who is above all, and through all, and in you all" (Ephesians, 4 : 6). "For ye are dead [dead to sin and error], and your life is hid with Christ in God. When Christ, who is our life, shall appear, then shall ye also appear with him in glory" (Colossians, 3 : 3, 4). "He that eateth my flesh, and drinketh my blood [in the spirit], dwelleth in me and I in him. . . . This is that bread which came down from Heaven; . . . he that eateth of this bread shall live forever" (John, 6 : 56, 58). "Ye shall know that I am in my Father, and ye in me, and I in you. . . . If a man love me, he will keep my words: and my Father will love him, and we will come unto him, and make our abode with him" (John, 14 : 20, 23). "As thou hast given him power over all flesh, that he should give eternal life to as many as thou hast given him. And this is life eternal, that they might know thee, the only true God, and Jesus Christ, whom thou hast sent" (John, 17 : 2, 3). "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death" (Romans, 8 : 2). "And this is the record, that God hath given to us eternal life, and this life is in His Son" (1 John, 5 : 11).

These few passages, amongst many others, testify to the truth of "Science and Health with Key to the Scriptures," that man is born of the Spirit, that he is spiritual, one with God in Christ, that God is Life, and Life is eternal, that man does not find eternal life by dying, but by living the Christ-life now.

Thousands of persons can testify to the power of healing in Christ Jesus by the demonstrations of Christian Science, and many of them had been pronounced incurable by the best physicians. Christian Science, as I understand it, leads us higher than the old religion. It leads out of self, and into God.

The Shepherd.

We find in both the Old and New Testaments that the type of the shepherd was a favorite one for Biblical writers. It was a touching one in a pastoral country like Palestine.

The sheep and shepherd were inseparable in that lonely, mountainous country. They were mutually dependent. The shepherd was drawn to the sheep for companionship; the sheep were drawn to the shepherd for protection. There were dangers from wolves, lions, robbers, torrents, and storms, which each shared.

This manner of life seems to have brought out in the man a sense of Love, so that the shepherds were among the first to know of the advent of Jesus to earth. We find by the parable of Jesus that there were both true and false shepherds. The duty of the true shepherd was in the morning to lead the sheep out where there were green pastures and running waters, carefully he tended the flock all day, keeping them away from dangers, and if one strayed away he went afar after it until he found it and brought it again to the fold. He slept with them at night. But the false shepherd, the hireling, cared only for the money he was receiving for his work, and ran away at the first approach of danger.

Jesus explaining this to his disciples called himself the true shepherd and they were the sheep. The Word of God is to every age, and the correction, denunciation, and reproof of the prophet Ezekiel to the shepherds found in Ezekiel, 34 : 4, because "The diseased have ye not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, neither have ye brought again that which was driven away, neither have ye sought that which was lost; but with force and with cruelty have ye ruled them"—applies alike to the hireling of to-day.

There are certain qualities of Mind that must come out in a true shepherd's life. Prominent among them are faithfulness, courage, gentleness, and love.

If these are not found in our lives we are not good shepherds.

David tells us in the Twenty-third Psalm that God is our shepherd, and that He leadeth us. Surely as we come into a fuller realization of the Love that is God we shall all have "One fold and one Shepherd," and all men will dwell in quietness, peace, and confidence forever. No longer warring over creeds, and the opinions of men, but willing that the Truth that comes (as James tells us only by revelation) may lead our fellow men as well as ourselves, "For with thee is the fountain of life, in thy light we shall see light."

Prevention.

If a medical prescription could be written that would prevent sin, disease, and death, men worth hundreds of dollars, would give their hundreds to possess it; men worth thousands would give their thousands; and men worth millions would give their millions. Yet, if possessed of such a valuable document, one would not expect that the reading alone of the same would produce the desired result.

Jesus gave such a prescription when he said, "If a man keep my saying, he shall never taste of death." Has not the world for nearly two thousand years been reading the prescription, without taking the remedy? Recently, our Mother has given us the equivalent in these words, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them." Are we, her children, using this preventive daily, yea, hourly?

Mary D. Rice, Denver, Col.

Miscellany.

A Picture and a Lesson.

Easter was most fittingly observed at the First Church of Christ, Scientist, the morning service being of especial beauty. It is one of the few buildings of which it may be said that it was flooded with light, for through the glass sides the sunshine shone with Easter brightness upon the golden daffodils, the palms, ferns, and azaleas and the myriad of blossoms composing the altar decorations. Principal among the flowers was a great vase of lilies sent

Digitized by Google

from Bermuda for this very occasion. A great surprise was in waiting for those who attended in the morning. Coming in with hearts full of thoughts of the resurrection of Christ, the eye as soon as uplifted fell upon an exquisite painting representing Artist Trojette's idea of the Resurrection. The work of art tells a story that needs no verbal interpretation to those who see. Before the tomb stands Christ looking in kindness at the woman kneeling beside the tomb, and to her he is saying, "Touch me not, for I have not yet risen." Overhead is the blue sky, the white clouds floating across carrying all of the peace and none of the turmoil of earth in their purity. Away in the distance are seen the habitations of man. But all thought of surroundings is lost when the face of The Man is looked upon. The expression is that of the ideal Christ and speaks of power, love, and most of all, tenderness and infinite sympathy—the Christ who came with healing. The painting is beautiful in detail. The colors blend as though it was the design of their maker that they should be together. The resurrection robe, of softest rose tint, falls in flowing folds to the ground, in delicate contrast with the yellow draperies partially enveloping the figure of the woman. The setting of the picture is of stained cypress, matching the woodwork of the church, and is in the form of a carved canopy and bench. Incandescent bulbs are concealed in the canopy, furnishing a perfect system for lighting at night. The canopy was designed by Architect Loth, of this city. The painting is valued at over one thousand dollars.

During the opening services Mrs. E. K. Betts said, "this Easter gift is the gracious donation of our friends, Mr. and Mrs. William S. Earl. In another room hangs a steel engraving presented to Mrs. Betts by some of her students. The subject is "Daniel's Reply to the King."

The Troy (N. Y.) Record.

[From the Munich Vaterland.]

A Neapolitan Legend.

Our good Lord Jesus Christ once walked with his disciples across a stony acre, where no tree defended the wanderers against the midday sun. "If each of you," said the Lord, "will take up one of these stones whenever you cross this land, the ground will soon bear rich fruits." The disciples, anxious to please the Master, picked up stones, as many as they could carry, and the sweat ran from their brows. St. Peter alone demurred. "Carry stones on so hot a day? Verily not I!" quoth he; and he picked up a pebble not much larger than a hen's egg. The Lord knew it well, but said nothing. At the end of the acre was a wooded hill, and here, by the side of a murmuring spring, the Lord told his disciples to rest. "Let each place his stones before me." St. John had carried a large piece of rock, so large that only his love for the Master could give him strength to bear the burden. By the side of this stone St. Peter's pebble looked rather ridiculous, but he did not seem to mind that. He turned to the Saviour and said, "Master, we would eat, but have no bread." "Those who work will always have bread," answered the Lord, and he blessed the stones before him. And behold, they were changed into loaves! All had bread in plenty, except Peter, whose portion fell out rather small, but he was too proud to beg of St. John. On the way back the disciples, without a reminder from Jesus, again picked up stones, and this time St. Peter carried the largest of all. At the other end of the acre flowed the Jordan, and Jesus said, "Let none do good for the sake of reward. Throw your stones into the river." Thus St. Peter fasted a whole day and learned much.

Victor Hugo's Prophecy.

For four hundred years the human race has not made a step but what has left his plain vestige behind. We enter now upon great centuries. The sixteenth century will be known as the age of painters, the seventeenth will be termed the age of writers, the eighteenth the age of philosophers, the nineteenth the age of apostles and prophets. To satisfy the nineteenth century it is necessary to be the painter of the sixteenth, the writer of the seventeenth, the philosopher of the eighteenth, and it is also necessary, like Louis Blanc, to have the innate and holy love of humanity which constitutes an apostolate, and pens up a prophetic vista into the future.

In the twentieth war will be dead, the scaffold will be dead, animosity will be dead, royalty will be dead, and dogmas will be dead, but man will live. For all there will be but one country,—that country the whole earth; for all there will be but one hope—that hope the whole heaven.

All hail, then, to that noble twentieth century which shall own our children, and which our children shall inherit!—*Iowa State Register.*

A Protest.

Senator Hanna's bill to drive out healers and others not graduates of reputable medical colleges has aroused the Christian Science people of Kansas, and they have issued this protest:—

"'Liberty is the largest word in the language,' says Colonel Ingersoll. More and more is freedom the motto of all parties. Nowhere in all the world should there be larger liberty than in selecting the person whom one desires to submit his body and health to for cure in any way. Any so-called law that restricts the freedom of any person to employ just whom he or she pleases for medical attendant is radically wrong. Any so-called law that would consign the Lord Christ to prison for healing—because he did not have a Latin sheepskin—is wholly indefensible. Think of sending St. Peter and St. Paul to jail for making the lame walk, because neither saint had gone to a medical college, and you will laugh. The only justification of the 'medical bill' of Senator Hanna or any other like it is to prove that physicians are infallible and immaculate. So far is this from being true that the so-called 'science' of medicine is merely 'nescience,' nonsense largely. Experiment from day to day with life."—*St. Louis Republic.*

Lived with Needle in his Heart.

An autopsy that was performed at the city hospital at San Francisco recently, bids fair to dispel the idea held by medical men that a puncture of the heart invariably results in death. Drs. Ofhuls and Sussdorf discovered a piece of a needle in the heart of Louis Bremer.

Bremer had lived for years with the broken needle in his heart. His death with due to purulent pleurisy.

The needle, it is believed, had been broken while a physician was trying to bring out a foreign fluid under the skin of the patient. The piece of needle was about three-quarters of an inch in length.—*New York Journal.*

Tough on Abington.

The school commencement at Abington occurred Friday evening, and several from this city were in attendance. It was the intention of those having the matter in charge to open the exercises with prayer, but when the hour for the exercises arrived one of the committee stated that it was impossible to get any one to do it, that he didn't know anybody in the vicinity that made a practice of praying in public. The prayer was dispensed with.

Questions and Answers.

Was the man healed at the gate of the Temple Beautiful a real man, liberated from a false belief?—J. L. S.

Every man is a *real* man. Every individual in the reality of his existence is an eternal idea of the eternal God—God's image and likeness. The man imaged forth to the material senses, the mortal vision, is not the image and likeness of God, or the real man. The lame, halt, blind, decrepit man, as he appears to mortal sense, is not the real man. In proportion to the disappearance of these untrue conditions, the true appear, and in this proportion the real man is becoming manifest. The man healed at the gate of the temple was a vastly better manifestation of the God who is perfect, than was the lame and infirm man who sought material aid for the relief of his infirmity. His reality as a son of Spirit was thus asserting itself as against his unreality as a son of matter. As a son of matter he sat at the gate of the temple, lame, shriveled, and bent. As a son of God, he arose, stood erect, and went *into* the temple "walking, and leaping, and praising God."

This Biblical incident is a most beautiful and striking illustration of the two states of consciousness—that depicted by the poor, bound beggar, and that shown by the man freed by the power of God.

All mankind represent the unreality of their being in the lame, bound, and beggarly conditions of mortal sense, and all mankind represent their freedom and reality in the degree of their emancipation from such lame, bound, and beggarly conditions. All in mortal trammel are metaphorically sitting outside the gate of the Temple Beautiful of Divine Truth, and all who will ask and receive the healing alms thereof will, like the lame man at the gate, go into the Temple walking, and leaping, and praising God, strong, erect, and joyous; thereby showing forth the real man within the Temple as distinguished from the unreal man who sat without the gate.

The lesson relates to moral erectness, moral freedom and health, moral emancipation; for when this is accomplished the physical follows in natural order.

What is the distinction between the divine or immortal mind and the human or mortal mind; how is the reader to know?—A reader of "Science and Health with Key to the Scriptures."

In the text-book, and all the other writings of Rev. Mary Baker Eddy, wherever the word Mind is used as a synonym of God, or to indicate the divine or immortal Mind, she uses the capital "M." When the human or mortal mind is meant the small "m" is employed, unless the word commences a sentence, in which case, of course, the capital letter is necessarily used.

No one can understandingly read Mrs. Eddy's writings without being aware of and keeping this distinction constantly in mind.

The supreme Mind is All. The human or mortal mind is, of itself, nothing. The allness of the divine Mind is the very corner-stone of Christian Science. Any system which claims or attempts to heal or save by the power of the human or mortal mind is wholly apart from Christian Science Mind-healing.

Letters.

Dear Teacher:—The Mr. R. you spoke of, whom you treated in 1890 for the bone felon and intoxication, is a sober man to this day, and has not had the least desire to drink any since. I overheard him and my brother talking not long ago about how their resolutions would be broken every time they would try to stop drinking, before they were treated, hence they knew a higher power was guiding them this time, as they did not have the least desire to drink now. Mr. R. is traveling, getting a good salary, and said he was going to hunt you up the next time he was in Kansas City. I have often thought of what a wonderful demonstration this one was, for *all* power was taken from whiskey, that all mortals say will make drunk, and the felon healed at the same time. Mr. R. told me himself, the night of his healing, that he had taken at least twenty drinks since supper, and was drunk when he went in the house; had been drunk for seven days, and was delirious for three days before you treated him; had not slept a wink for three nights, as he imagined he was covered all over with bugs every time he lay down; had not eaten a bite for three days. He remarked to me as he went out that he was as sober as I, and that there was no more pain about his thumb than there was about the heel of his shoe.

After we got down town, he ate a hearty lunch, and told some fifteen or twenty boys, who were in the lunch room at the time, about his experience that night, and also reminded them that they, every one, knew he was drunk after supper, but *now*. "I stand before you as sober a man as there ever was on earth, and with no desire whatever for a drink." He also struck the counter three times with fist clenched, that only thirty minutes previous was paining him with the felon before mentioned, and told the crowd that there was no more pain in that thumb than there was in the plate before him.

I assure you it is gratifying to see such as he was studying the Bible and Science and Health, instead of playing cards and drinking whiskey. Such work Science is doing all over our land, and yet a Baptist minister in our town told a brother preacher in the presence of a friend of mine, that I ought to be put in the penitentiary. I suppose it is because some of his members are coming to Science, on account of some things they have seen demonstrated by me. His own brother and all his brother's family are studying Science, and are themselves able to overcome most of their physical ailments, and care for the stock, etc., on his farm. They apply it on all occasions. This preacher's nearest neighbor is a man who has drunk up about ten thousand dollars in the last few years. A few weeks ago his wife called me in, and told me her husband had talked of having me treat him, but did not have moral courage enough to ask for it, and told me to go to work for him and she would tell him the next time she had a chance. He has not touched a drop since, and when he found out I was treating him, came down to the rooms, and asked me to treat him for heart disease, liver trouble, and several other diseases, all of which were healed. He said he was going to buy Science and Health with the first money he could possibly spare.

Sincerely yours, C. WADE.

REV. MARY BAKER G. EDDY.

Dear Mother:—About four years ago, I sat at this same desk, hardly able to move, sick, and so discouraged that I did not much care what happened, and wrote to a Christian Scientist, asking if Christian Science would help me. The answer was, "There is not anything but what Christian Science will help, and I have gone to work for you." In a short time my sense of life was changed. The M. D.'s had sentenced me, but when Love came to the rescue, the darkness of material sense became as nothing in the Light of Christian Science (the Christ idea of Love, Life, and Truth).

I love you for the Love that you reflect, and through the realization of the ever-presence and omnipotence of Love, the cares, anxiety, and disease of the past (that tried to be supreme in business life at times), have no longer any abiding-place in my consciousness. My prayer at all

Digitized by Google

times, is that I may be obedient to the teachings of Science and Health, for in so doing, I must reflect divine Love and harmony. Let me thank you for those words of love addressed to "Beloved Christian Scientists," in the Sentinel of February 9, and for what I have also received in the address to the Atlanta Church. God is very good to me, and in business these four years, God has answered my prayers, proving that as we abide by the Principle of Christian Science, Love, that all sense of discord, no matter in what way or form it may come will give place to harmony and peace through Love as darkness disappears by letting in the light. Thanks be to God with Love and gratitude to you, our dear Mother and Leader.

Sincerely, your student's student,

GEORGE L. BRETT.

Rochester, N. Y., April 4, 1899.

Mr. Carol Norton, C.S.D., New York City.

Dear Sir:—For a long time I have desired to inform you of a demonstration resulting from your lecture delivered in this city some months since, but being a stranger to you felt some reluctance in doing so. I feel confident, however, you will understand the motive prompting me.

For months prior to the lecture I had been trying to sow the seeds of Truth in the thought of one who had been educated for the Baptist ministry, but who found nothing therein which satisfied an earnest, longing seeker, and has since wandered through the horrible "isms" of some existing schools.

I furnished him a ticket and received his promise that he would go. It was nearly two weeks before I met him again, and was then informed that after listening to you he had not only given up the use of tobacco, to which he had been addicted for years, but had also taken it out of his store, and would neither use it nor sell it. The great change in his thought was very perceptible, and while he could not agree with you in all you said, still he admitted the Principle and I feel sure he will become more interested.

Knowing well the joy this will bring you, and desiring also to thank you for benefits received personally from the Truth expressed to us all that night, I remain,

Your brother in Truth,

C. R. FRISKEY.

The Sentinel.

Dear Sentinel:—I want to express my thanks for the many helpful lessons taught through your pages. The one in particular that seemed to help me most was, "Believing or Understanding," by Laura L. Dressler, in the edition of March 16. We are not yet anchored in the great harbor of Love. When we weigh our anchor out of the muddy harbors of theology and medicine, and launch out into the deep waters of Christian Science, we are apt to drift out of our course many times, until we learn how to handle the *old* craft that has laid at anchor so long. But our wild experiences in drifting away, teach us by the things we suffer how to keep the right course; and so with the lesson of the "bird with the nest of thorns. The more the bird rebels, the harder the thorns prick." In Christian Science we learn by the things we suffer in opposing the Truth, "It is hard for thee to kick against the pricks." This has seemed to be my experience in Christian Science.

I find that once out of the right course I must regain the point where I left it. I realize I have lost much, and am willing at last to steady down and sail straight for the haven of Love pointed out by our dear Leader, although the wind seems dead against me.—Joseph Robinson.

The Sentinel has just arrived and I determined to sit down and tell you how glad we are to see its bright, clean face. The contribution by S. P. C., Peking, China, sent a thrill through me. How we do love our flag! My late husband was a veteran. I did "Look at the picture and study it." Jesus said, "Ye shall hear of wars and rumors of wars, but the end is not yet." We are now hearing rumors of peace. The British lion and Russian bear lying down together (seeking arbitration) with the little child (the youngest nation) to lead them. To-day is the Scripture fulfilled in our ears. It is a glorious time to live. Mrs. Eddy and President McKinley voicing the angelic strain, "Glory to God in the highest, and on earth peace, good will toward men."

Mortal mind has endeavored to build a stone wall to prevent the entrance of Christian Science in our city, but Love heeds it not. "He that sitteth in the heavens shall laugh: the Lord shall have them in derision."

Cornelia D. Batchelder, Sacramento, Cal.

The Lesson Sermons.

To the Sentinel.

It is with heartfelt gratitude the following lines are written to thank the writer of the articles entitled, "The Christian Science Sermon."

These articles are of more practical benefit to me in understanding the sermon than a course in theology taken in one of the colleges of New York proved itself, which course was passed successfully. But for the test sermon at the close of the term (subject given, Holy Spirit), the writer could give but few words besides texts from Scripture to express the thought.

Our thanks are not alone due the writer of the articles of the above title, but to our Leader, Teacher, Friend, and Mother through whose consciousness comes to us all the good, the real, and the true.—Josie Eberts, Toronto, Ont.

I wish to acknowledge the benefit I received from reading Mr. Tomlinson's lecture delivered in Parker Memorial Hall. My paper came on Monday and in the evening I read the lecture. I had been feeling symptoms of a cold all day, and as I sat down to read I thought, "Now my reading this evening ought to help me destroy the claim." I read the lecture slowly trying to make the Truth of it my own as I read. Before finishing it I was conscious of my freedom. I was liberated.

I would like to take this opportunity to express my thanks for the articles on the Christian Science Sermon. They are of inestimable value to the Readers, and must help all to a more intelligent interpretation of the lessons if we "have ears to hear."

M. Fannie Whitney, Auburn, Me.

Notices.

The Mother's Evening Prayer.

Poem by Mary Baker G. Eddy. The music by William Lyman Johnson. For soprano or tenor, C sharp to A; for lower voices, B flat to F. The arrangement for both high and low voice is printed in the same copy. Price $1.00 per copy, $9.00 per dozen. Send order to Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

The next admission of candidates for membership with the Mother Church will take place June 3, 1899. Applications to be presented at that time must be in the hands of the clerk on or before May 15.

We wish to state that Numbers 19, 20, and 23 of the Sentinel are out of print. We will be glad to duplicate any other numbers to subscribers failing to receive these.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Boston, Mass.

Published by the Christian Science Publishing Society.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REVEREND MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada. No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles — cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen $6.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

Pamphlets.

HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 24 pp.

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MAY 4, 1899. | Vol. 1 No. 36

England and Imperialism.

THE Rev. William Cunningham, the English economist, addressed the members of the Twentieth Century Club in the hall of the Boston University Law School, on "Imperialism." He began with a sketch of the English national character. This was supplemented with a statement of the historical events and conditions which led England to substitute for the old national policy her modern cosmopolitan policy, in the pursuance of which she regards it as her duty to keep neutral markets open to cosmopolitan trade.

The economical policy of the English government to-day, he said, is never to grasp at excessive advantage for England's consumers and producers, but simply to maintain fair play for all. This policy leaves all others free to take advantage of all the markets and all the industrial opportunities which any district under our control affords. Our policy in Egypt, for example, is just as beneficial to the American as to the English manufacturer, and you are reaping advantage from our imperialism.

The modern problem, and our imperialism endeavors to solve it, is to provide police control for large areas in various parts of the world, inhabited by diverse races, with different standards of duty and different capacities for self-government. We have provided this control in India, and we are ready to do it elsewhere; we do not grasp at the opportunity, yet we do not shrink from the responsibility. If others do it, good and well; the advantage of our doing it is that our experience qualifies us for tackling the problem, and that we are prepared to give everybody a fair chance.

The spread of English imperialism, he continued, in its free play for the commerce of all nations, is the chief factor in diminishing the risks of commercial quarrels between the civilized powers; it is, moreover, the one practical step that is being taken in the present day to secure the peace of the world, and at the same time afford the greatest possible scope for national self-development. This is why we English think about our empire and this is why it arouses our enthusiasm. And so, as long as Rudyard Kipling writes our ballads, we do not much care how the colonists draft their constitutions.

It may be said, of course, that the empire is a great drain upon our resources, and that, sooner or later, the colonies will break away altogether from the mother country. We do not care if they do, but we do not think they will. During the last thirty years there has been a remarkable intensification of loyalty to the Queen. Its strength in the colonies has been a surprise to us. On the other hand, we are as proud of the achievements of our colonists as if they were our own. In that feeling you and your achievements are included, and our admiration for you and them depends in no sense on our selfish interests, but upon the sense of our kinship with you. Paternal pride we all feel in what you do, and this is the true guarantee, so far as we in England are concerned, of continued peace and friendship between us. We know that we tried to keep you in tutelage too long, and there was a row. (Laughter.) But we did our duty by you; we gave you a good education and a first-rate start in the world. (Applause.) So we feel genuine pride in the great achievements—naval and military, as well as industrial—which you have accomplished in your great career.

We in England, said Mr. Cunningham, look out upon the twentieth century with the sense of difficulties, but with no misgivings. We know that our national debt is large and that our coal may get exhausted. But somehow, we seem to have the men fitted to do the things the world needs most, and we hope to rise to the new responsibilities pressing upon it.

Notwithstanding deep differences, I hope and believe that there will continue an unbroken friendship between the two great branches of the Anglo-Saxon race. And I feel that if you could know our foibles and our dreams, as Englishmen—foolish as they may be—you might be less ready to condemn, even if you cannot approve, our English imperialism.

Items of Interest.

Colonel Garlington of the commissary department claims to have collected opinions of three hundred and seventy-six officers and one hundred and sixty-three enlisted men concerning the canned roast beef, which he classifies as follows:—

Twenty-three officers and one man pronounced it "good or excellent," twenty-five officers and two men "fair or good with exceptions," twenty-six officers and eleven men "mostly bad or unfit," three hundred and two officers and one hundred and forty-nine men "entirely bad or unfit."

He groups the opinions of officers and men on the refrigerated beef as follows:—

"Good or excellent"—seventy-six officers and eight men.

"Fair or good if trimmed"—one hundred and thirty-three officers and thirty-five men.

"Mostly bad"—forty officers and twenty-six men.

"Bad or unfit"—nine officers and fourteen men.

From this summary he concludes that about seventy-five per cent of the opinion was favorable to the refrigerated meat and twenty-five per cent unfavorable.

In reply to the formal protest entered by the German government against the language recently used by Captain Coghlan of the Raleigh, at the Union League Club banquet, the following official statement has been given out at the Navy Department:—

"Captain Coghlan has replied to the department, stating that the newspapers have not reported him with substantial accuracy. Also, that he intended no disrespect or contempt to the German flag, and is extremely sorry that any such interpretation was put upon his remarks. Proper reprimand will be sent, and such action taken in respect thereto as is proper."

The incident was considered closed when the German ambassador called upon the President and expressed the satisfaction of his government with the action taken.

The annual order concerning Memorial Day has been issued by W. C. Johnson, the acting commander-in-chief of the G. A. R. The order directs that President Lincoln's Gettysburg address be everywhere read in connection with the exercises of May 30. The acting commander says,—

The year closing with the next Memorial Day has added new strength and power to the nation and new glory to the flag. The worth and fame of the American soldier and sailor have been gloriously advanced. The achievements of "the days of the sixties" have rendered possible the glorious victories won in the interest of liberty and humanity.

In the presence of President McKinley and his wife, members of his cabinet, three generations of General Ulysses S. Grant's family, and a great crowd of people, Miss Rosemary Sartoris, granddaughter of General Grant, recently unveiled a heroic equestrian statue of her illustrious grandfather in Fairmount Park, Philadelphia.

The monument is a gift of the Fairmount Park Art Association to the people of Philadelphia. The height of the statue from the bottom of the plinth to the top of the rider's hat is fifteen feet one inch. The total weight is five tons, and total cost $32,675.35.

A new field has been opened to the fifteen hundred convicts in Sing Sing prison. They are to publish a weekly newspaper. The name selected is the Star of Hope. It will consist of four pages, and the work will be done by the convicts. Warden Sage, the originator of the plan, will be the managing editor, or news censor, of the new publication. Sing Sing prison has an extensive printing establishment, and the "copy" from the inmates which escapes the blue pencil of the warden will be set by convict printers in the shop and then run off on the press.

Senator Quay was acquitted on the charge of conspiring to use for his own unlawful gain the funds of the state of Pennsylvania. Immediately upon his acquittal Governor Stone of Pennsylvania appointed him United States senator to fill the vacancy until the next legislature meets. There is a question whether Governor Stone's appointment is sufficient to admit Mr. Quay to the Senate.

Colonel Frederick Funston of the Twentieth Kansas Volunteers is the hero of Calumpit. With a small force he crossed the Rio Grande river, flanked the insurgents, and drove them from the strong position they held. This was considered the most daring enterprise of the entire campaign in the Philippines.

Paris, April 25.—The secretary of the French embassy at Washington, M. Thiebaud, arrived yesterday, and handed the treaty of peace to the Spanish ambassador, Senor Leon y Castillo, who immediately sent it to Spain by the first secretary of the Spanish legation here, the Marquis de Novallas.

The only railroad which is in operation in the Philippine Islands, extends from Manila to the seaport Dagupin, located on the western coast of Luzon, a distance of about one hundred and thirty miles. The native employees receive less than twenty-five dollars a month.

Rear Admiral Melville, engineer-in-chief of the navy, will submit to the naval Board of Construction plans for fitting the armored cruisers with a modified triple screw system which will give the vessels a maximum speed of over twenty-two knots.

The American National Red Cross of New York has expended $82,724, and now has a balance of $7,416. The committee has been dissolved and the affairs and fund of the organization will be turned over to the National Red Cross in Washington.

The fiercest fight of the war with Filipinos occurred April 23, near Quingua. A reconnoitring party of American soldiers was suddenly and unexpectedly surrounded by the enemy in large force and eight Americans were killed and forty-three wounded.

The telediagraph is a recent invention by means of which drawings are transmitted by electricity. The experiments thus far have proven very satisfactory, and the invention promises to be an eminently useful one.

It is reported that Senator Hanna will use his influence toward helping to seat ex-Senator Quay. Between the two they confidently expect to secure the forty-five votes necessary to reverse the precedents and seat Quay.

A Spanish prisoner recently released by the Filipinos says that the insurgents have fifty thousand rifles, plenty of ammunition, and two hundred pieces of artillery, some of them the latest pattern of quick-firing guns.

The British Admiralty will make a series of experiments with a view of learning to what extent the wireless system of telegraphy can supersede the present system of signalling by flag, semaphore, or flag lamp.

It is reported that Governor Gage of California has followed the example of Governor Stone of Pennsylvania in appointing a United States senator, and has named Dan Burns to succeed Stephen M. White.

Although Congress at its last session authorized the construction of twelve additional vessels, it has just been discovered by the naval officials that it failed to make an appropriation to begin the work.

Sixty-five thousand soldiers comprise the regular army of the United States. Of these 14,868 are in Cuba, 2,972 in Porto Rico, and 24,000 in the Philippines; leaving about 25,000 at home.

The Wade Board of Inquiry on beef has held its last open session, and is now engaged upon the preparation of its report. Over forty-five hundred typewritten pages of testimony have been taken.

The Kentucky law, under which so many negroes in the last twenty years have been sold on the block for a term of years in punishment for vagrancy, has been at last declared unconstitutional.

Dr. William Seward Webb has presented war medals composed of metal taken from Admiral Cervera's flagship,

the Maria Teresa, to every member of the Vermont regiment of volunteers.

Information is received from Manila that General Luna, Aguinaldo's chief of staff, has sent an insurgent colonel through the lines under a flag of truce, to ask for a cessation of hostilities.

General Gomez has issued a proclamation announcing the formation of a junta of Cuban generals to advise him. He has also announced his desire for an independent democratic republic.

The Naval Reserve Association of Illinois, veterans of the Spanish-American war, have resolved to offer the government two hundred and fifty men for service in the Philippine Islands.

Assistant Secretary Meiklejohn of the War Department has issued an order extending the immigration laws of the United States to Cuba, Porto Rico, and the Philippine Islands.

The United States army regulars, volunteers, and naval force took part in the exercises of the Confederate Memorial Day at various points in the South, April 27.

Sig. Marconi, whose experiments in wireless telegraphy are attracting international attention, has successfully communicated from the shore to a vessel at sea.

Almost the entire five million dollars that the citizens of St. Louis have proposed to raise to clinch the proposition of holding a world's fair there is in sight.

"The Newsboy" is a unique paper published in New York for circulation among the newsboys. It is distributed gratis and contains no advertisements.

The voluntary offerings in the Church of England during 1898 were $37,531,770, more than $2,500,000 above the amount received the year before.

United States Ambassador Choate recently visited the Foreign Office in London and discussed the Samoan situation with Lord Salisbury.

The farm on which Abraham Lincoln was born has been sold to Daniel Grear of New York, and probably will be converted into a park.

General Miles has asked the President to appoint his son, Sherman Miles, a cadet at West Point, which the President will do next year.

Three hundred thousand square feet of space have been allotted to American exhibits at the Paris exposition to be held in 1900.

Ore assaying $1,000 gold to the ton has been taken out of the side of the Blowout Mountain in Cook County, Arkansas.

The United States dispatch boat Badger, with the Samoan commission on board, has sailed from San Francisco for Apia.

One hundred and twenty sailors from the United States cruiser Raleigh were recently entertained at the Waldorf-Astoria.

Information is received that Aguinaldo's agents in Japan are urging Japan to a friendly intervention with the United States.

Leroy M. Willard of Orange, Mass., has received the first pension granted to a soldier of the Spanish-American war.

The three hundredth anniversary of the birth of Oliver Cromwell was celebrated in London, April 25.

Lord Harlech, who has just passed his eightieth birthday, has had a seat in Parliament since 1841.

The Boston Young Men's Christian Union recently held its forty-eighth annual meeting.

Forty-five former American soldiers are now enrolled on the Havana police force.

A Remarkable Cure.

THE Christian Scientists of the city are citing the case of Mrs. L. Daharsh of Cascade, as an example of the efficacy of that means of cure. The circumstances as related are as follows:—

Mrs. Daharsh was stricken on October 9, 1897, with sciatic rheumatism, from the effects of which one of her legs became so swollen she was unable either to use the foot or wear anything on it. During the summer of 1898 she could get around by the aid of crutches, but was in very poor health. In this time she had received the attention of four doctors, but could get no relief. She remained in the same condition until the second week in January, 1899, when she weaned her baby. Immediately after, she was taken worse, and was confined to her bed for five weeks. The doctors at last said they could not tell what ailed her and it was a very bad case. She was told by a friend of the cures performed by Christian Scientists. She summoned a healer from Sheboygan and after twelve treatments, during a period of less than six weeks, she was healed. Mrs. Daharsh is now in excellent health and enjoys walking wherever she pleases, and can wear her shoes the same as ever. On March 29 she went to Cascade, and April 2 went to Hingham and enjoyed the ride as well as any one.

The facts in this case are given publicity at the request of Mrs. Daharsh, whose gratification at being cured is such that she desires that all others similarly afflicted may avail themselves of the same means of cure.

The Sheboygan (Wis.) Telegram.

Sonnet.

Conscience.

WHY ape the ways of blindly-followed precedent
That barriers all roads to eternity
When veils of fatuous hypocrisy
By one great mind have long in shreds been rent?
Why try to heavenize a sin; repent
In part, and weigh the conscience solemnly
On loaded scales of Egotism, then fly
The probe of questioning conscience and be—content.

But ah, when fear and anguish strike the quick
Of conscience, moment-clear, self-tumult free,
Why cry for euthanasy and new birth?
For death will not relieve thee, Life's the wick,
Love's deeds the flame that burns immortally
Dissolving night and bringing joy to earth.

WILLIAM LYMAN JOHNSON.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. — CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Watch.

"WHAT I say unto you I say unto all, watch."

What is the meaning of this Scripture? Who or what is it that is to be watched? Not God, for He needs no watching. Not divine Truth, for it needs no watching. Not divine Love, for it needs no watching. Not divine Life, for it needs no watching. Not Good, for it needs no watching.

The Master's injunction is to watch against evil or sin. He uses the words watch and pray conjunctively in many instances. They are, in a large sense, synonymous. To watch is to pray, and to pray is to watch. To be ever on our guard against the temptations of sin is to watch and pray. To be thus on guard we must have our thought and purpose so fixed upon God, Good,—in other words, our hearts so filled with divine Love,—that we are proof against the snares of the tempter.

And who is the tempter? To the earnest, struggling Christian the grosser forms of sin or error cannot be said to be temptations. These forms can be guarded against with comparative ease. But what of the subtle forms of error, coming in the guise of good? What of those temptations coming in the form of mental suggestion, where the deliberate purpose of the suggestor is to mislead, misguide, confuse, and warp the judgment and discernment of his intended victim? Only a few are awake to this form of temptation. It is perhaps unknown to the Christian believer outside the ranks of Christian Science.

Satan, operating in the mental realm, through the mental malpractitioner, with the stealthiness of the serpent, is the great tempter of Christians in this age, as indeed he has been in every age. The only effectual way by which Christians can guard themselves against Satan in this guise, is, first, to understand what Satan is. In other words, the methods of depraved and wicked minds "upon mischief bent;" and understanding, protect themselves against them by constant watchfulness and prayer; that is by the unceasing realization of the allness of divine Love and power. This is the protecting panoply of Truth or God, concerning which the poets have so often sung. This realization is a protection against all forms of error, however subtle, in advance of any deliberate attempt by mental operators to influence other minds.

Jesus again said (Mark, 14 : 38), "Watch ye and pray, lest ye enter into temptation." This is an explicit injunction to be constantly on guard against the subtleties and temptations of error. To the extent that one is influenced by the unholy and malicious thoughts of others, to that extent is one entering into temptation. And, although such entering may be unconscious and ignorant, baleful consequences none the less follow.

Our Leader, the Rev. Mary Baker Eddy, as all remember, caused the text which heads this article to be placed on the first page of our Sentinel. She did it for a purpose. She gave it out as an admonition. She is aware of the absolute necessity for watchfulness and prayer on the part of Christian Scientists, as we have endeavored above to outline it. The attempt to protect one's self by the merely intellectual declaration that all is Good, there is no evil, does not at all answer the need. It remains for every earnest disciple to prove the unreality of evil by overcoming it in his life. For only by its destruction in one's consciousness can one become freed from its claim of dominion.

Therefore, let us repeat: "What I say unto you I say unto all, *Watch.*" "Watch ye and pray, lest ye enter into temptation."

The Board of Lectureship.

WE are very happy to announce that Hon. William G. Ewing, recently retired from the bench of the Superior Court of Chicago, has been appointed to membership on the Board of Lectureship and has accepted the appointment. It is our understanding that Judge Ewing will fill appointments in the territory or district in which his residence is located, namely, the district heretofore assigned to Mr. Edward A. Kimball and Mrs. Annie M. Knott. With Mr. Kimball and Mrs. Knott he will co-operate in the lecture work.

It will be a matter of sincere rejoicing among all Christian Scientists and lovers of the cause, that Judge Ewing has thus determined to devote his life to the service of God and humanity, as God and humanity are served through the teachings and proofs of Scientific Christianity.

We understand that Judge Ewing declined a renomination and re-election to the bench, in view of the possibility that he would determine to devote his whole time to Christian Science work. He is to be profoundly congratulated upon taking this important step, and our cause is to be congratulated by reason of this accession to its active workers.

We may be pardoned if we express our gratification and pleasure at seeing members of our whilom profession thus coming into our ranks and lending their valuable aid to the furtherance of our great movement. Never shall we regret having renounced our profession to engage in the immeasurably larger and wider work offered to every earnest student of Christian Science, and we feel sure that our professional brethren will have a similar experience.

The profession of the law is a noble one, affording abundant opportunity to do good, but the profession of Christianity, in its higher and broader reaches, is the very supremacy of all professions, for its true disciple has opportunities beyond that of members of any other profession to demonstrate in practical human affairs the possibilities embraced in the great saying of Jesus of Nazareth—a saying involving the whole of the philosophy of life and the Christianity of Christ,—"Therefore, whatsoever ye would that men should do unto you, do ye even so to them, for this is the law and the prophets." In other words, he who is a true disciple of Christian Science is a demonstrator, in as large a measure as is possible to the present age, of the verities of the Golden Rule.

Corrections.

The clipping copied from "The Review," Peterborough, Ontario, in the April Journal, page 47, is, we find, incorrect; the services are held at No. 414½ George St.

The lecture of Mr. Edward A. Kimball, C.S.D., which was published in the May Journal, was delivered March 1, 1899, not March 1, 1889.

Healing the Body through Spiritual Means.

EDITOR OF THE MESSENGER:—I have just been reading the communications of E. W. N. and Mabel Gifford in the Messenger for February 8, and I want to express my sympathy with the thoughts contained in them, and my appreciation of the help which I have obtained from their perusal.

I am sorry to say that with the majority of New-Church people, so far as I have been able to observe, their study of the healing of the body without the aid of medicine has been confined very largely to the criticism, in many cases just, in others to my mind very unjust, of the various systems of metaphysical healing taught and practised in the world to-day. Having, in their opinion, "knocked the bottom" out of these systems, they proceed to state that there is contained in the writings of the New Church a true system of mental or spiritual healing, which is more sound and rational than any of these others. And there they stop! With few exceptions, there has been no attempt to formulate a practical system of instruction as to methods by which we may heal ourselves and others; and, better still, keep ourselves free from disease. And in nearly all cases those who have gone even this far theoretically, fall back upon a physician or the family medicine chest when any so-called case of "real sickness" appears. Now I do not speak of this simply for the purpose of finding fault, for such a spirit can only prove hurtful under all circumstances; but that we may, if possible, learn a lesson from these mistakes.

I would suggest that instead of pointing out the defects in the theology of Christian Science and other metaphysical teachings of this character, we look into them for the good there is in them. There seems to be a general impression among New-Church people that because these systems are wrong in some of their principles, there is nothing good in them and nothing good can be got from them. But this, I am profoundly convinced, is untrue. Indeed, from practical experience I have demonstrated, to my own satisfaction, at least, that one can gain from them an immense amount of help in ultimating in the outward life, even down to the outmosts of the physical body, the teachings of our Lord.

The main secret of the healing of the body through the soul lies in the truth that no evil is ours until we make it ours by appropriation; only we have not recognized that this can be applied to diseases as well as other forms of evil. When we feel a sensation of pain or weariness we at once say mentally, if not audibly, "Oh, I am so tired!" "Dear me, I have such a headache!" Thus we open the door and invite into our homes these ugly visitors from the lower regions, instead of refusing to harbor them and driving them back with the command, "Get thee behind me, Satan! I will have none of you. I am the child of the heavenly Father, and I have a right to refuse you entrance into my consciousness, and I do refuse to acknowledge and appropriate you. I claim my birthright,—health, peace, happiness, and prosperity." If this is done just as earnestly and with the same conviction that we refuse to yield to an unkind thought, or harbor an unholy suggestion or desire, the physical man would soon respond, and in time come entirely under the control of the spiritual.

Another mistake that we often see made is that people expect too much. By this I do not mean that we have not the right to see the outward results of our thoughts and words in increased health and vigor; but they seem to think that in a moment, a day, a year even, they can undo the work of half a life-time of erroneous thinking along these lines. Those who are endeavoring to obtain healing for the body entirely through spiritual forces, and are using as a means some of the varied forms of "self-treatment," expect to affirm, "I am free from this cold, or this headache," and presto! the cold or the headache has disappeared and they feel entirely well. And if they do not, they say the system is false, and they cannot produce any results from it. They do not realize that this refusal to appropriate the physical evil is very often half-hearted on their part. They only half believe what they say. When they see good results, they will believe; if not, there is nothing in it. What kind of faith, what kind of belief is this? "Because of the loaves and fishes" we follow the Lord, forgetting that whatever is true is absolutely true, without any relation to our personal experiences.

It is a fact that there is no time in spiritual states; it is true that an absolute conviction can sweep away in a moment the accumulations of years; but there must be this absolute conviction, and I think I am safe in saying that few have it. With most of us, there is only a little trickling stream of new thought which has to permeate, to soak through, as it were, deep layers of our conscious and unconscious being and make them over; and this is a process which in most cases is measured by time, and considerable time at that. As has been dwelt upon before in these columns, again and again did the Lord say, "According to your faith be it unto you;" "if we have faith," and it is certain that a faith which can be so easily shaken is a very poor sort of faith, and will produce a very poor sort of results.

We are too apt to pet and pity ourselves physically. No one would consider himself an object of commiseration because he has been tempted to cheat or injure his neighbor; so neither ought we to look for sympathy because we are the victims of the toothache or the grip. I am not sure but that we ought to hide away in shame such ugly things, with sorrow that our bodies have formed the soil in which these noxious weeds can take root and grow. But of course this would involve some degree of appropriation to ourselves, and in many cases take the form of morbid self-reproach, which would be a hindrance rather than a help in getting rid of the evil. Still I do insist that the parading of our aches and pains, our physical feelings of any kind, before our friends, is neither helpful nor kind.

It should also be borne in mind that we have a right to claim perfect physical health only when we are living an orderly physical life. Just what are the details of such a life, each must decide for himself; so greatly do outward conditions differ with different individuals. It is certain, however, that the body must not be neglected, and that one must observe as a rule, simple, regular habits of diet, sleep, dress, and cleanliness. No rational, civilized being can voluntarily neglect these without paying the penalty.

It is my earnest wish that the subject of spiritual healing should be better understood and more widely practised among our people; for I believe it would go a long way towards bringing us the answer to our prayer, "May thy kingdom come; may thy will be done, as in the heavens, so also upon the earth."—L. M. H.

New-Church Messenger.

Mary Magdalene.

IN her last ministry of love, the Magdalene
Stands hopeless, weeping at the Saviour's empty grave,
Yet by her side the Master stands unseen,
Not lost, not gone, not dead, but mighty still to save.
"Mary!" Oh, with what joy she hears his loving word!
Thus seeking a dead Christ, Love finds a Living Lord.

W. K. JAMES, in *Volunteer's Gazette.*

All the days of the week are used as days of rest: Christians use Sunday; Greeks, Monday; Persians, Tuesday; Assyrians, Wednesday; Egyptians, Thursday; Turks, Friday; Jews, Saturday.—*Boston Evening Transcript.*

Experiences of a Commercial Traveler.

TO THE EDITOR OF THE REPUBLIC:—While reading a recent number of your interesting paper, my attention was attracted by a report of a sermon on the subject of "Christian Science Cures."

I trust that you will accord a non-resident of your city —whose duties bring him here periodically—the courtesy of a short space in your paper to correct at least one of the many bold assertions which the reverend doctor made in that discourse. I allude particularly to that paragraph which says, "Remember that the whole class of cures that require surgical treatment are confessedly beyond the reach of Christian Science. It makes no attempt to deal with a gangrenous limb that must be amputated. It records no cases of cures for well-defined cancer or appendicitis."

As the diseases mentioned in this quotation from his sermon are defined as organic, it is only reasonable to presume that all diseases coming under this classification are embraced in the minister's sweeping statement.

Before proceeding with my subject and to preclude the conclusion that I am a migrating religious crank, with more zeal than knowledge, I wish to state that I am, by profession, a commercial traveler, and by choice an athlete, with a predilection toward aquatic sports, and that these pursuits are not generally conducive to the fostering of illusions or of any special religious fervor.

Up to six months ago I knew almost nothing of Christian Science, and cared less, but there has since come under my observation, in the person of my wife, a case of healing from an organic trouble which proves beyond cavil the potency of the healing in Christian Science. The case is briefly as follows: My wife had been ailing for some time. Our family physician, after consultation with another, diagnosed her ailment as resulting from what they believed to be an ovarian tumor, and advised consulting a specialist at once. The specialist in question is the best surgeon of one of the leading hospitals in New York, is a man of international reputation, a celebrated specialist in his treatment of organic diseases, famous for his skill with the knife as well as for the correctness of his diagnoses. A date was fixed, and a thorough examination made, with the result that the diagnosis of the two previous physicians was confirmed and an immediate operation advised, with the significant statement added that unless the operation was performed within two weeks he would not assume the responsibility of undertaking it.

At this juncture my mother came to our rescue with the statement that she had quite recently met an old friend, who had been bedridden for many years, looking well and happy as the result of treatment in Christian Science. She urged us to try it. We followed her suggestion, with the result that within two weeks all disagreeable symptoms disappeared, my wife was perfectly healed, she has "renewed her strength like the eagle," the freshness of her complexion and buoyancy of a happy disposition have returned. She is once more the cheery, helpful companion of days gone by, but with added dignity, grace, and confidence, which come only to those who are "newborn of spirit," who have caught a glimpse of the allness, of the universality of infinite Love.

For the benefit of any one interested I will be happy to furnish the name of a prominent business man of New York City who, if the medical authorities know their business, had a "well-defined" case of cancer. He was under the treatment of admittedly competent authorities, was finally given up as beyond their help, was prevailed upon to take Christian Science treatment, and is now a well and happy man. I know of yet another case, in Orange, N. J. An aunt of an intimate friend of mine suffered for nine years with cancer, securing only temporary relief by continued application of the knife, until eventually her surgeon refused to operate any further. She, too, was prevailed upon to try Christian Science and is now a well and happy woman.

As one accustomed to competition in business, it is not at all surprising to me that the medical profession should decry Christian Science, but when I find ministers of the Gospel doing this, professed followers of the Master, surely they have not recently refreshed their memory with his commands. In Matthew, the tenth chapter and eighth verse, we find the following: "Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." Are we forced to infer, from the meagreness of the giving of most of the reverend advocates of orthodoxy, that they have not yet "freely received"? The time is coming and is fast approaching when our pulpits will be filled by those who have really discerned the Principle which destroys the desire to sin, and will find that this Principle is Infinite Life, Truth, and Love, and that in this Principle there is no room for sin, for sorrow, for sickness or death. I am not as yet a member of the Christian Science Church, but I am learning to love to attend the services, and delight in the privilege of being with people who I cannot fail to observe put into daily practice the golden rule and take for their motto, "God is Love." Very respectfully,

CHARLES W. HAYNES.

In *The Republic,* St. Louis, Mo.

The Lectures.

At Hudson, Mass.

Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., lectured on Christian Science, to an immense crowd in the Town Hall, Monday evening, April 10. He was introduced by an old college friend, Ralph E. Joslin, Esq., who spoke as follows:—

We have met this evening to listen to a discussion of certain religious principles by one who comes as the official representative of the Christian Scientists. I find my position here somewhat unusual, though by no means unpleasant. This meeting is held under the auspices of the First Church of Christ, Scientist, of Hudson, and it is customary to select as the presiding officer one who is known to be a member of the organization holding the meeting, or at least one prominently known to be a believer in the doctrines to be advocated.

I am obliged to confess that I am not familiar with the tenets of Christian Science, and indeed, until called upon by a committee, I did not know of the existence of such a society in our town.

I am here as the result of a long and pleasant acquaintance with the speaker of the evening and upon his suggestion. Whatever faults may be ascribed to the system of government under which we live, the right of free speech in times of peace cannot be said to have been denied any man, or any theme. So high a degree of intelligence and cultivation has been reached by our citizenship that any man or sect who has anything to offer in any field of human thought will be heard, and whatever of good there is in the new propositions will finally survive and be accepted by the people.

It is desirable that any new doctrine should be intelligently and forcibly explained to gain the ear of the people. In the hurry of this workaday world, there is little time to spend in deciphering hieroglyphics on ancient tombstones, or revising the confused speech of a poor pleader. Christian Scientists, recognizing the necessity for able, intelligent, and correct expositions of their doctrines, if they would have them properly understood, have created a board of official lecturers or teachers from among their abler members, whose duty it is in meetings like this to explain and advocate their views, that all may be informed, and led to

Digitized by Google

yield their assent thereto. And so the local church has arranged this meeting that the citizens of this town and vicinity may hear from one who is learned in the doctrines of Christian Science and represents the parent body in an official capacity, a careful and exact statement of some of the ideas for which the organization stands.

I gladly join with those of you, therefore, who are in ignorance of these things in listening to one well qualified to represent the Christian Science body, not only because of his inherent ability but because of the sincerity and the genuineness of his character. Whatever the precept may be that a man may utter, its value for his hearers depends upon the practice of the preacher. A statement of the ten commandments from the lips of a violator of them all is but a mockery and a jest, but from the lips of one who obeys them they are recognized as the guide of human conduct and the basis of all the enduring laws of man. Whatever may be the results of this evening's lecture to each one of you personally I congratulate you and the members of the Christian Scientist body upon its representative.

Descended from a Universalist minister, having a brother who is now a Universalist minister, it was but natural that our speaker should turn to that ministry himself. It was upon his admission to the Tufts Divinity School after his graduation from Buchtel that I first became acquainted with Mr. Tomlinson. His ability and geniality quickly brought him to the attention of the members of his school and of the students in the college of letters. I have watched his subsequent career with interest, for it has not been in the usual well-worn ruts. Upon his ordination to the Universalist ministry his ability immediately gained for him a call to prominent churches, and he was successively the pastor of churches at Saugus, Arlington, and Boston. And so he might have gone on smoothly, comfortably, and, as the world counts such things, successfully, to the end.

But not of such stuff is Mr. Tomlinson made. To use his own words, "being desirous of helping humanity more than the opportunity afforded as a clergyman," he resigned his pulpit and took up his residence in the North End of Boston. There on Hull Street, our friend began a college settlement, and in a non-sectarian way sought to improve the mental and social conditions of the dwellers in that, practically, foreign country. How well he succeeded the Boston papers of the years 1895 to 1897 bear witness. I have not spoken of this, however, for the purpose of recounting a personal success, but rather to call attention to the personal sacrifice contained in it. Like Wendell Phillips, who gave up his prospects of a brilliant social and professional career that he might speak in behalf of the black man, so Mr. Tomlinson cut himself off from hopes of personal advancement to live by the chance support of the poor whom he befriended. Not what men say but what men do is the true index to character, and by that test our friend stands forth pre-eminent among his contemporaries. Again, when his investigations led him to believe that the doctrines of Christian Science were true, he braved all adverse criticism, and freely and fearlessly followed where Truth seemed to show him the way. Whether rightly or wrongly it is not for me to say, but you will hear him and judge for yourselves. I have already kept you apart too long, and without further delay I introduce to speak to you upon "The Unknown God made Known," my friend, who will make himself your friend, the Rev. Irving C. Tomlinson, of Concord, New Hampshire.—*The Enterprise.*

At Asheville, N. C.

A lecture on Christian Science was delivered in the Opera House, Tuesday evening, April 18. The lecturer was Mr. Edward H. Hammond, C.S.D., of Baltimore, Md. Mr. Hammond held the respectful attention of a large audience for more than an hour, and by his earnestness and sincerity impressed many with the spiritual nature of his theme. The lecture was given under the auspices of the Christian Science society of Asheville, but the audience was mainly composed of members of other denominations. Mr. Hammond was introduced by Mr. Edward J. Harding, who said,—

My dear Friends:—Mr. Hammond will address us tonight on the subject of Christian Science. The teaching which is known by this name, although entitled a science, partakes largely of a religious character. It seems fitting, therefore, that we should ask ourselves what religion really is. I should answer the question thus: "Religion is the surrender of the human to the divine." Each of us is conscious of a double self—a sordid, pleasure-loving, animal nature and a nature that craves the true, the pure, the right. These two selves—the natural and the spiritual man—are engaged in a constant struggle. They entwine each other, almost inextricably, in a hostile embrace; neither of the two gains a complete victory, but each has the upper hand in turn. So long as this state of things lasts, the man has no unity of purpose, no settled happiness. But one day he hears a call to which he responds. He makes his choice once for all. This spiritual nature, he declares, shall be my true self. Henceforth I will identify myself with this nature alone; I will disown and deny my baser self. I will merge my own will in the will of God. From that moment he is conscious of a wonderful change. Having no selfish interests to serve, he has no cause to quarrel with the world, and hence he enjoys true peace of mind. This is no "illusion of the craving heart;" it is a fact of experience, and as anger, and fear, and self-consciousness, and gross desires disappear, the tranquillity and benevolence and "sweet reasonableness" which ensue have a heathful effect on the physical nature also. So much, I think, all of us will admit. Not having embraced Christian Science myself, I shall leave Mr. Hammond to define its teachings. But I believe I may truthfully say that Christian Science applies and extends the principles we have just affirmed. Whether it states "the truth, the whole truth, and nothing but the truth" on the subject of which it treats may of course be questioned; but for the sake of the genuine truth which it undoubtedly does contain, I ask you to listen to the exposition of its principles with patience, and, as far as you can, with sympathy. I now take pleasure in introducing the lecturer of the evening, Mr. Edward H. Hammond.

The Asheville Daily Citizen in its report of the lecture said, among other things, "It was in many respects a remarkable discourse to listen to in the midst of the vain materialistic worship of the nineteenth century's gods of 'Get-on,' 'Material Progress,' 'Financial success' and all the rest of the modern Pantheon." LILLIAN HARDING.

At Jacksonville, Fla.

The Union Congregational Church was filled to almost its utmost capacity on Tuesday evening, April 11, to hear a lecture on Christian Science, given under the auspices of the Jacksonville Church of Christ, Scientist, by Mrs. Livingston Mims of Atlanta, Ga., who is one of the Board of Lecturers appointed by the Mother Church, of Boston, Mass.

The audience included doctors and lawyers and many of the elite of the city, and the profound attention given her every word was a just tribute to the culture and nobility of Mrs. Mims and the forcible, spiritual, character of her lecture.

The platform was beautifully decorated with palms and lilies.

Judge R. B. Archibald introduced Mrs. Mims to the audience in the following language:—

Some nineteen hundred years ago the question was very significantly asked, "What is truth?" All down the centuries, from that day to this, honest, inquiring souls have,

Digitized by Google

in various ways, been asking the same question. That question, while it may be very simple and easily asked, has been a very difficult and in bygone ages a dangerous one to answer, especially where the answer conflicted with the opinions of those in power and authority.

The early Christians believed that they could answer that question, and so undertook to enlighten their fellow-citizens of the Roman Empire, but for their pains in so doing were sent to the scaffold, the prison, or to the wild beasts. The Waldenses, the Huguenots, and others conceived that they had and could teach the truth in religion, but they were persecuted and slaughtered without mercy. Even in our own land, for the expression of honest convictions upon religious matters, men and women, believing they taught truth, have been mercilessly persecuted, as, witness the execution of the Quakers and the whipping of the Baptists in colonial times. But, thank God, we live in better times, and that the day has dawned when men and women can express their honest convictions without fear of persecution of any kind. Some twenty-five or thirty years ago a new name appeared in the religious world—the name of Christian Science. Christian Scientists honestly believe that they can answer the question, "What is truth?" To many of us their views and doctrines appear new and strange, but they assure us that their doctrines are neither new nor strange, but that they are simply a revival of the doctrines of the early Christians and of Christ himself, and are as old as Christianity itself. We have with us to-night one of the most distinguished exponents of Christian Science in this country, Mrs. Livingston Mims, of Atlanta, Ga. In looking over this audience, I know that I can assure her that, on the part of both believers and non-believers in Christian Science, her utterances will receive most respectful consideration. I have now the pleasure of introducing the speaker of the evening, Mrs. Mims.

The Metropolis.

At Oak Park, Ill.

Saturday evening, April 8, Mr. Edward A. Kimball, lectured in Unity Church, under the auspices of First Church of Christ, Scientist. The church was well filled with a very appreciative and intelligent audience. The pastor of the church, Rev. Mr. Johonnot, introduced the lecturer, saying in part:—

Ladies and gentlemen:—We are here to-night to listen to an exposition of the doctrine and practice of Christian Science from the lips of its official lecturer. As the pastor of this church it may be proper for me to state my own attitude and the relation of this church towards this teaching.

This is a liberal church. We have a definite system of faith which we believe to be true, a high and noble faith to which we welcome all and for which we challenge investigation; but we are liberal enough to believe others also have truths, and we are ready to co-operate with any and all who are trying to build up the kingdom of God on earth. We also believe in the enlargement of our truth and welcome light from all sources. We are not afraid to investigate others' doctrines, and our system is large enough to take in all the truth any one can offer; for all truth is consistent.

We have heard Buddhists here, yet we are not Buddhists. We have heard Hindus, yet we are not Hindus, though we find truth in these systems. I have carefully studied Christian Science; and while I cannot accept its philosophy, I find in it much of good and of truth. I gladly will listen to whatever the lecturer of the evening may say, and hope to realize much benefit therefrom.

Christian Science does not seem to me to fit the total facts of life nor to account for the world as we find it; but I believe it to be doing good through its emphasis on the supremacy of the spiritual life. I am sure the time will come when all Christian churches will acknowledge a debt due to it for the spiritualizing work it has done, just as Orthodox churches are beginning to acknowledge their indebtedness to liberal teaching and to adopt the principles of our church. I find much in Christian Science which is identical with what we have been teaching for a hundred years.

The supreme test of a teaching is its effect upon life when put in practice. If Christian Science makes men better and nobler, makes them more useful and helpful members of society, it will stand; no attack will injure it. But if it makes men selfish, and indifferent to the needs of others, it will fail, however eloquently it may be presented. The real test for all sects and religions is that laid down by Jesus, "By their fruits shall ye know them."

I have great pleasure in presenting to you Mr. Edward A. Kimball, the official lecturer of the body of Christian Scientists.

GERTRUDE B. GIBBS, Clerk.

At Reading, Mass.

The attendance at the lecture of the Rev. Wm. P. McKenzie, in Masonic Hall, Tuesday evening, April 18, was very gratifying to the committee of First Church of Christ, Scientist, having the lecture in charge. Nearly, if not quite, every seat on the main floor was taken and there were few vacant seats in the gallery.

The lecturer was introduced by Mr. Walter S. Parker, who said in part,—

In behalf of the committee who have this meeting in charge I will bid you a very cordial welcome.

I presume a number of my friends are asking "And are you a Christian Scientist?" I believe the committee understood distinctly that I was not, and whether I shall be after hearing the remarks of the speaker I do not know. I told the committee that waited upon me that I was ready at any time to assist in every good cause. Have been ready in the past, am ready in the present, and hope I always shall be in the future ready to uphold any good work going on in the community.

A friend of mine said, and she is not a Christian Scientist, "There is one thing about it—they appear to be very happy over there." I think that is a very good recommendation for any class, that they appear to be happy.

I do not know what the cardinal principles of Christian Science are, but I understand that Christian Scientists think that there is a very intimate connection between the mind and the body. I do not see how we can be on this earth many moments without being fully conscious of that very thing.

We want all the time for the speaker, for I believe this is a great, good work in the community, an uplifting work. There are two forms of criticism in the world, destructive and constructive. Destructive criticism merely points out the errors—breaks down and prohibits and does not lead to the better way. But constructive criticism corrects and points out the errors, but does it in such a kindly way that it builds up and repairs and makes for righteousness. I believe this work is constructive: there is no question about it. The criticism that helps us to do better work is constructive, but the criticism that merely says "don't do it," and does not lead to anything better, is destructive and has no place.

An old friend of mine is very much interested in Christian Science. I know it changed her whole life. In the first place it made her ten or fifteen years younger. Now a work that will do that must have an element of truth in it.

Without saying any more, it gives me great pleasure to introduce to you the Rev. Wm. P. McKenzie, C.S.B.

The Reading Chronicle.

At Dallas, Texas.

Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., lectured on Christian Science, in the Dallas Opera House, Sun-

Digitized by Google

day afternoon, April 16. Mrs. Knott was introduced by Mr. J. T. Trezevant, who, though not a Christian Scientist. is a business man with broad, generous, and progressive views. He said,—

Standing at the threshold of the twentieth century we hear as anxiously as ever the eternal cry, "Whence do we come, whither do we go?" The great mystery of a future state: how to live this life as a preparation for the life to come, seems, thus far, to have defied the logic of the schools, the investigation and speculation of philosophers, savants, and mystics alike.

The glory of the nineteenth century has been, not only its keen search after Truth, but that broad catholicity of spirit, that liberality which recognizes and applauds earnest seekers, in whatever direction their investigations may lead. This spirit pervades all classes, and it is in this spirit of welcome for earnestness that this Dallas audience, representative of every known sect, is assembled this afternoon to hear earnest words—words from the heart of the distinguished and cultivated teacher of Christian Science. Whether its teachings lead to the Christian paradise, or to that perfection of soul which Buddhists name Nirvana, we are told they lead to the control of physical ills through spiritual perfection. This, in itself, means right living, purer men and better women; and the high standing, character, and earnestness of the advocates of Christian Science in this community command at once our respect and admiration.

Ladies and gentlemen, I have the honor to introduce to you Mrs. Knott, who will speak on the subject of Christian Science.

Mrs. Knott addressed the Scientists on Monday afternoon, and after this meeting the following demonstration was made. One of the ladies who had attended the meeting, accompanied a friend part of the way home. Just as she was getting out of the buggy a bicyclist passed in front of the horse, which frightened him and he became unmanageable. The Scientist was thrown to the ground, and the buggy wheel passed across her head and body.

She told the demonstration later at an evening reception. She said she was so filled with the thought of love after listening to Mrs. Knott's words, that she instantly realized no evil could befall her. When assisted to her feet she was uninjured, though there was the trace of the muddy wheel across her head. MRS. SUE H. COCHRAN.

At Salem, Mass.

At Ames Memorial Hall Tuesday evening, April 25, a lecture was given on Christian Science by the Rev. William P. McKenzie, C.S.B., a member of the International Board of Lectureship of the Mother Church of Christian Science. The subject was "The Truth about Christian Science."

The speaker was introduced by Rev. E. J. Prescott of the First Unitarian Church, who, although not a Christian Scientist, expressed himself as pleased to introduce one who should explain about the new movement.—*The News.*

The following is Rev. Mr. Prescott's introduction:—

It is very beautifully stated in one of the most charming poems of our New England singer, that,

> All of good the past hath had
> Remains to make our own time glad,
> Our common daily life divine.

All of us I think are united upon one great principle to-day. We are all trying to peer into this great universe and bring out an element of Truth. We are asking ourselves, whatever denomination we may be in as clergymen, whatever walks of life we may be called upon to go in as laymen, as never before in the history of the world,—what is the great truth about Life?

Some people are sceptical about new movements. Some ministers are. That has never been my trouble, I think. I have never worried about new movements. And so when Christian Science appears upon the scene, claiming as it does some of the very best thinking men and women of our time, claiming the greatest readers and some of the deepest thinkers, it is not for any one of us to put its claims aside, and say that they are all untrue. It is rather for us to consider them fairly and honestly.

It is my conclusion from reading history, that all great movements which have progressed, if true, will progress in spite of all the fighting that any of us may do. If they do not contain the Truth, all the upholding in the world will not maintain them.

I do not speak in this introduction as a Christian Scientist, I am not one. I may be one in the future. I am simply a seeker for God's great eternal Truth. I believe, as I had the privilege of stating in my sermon last Sunday morning, that Christian Science does contain an element of Truth, and I think it is for us to seek that element of Truth. It gives me great pleasure to introduce to you Mr. William P. McKenzie, who has come to tell you about the great movement of Christian Science.

At Lowell, Mass.

A large audience listened to Rev. Irving C. Tomlinson of Concord, N. H., Tuesday night, April 18, in Colonial Hall. Mr. Tomlinson is prominently identified with the Christian Science movement in New England. His audience last night included many who do not profess the Christian Science faith, and they listened with close attention while the speaker expounded the principles which obtain in this Science which is interesting many of late. Mr. Tomlinson is a member of the International Board of Lectureship of the Mother Church of Christian Science.

The speaker was introduced by Rev. R. A. Greene of the Grace Universalist Church, who said that he was glad not only to meet an old friend in Mr. Tomlinson, a former co-worker in the Universalist denomination, but he was glad also to have an opportunity to listen to an exposition of the doctrine of Christian Science by one who is supposed to be an authority. "We do our fellow-men great injustice sometimes," he said, "because we do not know them, and I am sure that we do our fellow-men's thoughts and opinions great injustice, because we do not understand them. So far in my life, I have found the philosophy of life that I profess, quite large enough for me. There may be something very much larger and better than that; if there is I want to know it. I had perfect confidence in Mr. Tomlinson while he was a co-worker with me; I have equal confidence in him now; and should he ever grow out of Christian Science (which he may do, for he is a growing man), my confidence in him will still be the same."

Lowell Citizen.

At Greensboro, N. C.

A lecture on Christian Science was delivered at the Academy of Music by Edward H. Hammond, C.S.D., of Baltimore, Md., Sunday afternoon, April 16.

The audience was composed of representative people of the town, and since the lecture many have come to learn something more on the subject.

The work was started here a few months ago. There are only three of us, but we had no difficulty in raising the amount necessary to pay all expenses. We feel that much good will come from this lecture, as so many wrong impressions concerning Christian Science have been given out by those who know nothing whatever of the subject.

We echo the sentiments of gratitude expressed by all loyal Scientists to our beloved Leader for providing this means of supplying our human need, and furnishing this "table in the wilderness." MRS. ELLA WEILL.

At Newark, N. J.

"Common Sense and Christian Science," was the subject of an interesting lecture delivered in the Church of the Redeemer Friday night, April 14, by Carol Norton, under the auspices of the First Church of Christ, Scientist, of this city. Mr. Norton is a member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, and readily succeeded in holding the close attention of a large audience evidently in thorough sympathy with him.

He was introduced by the Rev. Henry R. Rose, the pastor of the church, who remarked that he was glad to present the speaker, because he believed in fair play. He expressed the hope, too, that the lecturer would bring a message fraught with good and one that would help dispel the modern tendency toward morbidness and melancholy.

Newark Daily Advertiser.

At St. Cloud, Minn.

The Opera House was well filled Thursday night, April 13, by an interested audience to listen to the lecture by Mr. Edward A. Kimball, C.S.D., of Chicago, on Christian Science. The stage had been effectively decorated by the ladies connected with the local movement, potted plants and cut flowers being used, and it presented an attractive appearance. The speaker was given the closest attention throughout, and made a most effective plea for the new healing faith. He explained away many of the misconceptions and misstatements which exist and have been made regarding Christian Science, and to many in the audience his address was a great revelation. He was introduced by G. R. Wilson of this city. The address will appear almost in full in to-morrow's issue of the Journal-Press. It will make good Sunday reading.—*The Daily Journal-Press.*

At Austin, Ill.

Edward A. Kimball of Chicago, lectured Monday evening, April 17, at the Opera House. His subject was "Christian Science," and his exposition of the truths of the world-known Science was certainly a brilliant one. His manner of speaking alone is sufficient to hold the attention of an audience, and this, together with the masterly manner in which the topic was treated, provided entertainment of an unusually high order. A large crowd was in attendance, delegations coming from points to the south and east.

The Austin Daily Register.

At Kinston, N. C.

A large audience heard Mr. Edward H. Hammond, C.S.D., lecture on Christian Science here Friday night, April 14. Mr. Hammond paid a glowing tribute to Mrs. Eddy and her book, Science and Health.

The reading room in Kinston, which is free to all, is located in the Opera House where the lecture was given. Sunday services are held at 11 A.M. At the reading room may be found Christian Science literature.

The Kinston Free Press.

At Pasadena, Cal.

When the Board of Lectureship was established, it seemed an impossible undertaking for us to have a lecture on account of our seemingly limited finances. But we decided to try, and success crowned our efforts.

Mr. E. A. Kimball, C.S.D., of Chicago, lectured last September to an audience of about five hundred, which filled the Auditorium, the largest hall in the city.

MRS. SARAH TOWNSEND GEE.

The Eternal Now.

BY BERT POOLE.

I SAT me down to write a line
  My thoughts went back one year,
When Nature's sun had ceased to shine
  And life had lost its cheer.

While thinking thus of former days,
  My mortal mind was stirred
With chilling, reminiscent lays,
  And evil voices heard.

Not satisfied, I called the muse
  To guide my mind and pen;
She led a timely theme to choose
  The *Now* instead of *Then.*

So leaving chill and grewsome thought
  For present blessings rare,
The life grew warm, and joy was brought
  On heaven's balmy air.

To find a sweet existence here,
  In harmony abide;
To see pure Truth and Love appear
  From morn till eventide,

'Twere best to study well the *Now*
  And bury all the *Then*
To cease vain strivings, learn the *How*
  And never mind the *When.*

For *Now* is ours, Eternal Grace
  And bounty doth impart;
While the forever's only place
  Is *now* within the heart.

But ill it seems to all mankind
  To labor and to wait
For some great future joy to find,
  Within the "pearly gate."

'Tis better far to seize the good
  That crowds our daily life,
Than overlook its joyous mood
  While listed in the strife.

'Tis not that efforts are to cease,
  We should not leave the field,
Ah, no! 'Tis ours to know the peace
  Which Christ the Truth doth yield.

A force tremendous now is thine
  Your efforts to forestall;
An active Principle divine,
  Pervades the All-in-all.

So lift thine eyes, stretch forth thy hand,
  Nor heed the sweat of brow;
"The warfare with thyself is grand,"
  To-day—Eternal—*Now.*

Answer to an Honest Inquirer.

Hon. George W. Savage, House of Representatives, Austin, Texas.

Dear Sir:—Your letter of inquiry is before me, and as you say the questions are asked in the spirit of kindness, I will endeavor to give them such consideration as I can in a letter, trusting that you will receive the answer in the same kindly spirit. You refer me to Acts, 2 : 37; 9 : 6, and 16 : 30, and ask, "What answer do Christian Scientists make?" The substance of these verses is this: "What must we do to be saved?" I would answer in Bible lan-

Digitized by Google

guage, "Believe on the Lord Jesus Christ." This includes more than is apparent at a glance. It means vastly more than the mere belief that Jesus was the one sent to redeem the world. If we *believe* in the Master, we shall believe that his words were true, that his commands were to be *fully* obeyed, and that he is "the way, the truth, and the life."

To the young man who wished to know specifically what he lacked, the Master answered, "Come and follow me." How are we to follow the Master unless by following his example in casting out *all* manner of evil, sickness, as well as sin. The Master plainly said, "If any man will come after me, let him deny himself, and take up his cross, and follow me." This is what Christian Scientists are endeavoring to do. They are striving to deny material selfhood and seek the recognition of a higher selfhood, even a life "hid with Christ in God." They are endeavoring to put all evil out of consciousness, knowing that it has no place in God or His creation. Jesus said, "If ye love me, *keep* my commandments." Can we say we love the Master while failing to walk in the way he mapped out for us? The same sentence that commands us to preach the "Glad Tidings" tells us also to heal the sick, and thus only can the Gospel be a *full* Gospel. (Vide Luke, 9 : 2, and Matthew, 10 : 7, 8.) Shall we tell a man the "kingdom of heaven is at hand," free him from the bondage of sin through the power of divine Love, but leave him in the clutches of disease, thinking that there God is of no help?

When the light of Christian Science shines in a man's heart it brings to him a vital and practical Christianity. It heals him physically and morally, and assures him that he is a *true believer* according to the Master's own definition in the last chapter of the Gospel of Mark. Such an one needs no further assurance that he has truly believed on the Lord Jesus Christ, as the Scriptures demand, and in proportion to his demonstration is he saved, because he has both internal and external evidence of the allness and power of God.

Christian Scientists believe in the baptism of Spirit. They seek demonstrable proof of the ever-present power of Christ in casting out sin, sickness, and all manner of evil. They are not sticklers for forms, creeds, and ceremonies.

It is sometimes said that Christians to-day are not enjoined to do the works that were done by the disciples. I commend to your prayerful consideration the following passage from Matthew, 28 : 19, which is a literal translation from the original Greek (Rotherham) : "Going, therefore, disciple ye all the nations, immersing them *into the name* of the Father and of the Son, and of the Holy Spirit, teaching them to observe *all things as many as I myself command you,"* etc. Here is a definite, unambiguous statement. All nations are to become as the disciples through the understanding of a practical Christianity, being immersed by the baptism of Spirit into all Truth. Furthermore, the great Teacher plainly declares that the nations are to do *all things* that he commanded his immediate followers to do. There we must leave it. The great body of people known as Christian Scientists, who use for their text-books the Bible and "Science and Health with Key to the Scriptures," by Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, have been raised up as a living monument to the practicability of Christianity as above set forth. We truly believe that such as these are being saved, inasmuch as the signs follow their belief in Christ as the Way, and this is the *test* of *true discipleship*.

"What must men do to become members of a Church of Christ, Scientist?" Believers in Christian Science using for guidance and instruction in Christian Science only the Bible and Science and Health with other works by the same author, may unite with the churches of this denomination by signing the tenets and rules of these churches. All churches have the same tenets, which you will find on page 493 of Science and Health. There is no formal ceremony in joining a Church of Christ, Scientist, and applicants are usually received on a Sunday on which the Communion is observed.

In answer to your question, "Why is Science and Health sold so high?" I refer you to an answer to the same question in the Christian Science Sentinel of March 2, 1899, a copy of which I mail you. Replying to your further query, "If it is an equal companion with the Bible or, in your words a 'Key to the Scriptures,' why sell it at at least three times the price?" The book Science and Health has, at the present time, not the means of circulation that the Bible has. The book is published and circulated at great cost. Means are necessary for the promulgation of this great Cause. If orthodox Christians would join hands in seeking to aid this Cause instead of denouncing it, and placing all manner of hindrance in the way, it is just possible that these books might be produced cheaper. This is merely my opinion, and I have no authority to make any statement regarding the possible future price of the book. I am personally acquainted with those who are managing the publication of Christian Science literature, and I know they are working unselfishly and not for money, and are giving to the world this literature at a price which must be governed by divine Principle. Orthodox Christians annually contribute thousands of dollars to Bible societies for the purpose of aiding in distributing books and lessening their cost. Are they equally willing to render their assistance in the distribution of Christian Science literature? If they are not, the question, "Why is the literature sold higher than missionary Bible literature," should not be asked. The price of the book, Science and Health, is no index to its value. For the good I have received from Christian Science I would not take all the money you could pile up in the Hall of Representatives, and I am only one among thousands in like position. I will say, furthermore, that in my ten years active service in Christian Science, as minister, Reader, and practitioner, I have never known of a single instance where any one who was really in earnest failed to own a Science and Health.

I most earnestly advise you to make a prayerful and unprejudiced study of Christian Science. The great Leader in this Cause, the Rev. Mary Baker Eddy, is laboring unselfishly for the race. Let *all* Christians who would glorify God in word and deed lend a helping hand, and so may they all be redeemed from evil and "be saved" through following in the footsteps of the great Way-shower.

Sincerely yours,

R. L. ZILLER.

Fate of a Medical Bill in Illinois.

157-163 Lasalle Street, Chicago, April 17, 1899.

Dear Editor:—Early in the session of 1899, a bill was introduced in the Illinois Legislature seeking "to regulate the practice of medicine in the state of Illinois." It provided for the licensing of physicians by the State Board of Health, and defined the practice of medicine in such terms as would render any one without such license, who should assist another—except by the administration of family remedies in case of emergency—liable to fine or imprisonment or both. It provided that the fine and imprisonment should be doubled at each conviction. A person unfortunate enough to be convicted a number of times, would need a century or two to serve the term of his imprisonment and the fortune of a multi-millionaire with which to pay his fine.

The bill met with considerable opposition, the most potent being from a committee of five Christian Scientists appointed by the three Christian Science Churches in Chicago. We insisted that the section defining the practice of medicine should be stricken out or that it should be so modified by a proviso as to exempt those who min-

Digitized by Google

ister to the sick by mental or spiritual means and without the use of drugs. It was finally agreed that a proviso should be prepared by Judge Ewing, who was one of the committee, and should be inserted in a bill which was substituted for the one originally introduced. The agreement was made with the representatives of the State Board of Health and the Judiciary Committee of the Senate.

The proviso as follows, is a part of the bill passed in the closing days of the session:—

"Provided, that nothing in this section shall be construed to apply to any person who ministers to or treats the sick or suffering by mental or spiritual means, without the use of any drug or material remedy."

The Judiciary Committee of the House made about twenty changes in the bill but did not change the proviso in any way. Toward the last days of the session it seemed that a combination of opposition and apathy would prevent the bill being called up before the close of the session, therefore the committee decided to send one or more of its members to Springfield. Mr. Ryan reached Springfield on Thursday morning and succeeded in having the bill called up and passed at the night session, and on the following morning—the last day of the session—the Senate concurred in the House amendments. The bill will become a law in ten days from the time it reaches the governor, unless vetoed by him, but will not become operative until July first.

The result was obtained by earnest effort and a proper and dignified presentation of the matter to the Senate Judiciary Committee and such members of the Senate and House as could be of assistance. There was no entreaty nor threat used, and there was nothing spectacular in the way of a large committee, although we were ready to summon several hundred people to Springfield should necessity arise.

The above is a plain statement of facts. What they mean to the cause of Christian Science can be discerned by most of us who can trace the growth of the movement during the past ten or fifteen years, but the full recognition must come from those who, whether practitioners or patients, are freed from the persecution which has taken the name of prosecution.

Perhaps a statement of why a committee of busy business men were willing to do this work and give to it such time as it required, may be of interest. All of them are debtors to Christian Science to such an extent as to inspire the most profound gratitude—two of them having been brought back to health after the sentence of death had been passed upon them. It is because they have learned through Christian Science that Jesus was truthful and knew whereof he spoke; that he commanded nothing impossible, and promised nothing impossible of fulfilment; that they have learned through demonstration that Christian Science is —to-day—healing the sick, reforming the sinner, and rescuing humanity from misery and poverty.

It seems important that this statement of what has been done in Illinois should be published as an encouragement to our friends in the states wherein the legislatures are still in session.

Yours very truly,

ARCHIBALD MCLELLAN.
Attorney at Law.

[The bill as passed has been signed by the governor and is now a law.—ED.]

From the Klondike.

BY C. R. DALTON.

I WISH to write of one whom I was instrumental in interesting in the glorious work of Christian Science, who, after months of doubting, very reluctantly concluded to accept Christian Science treatment, and who, after eight treatments, was completely healed of many complicated diseases, among which was a severe rupture of years' standing. After being healed he started for the Klondike gold fields, and I herewith enclose you extracts from two letters received from him, one before, the other after crossing the Chilcoot Pass; packing with him some twelve hundred pounds of freight, which took him about three weeks to do, working in the rain continually and not having a dry garment on him all that time day or night. He says,—

"I have little time to study Science and Health now, but knowing that I have it is a great satisfaction to me, and my faith in its teachings keeps me as straight as an arrow, and in strength I never knew before. What a contrast to my condition two short months ago, when I thought I was the most afflicted man on earth, unable to do any work, and could not lift ten pounds without fear and trembling. I thought I had all the diseases on the calendar, and was reading almanacs and patent medicine signs for anything new and up to date in the line of diseases. To-day I am strong and healthier than I ever was in my life. That is to say, I have learned the source from which we derive our health and strength, and that understanding is health and strength. It is the knowing and not the guessing, that puts us right and keeps us right. And who on earth can better know than one who has been so completely transformed from a physical, and, I might say, a mental wreck, to perfect health, strength, and manliness? Though my understanding of God's word is limited, I would not part with the little understanding I have of the teaching of Science and Health for all the gold in the territory; and I am more eager for the understanding of Science and Health than for nuggets of gold. Every word we learn to know and understand is a nugget in itself, and I want lots of them. I will take my chance on the gold.

"Well, I think a man who can breast a river of ice water as I have done, and tow a boat loaded with freight, making three trips covering eighteen miles, then go ashore and pack twelve hundred pounds half a mile to camp, and feel good over it, is better than an invalid. If there is anything the matter with me now, it would take a powerful magnifying glass to find it, and I am too busy to be looking for it myself."

The following was written some months later.

"I have found some pretty steep and tedious climbing, some rugged old mountains on the Christian Science trail. Sometimes it seemed doubtful about getting over, and I have often been stalled near the summit for several days before I could decide I was carrying too much of a load of mortal mind. Finally I would investigate my pack to see if there were anything I could dispose of to lighten the load, and I have usually found I could dispose of the whole thing, pack, straps, and all, so I let go and I go on my way rejoicing, and I tell you I do rejoice every time I let go. Everything that is burdensome we can let drop without fear of dropping anything good, for good never burdens us. I am striving for something that I can carry every day that will not, cannot burden me.

"I am happy to say I can see all that I desire only a little way ahead on the Christian Science trail, almost within my grasp, and it dawns upon me that there should be no space between me and that which I seek.

"Respectfully,
"A. W. VAN ANTWERP."

Individual Work.

I SHOULD like to write down a little thought that came to me, in the hope that it may perhaps help others as it has often helped me.

A fellow student and I were sitting one day by an open window, looking on to a river; we had been together for some weeks, and the day had come when we had to part. We had helped each other over many a little rough place, and were both working to bring to our consciousness that "there is no separation in Truth." As I was looking out of

Digitized by Google

the window, thinking and working, a steamer with two barges in tow came winding its way up the river. The steamer was going along straight and steady, and I could see no human being upon her. The two barges were fastened to her by two longish ropes, and on each barge there was a man at the helm. When the man kept a firm hand on the rudder his barge kept along straight and steady; but if he were inattentive, or looked about him, paying more attention to the passers on the shore than to the work in hand, the barges bumped one against the other, tugged at the ropes, and the men were jolted and tossed, and had hard work to keep their balance; being tied to the steamer they were bound to follow, only it depended upon each individual bargeman as to whether their passage up the river was smooth or agitated. The only way each individual could help the other was by keeping his own barge straight and steady, then he did not bump and thump and shake that of his neighbor. If his fellow traveler was perhaps a little careless, or not keeping a good lookout for all the little boats, or even the big ones that were round about him, his neighbor could give him a warning call, or a word of advice, but he could not touch his rudder or prevent his barge being bumped as a reward of his carelessness.

I could not help thinking it was just the same with our two selves. In the same way as each barge was tied to the steamer and had to follow it, but it depended upon the mortal who guided it as to whether its passage was rough or smooth, we were inseparable from Principle; but it depended upon our two individual selves as to whether our passage up the river was smooth or rough. If we were honest, always at our post, with our eyes open ready to meet every foe, either large or small, with our hand always steadily on the rudder, our passage would be smooth, and we would follow Principle side by side. But if we looked about us or deserted our post, we should not only make our own passage rough and difficult, but we should mar the progress of our neighbors, giving them many a thump and a bump. We both had to follow where Principle led, and all we could do to help each other, was to keep our own barge straight along the narrow way, without looking to the right or to the left. Whatever little word of advice, or encouragement we might be able to give one another, we had to follow the guidance of Principle, be led, be drawn, be one with Him. So the way of His appointing, not our will but His, be done, and we both were making for the same port, both had the same goal in view, "The Kingdom of Heaven."

VIOLET C. BATH, London, England.

The Word of God.

BY HENRIETTA E. CHANFRAU.

CHRISTIAN SCIENCE is the word of God which heals the sick and the sinful, opens the blind eyes, and unstops the deaf ears. It is the gospel as taught, preached, and practised by our beloved Master.

To our beloved and inspired Leader and Teacher, the Rev. Mary Baker Eddy, who has brought to this age and made practical the healing power of the gospel of Jesus Christ, we owe an endless debt of gratitude. For through her discovery of the Truth, we are able to demonstrate and follow the commands of Jesus: "Go ye unto all the world, preach the gospel, heal the sick, cleanse the leper, raise the dead, cast out demons." And so great and wonderful is this word of God, that it is not within the power of mortal man to stop its progress. There are thousands who are gladly testifying, in this country and abroad, to its healing power, and proofs of these testimonies can be obtained if desired. Two-thirds of the cases that come to Christian Science practitioners are those that *materia medica* has failed to heal. And it has been my experience, as well as that of many others, to have cases sent to us by the physicians themselves. As a physician recently and very truthfully remarked, "*You will find Christian Science victims very rare.*" Where there is one case lost under Christian Science treatment, there are hundreds that are advertised in our daily papers who have passed away under *materia medica.* But we have nothing to say against the medical profession, which numbers in its ranks many noble men and women who do what they can as far as lies in their power to alleviate the sufferings of mankind by administering drugs. But *we,* through God's law,—His spiritual law,—know of a better way, a way marked out for us by the greatest healer the world has ever known, Jesus of Nazareth, and shall we be condemned for trying to walk in that way?

"Bless the Lord, O my soul, and forget not all his benefits: Who forgiveth all thine iniquities; who healeth all thy diseases."

"Science and Health with Key to the Scriptures," opens the Bible to us (a sealed book to millions of people), and through its teachings we are able to discern spiritually, and through that discernment it becomes illumined. It is truly "A lamp unto our feet and a Light unto our path." We are a God-loving, God-fearing people, and do not condemn our brother who will not follow us. The way is open for all to know and understand. It is the strait and narrow way, but when we find it, it is the King's highway, and leads us straight to God.

I will say with Gamaliel, "If this counsel or this work be of men, it will come to nought: But if it be of God, *ye cannot overthrow it;* lest haply ye be found even to fight against God."

Stereopticon Views.

[THE following description of a set of stereopticon views of Jesus will be read with much interest.—ED.]

On the evening of Easter Sunday, I was privileged to attend a special service at the St. Mary's Avenue Congregational Church, entitled, "The First Easter." It consisted of over a hundred superb stereopticon views in which Christ was the central figure. The pictures were from paintings of the masters of art, and looked so natural when thrown upon the screen that it almost seemed we were standing amid those marvelous scenes of long ago. Every important event recorded in the Gospels was there given from the manger to the cross, out through the tomb to the resurrection morning. It was simply inspiring. I saw the Master standing before the five thousand feeding them with the loaves and fishes; I saw him rebuking the tempest and walking the waves; I saw him riding into Jerusalem amid the loud hosannas of the multitude; I saw him in the Temple teaching; in his mother's home; in the abode of the disciples; at the well; on the hillside teaching the people; in the garden; before Pilate; bearing the cross up the hill of Calvary; I saw him stretched upon the cross; I saw him lifted down, wrapped in fine linen, borne to the sepulchre. The cave opened; I saw within the cave where they laid him; I saw the last loving touches made before he was left alone; I saw them come away; I saw the stone at the cave's mouth, the sad disciples in their abode, the home of the mother of Jesus the night of his burial. Then I saw the dawn of Easter morning, a sight so grand as to bring tears to one's eyes; I saw the stone rolled away, the Master stepped forth, appearing to Mary, recognized by her; I saw him meeting the disciples; I saw him on the way to Emmaus, and then I saw the Ascension. Surrounded by many disciples and followers, he rose somewhat as it were in the air, and then faded away till nothing was left but a pure white cloud. What an inspiration was that picture-lesson as a whole! Every picture was perfect, as natural as life, almost, to the eye, and I seemed to have followed the Master throughout his pilgrimage on earth, and shared in the joy of his victory over the grave, on that bright Easter morning; and seem to see the Risen-Christ idea clearer and better than ever before.

WALDO PONDRAY WARREN.

Question and Answer.

In what sense can the atonement be said to be "a hard problem in theology" from the Christian Science point of view? Does this mean the theology of Christian Science or that of old theology?—T. D. W.

We understand this quotation from our text-book, "Science and Health with Key to the Scriptures," page 328, relates to the old theology. The atonement has ever been one of the perplexing questions of the old theology, because in it are embraced many other difficult doctrinal questions. The old theological theory is, that atonement is the reconciliation of God to man, or the appeasing of God's wrath through the propitiation or mediatorial office and sacrifice of Jesus Christ. Those who so far believed on Jesus Christ as the Saviour of mankind as to bring themselves within the saving efficacy of his blood shed for them, had so far appeased God's wrath as to be forgiven of their sins and thereby saved. Those failing thereof were still under the ban of the divine wrath and were to remain unforgiven throughout all eternity, consigned to endless banishment from God's presence and saving power. This view of the atonement surely is a hard problem—hard in every conceivable view of it; hard because difficult of comprehension and more difficult of solution,—a mystery above and beyond mortal ken. And yet, according to the old theory, if unsolved, the penalty of eternal banishment from salvation follows.

But what of the Christian Science view of atonement? God is eternal, ever-present Love. His atonement is love. He has evolved from His eternal consciousness or selfhood, infinite ideas. The highest of these ideas constitute man. God being the Principle of man, the Principle and the idea are forever inseparable. There is, therefore, an eternal at-one-ment between God and man, or Principle and idea. This is the absolute fact of Being.

To the extent that mortal man, or the man of the material senses, has strayed, in his own belief or conception, from his true relation to God as His idea, he has lost his true estate, which is spiritual, not material; and to this extent he may be said to have become unreconciled to God.

Now, what of the reconciliation? He must awaken from his lost, or misconceived, estate to the understanding of his true estate, of his real relationship to God. He thus awakens in proportion as he ceases sinning or straying away from God, and in this proportion he is coming into at-one-ment with God, into his true selfhood and estate.

Theologically the Christian Science view is not difficult. It is stripped of all the perplexities of the old doctrinal conception. But, nevertheless, from every human standpoint, it is fraught with serious import. The practical working out of the theory involves sacrifice, even the sacrifice of all the false and alluring pleasures of the world, that is, of the material senses or fleshly, sensual passions, appetites, and indulgences of every character. It involves the absolute destruction of the old man of sin—placing upon the altar, which burns and destroys, every false conception and condition, and putting on the new man of spiritual righteousness and wholeness.

Eternal, all-present Love, needs no appeasing. Strict conformity to the divine law is the sacrificial altar upon which all must place themselves. "Keep the statutes and Commandments." This is the Scriptural edict, the divine injunction, which was, and is, and ever shall be, until the end of the world,—that is, the end of mortal error. This is the atonement. Read carefully in this connection the chapter on "Atonement and Eucharist" in Science and Health.

Rev. Dr. McKenzie says that church which is too good for the poor man is too poor for the good man.

Boston Evening Transcript.

Letters.

Cedar Rapids, Ia., April 19, 1899.

Dear Editors:—I enclose you under separate cover the last two issues of the Sunday Republican. The former contains a paper read before the Methodist Ministerial District Conference. The writer believed he was attacking Christian Science by saying, "it was to all practical purposes the same as mental science; called it "pantheism;" does not see how any well-balanced mind can be attracted by such nonsense; "it is the craziest of all crazes." Of course he had put up his target to shoot at and hit it, but Christian Science was untouched, for one must know something about Christian Science before he can attack it,—our dear brother will erelong see that Christian Science can withstand all attacks, for Christian Science is not vulnerable. It is not of man, but of God.

The second paper was copied from the Sentinel of March 30, "Why Christian Scientists should be recognized as Christians," from the pen of Rev. Josiah Zimmerman, a Lutheran minister, and read before the Ministerial Association of Lincoln, Neb. It was a grand article, and we were glad to see it published here, for it was only the truth regarding Christian Science. Was it not a beautiful tribute to Christian Science that this article was suggested by a Methodist lady as a reply to the former, and at her request it was published?

A little less than a year ago my wife and I, when overwhelmed with bodily infirmities, came to Christian Science for help. For many years we had "sought to the physicians" to be healed of our ailments, but could get no relief. In the darkest hour, when we were without hope (man's extremity), suddenly there flashed out a beacon light and the gates of Christian Science were revealed to us. We entered together and almost instantly were made whole (God's opportunity). We rejoice now that we can give this wonderful Truth to others and can ask "Who is so great a God as our God?"

Most respectfully,

JOHN E. PLAYTER.

From Mr. Buswell.

Beatrice, Neb., April 14, 1899.

Dear Mother:—I cannot let this week pass without telling you of another proof that divine Love does speak to the world through you. Last Sabbath was a beautiful day with us, and our attendance at church was good. In the audience was a lady who seemed to be suffering with physical trouble. Her thought in the morning was that she could not get to church; but she felt she must go.

During the service the claim seemed so strong she thought of calling on some one for help. During the reading and singing of the last hymn (No. 178, "Saw ye my Saviour," composed by your own dear, loving thought), she felt she was set free. Her trouble was gone, and she *realized* the peace expressed in those beautiful words. Who can doubt the inspiration of those words of love—"The sick *are* healed"?

We find it pleasant to be settled in our own home, but we miss the dear ones in Concord, and most of all your dear smile and loving words of counsel and encouragement. It rejoices our hearts to see the progress that is being made in that field, so dear to us all. And we thank the dear Father, with you, for His goodness to His children. Mrs. Buswell and I are busy scattering seeds of love and cheer among this people, and we know we have your approval and God's blessing when we are faithfully doing His will. Mrs. Buswell joins in much love to our dear, faithful Mother.

EZRA M. BUSWELL.

Afraid of the Moon.

Editor Sentinel: —

GEORGE G. GROFF, M.D., a professor in Bucknell University, at Lewisburg, Pa., and who also served as an army surgeon in the United States Volunteers, in Porto Rico, wrote a letter to the Saturday News, at that place, which was printed in that journal April 8, 1899.

I send you the following excerpt from the letter, which I think will interest the readers of your valuable and interesting paper:—

"I find an idea prevalent here which may be of interest to some of our Pennsylvania friends who believe in the influence of the moon. They think here, among other things, that the moon's light is injurious to health. So on moonlight nights if it is necessary to go out they carry an open umbrella over their heads. It is a ridiculous sight to see scores of people under umbrellas, the moon shining brightly and not a cloud in the sky. It is not the poor and ignorant alone who do this, but the well-to-do and educated people, just as at home where college professors, ministers, and lawyers are the foremost patrons of quacks."

A. L. SHOWERS.

Miscellany.

A Sensible Ordinance.

The following is an extract from an ordinance recently published in the Galveston Daily News, which had been introduced at a meeting of the city council of Galveston, Texas. May it not justly be considered as one of "the signs of the times"?

It shall not be lawful for any person, firm, or corporation to exhibit or distribute or to have posted or pasted up on any of the bill-boards, fences, sidewalks, curbstones, posts, or awnings in the city of Galveston, or display in any window or show case any picture, print, lithograph, or advertisement representing a human figure in a lewd, improper, or indecent manner, or representing such human figure as suffering from or being afflicted with disease of any kind whatsoever, nor shall it be lawful in any of the methods aforesaid, to exhibit advertisements of any medicine or remedy purporting to cure such disease or ailment, where such advertisement is accompanied by pictures or representations of persons represented to be suffering from such disease, and all such pictures or representations so exhibited are declared to be nuisances in any of the streets, alleys, or sidewalks of the city of Galveston, and when posted or pasted up may be removed by the chief of police, or other officers of the city.

Civilization.

"As I understand it," said the heathen, "You propose to civilize me?"

"Exactly so."

"You mean to get me out of habits of idleness and teach me to work?"

"That is the idea."

"And then lead me to simplify my methods and invent things to make my work lighter?"

"Yes."

"And next I will become ambitious to get rich, so that I won't have to work at all."

"Naturally."

"Well, what's the use of taking such a roundabout way of getting just where I started? I don't have to work now."—*Washington Star.*

The World is Growing Better.

Some unthinking people say that the world is getting worse, but social scientists, men who devote their lives to social questions, are positive in saying that the world is better now than it has ever been, though less religious in the sense of following creeds. There are not many men or women in the world who would betray a personal trust placed in their keeping, or violate the sacredness of any obligation, tacit, implied, or outspoken, for it is now accepted among all classes of people, high or low, that the betrayal of confidence or trust is evidence of the lowest moral depravity, and from this widespread conviction, men of science conclude that when man recognizes unity of principle the world is growing better.

Times-Union Citizen, Jacksonville, Fla.

Editorial Comment.

Christian Science is entitled to precisely the same respect and protection that are extended to all other creeds and systems, provided that they keep within the law. If men or women believe in Christian Science their opinions are entitled to all possible consideration. If persons are firmly persuaded that they can be cured of bodily pain and disease in that way only, they are fools if they do not resort to Christian Science. The fact is, that if Christian Science did not cross the tracks of the "regular" physician and the "orthodox" clergyman it would meet with but very little opposition.—*Buffalo Commercial.*

In an account of a five years' sojourn on the Mackenzie River, Edouard de Sainville mentions the entire absence of consumption among the natives, and the occurrence of colds only on contact with civilization. The curious experiment was tried of opening a soldered zinc case in a perfectly healthy camp, and distributing the contents. On the following day every member of the camp developed a violent cold, which was cured with camphor. The case had been packed in Winnipeg.—*Concord Statesman.*

Mrs. Hornbeak (looking up from her newspaper)—Here is a patent medicine which is guaranteed to cure ye after everything else has failed.

Farmer Hornbeak—Huh! What I want when I'm sick is a medicine that will cure me before I've tried everything else, an' not one that I have to put off takin' till I have waded through the whole blamed mateery meddicky without gitting relief.—*Harper's Bazar.*

A Difficult Problem.

"What's the matter?" inquired the sympathetic friend.

"I don't know," replied the man who was gazing at the floor and holding his face in both hands.

"Is it the toothache?"

"It started that way, but I don't know now whether it's the toothache or the things my friends persuaded me to do for it."—*Washington Star.*

Notices.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

The next admission of candidates for membership with the Mother Church will take place June 3, 1899. Applications to be presented at that time must be in the hands of the clerk on or before May 15.

☞ Those who intend to be present at the annual meeting of the Mother Church to be held in Boston, Mass., June 6, 1899, can secure reduced rates by getting certificates for the same from their local agents when they purchase their tickets.

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid. . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MAY 11, 1899. | Vol. 1 No. 37

Secretary Long.

He Defends the President and the Campaign in the East.

SECRETARY LONG was the guest of honor at a dinner given by the Essex Club of Boston, on the anniversary of the great battle of Manila Bay. His address on that occasion was in part as follows:—

In behalf of the navy, I thank the Essex Club for celebrating this day, which is one of the most conspicuous in naval annals, and in paying its tribute of respect and admiration to the most conspicuous naval hero of recent times. I cannot claim him, however, for the navy alone. Nor can I claim that your plaudits are solely on account of his naval distinction. By his display of large powers of administration, by his poise and prudence, and by his great discretion, not only in act, but also in word, which is almost more important, he has proved himself a great representative citizen as well as a great naval hero.

In the cluster of military celebrities of the recent war, Dewey easily stands at the front. No captain ever faced a more crucial test than when, a year ago this morning, thousands of miles from home, with every foreign port in the world shut to him, nothing between him and annihilation but the thin sheathing of his ships, his cannon, and his devoted officers and men, he moved upon the enemy's batteries on shore and on sea with that unflinching faith and nerve which sometimes fail other men even of courage and spirit, and, before the sun was half-way up the heavens, had silenced the guns of the foe, sunk the hostile fleet, demonstrated the supremacy of the American sea power, and transferred from Spain to the United States an empire of the islands of the Pacific.

I thank you, also, for your courtesy in inviting to your board so many officers of the United States navy, whom I am honored to meet.

My only regret is that we cannot have with us all the brave heroes who participated in those great events. They would include not only the officers on the decks, but the men behind the guns. May we not, however, say that, though not present in person, they are all here in our hearts, our affection, and our gratitude?

✠

I do not forget that, while celebrating the glorious record of our navy, you are also, in common with all good citizens, keenly alive to the new problems which, as a legacy of the war, are upon us. The old order of things is always giving way to the new, and calling for the highest patriotism and wisdom. There has never been a generation in our country that has not had to face some new crisis, which, in each case, was to many a portent of ruin. But it has always resulted in larger development and resourcefulness.

So now, if there were no other new possessions than Hawaii, a grave new departure would be before us. If only Cuba and Porto Rico were added, it would be a great tax upon our faith and ability. With the Philippine Islands, almost unlimited in number and population, thrown into the scale, no wonder the prospect creates a feeling of anxiety on the one hand, but of high resolve, as well as of hope, on the other. The discussion that has arisen is interesting and vital. As happens in all discussion, there is danger of being misled by terms and of the appearance of greater differences than really exist.

It is worth while to remember that there are certain points on which all sides are substantially agreed. One of these is that it was the national duty not to permit these islands to revert to Spain. Another is, though I notice the term is sometimes still used in the excitement of debate, that there is no purpose anywhere to "subjugate," or reduce these islands to "vassalage," or make their people "slaves," or deprive them of any rights which are enjoyed by the inhabitants of our own territories at home.

✠

The first, constant, and last instruction of the administration has been to insure them every help to better conditions. You can point to no word it has uttered, no order it has given, no mission it has sent, that has not had in view the improvement of the Philippine Islands. If you will read the recent proclamation issued by the commission of which President Schurman is the head—a man of the highest character and purpose—you are blind if you do not see that it tenders to them every advantage of good government and civilization.

At the close of the war the President found himself charged with the duty of securing proper guarantees of order and protection to property, and of organizing a stable government. It was a difficult problem in any event.

I think he would have been able to meet it more quickly and more successfully if the treaty of peace had been ratified at once. The delay in its ratification, entirely honest on the part of many as it was, yet worked—as opposition, though entirely honest, to the present efforts of the administration is now working—two embarrassments.

First, it induced Aguinaldo to believe that a large element in this country was opposed to the President's policy and favored the immediate independence of the islands; and his agent here, Agoncillo, encouraged him in this opinion.

Secondly, this delay left no time for Congress to act upon the question of what disposition should be made of the

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

Philippines, but left them in the hands of the President. He has not the power to dispose of them. They are territories for which Congress must make the needful rules and regulations. The title to them is in the United States. His simple duty is to maintain law and order there, and to do so until Congress can act.

The President had given strict orders to General Otis to avoid conflict in every possible way, and General Otis had so notified Aguinaldo. The latter, instead of seeking peaceful settlement, went on waging war on the city and on our troops lawfully there. In the discharge of his duty to maintain law and order, certainly the President was justified in suppressing these attacks. And, if the best means of defence was, for the time being, to assume the offensive after such provocation, in order to prevent further attacks, he was justified in that.

Meantime, the most enlightened commission he could select had been sent to Manila, with a view to bringing about some proper adjustment. This commission is now at work.

It seems to me that this is the first thing to be done; and this the administration is endeavoring to do.

The second thing to do is to go on, through the Schurman peace commission, as that commission is endeavoring to do, and as speedily as possible, get into communication with the leading influences among the natives and secure some adjustment.

The third thing for the administration is, while thus insuring order and doing everything to secure an adjustment with the natives, to wait the action of Congress, which must determine what the disposition of these islands is to be. My personal views are of very little consequence, but I have already expressed them to the effect that I should be glad to see every step taken toward their ultimate self-government as soon as they show their capacity for it.

I am one of those who believe in freedom of speech. There are occasions when those in official position are expected to be reserved. But among the people, I think criticism of those in power is often useful and good, even if not wholly warranted.

On the other hand, in all good nature, when we really get down to business, let us not be too immoderate, too exacting, or too denunciatory. Let us bear in mind that it is much easier for the fellow who has no responsibility to tell what ought to be done, and not to be put to the test of doing it, than it is for the fellow who has the responsibility to be put to the test of deciding and doing what ought to be done.

You certainly may be sure of one thing, that the administration is just as humane and just as eager to do right as any man or woman in Massachusetts, and that is the highest standard I know of on all this footstool. You may be sure that it has not the least idea of putting any shackle or fetter on any Filipino, not so much as a cotton twine string around his ankles. You may be sure that it is more eager to stop bloodshed and secure peace than you are, because it has to bear the responsibility.

At present a plain, honest, devoted citizen, whose ambition and purpose is to render good service to his country and to humanity, is on duty, and he cannot give that duty up or transfer it or shirk it. He is doing that duty as best he can, and he is doing it in just the spirit, if not in just the way, that the most exacting combination of good sense and good conscience at this table would have him do it.

In his efforts, you men of Essex—grand old patriotic name—can hinder him or aid him. You are free agents, and have the right to do as you please. You can pelt him with brickbats, or you can give him a cordial word and a helping hand. Which shall it be?

Items of Interest.

In a letter to a Kansas paper one of the members of General McArthur's brigade writes from Manila, "Night before last I was on picket duty all night, and yesterday morning I found that the nigger picket was within a hundred yards of me. After a little talk we both laid down our guns and met between the lines, and had a little visit. He said the people in their army did not want to fight us, but they had to, or their officers would kill them. He also said that he had not had a bite to eat for three days. I gave him what hardtack I had with me, and it did me more good to see him eat it than if I had eaten it myself. When we parted we shook hands, and he cried like a baby."

"Dewey day" was generally celebrated in an appropriate manner. President McKinley visited the navy yard at New York, and while there sent the following despatch to Admiral Dewey:—

New York, May 1, 1899.

Dewey, Manila:—On this anniversary of your great victory the people of the United States unite in an expression of affection and gratitude to yourself and the brave officers and men of your fleet, whose brilliant achievements marked an epoch in history and which will live in the annals of the world's heroic deeds.

WILLIAM MCKINLEY.

Rufus L. Perry, a colored lawyer of Brooklyn, has secured an option on fifteen hundred acres of land on Long Island, with the idea of forming a settlement of the people of his race. The plan is to bring up about six thousand negroes from the sections of North Carolina and South Carolina, and lease the land to them on ninety-nine year leases at five dollars a lot. Building materials are to be supplied to the settlers and factories for the manufacture of various kinds of woodwork will be established.

When the payment of twenty million dollars to Spain is made, the cash balance in the United States Treasury, May 1, will be about two hundred and sixty million dollars. The expenditures on account of the war and maintaining garrisons have reached about two hundred and sixty-six million dollars. The ordinary receipts during the month of April were $41,611,587, which will leave a deficit of about five million dollars.

The first authentic information regarding Lieutenant Gilmore and his party who were recently captured while endeavoring to rescue a body of Spanish soldiers, was received by General Otis in the form of a list of the missing men, and was signed by Gilmore himself. Seven enlisted men of the navy and six enlisted men of the army are with him. All are doing well.

Princeton University recently received an anonymous gift of one hundred thousand dollars to endow a professorship of general politics in that institution. The alumni and friends of the University have settled upon ex-President Grover Cleveland as the occupant of the chair. It is even said that the donor of the gift had Mr. Cleveland in mind.

The aggregate strength of troops employed during the war with Spain was approximately 275,000. During this time the deaths from all causes was 6,190, or 2.25 per cent. The mean strength for the first year of the Civil War was 276,371, with an aggregate loss by deaths of 19,159, being a percentage of 6.8.

A magnificent memorial building is to be erected in honor of Admiral Dewey at Norwich University, Northfield.

Vt., the state's military college where Dewey was a student. The ground was formally broken on Dewey day. The first sod was turned by Captain Clark, formerly of the battleship Oregon.

What was once the Southern Ute Reservation in Southern Colorado has been opened for settlement. There is enough land to make fifty-two hundred homes of one hundred acres each. The government gave to the Ute Indians

President McKinley is apparently satisfied with the general conclusions of the beef court of inquiry, but thinks the report is too harsh, and has returned it to General Wade, the president of the court, with instructions to modify it by toning it down.

Wireless telegraphy recently had its first practical demonstration in England. A lightship was struck by a passing vessel. The crew immediately telegraphed to South Foreland that their ship was in a sinking condition, and tugs were sent to the rescue.

Secretary Hay has paid to the French ambassador, M. Cambon, the twenty million dollars provided by the treaty of peace for the cession of the Philippines. The payment was made in four treasury warrants of five million dollars each.

A battery of sixteen twelve-inch rifled mortars, having an accurate range of five miles, are being put in place at Fort Point, San Francisco. Military engineers say that when they are set the Golden Gate will be impregnable.

President Loubet has requested the French ambassador to Spain to convey to Madrid an expression of his satisfaction that peace between Spain and the United States had been brought about through the good offices of France.

Chief Yeoman Willis, who stands six feet seven inches, said to be the tallest man in the United States Navy, has been selected to take the part of Uncle Sam in the Peace Jubilee to be held in Washington, D. C.

The letter of reprimand to Captain Coghlan, on account of his anti-German utterances, will not be made public unless the captain himself cares to give it out, which he is at perfect liberty to do.

The President has appointed Colonel Frederick Funston of the twentieth Kansas, a brigadier-general of volunteers, in recognition of his skill and gallantry in crossing the Rio Grande River.

The Phœnix Bridge Company, Phœnixville, Pa., has received a contract to build twelve steel bridges for the Russian government. The bridges are for the Eastern Chinese railroad.

"On this occasion, it appears to me that silence is golden," was Admiral Dewey's response to a request from a New York paper for a sentiment appropriate to Dewey day.

American manufactured goods to the amount of $36,025,733 were exported during the month of March, or more than twenty-five per cent in excess of any preceding month.

The heaviest passenger engine ever built runs on the Burlington road out of Chicago, and weighs 127 tons. It will haul a train weighing thirty-eight hundred tons.

Information is received from Apia, Samoa, that the Mataafan chieftain has accepted an armistice, though the German consul failed to sign the proclamation.

Secretary Alger was one of the speakers at the fifteenth annual banquet of the Michigan Commandery, Order of the Loyal Legion, recently given at Detroit, Mich.

At a recent cabinet meeting it was decided to seize all the literature issued by the Anti-Imperialist League mailed to the new possessions of the United States.

General McArthur has sent an officer to General Antonis Luna, the Philippine commander, under a flag of truce, asking an exchange of prisoners.

The North Atlantic squadron, under command of Rear Admiral Sampson, has arrived in New York after an extensive cruise in the West Indies.

From February 4 to April 28 one hundred and ninety-three soldiers were killed in the Philippines, and eleven hundred and eleven wounded.

The French despatch-boat Ibis has successfully telegraphed a distance of twenty miles by the Marconi system of wireless telegraphy.

United States Senator Hoar has sailed for Europe. Accompanied by his wife he will make a continental tour of some duration.

The bill to limit the height of buildings in Massachusetts to one hundred feet, was killed in the House of Representatives.

The future Cuban republic will assume an indebtedness of forty million dollars to pay the Cuban militia and civil employees.

It is said that because an oath has no sanctity among the natives, there will be no jury system in the new laws of Cuba.

It is estimated that during the present year the railroads of the United States will require about ninety-four million ties.

The government has decided to establish a military post at Pyramid harbor, near Chilkat village, in Alaska.

The total supply of gold coin and bullion in the United States is nine hundred and eighty million dollars.

The Christian Endeavor Society reports more than 3,200,000 names on its rolls.

The anniversary of the sinking of the Spanish fleet was quietly observed at Manila.

It is estimated that the Klondike output this year will be about fifty million dollars.

The postal service on the island of Porto Rico is now self-sustaining.

General Charles P. Eagan has sailed for Honolulu.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Not Matter but Spirit.

[From the Concord Evening Monitor.]

THE following opportune and instructive message from the Discoverer and Founder of Christian Science was read at the regular Wednesday evening meeting of the First Church of Christ, Scientist, in Concord, on the date which it bears:—

First Church of Christ, Scientist, Concord, N. H.

My Beloved Brethren:—We learn from the Scriptures that the Baalites or sun-worshipers failed to look "through nature up to nature's God," thus missing the discovery of all cause and effect. They were content to look no higher than the symbol. This departure from Spirit, this worshiping of matter in the name of nature, was idolatry then, and is idolatry now. When human thought discerned its idolatrous tendencies, it took a step higher; but it immediately turned to another form of idolatry, and, worshiping person instead of Principle, anchored its faith in troubled waters. At that period the touch of Jesus' robe, and the handkerchief of St. Paul, were supposed to heal the sick; and our Master declared, "Thy faith hath made thee whole;" and the medicine-man, far lower in the scale of thought, said, "My material tonic has strengthened you." By reposing faith in man and in matter the human race has not yet reached the understanding of God, the conception of Spirit and its all-power.

The restoration of pure Christianity rests solely on spiritual understanding, spiritual worship, spiritual power. Ask thyself, Do I enter by the door and worship only Spirit, and spiritually? or, Do I climb up some other way? Do I understand God as Love, the divine Principle of all that really is, the Infinite Good, than which there is none else, and in whom is all? Unless this be so, the blind is leading the blind, and both will stumble into doubt and darkness, even as the ages have shown. To-day if ye would hear His voice, listen to His Word and serve no other gods; then the divine Principle of Good, that we call God, will be found an ever-present help in all things, and Christian Science will be understood. It will also be seen that this God demands all our faith and love; that matter, man, nor woman can ever heal you, nor pardon a single sin; while God, the divine Principle of nature and man, when understood and demonstrated, is found to be the remote, predisposing, and present cause of all that is rightly done.

I have the sweet satisfaction of sending to you weekly, by Mr. Mann, alias our "best man," flowers that my skilful florist, Mr. Eaton, has coaxed into loveliness despite our winter snows. Also I hear that the loving hearts and hands of the Christian Scientists in Concord send these floral offerings in my name to the sick and suffering. Now, if these kind hearts will only do this in Christ's name, the power of Truth and Love will fulfil the law in righteousness. The healing and the gospel ministry of my students in Concord, have come to fulfil the whole law. Unto the angel of the Church in Philadelphia—the Church of Brotherly Love—"these things saith He that is holy."

To-day our great Master would say to the aged gentleman healed from the day my flowers visited his bedside, "Thy faith hath healed thee." The flowers were imbued and associated with no intrinsic healing qualities from my poor personality. The scientific, healing faith is a saving faith: it keeps steadfastly the great and first Commandment, "Thou shalt have no other gods before Me"—no other than the spiritual help of divine Love. Faith in aught else misguides the understanding, ignores the power of God, and, in the words of St. Paul, appeals to an unknown power "whom therefore ye ignorantly worship." This trembling and blind faith, in the past as in the present, seeks personality for support,—unmindful of the divine law of Love that can be understood, and whose Principle works intelligently as the divine Mind, not matter, casting out evil and healing the sick.

Christian Science healing is the Spirit and the bride—the Word, and the wedding of this Word to all human thought and action—that say, "Come," and I will give thee rest, peace, health, holiness. The sweet flowers should be to us His apostles, pointing away from matter and man up to the one Source, divine Life, and Love, in whom is all salvation from sin, disease, and death. The Science of all healing is based on Mind—the power of Truth over error. It is not the person who gives the drug, nor the drug itself that heals; but the law of Life understood by the practitioner as transcending the law of death.

I shall scarcely venture to send flowers to this little Hall if they can be made to infringe the Divine law of Love even in thought. Send flowers and all things fair and comforting to the dear sick; but remember it is not he who giveth the flowers that conferreth the blessing, but "my Spirit saith the Lord;" for "in Him was life, and that life was the light of men."

MARY BAKER EDDY.

Pleasant View, Concord, N. H., April 19, 1899.

Not Well Informed.

CERTAIN gentlemen of the pulpit in Michigan and elsewhere, are varying their stereotyped attacks upon Christian Science by attempting to make capital out of the falsehoods which have recently been revived, to the effect that the author of "Science and Health with Key to the Scriptures," borrowed her system of healing from one Dr. P. P. Quimby. One of these gentlemen is reported to have said in a recent sermon, with reference to these charges, that the Rev. Mary Baker Eddy has kept a judicious silence, although the seriousness of the offence and the boldness of the accusation have demanded a reply, which she had never even attempted.

In view of the facts, this assertion, made publicly in a pulpit where truth only is supposed to be uttered, is about as bold a performance as anything of which we can conceive. The gentlemen who thus speak should be aware that they are thereby acknowledging themselves to be uninformed of existing and well-known facts, and they should become better historians before undertaking to recite history.

The fact is, that many years ago these calumnies of Mrs. Eddy and her work were answered by her and others. We regret that our clerical friends at the time of the delivery of their sermons, had not perused the Christian Science Sentinel, published in Boston, Mass., of February 16, 1899; for had they done so they would have been thereby

Digitized by Google

informed that, as early as October 6, 1883, there was published in the Journal of Christian Science, parts of a decision of the United States Circuit Court of Boston, in a suit brought by Mrs. Eddy against one Edward J. Arnes, for infringement of her copyright of "Science and Health with Key to the Scriptures." In this action the defendant Arnes alleged as his sole defense, that Mrs. Eddy was not the author of Science and Health, but that the said Quimby was. Upon this issue the case went to trial, there being no other issue involved in it, for Arnes had no other defense. The defendant's counsel failed to produce any evidence in support of his answer, that Dr. Quimby and not Mrs. Eddy was the author of the book, for the infringement of the copyright of which the suit was brought. At the time of the trial the defendant's counsel was asked by Mrs. Eddy's counsel why he did not present evidence in support of his answer, and he said, for the reason that there was none to present. Does any one suppose that, this being the sole defense, the defendant would not have proved his case if it had been possible?

A substantial copy of the record of the case, including the decree of the Court, perpetually enjoining Arnes from continuing the publication of his pirated book—copied verbatim from "Science and Health with Key to the Scriptures"—and consigning all that then remained on hand to the knife,—was republished in said number of the Christian Science Sentinel. Also letters from students of Mrs. Eddy, and from Mrs. Eddy herself, dated variously in 1886, 1887, 1892, and 1899, all of which were in refutation of the charges which our clerical friend declares have remained wholly unanswered. Various refutations of the same falsehood have been published in daily and weekly papers and other general publications in this country; some in Denver, Col., some in Chicago, Boston, New York, and many other places. Not only so, but members of the official Board of Lectureship of the Christian Science denomination, have publicly refuted the same from numerous rostrums, east, west, north, and south, and are yet doing so.

In view of all this, may we not pertinently inquire where our belated clerical brethren have been doing their current reading? They must be so absorbed in their theological studies that they are lost to the events of the outside world.

The only question that has seriously arisen in the minds of Mrs. Eddy's friends and adherents, has been, as to whether there has not been altogether too much notice taken of charges so frivolous, foundationless, and inconsequential as those in question. It ought to be enough to know that they were set in motion for no disinterested purpose, but in a spirit of sheer malevolence.

The only apology there is to be offered for noticing these moss-grown falsehoods, is the fact that there is already so much misrepresentation and misapprehension concerning the Discoverer and Founder of Christian Science, and the system itself, that many innocent persons may be misled thereby.

From a lecture delivered in Chicago, March 1, 1899, by Edward A. Kimball, C.S.D., of the official Board of Lectureship, and published extensively in the Chicago and other newspapers, we make the following extract:—

"A metropolitan editor recently expressed surprise that we did not 'come back at' the people who were making public utterances of antagonism toward Christian Science. One reason why we do not is that there is no unity in the thought, theory, or practice of those so opposed. Indeed, the medley of conflicting human thought which rises up to declare the unreality of Christian Science without having any knowledge of its nature is self-contradictory, illogical, and grotesque beyond the capacity of any man to estimate. It is a house divided against itself. To 'come back at it' would be as profitless as to chase after the terminals of the rainbow. The house itself cannot stand. It will fall in due time.

"The crusade of reform which is now progressing in the name of Christian Science is not controversial, but educational. It is useless to quarrel with the opponent of Christian Science because, as a matter of fact, he condemns that which is his own misconception. I never knew of a person who really understood it that did not recognize its verity and accept it with rejoicing. The man who does not understand it and know its great value cannot be persuaded by acrimonious and undignified debate, but needs to find his way through the pathway of loving-kindness and by means of the processes of education.

"Another reason why we prefer to hold our peace is that many of the unfavorable utterances concerning Christian Science are in the nature of sheer defamation. They are nothing but graceless lies, and we do not care to yoke ourselves in an unprofitable race with falsehood.

"There is one lie, however, that came under jurisdiction of the United States Courts several years ago, to the effect that Mrs. Eddy is not the Discoverer of Christian Science, and that her works are not original. The Federal Court, in taking cognizance of this false claim, entered a decree confirming her status as the author and originator of the substance and details of her text-book, Science and Health, and entered judgment and injunction against the would-be infringer. A well-ordered mind usually accepts such a decree as decisive and conclusive.

"As a lie which has been exposed, it is now hoary with age, and should have become weary of the use for which it is being urged in vain. Nevertheless there are people who are intent on assaulting Christian Science without regard to ways and means, who rehabilitate this fabulous charge, and continue it in ignoble service.

"My attention has been called to a sermon preached in Massachusetts in which this old story is repeated to the effect that Mrs. Eddy got her ideas from the manuscript of the late Dr. Quimby of Maine. This whole question of originality was involved in and disposed of by the legal decision referred to, and the fact that Mrs. Eddy is the Discoverer and Founder of Christian Science is now formulated as history and acknowledged by encyclopedias, dictionaries, and biographical works. There are, however, several features of the case which the Court decision does not take cognizance of, and which are worthy of mention:—

"1. Dr. Quimby was an avowed mesmerist.

"2. Christian Science and mesmerism are like polar opposites. They are antipodes, and could not possibly proceed from the same source.

"3. The proposition that a professional mesmerist could originate Science and Health, or that the Discoverer of Christian Science could also be a mesmerist, is not only inconceivable but impossible.

"4. People who have examined the fragments of manuscripts which Dr. Quimby wrote, and made the examination with a view of using them to discredit Mrs. Eddy's position, have admitted that they were valueless for such a purpose.

"5. The only semblance of a basis for this report is the statement of Dr. Quimby's son to the effect that Mrs. Eddy's ideas were the same as his father's.

"6. Mrs. Eddy herself says that she not only did not get any of the ideas of Christian Science from Dr. Quimby, but that his views were utterly unlike it.

"Did you ever know a woman who, from childhood's early hour, had with purity of motive and with steadfast, holy purpose clung with uncompromising fidelity to God—eager to know His will and satisfied with obedience? Did you ever know of such a woman whose many years of journeying along life's pathway were marked by monuments of integrity, chastity, benevolence, and self-sacrificing love? Do you know that her life has been one of ceaseless and unselfish devotion to the welfare of her fellow man, and that she has endured all the evil shafts that have been directed to her because of her endeavor to reclaim a lost race, rather than to falter and give way? Do you realize, when with her, the presence and balm of a deep, holy piety, the just-

Digitized by Google

ness and merciful nature of her judgment, and the rectitude of thought that is in communion with God?

"If you do know such a woman then you know that the very substance and grandeur of her life constitute their own best evidence that she is neither robber nor liar."

If our good friends of the pulpit will take the pains to read this single refutation of the falsehoods they are repeating—strong, vigorous, truthful, and convincing—they would hesitate again to become parties to the circulation thereof. Should they do so, they would do it knowingly and wilfully, and must suffer the consequences of their wrongful acts. Let us hope that in their anxiety to antagonize Christian Science they will not become thus reckless.

Medical Bill Vetoed.

THE Colorado Legislature at its recent session passed a restrictive medical bill, aimed, of course, largely at Christian Science. Its passage seems to have been a surprise to every one, and was doubtless hastily done. Fortunately, however, it could not become a law without the governor's endorsement and signature.

Governor Charles S. Thomas of that state, is too astute a lawyer not to have seen the weakness of the bill, its character as class legislation, as oppressive and tyrannical, and its invasion of civil and religious rights. He is, also, too just a man, and too pronounced in his opposition to trusts and monopolies of every kind, to have given his consent to so flagrant an attempt at trust legislation as that embraced in this medical bill. He, therefore, vetoed it. His veto message will, in our opinion, rank among the great state papers of the present decade. It is broad, liberal, and able from every point of view, but especially the legal.

Governor Thomas is universally acknowledged to be among the ablest lawyers of the West. He is endowed with an unusually keen, analytical mind, and his experience as a lawyer has been varied and extensive. His practice for many years has been as large as, if not larger than, that of any other single lawyer in his part of the country. This fact adds greatly to the force and effect of his veto message. We take great pleasure in extracting from it, and refrain from publishing it in full only from lack of space.

After the tenth day of August, 1899, any person who, not having complied with the requirements of the act, shall continue to practise, or who shall thereafter begin, or offer to practise medicine and surgery, shall be criminally proceeded against and punished. Any person shall be regarded as such practitioner who shall publicly or privately act as a physician by prescribing or giving drugs or performing surgical operations for any person having any bodily injury, deformity, or disease; or who shall use the words "Dr.," "doctor," "surgeon," "M. D.," or "M. B.," in connection with his or her name. This sweeping inhibition embraces within its range everything from doctors of divinity to veterinary surgeons, and the use of an ordinary appellation by either is transformed into a grave misdemeanor.

The public health is also guarded against peril from physicians from abroad who may be consulted, or may practise across the border, but who cannot endanger life by establishing an office or a meeting-place for patients in Colorado. Medical attachés of the army and navy and medical examiners of relief departments of railroad companies may be tolerated within the strict line of their official duties, and dentists will not be interfered with so long as they confine themselves to the teeth. Services in case of emergency are harmless, provided they are gratuitous, and family remedies are recognized as compatible with the public health and the preservation of human life.

A decided majority of the medical profession, including a large number of personal and political friends, have urgently requested the approval of the measure. I am persuaded that they sincerely believe it to be essential to the public welfare and designed to subserve the objects set forth in its title. It is not without reluctance, therefore, that the conclusions I have reached concerning its merits make it impossible to comply with their desires. With every consideration for their judgment and their sincerity, I regard the bill as unjust, oppressive, and obnoxious to the general welfare.

Whatever may be the design of the bill, it will not protect the public health. If statistics are to be relied on, the death-rate in Colorado is as low as it ever was, and lower than in some of the states which have enacted measures of legislation similar to this. The department of surgery excepted, medicine is not a science. It is a series of experiments more or less successful, and will become a science when the laws of health and disease are fully ascertained and understood. This can be done, not by arresting the progress of experiment, and binding men down to hard and fast rules of treatment, but by giving free rein to the man who departs from the beaten highway and discovers hidden methods and remedies by the wayside. It is through these means that the public health is promoted and thereby protected, that the members of the medical profession are enabled to minister with success to human ailments and bodily suffering. Nearly every advance in the treatment of diseases, in the methods of their detection, and in the prevention of their occurrence, has been made by physicians in disregard of the regulations of the order; and the great body of their brethren, after denouncing and enduring, have ultimately accepted the unquestionable results of these researches and discoveries, and made them respectable by adding them to the category of the recognized and the regular. But for this, the leech, the lancet, and the pill-box would still be the regulators of the public health, and licenses to practise would be confined to those, and those only, who used them. This is but to say that medical progress in general has not been made by, but notwithstanding, the great body of its professors.

The bill invests the Council and the Board with autocratic and oppressive authority. The first shall, by order of not less than seven members of the second, deprive practitioners of their certificates and of the right to continue their business. They may do this whenever, in their opinion, a "physician shall be guilty of practices or conduct likely to deceive or defraud the public." What these practices may be, the Board alone may determine, and its decision seems to be final. An advertisement, criticism of the Board or one or more of its members, the application of an unusual remedy, testifying against the defendant in an action for malpractice, challenging the infallibility of something hoary with age and crowned with failure, these, and similar deeds might well be cited as sufficient to set in motion the machinery of the Star Chamber. A land like ours, which founds its policy upon justice, should tolerate no such tyranny as this, and I will not believe that any profession needs such an aid, either for its protection or its support. If men may be thus subjected to correction or punishment, if their livelihood can be made to depend upon such oppressive conditions, the independence of the individual must disappear, and servitude in its worst form will inevitably follow. If the public health cannot be protected otherwise, it were well to leave it to its fate; for disease is at least preferable to the unrestricted power of punishment and confiscation.

Digitized by Google

The true intent and purpose of the bill is to restrict the profession of medicine to the three schools therein mentioned, and then limit the number of practitioners to suit the judgment of the composite board. People desiring medical or surgical service may employ its licentiates or die without the consolations of the healer. This is but to say that a medical trust is to be established which shall regulate demand and supply by absolute control of the product which forms its basis, the General Assembly furnishing the appliances whereby the trust shall become effectual.

The details of the proposed law are restrictive, repressive, and unjust. No physician, however learned, reputable, and zealous, can practise his profession without enlisting in one of the three recognized schools. No individual discovering some potent remedy and desiring to profit by his discovery, may prepare and vend it without passing the ordeal of Board and Council. Even then he cannot proclaim the glad tidings of his sovereign remedy through the press to those who need it without incurring the penalties of expulsion and imprisonment. No druggist in any emergency may administer relief to human kind without going to jail unless he does it gratuitously, and even then he must be very sure the emergency exists. No individual living away from the centers of life and far distant from a licensed physician can afford to be sick or meet with an accident, for none save the anointed may safely be his good Samaritan. He may bleed to death for lack of immediate surgical attention, or expire for the want of that medical care which the unlicensed might easily give. Nevertheless, the giving of it becomes an offence that the public may be protected. Midwives may ply their necessary vocations, but they may not prescribe any save "family remedies" under pain of fine and imprisonment. It is difficult to conceive of a medical bill more drastic and far-reaching in its provisions than this.

It is a legitimate criticism of this bill that it is the offspring of a union between the allopathic, homœopathic, and eclectic schools of medicine, into whose custody the health of the public is to be unconditionally delivered. Each in its own circle is given impunity as against the other two, but the condition is that the fusion or triple alliance must stand as a unit against all others.

The title of the bill, as it relates to the public, is a misnomer. This is a common subterfuge; all measures designed to promote a specific interest or protect an existing evil are ostensibly labeled "for the benefit of the people." The fact that the people do not seek the protection, ask for the benefit, nor suspect the existence of the alleged danger, is wholly immaterial.

It might be contended that this bill will regulate but not prevent the development of medical investigation. This is undoubtedly true; but investigation, to be beneficial, must be unfettered. Innovation and experiment will always languish when held in thraldom by the censorship of a powerful commission founded upon a rigid and exacting statute.

No one will believe that this union would have been made had it not been essential to the passage of the bill. If the allopath is to be believed, the homœopath is a charlatan and the eclectic a fraud. If the homœopath is to be credited, he has saved society from the narrow dogmatism of allopathic ignorance, and if the eclectic is heard he tells us that he has garnered to himself the wisdom of all schools, and nothing but the husks remain. Neither deems it consistent with professional ethics to confer or consult with the other, and each believes his own to be the one branch of medical science worthy of the name. Homœopathy fought its way to recognition against the bitter and implacable antagonism of the regular school, established itself in the face of bitter abuse, ridicule, persecution, and invective. Its disciples suffered all the pains that hatred, contumely, and authority could inflict upon it. A bill like this a half century ago would have sent them in shoals to the common jail and branded them with the outlawry of society. They now unite with their hereditary and still unreconciled adversaries to deny to others the claim they have so successfully vindicated for themselves, and to assist them in the effort to extinguish all forms of healing save their own. Such conduct may be just; it cannot be generous.

It may be that the public health is protected by such a union. It may be that each school has become convinced of the virtues of its present associates, and that among them is the alpha and the omega of medical and surgical lore. Society, however, does not forget, and it may, therefore, be pardoned if it sees in this fusion of the schools something beyond the philanthropic desire to protect the public health.

The fundamental vice of the bill is that it denies absolutely to the individual the right to select his own physician. This is a right of conscience, and is that which enables the citizen to worship God as he may desire. It is indeed the same right manifesting itself in a parallel direction. It is part of the law of the land, and no civil power is strong enough to deprive the citizens of its exercise. He may indeed select a healer of doubtful reputation or conceded incompetence, but that is his affair just as much as is his choice of a minister or an attorney. His action may prove injurious, possibly fatal, to himself or to some member of his family. It is better so than to delegate to any tribunal the power to say "thou shalt not employ this man" or "thou shalt not employ this one." That this bill produces such a result indirectly makes it the more objectionable. It is not the outspoken and aggressive assault upon individual liberty that men should fear, but the indirect or resultant blow that is masked and falls unexpectedly.

The bill, like all kindred forms of paternalism, assumes that the citizen cannot take care of himself. The state must lead him as a little child lest he fall into trouble unawares. He must be guided and chided, limited here and licensed there, for his own protection. Such a system, born of the union of Church and State, crumbled into ashes in the crucible of experience. It cannot flourish though disguised in the garments of an alleged public necessity. The privilege of choosing one's own physician is a positive essential to the public health. Confidence of the patient in the healer does more to restore him than all the drugs that ever medicined man. Give the sick physicians of the greatest ability without that trust which links the one to the other, their acts are apt to fail them. Give the sick physicians of mean capacity, if the bond of sympathy exists between them, its influence will find expression through the remedies suggested. Yet this bill assumes to thrust the coarse machinery of the criminal law into one of the most sacred relations of human life, to drag the chosen physician, if unlicensed, from the sick-room to the prison cell, and to substitute for him some one who, however, exalted and honorable, may not command the confidence or secure the sympathy of his patient.

These comments are not extreme, for it must be remembered that those who believe in and patronize the various arts of healing that are ostracized by this bill form a very large part of every community. Nor are they confined to the ignorant and superstitious portions of society. They number in their ranks thousands of the most refined, intelligent, and conscientious people. They recognize in many modern methods of giving relief to the sufferers, a religious or spiritual element that appeals to their best and tenderest sympathies. They recognize a subtle psychic force in mental healing, a power to overcome disease by the operation of mind and personal influence, which

Digitized by Google

no argument can shake or ridicule disturb. Others, equally intelligent and discerning, put their faith in the osteopath, the magnetic healer, the hydropathist, etc. The benefits they claim and the cures they narrate are not imaginary. Shall the government enact by statute that these people shall no longer enjoy their beliefs or put them into daily practice? Shall it officially declare these people to be criminally wrong and the three schools legally right? By what authority does it so declare?

A distinguished physician of Massachusetts has recently declared with great force that "the commonwealth has no right to a medical opinion and should not dare to take sides in a medical controversy." It would be as consistent to take sides in the theological or philosophical discussion. The one would be condemned by all men; the other is equally foreign to the province of government. It may regulate, but cannot prohibit, the calling of the citizens; it may prevent the commission of wrongs, but cannot deprive the individual of the right to choose his own advisers.

✤

Editorial Comment.

The Denver Republican thus editorially approves the governor's veto.

Governor Thomas will receive the praise of all classes of the population, except members of certain schools of medicine and their immediate friends, for his veto of what is commonly known as the Medical Bill.

This bill was designed to place the licensing of physicians in the hands of a board of examiners, composed of representatives from three different schools of medicine. These schools are, as a rule, antagonistic. Allopaths, for instance, will not consult with homœopaths, even though the life or death of a patient may be involved. But they buried their differences in this case and made a combination to keep out all other physicians from the practice of their profession. Practically this was the establishment of a doctor's trust, and as such it was condemned.

In his veto Governor Thomas recognizes that the effect of the proposed law would be to establish such a trust, and this is given by him as one ground for refusing to let the measure become a law. Under a law of the kind contemplated by this bill the members of the three schools of medicine referred to would have power to exclude from practice all persons who might not comply with the standards which the Board of Medical Examiners might set up. That board would be able to restrict the practice of medicine to certain favored persons and prevent, it may be, worthy men, not of their particular line of medical belief, from practising the healing art in any form.

The measure was, furthermore, restrictive of the rights of people who prefer the treatment of persons not connected with one of the three schools of medicine named. A man suffering from an ailment would be prevented from calling in a specialist, not of one of those schools, and yet it is very evident that an invalid should have the right to choose his doctor, if he is to be allowed any rights whatever.

Governor Thomas was not blind to the fact that the doctors who favored this bill would condemn him for refusing to let it become a law. But he faced that opposition and took the proper course. His veto is a recognition of the proposition that legislation may assume the form of tyranny, and that in this instance it would have worked an injustice without promoting the public welfare. He recognized also that progress in medicine is not to be made by placing all medical men in leading-strings. The path of progress traverses the field of experiment, and experiment is rarely fruitful of much good when it is confined to narrow limits.

✤

Also the Denver Evening Post.

The refusal of the governor to approve the so-called Medical Bill will meet with general approbation from the public. The bill was class legislation pure and simple, and as such had no place on the Colorado statute books. It was not aimed as a protection to the public as its originators would have the people believe, it was simply intended for the protection of a certain class, and in its effect would have been the means of creating a combine. The governor has taken the trouble to point out the defects of the measure at length, and to properly characterize the detrimental effects such a law would have upon the community.

Doubting Thomas.

It is he who is responsible for most of the religious indifference of the day. He is so talkative, this questioning Thomas. For the last decade "critical doubting" has been the shortest road to notoriety—which is the mere spook of fame, to be sure, but is valuable commercially. The endless questioning whether there be punishment in a future world; the prattle about "higher criticism" that has been on Thomas's tongue with little study as to what it means, except a general aspersion of the Scriptures; the utterance of postulates followed by long statements of conclusions to these loud-sounding subjunctives—all this process is bearing fruit. A multitude of busy people wake every Sunday morning with a queer sensation. "This is the holy day—or it used to be called holy. It is the day for church. But what do they set forth? Who is settled enough in his own belief to guide mine? It is, with some exceptions, probably, the day for questions about religion rather than the assertion of religion."

Perhaps all this could not be otherwise. Possibly it is the dust in our orbit through which the globe must pass. But it is not the less unfortunate. It is the real cause of non-churchgoing. Man is rational. If he is to do a thing, he asks, "Why am I to do it?" If he is to go to church, the object is a rational consideration. Suppose, therefore, he concludes, "I will wait till these people settle upon something. Then I will go and receive it at their hands." The average merchant is too much fatigued by his secular work to enjoy metaphysics or discussions that rest his tired wing nowhere. Nor is he fitted by mental habitude for the process. It simply increases his religious confusion. In the division of labor he pays his pew rent, or his subscription to the theological schools or denominational press, and wants to buy products that are real.

There are a handful of men, mostly writers and talkers, who enjoy "investigation." Heaven help us! They have had their innings for the last few years till we are investigated almost to shreds. They have torn all the splints from the old basket—the basket which simple prayer filled, as we worked for our daily bread. But they do not seem to weave in any new strands. No doubt they enjoy their iconoclasm. But the plain people, the men and women who are doing the work of this world, are distressed as they cling to the old basket by the self-same handle their pious mothers and fathers put into their young hands.

By the way, those old people were a fine type. They were not very "high" on "criticism." They were very high on probity, truth-telling, mercy, courage, reverence, and faith. They succeeded in founding a great state, the greatest and grandest the sun ever shone upon. All the way from Plymouth Rock to the Aleutian Islands their crude and simple trust in the God of Abraham and the Christ of St. Paul has been a decidedly safe basis for a republic. Old Eliot, whose ashes lie in a weed-grown cemetery of Boston, subdued the earlier savages with his "blessed Bible." The most effective subduing that was ever done with the American savage was not with flintlocks, but Bibles.

What an hour it is for the man who believes; who has a self-denying and pure life behind his faith and then stands

Digitized by Google

forth to assert it; who can find enough faults to be corrected in the wicked and sorrowing heart of humanity without spending precious time in scholastic doubt! Let him grasp the old Bible in firm hands and preach it cover to cover, as Phinney and Whitfield did. Surely its "errors" are not our main danger.

The Mail and Express, New York City.

Sure Her Son is Safe from Harm.

As has been noted before in these columns, Mrs. H. S. Murdock, of Conemaugh, has a son—Harry Murdock—in the United States service in the Philippine Islands. He is Sergeant-Major of the First Battalion of the First Nebraska Volunteers, which command has been taking an active part in all the recent fighting, several men of the regiment being reported killed and quite a number wounded after each day's engagement for some time past. In spite of this, however, Mrs. Murdock says she is not in the slightest degree concerned for the welfare of her son; in fact, so little that she scarcely thinks it worth while to look at the list of casualties from day to day, so certain is she that he has escaped harm.

These statements Mrs. Murdock made last evening in the city, where she had come to exhibit a new collection of Philippine relics recently received. She further stated that her freedom from fear was based entirely upon the fact that both she and her son are Christian Scientists. She points out as a proof of the correctness of her position that, though her son has been in service continuously since the 26th of April last year, has made a long ocean voyage, and lived in a tropical climate most of that time, and has gone through several serious battles, he has never been unfit for service a single moment—a record which has not been equaled by any of his comrades, some of whom died on the way over, and many since, from disease, while insurgent bullets have found a resting place in the bodies of many of them also. The thought that such a fate may befall her son, Mrs. Murdock declares, never enters her head, and however much credence others may give to her belief, it is a source of much comfort to her.

The collection of relics which Mrs. Murdock now possesses, sent from her son, is quite extensive and embraces many of very great interest. It includes articles of wood and gold, made by the natives, shells of rare beauty from the seashore, bullets, buttons, and charms worn by the Filipinos, etc. Among other things is a piece of carved wood taken off an old monastery bombarded by Dewey in August, which is known to have been erected as long ago as 1620. From the mortar in the walls of the same building young Murdock dug out several bullets, supposed to have been fired there by the English when they captured the place in 1742.

Mrs. Murdock has a letter which she received from her son that was written on the battlefield on the 5th of February. He had no writing paper and so used one side of the colored papers around cans of tomatoes, corn, and other vegetables which were furnished to the soldiers. The letter was wrapped in bark from a cocoanut tree and tied with bamboo strings. The address was written on the bark, and brought the package to Conemaugh all right. No stamps were put on it in the Philippines, but there was four cents due on its arrival.—*Daily Tribune, Johnstown, Pa.*

The Lectures.

At Scranton, Pa.

Under the auspices of the First Church of Christ, Scientist, of this city, a large audience heard Carol Norton, C.S.D., of New York City, at the Lyceum, Tuesday evening, April 25, on "Christian Science and Common Sense." He was introduced by ex-Lieutenant-Governor L. A. Watres, whose address in part was as follows:—

It is a crowning privilege to live in the dawn of the twentieth century.

There is an expansion everywhere—geographically, commercially, and scientifically, and in the religious world as well.

A war for humanity has changed the map of the world. Upheavals in the spiritual sphere are transforming the theological atlas by a hidden, but none the less resistless power.

Growth and progress are witnessed everywhere.

The canal transport has given way to Stevenson's locomotive, and this in turn to the finer mechanism which in sixty seconds runs a mile.

The Santa Maria was weeks in crossing the ocean, but her fashion has been set aside by the Kaiser Wilhelm der Grosse, which makes the voyage in six days, plus a few hours.

The tallow dip of our grandfathers has been supplanted by the electric spark, which throws a flash-light for many miles, or burns incandescently at your will.

Ericson's propeller, which the High Admiralty Court of England but recently demonstrated to be a flat failure, today equips every respectable vessel that ploughs the sea.

Within the memory of not the oldest inhabitants, Morse was ridiculed, doubted, and called names for asking Congress to construct a telegraph line from Washington to Baltimore.

To-day messages are sent round the globe in less time than it requires to explain the method, and wireless telegraphy is an accomplished fact.

But yesterday, as it were, men were content to wait for days and travel long distances to communicate with friends upon business or pleasure.

To-day, thanks to the Wizard of the West, we may talk through a hole in the wall over the wire for a thousand miles; and the busy man in Chicago becomes uncontrollable in his rage if "Exchange" does not give him his man in Boston within three minutes after due demand.

Our own city furnishes a striking example of the growth of ideas. A college or university of over three thousand used to be considered well-nigh unmanageable. Yet, in our very midst, presided over by a modest genius, the Colliery Engineer, practically the largest university in the world, is giving to over seventy-five thousand of the youth—not only of our own, but of every civilized land—the advantages of a college education, the better equipping them to meet and discharge life's duties and responsibilities.

Both time and your patience, and the occasion, all forbid that I should further pursue this limitless line of thought. Permit me briefly, however, to suggest, that Stevenson discovered no new law. The law of mechanics has always been the same. Had the wise men of the East understood it, their journey would have been materially shortened. Stevens merely discovered the applicability of that law.

The law applied by Ericson is as old as Sinai. Had Columbus understood it, we should have been discovered several weeks earlier than we were.

Prof. Henry and Morse and Edison but put a harness upon a power which had existed for all time. Had it been understood when the Erie canal was opened, that important event would not have been announced by the firing of a cannon.

Solomon's Temple in all its glory was not lighted like this Lyceum, because Solomon understood not the law governing arc and incandescent lights. It may be said that growth and progress are limited to things material. Is it thinkable that the understanding of God's law, which created and governs the Universe, including man, is stunted in its growth? With due respect for our grandfathers,

Digitized by Google

are we to be bound by their interpretations and conclusions concerning God's law any more than we should be by their recognized lack of knowledge as to the physical laws?

Who shall say that Christian Science, as taught by Mrs. Eddy in Science and Health, has discovered a new law? The law of Love and of Truth and of Life has been the same moving and vital law since the morning stars sang together.

Christian Scientists have but discovered that this spiritual law—this law of God—may be so understood and applied as to lighten the burdens, and relieve the distresses of a suffering humanity, and that when properly understood, it heals the sick as well as the sinner. Was not this the plain teaching of the Master when he walked among men, and are not many thinking and scholarly people agreeing in these days that it must be as true now as it was eighteen hundred years ago?

This large and growing body of Christian workers can do no harm to the world, nor to any other body of Christian workers. They believe in God's power to a greater extent than do their critics, and for doing good deeds to impotent men, are they called in question. For this they are ridiculed and persecuted, until even the cherished provision of the bill of rights, that "one may worship God according to the dictates of his own conscience," is practically repealed, or at least suspended.

In these days, when there is an earnest pleading everywhere for "the unity of the Spirit in the bond of peace," it would seem but reasonable to expect that all who bear his name—who are led by the same Spirit, who contend against the same enemies, and who hope in the same promises—would at all events be upon speaking terms, and look upon each other with due complaisance, would bear each other's burdens, and so fulfil the law of Christ.

Love, the discriminating characteristic of true religion, is most surely growing in the hearts of men, and it seems to be melting the theological glacier of the centuries.

For the love of God is broader
Than the measure of man's mind;
And the heart of the Eternal
Is most wonderfully kind.

Men everywhere are searching in primitive Christianity, in the life and teachings of the Master, for the Truth that makes men free.

Although not a member of the Christian Science Church, it would be base ingratitude not openly to acknowledge that in its spiritual interpretations of the Bible, and in the healing power, I have found the greatest help and comfort.

I have now the honor of introducing to you Mr. Carol Norton, C.S.D., of New York, who will address you upon the interesting subject of "Christian Science and Common Sense."—*The Scranton Republican.*

At Kalamazoo, Mich.

Mr. Edward A. Kimball lectured in Kalamazoo, Mich., Friday evening, April 28, to an audience of more than a thousand people, which we consider a good showing for a town not having more than twenty-three thousand inhabitants. Mr. Kimball was introduced by United States Senator J. C. Burrows, who spoke as follows:—

Ladies and Gentlemen:—It seems little less than an act of supererogation formally to present to you the distinguished gentleman who honors us with his presence to-night. Indeed, he needs no introduction to this intelligent audience. This crowded Auditorium, filled with the *elite* of the city, must convey to you, sir, the gratifying assurance, not only that you are known to our people, but that your presence is highly appreciated. I feel more like congratulating ourselves that we have the opportunity of listening to an exposition of the doctrines of Christian Science from one who speaks from the vantage ground of personal knowledge and ripe experience. Whatever may be our individual judgment, I bespeak for the orator and his cause on this free platform a patient and thoughtful hearing.

This has been a marvelous century. A century in which art, science, philosophy, discovery, invention, and all the possibilities of human genius have had a new birth and made colossal strides toward the summit of human achievement.

Governments, too, have risen and decayed. The map of the world has been changed—thrones shattered and crowns crushed beneath the majestic tread of human power. But these are the material manifestations. He is a very indifferent observer of the times who has not discovered that the human mind to-day is pregnant with a thought conceived of the Infinite and laying hold of the Eternal, which in the fulness of time may be to the world a new evangel of Truth. Already the veil which obscures the future is rent in twain and the present and the hereafter are blending in one eternal now.

Then,—

Let there be many windows in your soul
That all the glory of the universe
May beautify it. Not the narrow pane
Of one poor creed can catch the radiant rays
That shine from countless sources. Tear away
The blinds of superstition: let the light
Pour through fair windows, broad as truth itself
And high as heaven. Tune your ear
To all the wordless music of the stars
And to the voice of nature, and your heart
Shall turn to truth and goodness as the plant
Turns to the sun. A thousand unseen hands
Reach down to help you to their peace-crowned heights,
And all the forces of the firmament
Shall fortify your strength. Be not afraid
To thrust aside half-truths and grasp the whole.

Ladies and gentlemen, it affords me great pleasure to present the distinguished lecturer of the evening, Edward A. Kimball of Chicago. CORA E. DOWNER.

At Parsons, Kan.

The lecture of Mrs. Annie M. Knott of Detroit, Mich., at the Opera House, Friday night, April 28, on "Christian Science," drew a large audience, and those who went through curiosity came away well pleased with the lecture. General Attorney Sedgwick, of the M., K., & T. railroad, introduced the speaker of the evening in a short, but pointed speech, which found a responsive chord in those present, and the lecturer was accorded most respectful attention and the scepticism of many in the audience melted away under the eloquent presentation of Christian Science. Mrs. Knott's lecture was free from criticism of other beliefs so common among religious denominations, was an interesting insight into the methods and teachings of Christian Scientists, and made such a pleasing impression on the audience that the society here will feel the influence of Mrs. Knott's visit to this city.—*Parsons Daily Sun.*

Mr. Sedgwick's introduction was as follows:—

We have gathered here to-night for the purpose of listening to a lecture on the subject of Christian Science, and I have been requested to introduce the speaker. The term Christian Science is not new, but this is the first opportunity we have had in this community to listen to an address upon this subject. I have no doubt that a great many in the city, like myself, know very little about it; on the other hand, we have among us those who have made a careful study of the subject.

I am not a Scientist, and therefore am not at present prepared, for want of exact information, to either accept or reject this doctrine; but whether right or wrong, sound or unsound, it ought not to be rejected without a hearing. We have in our midst a congregation composed of very respectable and intellectual people who do accept this doctrine and firmly believe in it. And as this congregation embraces some of our very best people whom we all know to be honest and conscientious, this alone should always insure the advocates of this new doctrine an attentive and

Digitized by Google

respectful hearing. So far as my limited knowledge extends, I find nothing in it to condemn. The theory is very pleasing, and it seems to me that those who believe in the doctrine and practise its precepts, possess a sweetness and charm in their daily lives that is not possessed by all. Whatever the term may imply, its teachings appeal to the moral and intellectual side of our lives, and can do no harm. It is my observation that the doctrine finds support among thinking people. But you did not come here to-night to listen to any address by me, and therefore, asking your pardon for these few remarks, I will introduce to you the speaker of the evening, Mrs. Annie M. Knott.

At Topeka, Kan.

An audience which completely filled Crawford's Opera House assembled on Sunday night, April 30, to hear Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., present the merits of Christian Science as taught by the Rev. Mary Baker Eddy.

Mrs. Knott is a woman of pleasing personality. She has a very sympathetic voice and held the close attention of her audience for an hour and a half.

In introducing the speaker of the evening, Col. Geo. W. Veale spoke as follows:—

My Neighbors and Friends:—I have been honored by being invited to introduce to this meeting this evening an accredited lecturer on Christian Science. I am not a Christian Scientist myself in the full sense of the term. I only wish that I was; that I had sufficient knowledge of the world and its affairs to fully comprehend all the good things that are allotted to man. I must confess to you that I feel my inability to assume any definite position in regard to it. I am ready, however, to yield to the just claims of its advocates.

The highest type of manhood, the highest type of womanhood, is to be found in the organization of Christian Scientists. Christian Science is founded upon the Holy Bible, the word of God, the teachings of Christ Jesus. Christian Science is an axiom, self-evident truth, the teachings of Christ, and no man dare deny the universal, established authority as to what Christ did while on earth, and that he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." Christian Science teaches one God, one Truth, one Mind; Life, Truth, Love, triune. God is Good. God is Love. God is omnipotent, omnipresent, omniscient.

Blessings that were unsuspected for generations have been brought to light by the matchless genius demonstrated by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science the Mother of the Church the doctrine of which is now being taught throughout the world with some of the most wonderful demonstrations known to civilization, about which the speaker of the evening will talk.

Ladies and gentlemen, I now have the pleasure of introducing to you, Mrs. Annie M. Knott of Detroit, Mich.

The Topeka Daily Capital.

At Marlboro, Mass.

There was a fair audience at the Marlboro Theatre, Thursday evening, April 27, when Rev. William P. McKenzie delivered a lecture on the subject of Christian Science. The lecturer was introduced by Heman S. Fay in the following words:—

But a few years ago a new faith known as Christian Science appeared to take its place among the beliefs of the world, and though subjected to severe criticism, it has continued to grow in strength and in the number of its followers until now the society formed of those entertaining this belief has attained to very large proportions.

This society sends its teachers abroad into the land, not for any gain to itself but for the purpose of teaching this faith to others.

These lectures are given without expense to the audience, the only desire of the society being that the world at large may know just what Christian Science is.

"By their fruits ye shall know them," and no nobler work was ever vouchsafed to man than to point his brother man to a better life; for too few in this life come to us only for the purpose of doing us good, and howsoever we may think that we differ from them in their belief, this purpose alone should secure for them a most generous welcome.

I have no doubt the speaker will meet to-night an audience which will give to him most careful and intelligent consideration, and this meeting between you will be fraught with mutual pleasure.

I have the honor of presenting to you one of the lecturers of this society, the Rev. William P. McKenzie of Cambridge.

Mr. McKenzie's lecture was attentively listened to, and a full report of it will be found on the second page of this paper.—*The Daily Enterprise.*

At Burlington, Ia.

Tuesday evening, April 25, Edward A. Kimball lectured to a large audience in Burlington, at the First Baptist Church, under the auspices of the First Church of Christ, Scientist. He was introduced by Mr. Mortimer J. Higley, who said in part:—

Ladies and Gentlemen:—Your presence here to-night betokens an interest in or a desire to know something of the great truth of Christian Science, which to-day is healing and saving mankind from all forms of sickness and misery.

You will no doubt agree with me that the human race is in need of something better than the majority of our fellow mortals seem to have. Something that will lift them out of the sorrow, the sickness, and the woe we see manifest on all sides of us, into a better, a happier, a more harmonious condition.

We are glad to have you with us to-night, for you will learn something of this Truth which is bringing to its devotees an approximation of the many promises that our heavenly Father has made His children.

In the immortal record chronicled in the first chapter of Genesis there is no allusion to the chaotic condition now prevalent in the world, but the record deals with God's creation perfect and harmonious and closes with the declaration that everything was created very good. It is with this perfect creation that mankind must become familiar, for through knowledge of it, and the Science of God's government, man may eliminate from his pathway the discords which beset the human race.

I now have the pleasure of presenting to you Mr. Edward A. Kimball of Chicago.

Burlington Democrat-Journal.

At Wilmington, N. C.

From three to four hundred people assembled at the Opera House, Thursday evening, April 20, to listen to a lecture on Christian Science by Edward H. Hammond, C.S.D., of Baltimore, Md. The lecturer was introduced by the mayor of the city, and listened to by an audience described by one of our leading physicians, in an interview with Mr. Hammond, as representing the intelligence and culture of Wilmington.

This was the last of a series of five lectures given in this state within a week. We feel that Mr. Hammond has done much to advance the cause. The lecture was published in full in the Wilmington Messenger, which has a large circulation throughout the state. It was both instructive and forcible, and well calculated to present a clear

Digitized by Google

idea of the subject to those desiring information. We are four in number, with no organized church, but when the necessity for a lecture presented itself, there was no difficulty in meeting the demands. MARY BRIDGERS.

At Toronto, Ont.

At the pavilion in Horticultural Gardens, the people of Toronto were given their first opportunity to hear a public lecture on Christian Science, Thursday evening, April 6. Mr. Carol Norton, C.S.D., of New York, a member of the Board of Lectureship of the Mother Church in Boston, was the one upon whom the pleasant duty devolved.

The vast audience, numbering about two thousand, stood while the Scientists sang "Saw ye my Saviour," written by our beloved Leader, Mary Baker G. Eddy.

Mr. Norton was introduced by Alderman Lamb in a few well-chosen words, and held the undivided attention of all present for nearly two hours. The lecture was given under the auspices of the Second Church of Christ, Scientist. MRS. DORA F. MAYBEE.

At Springfield, Mass.

A lecture was given in the Court Square Theatre Tuesday evening, April 25, on "Christian Science: the Unknown God Made Known," by Rev. Irving C. Tomlinson, C.S.B.

The lecture was given in order to correct the misapprehension on the subject of Christian Science, and was under the auspices of the First Church of Christ, Scientist, of this city.

Rev. Charles Conklin introduced Mr. Tomlinson, and asked especially that the speaker be listened to without prejudice. Mr. Conklin said that Mr. Tomlinson was a personal friend of his, and he knew him to be one of the most sincere men. Mr. Tomlinson likewise put in a plea for an unprejudiced opinion.—*The Springfield Union.*

At Armstrong, Iowa.

Wednesday evening, April 19, Edward A. Kimball lectured in Armstrong under the auspices of the local Scientists. He was introduced by Mr. K. Faltinson, a prominent lawyer and the editor of one of our county papers. The lecture was printed in two of our papers. This experience has proven to us that God can furnish a table in the wilderness. It required constant work on the part of every one of our little band of seven from the moment we asked Mr. Kimball to lecture for us, but every obstacle was overcome, and we feel that it has been a great blessing for every one here as well as our own little church.

MRS. LENA REAGAN, Clerk.

At East Orange, N. Y.

Mr. Carol Norton, C.S.D., of New York, lectured on Christian Science, in Commonwealth Hall, Wednesday evening, April 26. The lecture was given under the auspices of the First Church of Christ, Scientist, of this town, and was attended by a large and cultivated audience of ladies and gentlemen. The speaker of the evening was introduced by Mr. John E. Knapp, of Arlington Avenue, president of the local church organization, who read an interesting testimony in support of the doctrines of Christian Science from the Rev. Dr. A. B. Curtis, of Binghamton, N. Y., closing with some strong lines by Fichte, the German idealist.—*East Orange Gazette.*

At Austin, Texas.

A lecture on "Christian Metaphysics or Christian Science," was given in the Hall of Representatives Wednesday night, April 19, by Mrs. Annie M. Knott of Detroit, Mich. A very attentive audience listened to the lecture on this subject, which is receiving close study from many of our best-known thinkers and writers. The lecturer was introduced by Hon. J. S. Sherril, speaker of the House, in a very neat and appropriate address, which instantly commanded the attention of the audience.

Austin Daily Statesman.

At Buffalo, N. Y.

In the Star Theatre, Sunday afternoon, April 30, a large crowd of interested people gathered to listen to Carol Norton, C.S.D., lecture on "Christian Science and Common Sense." If all the people present are members of some one of the four churches of Christian Science in this city, their membership is certainly surprisingly large. If they are not members of these churches, then yesterday's audience is more surprising, in that it shows what a large number of people are interested in this comparatively new branch of religion.—*The Buffalo Courier.*

At Hartford, Conn.

At Foot Guard Hall, Thursday evening, April 20, the Rev. Irving C. Tomlinson of the Board of Lectureship of the Christian Science denomination, delivered an address on "Christian Science, What it is not and what it is." The lecture was given under the auspices of the Christian Science Church of this city, and a very large audience listened to Mr. Tomlinson's address.—*The Hartford Courant.*

At Ardmore, Ind. Ter.

Friday evening, April 14, despite the inclement weather, Kloski's Opera House was comfortably filled when H. M. Furman, in a few well chosen remarks, introduced Mrs. Annie M. Knott of Detroit, Mich., one of the leading members and workers in the Church of Christ, Scientist. The lecturer, without unnecessary explanation, entered into the discussion of the subject of Christian Science.

At Fairmont, Minn.

The lecture Wednesday evening, April 19, on Christian Science, by Edward A. Kimball of Chicago, was attended by a large number of people and was listened to with great interest. Mr. Kimball is a pleasant and earnest speaker, and impresses his audience with sincerity in his utterances. The lecturer left a very pleasant impression upon those who heard him.—*Martin Co. Independent.*

At Marshall, Texas.

Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., lectured at the Opera House Sunday afternoon, April 23, to a large audience, as thoroughly representative of the culture of the city as any that has been brought together in many days. The lecture was delivered under the auspices of the First Church of Christ, Scientist.

The Evening Messenger.

Interview with a Physician.

THE following is an interview held by a Christian Scientist with Dr. John Russell Lefever, C.S., of Pennsylvania.

Dr. Lefever is a regular graduate of Hahnemann Medical College, of Philadelphia, Pa., having graduated in the year 1884.

Question. When did you first hear of Christian Science?

Answer. In the year 1896.

Q. Did you practise your profession up to that time?

A. Yes, sir.

Q. As the result of your practical experience in medical practice, what are your general views about the science of *materia medica?*

A. I am satisfied that there is no actual science in it.

Q. Upon what general results do you base this conclusion?

Digitized by Google

A. Because a drug acting on the same conditions at different times should always give the same results. And it does not.

Q. How do you now account for the failure of drugs to cure disease and destroy the actual cause of bodily infirmity?

A. Because I now believe that the cause of sickness is mental.

Q. Do you not still hold that drugs can cure disease even if it is mentally caused?

A. No. I have given up that idea.

Q. Why have you rejected this general medical opinion?

A. Because I believe that a drug can do no more than the mind admits or allows it to do.

Q. What practical proofs have you of this conclusion?

A. I have personally seen cures effected where the sufferer felt that medicine was being administered, but in reality not a grain of medicine had been given.

Q. Were there positive evidences of a cure in these instances?

A. Yes, sir.

Q. How do you account for the results?

A. It was the action of mind on the body. I now consider it the result of the faith of the patient reposed in me and in the supposed remedy.

Q. Were these things observed by you before you heard of Christian Science?

A. To some extent.

Q. What led you directly to the investigation of Christian Science. A religious aspiration or medical observation?

A. It was the healing aspect of Christian Science that first appealed to me because I was in search of a higher curative method.

Q. Will you name one or two practical demonstrations of the power of Christian Science which led you to give it honest and direct investigation?

A. I have known consumption to be healed. I have known softening of the brain to be healed. I have seen two cases of membranous croup healed. I have seen cases of marasmus healed.

Q. Do you consider that the phenomenon of Christian Science Mind-healing, as taught in the writings of Mary Baker Eddy, is nothing more or less than the manifestation of what in common medical phraseology is now denominated hypnosis, auto-suggestion, suggestive therapeutics, or an indefinite form of faith cure?

A. It has nothing to do with any of these systems.

Q. From the platform of mental therapeutics what do you consider the rational line of separation between these systems and Christian Science Mind-healing?

A. In Christian Science Mind-healing I am persuaded that the healing power is divine Mind, alias God; demonstrable divine Principle rather than a remote personality. In these other systems, very generally confounded with Christian Science Mind-healing, the so-called healing power, or agent, is wholly the human mind. This human mind manifested in the phenomenon of hypnosis is nothing more or less than animal magnetism.

Q. As you view the field of Allopathy and Homœopathy in this era of our civilization, do you consider that either of these schools has the right to the word "regular" to the exclusion of the recognition of the scientific basis of Christian Science Mind-healing?

A. No sir.

Q. What do you understand by the term "regular" in medicine?

A. The word "regular" generally stands for Allopathy, and is a thoroughly arbitrary standard.

Q. Was not your own school of Homœopathy once bitterly opposed as irregular, and is it not in some sections even to-day considered as irregular and allied to quackery?

A. Such is the fact; although the two schools often meet in consultation at the present day.

Q. What do you consider the next logical step to genuine Homœopathy?

A. Christian Science.

Q. Do you believe that Christian Science Mind-healing scientifically demonstrated and applied according to the therapeutical deductions of its Founder is destined to supersede all other forms of curative practice?

A. In time it will accomplish this.

Q. From the basis of Christian Science as you now view the realm of organic disease, do you consider there are any incurable diseases, taking into consideration the fact that Christian Science applies the same curative Principle to all forms of disease?

A. No, for the Scriptures assure us that there is nothing impossible with God, who is divine Mind.

Q. Do you consider that the healing of disease and the destruction of error or sin in the human mind are practically one and the same thing?

A. They are.

Q. Do you believe that the religion and healing of Christ represent a united system?

A. It must be so.

Q. Do you believe that the religion of Christian Science can be separated from its mental therapeutics?

A. No.

Q. How do you account for the opposition of physicians to a system so logically and practically demonstrable as Christian Science has proven itself during the last thirty-three years?

A. Physicians are so thoroughly indoctrinated with the idea of physical causation, and have so persistently failed to recognize the mental cause in the origin of disease, that they have given, and still go on giving, material remedies to reach assumed physical causes, but what Christian Science proves to be mental causes.

Q. Do you know of reputable physicians who are giving up regular medical practice and adopting Christian Science?

A. Yes.

Practise what you Preach.

BY WILLIAM LEANDER POST.

THE only sure way to practise what you *preach* is to preach only what you practise. Fewer sermons, and a practical endeavor to make use of the little that is known is what the world needs.

The *understanding* of a single verse of Scripture, bearing fruits in healing and blessing, is far more praiseworthy and useful than a simply literal knowledge of whole chapters of the Holy Word. Those who can quote the Scripture and Science and Health fluently, or tell in flowery language what the Truth is, yet fail to demonstrate it, at least in part, are not following this rule of "practising."

Jesus taught his religion by demonstration, not by words. His actions were more powerful than his sermons in influencing the people to accept his Divine message. He healed the people and then told them to go and do likewise.

Our dear Leader says in Science and Health, p. 97, "The best sermon is the practice of Truth, and its demonstration through the destruction of sin, sickness, and death."

One case healed will do more for the cause of Christian Science than a hundred eloquent addresses. Our *understanding* increases only through the demonstration of what we already know, and those who have demonstrated the highest, and therefore know the most, talk the least. They preach in practising.

Talking and not *living* the Truth has been the mistake of the ages, and the opposite practice will bring in the millennium. No tumult of error can drown the echo of a good deed, while drowsiness often hampers the value of a learned sermon.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH*."—Jesus.

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., MAY 18, 1899. | Vol. 1 No. 38

Strangest Church in the World.

I HAVE just returned, says a correspondent of the Cleveland Plaindealer, from visiting the most remarkable church in the world, a place of worship situated seven hundred and fifty feet underground in the heart of a coal mine, and fashioned entirely with pick and shovel by hardy toilers in the fossil woods. The strangest of all Christian temples is to be found at Mynydd Newydd, near Swansea, in West Glamorgan. My way to church lay first up a steep hill, then down by means of a wet and dirty iron cage to the bottom of a shaft, and finally through a series of mazy labyrinths, lighted by the glimmer of the miners' candles, to the chapel. It required considerable nerve on my part to get thus far, for it was my first visit to a coal mine, but having at last reached the only coal-mine chapel in the world, I determined to make the best use of my eyes.

It is not an attractive-looking place. The walls are formed in part of small rough pine logs. The roof is somewhat menacingly close overhead, but it is of hard, smooth clift and has been whitened with lime, so that it looks like an artificial ceiling. As you enter you observe that the chapel is "timbered" with pit-props on either side and furnished with rude plank seats placed at equal distances between the props. The seating capacity is about a hundred. It is not much like a church, and yet there are points of resemblance, too, especially to the fanciful. The double rows of pine logs supporting the roof—what are they but the columns of this minster? The pathway leading between the seats and the pillars form the nave, and the seated portions inside the columns are the aisles of the building. There is no altar, but the high wooden desk at the end certainly suggests a pulpit. The little chapel is lighted by candles, which are stuck on the pillars and fitted vaults all round, an ample allowance of two being made to the pulpit. There is no regular officiating minister, but a conductor calls on any one he pleases, and there is no lack of spiritual gifts. The service is only held once a week—on Monday morning, at the early hour of six, before the men go to their daily work.

But now the service, which takes the form of a short Welsh prayer-meeting, has commenced. The conductor has given out a hymn, and the voices of prayer and praise ring out in this meeting-house in the modern catacombs. The seats are all well filled, and even outside, all along, a row of men are squatting with their lamps by their sides—for lamps are not allowed inside the "building" because of the smoke they emit. It is only as the eyes get accustomed to the gloom that one fully sees all the shadowy forms assembled. They have taken their seats noiselessly and the place has filled imperceptibly. But the "Amens" and the Welsh "Yes" interpolated in the prayers soon help one to realize the large number in the audience. The service is entirely in the Welsh language and consists, as it almost invariably does, of a chapter from the Bible, two hymns, and two extempore prayers. The Bible, which is treasured in a tin case, is now carefully taken out, and one of the miners, with emphatic, measured intonation, reads a chapter. Then another miner offers prayer, and surely his surroundings are well adapted for communing with the Deity. The dead silence, unbroken even by an echo, the remoteness from the outside world, the perilous nature of the occupation, the common sense of need and protection which must exist in the minds of the worshipers, all tend to accentuate the veneration and devotion inherent in the Welsh character. The Welshman is always eloquent in his own language and dumb as an oyster in that of every one else. It is the way the Celt has. Welsh public meetings, like Welsh prayer-meetings, are never in want of orators.

The service is impressive entirely from its spontaneity and simplicity. Neither high mass at St. Peter's, nor a national celebration at St. Paul's—in fact, no rite, ceremony, solemnity, or sacrament in the world above—could strike so convincingly upon the mind and the imagination as this simple service. Another prayer, another hymn, and the little gathering, which rarely lasts more than half to three-quarters of an hour, comes to a close. The miners separate and go to their working-places, probably with a distincter impression of their dependence on the protection of Providence. At any rate, a scoffer is unknown at this little chapel, and it is admitted that the Mynydd Newydd pit contains an unusual proportion of sober, upright, thoughtful workmen. No special reference is made in the prayers to the collier's life. There is no thought of sect or creed, and people who think of Wales as being rent by Nonconformist dissensions will be surprised to learn that Baptists, Calvinistic Methodists, Congregationalists, here take turns heartily at the prayers, while the hymns used are such popular ones as are known in Wales by all denominations alike.

The library of the little chapel is very small indeed. The old Bible appeared to be in a very forlorn state when the new one was presented by a visiting Scotch doctor, Dr. McRitchie, a couple of years ago. On the fly leaf the doctor had written in Welsh the text: "Faith, hope, charity, these three: but the greatest of these is charity." There was no more allusion to miners and coal pits in this entry than there was in the men's prayers. But probably the text implied a distinct compliment to the various sects who meet and in the deep ways of the earth "dwell together in unity."

Digitized by Google

The idea of a place of worship underground is so novel and remarkable that, after the service, I endeavored to glean some idea as to its origin.

The Mynydd Newydd Chapel has existed and has been in regular use for fifty-four years. It was started, so far as I could discover, August 18, 1845, two or three years after the opening of the colliery. It was one of the first happy thoughts that occurred to the newly employed colliers. There are one or two men still working in this colliery who were present at the first service held there.

Items of Interest.

The report of the beef court of inquiry has been made public. The charges made by Major-General Miles were not sustained. The allegations that the refrigerated beef was treated with chemicals, and that the canned fresh or roast beef was unfit for food, were not established. General Miles was censured for failing promptly to notify the Secretary of War when he first formed the opinion that the food was unfit; General Eagan was also censured for the too extensive purchases of the canned beef as an untried ration. It was decided that the packers were not at fault, and that the meats supplied to the army were of the same quality as those supplied to the trade generally. It was recommended that nothing further be done in the matter.

Commissioners from Porto Rico have presented a second memorial to the President asking the following concessions:—

1. The cessation of military government and the establishment of civil rule in the island.
2. The establishment of absolute free trade between Porto Rico and the United States.
3. The reduction of American troops and the enlistment of Porto Ricans.
4. The right of American citizenship in the island.

The ninth annual reunion of the United Confederate Veterans opened at Charleston, S. C., May 10. The bells in old St. Michaels chimed incessantly during the morning, playing, "My country, 'tis of thee," "Star Spangled Banner," and other patriotic airs. The feature of the day was the parade of ten thousand veterans followed by the reunion exercises at the new auditorium. The opening address was delivered by General J. B. Gordon, Commander-in-chief of the United Confederate Veterans.

It is reported that Admiral Dewey will start for home within a few days. The insurgents are in a demoralized condition, and the prospect of peace is so bright that he hopes to be able to leave very soon. He probably will not await the arrival of Rear Admiral Watson, but will leave Captain Barker in command of the Asiatic Squadron. He will come in the Olympia by way of the Suez canal to New York.

The junta of Cuban generals has definitely decided to accept the distribution of the three million dollars donated by the United States on the terms insisted upon by General Brooke, namely, that those soldiers turning in a full equipment shall receive the money. Recent investigations show that not more than fifteen thousand guns are in possession of the Cuban forces.

Admiral Dewey has been notified of the orders to Rear Admiral Watson to sail on May 16 for Manila, in order to relieve him when he is ready to return, but he understands that this is not intended to affect his discretion as to when he will return. He need neither delay nor hasten his departure for home on account of the coming of Rear Admiral Watson.

The first engine manufactured by the Richmond Locomotive Works for a railroad in Sweden has been completed. The locomotive has no bell, no pilot, and no cowcatcher, these features of the American engine being rendered unnecessary by the fact that all railroads in Sweden are fenced in. The engineer sits on the left side of the cab instead of the right.

It is reported that the President will call Congress together in extraordinary session about October 20. It is desired to have the policy of the government in respect to the Philippines and other colonial possessions thoroughly defined, and the currency question disposed of before the next campaign.

Admiral Dewey has expressed his intention of attending the thirty-third annual encampment of the Grand Army of the Republic to be held in Philadelphia next September, if he can possibly do so. It is proposed to make his presence there a national event.

Admiral Dewey, upon his return to the United States, is to be presented with a magnificent testimonial, consisting of autograph letters from members of President McKinley's cabinet, governors of states, and prominent United States senators.

The United States and Great Britain will stand together in the advocacy of the adoption of a plan for the settlement of international disputes by arbitration which will be presented at the disarmament conference at The Hague.

The United States cruiser Buffalo has arrived from Manila after a very quick run of forty-four days. She brought about five hundred officers and men of Admiral Dewey's squadron, mostly long-term men whose time has expired.

The appropriations of the fifty-fifth Congress at its third session amounted to nearly six hundred and seventy-five million dollars. In addition to this, contracts were authorized to the amount of seventy-seven million dollars.

Secretary Long has received a letter from the minister of marine of Germany giving expression to the good feeling which prevails in the highest naval circles of Germany toward the United States naval authorities.

As a result of his consideration of the Wade court of inquiry, the President has asked the commanders in the Philippines, Cuba, and Porto Rico for suggestions regarding proper rations for the tropics.

There are two thousand Spanish prisoners in the hands of the Filipinos at San Miguel. They are served with five cents worth of rice daily, and are compelled to work hard on the rebel defenses.

United States ambassador, Mr. Joseph H. Choate, was the central figure at the annual meeting of the British and Foreign Sailors Society recently held in the Mansion House, London.

The mayors of eight leading cities of the West have united in sending a cablegram to Admiral Dewey asking him to return by way of San Francisco.

Governor-General Brooke has signed the commissions of the president and associate justices of the recently constituted Supreme Court of Cuba.

Three big mass-meetings were recently held in Chicago, in approval of the administration's policy with reference to the Philippine Islands.

The National Museum at Washington, D. C., has received from Admiral Dewey two cannon captured from the Spaniards when Cavite fell.

It is stated that Andrew Carnegie has sold his entire interest in the Carnegie Steel Company for one hundred and fifty million dollars.

The French commissioners of the Paris Exposition of 1900 are anxious to secure for the fair the American Liberty bell.

The steamer Havana recently made the trip from Havana to New York in sixty-eight hours, the fastest time ever made.

The Chinese legation has vigorously protested against the extension of the Chinese exclusion act to Cuba.

No further action is to be taken by the government regarding Mr. Edward Atkinson and his pamphlets.

Diplomatic relations are to be resumed between the United States and Spain early next month.

An English railway company has ordered twenty freight engines of the Baldwin Locomotive Works.

Miss Susan B. Anthony, the noted suffrage leader, will attend the peace conference at The Hague.

Ex-President Harrison will act as chief counsel for Venezuela in the boundary dispute.

President McKinley will spend two or three weeks at Hot Springs, Va.

Concord Items.

Concord, N. H., May 9, 1899.—At the meeting of the city government this afternoon an agreement proposed by the Rev. Mary Baker Eddy, looking to the expenditure of five thousand dollars by the city, the sum to be given by Mrs. Eddy, for a boulevard leading from her home toward the city, was accepted.—*Boston Herald.*

The generous offer of the Rev. Mary Baker Eddy to furnish five thousand dollars to the city for macadamizing and otherwise improving Pleasant Street in the vicinity of her home was promptly accepted, as it deserved to be. This street, as The Monitor developed by a recent inquiry, the result of which we published, is the one most frequently passed over by visitors to the city and, accordingly, should be made the most attractive. Mrs. Eddy's gift will do a great deal to make it so; and in future it is to be hoped that a portion of the permanent work which the highway commissioner does each year may be so placed as to continue that which is now made possible by Mrs. Eddy's generosity, until the whole street shall be transformed into a magnificent avenue.—*Concord Evening Monitor.*

A Failure of Science.

As we cannot learn the mechanism of a watch by taking a telescope to pieces, so these vivisectors say, as we have learned nothing by vivisecting animals, we must have human beings to vivisect!

So with unparalleled boldness, they have endeavored to get a law passed in the Ohio Legislature to have murderers given up to them to vivisect! and to have no one but vivisectors present at the scene of torture! Medical journals publish facts showing that in hospitals and almshouses, poor, sick patients have been experimented on in a cruel manner without pity.

Colonel Roosevelt said, "In this last war surgeons operating on wounded soldiers showed no pity for their sufferings." This is only one of the effects of animal vivisection, it destroys that God-like pity and sympathy for suffering. Doctors should have muscles and nerves of steel, but—they should also have a heart.

In our late war limbs were amputated uselessly and without pity. Some of the soldiers fought against it, but how many were powerless to resist! Vivisection is the first lesson in murder. The murder of the two girls in the belfry at San Francisco was the work of a medical student and the result of lessons in vivisection.

Professor Webster of Harvard, who practised cruel experiments on live animals, nailing his own dog to the floor to experiment on him, ended by killing the venerable Dr. Parkman, and went to a party the same evening, in as good spirits as ever.

Vivisection is a mean, cowardly, and cruel practice. We cry out against the Spaniards for their bull-fights, but vivisection is more cruel and meaner, because the bulls are allowed to fight for their lives, and vivisectors bind their victims down and even strap up their mouths that they may not have the alleviation of groaning.

Harvard students descend to the meanness of going about stealing people's cats, and hire boys to do the same, it is said.

But as Professor Channing's widow remarked to the writer some years ago (and it is true at the present time), "Harvard College is not what is formerly was. Then man attended and went to study. Now boys go, and the professors, also, are boys."

The result is obvious. Strength of limb, swiftness in running, dexterity of hand are prized more than intellect and brain work. Field games, coarse manners, oaths, etc., are not good things to make a whole-souled, clean, intelligent man. Introducing experiments on living animals into our high schools is a retrograde movement, and will result in destroying the finer feelings implanted in the soul. Let parents consider the effects when they allow their sons and daughters to witness them. All who sanction and are engaged in this cruel work must remember one irrevocable law of the brain.

All man's doings are photographed there. Memory, like Nemesis, stores them up for punishment or reward, and remorse follows in her path.

An English surgeon, who had practised on living animals, in his last sickness was haunted by the sight of all the poor, helpless animals he had vivisected, and struck by remorse died in the midst of fearful, visible horrors.

God will not allow his helpless, dumb creatures to be tortured with impunity, for whatsoever we mete out to them will be meted to us also.

A suggestion: As vivisectors do this in the cause of science, and as some doctors have given their lives in that cause, and as they have gained nothing by experimenting on animals and now ask for human subjects; if these are wanting, why not draw lots among their own number for a subject; surely, they might do this for science.

MISS LYDIA L. A. VERY, in *Salem Observer.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Startling Statistics.

SOME of the daily newspapers of New York and elsewhere are publishing a list of what they are pleased to call Christian Science casualties or deaths, occurring under Christian Science treatment. The researches of the statistician evidently extend all over this country and Europe, and the net result between May 1896 and May 1899—three years—according to their own showing, is thirteen. We are not familiar with all these cases, but with several of them, and we are aware that they were not all in charge of Christian Scientists at the time of their death. Some were in the hands of physicians. Harold Frederic is mentioned in the list. As a matter of fact, he had been in the hands of the physicians for a long time before the Christian Scientist took charge of his case, and had been restored to the hands of the physicians two or three days before his death. The same is true of some others of those mentioned. It is hardly fair, therefore, to charge them up to Christian Science. Nevertheless, if we were to accept the showing as they make it, we can conceive of no better advertisement for the virtue of Christian Science healing. Not nearly as good a showing could be made by any physician of considerable practice. We doubt if the best physician in the world can produce such a record for the same length of time. But let it be borne in mind, that the patients of a physician having the largest practice are few, as compared with the vast number that are being treated all over this country and Europe by Christian Scientists. It is estimated that in Chicago alone there are at least five thousand people constantly under Christian Science treatment. If Chicago furnishes a fair index for all, the number of persons who are being daily treated by Christian Science must extend up into many thousands. In Boston and suburbs, from our knowledge of the situation, we feel warranted in saying that there are not less than from fifteen hundred to two thousand persons constantly being treated by Christian Scientists.

In view of these well-known facts, according to the best showing that our opponents are able to make, the percentage of deaths among Christian Scientists is startlingly small. There is no other healing method known to the world that will bear comparison with it in this respect. The showing is all the more impressive when it is considered that the great majority of cases that come to the hands of Christian Scientists are among the incurable or hopeless cases, having been so pronounced by the attending physicians. We know that many hundreds, nay thousands, have been, to all intents and purposes, rescued from the grave through Christian Science practice.

The papers publishing said list announce also the fact, that there are one million followers of Christian Science in America, and at least ten thousand in Greater New York alone; that it has four churches in Manhattan, one at the Boulevard and Eighty-first Street which will cost $400,000, and one on West Forty-eighth Street which was originally Rev. Dr. R. Heber Newton's All Soul's Church, etc. All this is valuable information for the public, and no fair-minded, unprejudiced person can read these statistics without being deeply impressed with the wonderful work that Christian Science is accomplishing, and he must inevitably conclude that a healing system which is able to make a record so marvelous that even its strongest opponents, while attempting to break it down and prejudice the public against it, in reality place it at the very head of the entire list of healing systems, is indeed a healing power.

We have reason deeply to congratulate our movement upon such a showing as this. Nevertheless, the fact that some deaths have occurred under Christian Science treatment, is teaching its adherents the lesson that deeper consecration, higher prayer, and a closer walk with God, are needed to prevent like occurrences. More earnest striving to assimilate the divine Truth that heals, must follow every seeming failure, and Christian Scientists must recognize this fact more and more.

As to one of the cases mentioned in the list above referred to,—that of Mrs. J. W. Eller, of Omaha, Nebraska,—a word of explanation will not be out of place. The fact is, Mrs. Eller, wife of Judge Eller of that city, was so severely burned that there was no human power to relieve or save her. She responded, however, we are informed, to Christian Science treatment; there was hope of her recovery; and she was relieved of pain and suffering. Judge Eller, and other members of the family, who had also been severely burned, were, through Christian Science treatment alone, entirely restored. Their cases are considered by those familiar with the facts, and willing to admit them, as remarkable cases of cure.

Doubtless there are others on this list that are as improperly there, in the connection mentioned, as the two cases to which we have referred. In one other, which we do not care to mention, we know this to be the fact, having learned thereof from the husband of the lady who passed away.

If we were to reduce this list to its fair and proper proportions, we should find that these cases, so far from being a reproach to Christian Science in the work accomplished in the way of relieving pain and suffering, would be a strong argument in its favor. We know of some instances in which death has supervened, where the circumstances were so favorable to Christian Science treatment, the pain and suffering so well overcome, and the patient lifted to a spiritual plane, so much higher, that, as a result, whole families have adopted Christian Science, and are now among its active adherents.

We are frank enough to say that our opponents have not published all cases that have passed away in the hands of Christian Science treatment. There are others, but the total number that could by any fair means be said to have died in the hands of Christian Scientists, is amazingly small.

While upon this subject, we feel it our duty to protest against the unfair methods of some of the newspapers, in mixing all kinds of "fads" and "black art" with Christian Science; as for instance, one Boston newspaper publishes under head lines the insane acts of a Dr. Dicario, and under the same head lines publishes an account of the death of a well-known lady of Chicago, who was a Christian Scientist; following this account with the account of the Dr. Dicario. This is so palpably unfair we wonder that any journals should resort thereto.

As to Answering Attacks upon Christian Science.

WE receive many requests for permission to answer attacks upon Christian Science by the ministers and others

Digitized by Google

in various parts of the Field. We will say that local Scientists are at entire liberty to use their own best judgment, with reference to answering such attacks. If they deem it wise and for the best interests of the cause, locally considered, to make proper and Christianly reply to unjust attacks, it is their privilege to do so without special permission from any one at headquarters. Let there be no recrimination, but only fair argument and deduction, and such explanation as will tend to remove the misapprehensions of Christian Science, its teaching, purposes, practices, etc.

The criticisms of Christian Science, to any one having even a small understanding of its teaching, are so manifestly founded on misconception, that the student of Christian Science, at a glance, sees the critic is battling, not with Christian Science, but his own erroneous conception of it. He is fighting, as it were, his own thought, and not that of the Christian Scientists. The chief purpose of articles replying to attacks should be to arouse the critic to a knowledge of such fact.

In His Last Sickness.

It may not have been to the discredit of Dr. Phineas P. Quimby, that in his last sickness, he was under the care of a drug physician, but it does not speak in the highest terms for the efficacy of his healing system, nor can it be said to be a strong argument in favor of the claims of those who are now maintaining that the system of Christian Science healing was borrowed by its author, its Discoverer and Founder, the Rev. Mary Baker Eddy, from Dr. Quimby or his writings. It is well known to every intelligent person these days that Christian Scientists rely upon God, or Divine power, for their healing, in every and any emergency, rather than upon a human physician. It is well for disinterested people, who desire only to know the truth, to bear in mind this fact, and consider the probabilities and non-probabilities of the question in all its aspects.

A Correction.

An error appeared in the article entitled Prison Work on page 14 of the last issue of the Sentinel. It was through the efforts of Mrs. (not Miss) Chanfrau that the prisoner was again permitted to have the Quarterly and Journal.

A Wednesday Evening Meeting.

At the close of a day of steady snowfall, which the warm breath of April had, at every street crossing, quickly converted into mud of uncertain depth, the thought came: "This is Wednesday evening; surely the gathering at the dear church will be thin to-night, yet I cannot afford to stay at home." So, dressing to suit the weather, I waded forth, only to find, on arriving, that every one else was of the same mind, and the church was as usual well filled.

The thought arose: "What is the attraction that will fill a church on such a night as this with people from every quarter of the city?"

I saw lawyers, professional and prominent business men, with their wives and families, side by side with many from the poorer walks of life, all with earnest, happy faces, as if they were coming to a feast. Had they come to be thrilled with the eloquence of some famous preacher, or to listen to strains of rare music? No, it was only the mid-week assembling together of plain, every-day people, to tell what God's love had done for them, in the healing of sickness, sorrow, and sin; to give out from their varied experiences words of help and encouragement to others who are hungering for something that the world has failed to give them.

An opening hymn was sung. Following this, a few passages from Scripture and Science and Health were read, then an impressive silence of a few moments, when every head is bowed in prayer, followed by the Lord's Prayer, in which all, even the little children, join. Another hymn was sung, and the leader announced that the meeting was in the hands of the people.

The first testimonial given, was, as told to the narrator by a business man of this city, as follows: A poor dog, which had had its back broken, or injured in such a way that he was helpless, was lying in a vacant lot, opposite his house and was being kindly fed and cared for by the children in the neighborhood. The gentleman thought it would become his duty soon to notify the city officials of the presence of the body of a dead dog. A few days afterward he looked across and did not see the lame dog in his usual place. He crossed the street and searched among the weeds, but not finding the dog, he asked his wife if she knew what had become of the animal. "Yes," said his wife, "he has been healed through Christian Science."

Some days later they were sitting on the porch, when a shower came up. Directly a dog came up the street (the very same that had been injured), turned in at the gate and lay down at the lady's feet. When the rain stopped he trotted off.

This testimonial called forth another experience of a somewhat similar character, concerning the healing of a pet kitten, showing that the understanding of God as infinite Mind, and infinite Love, destroys all sense of pain and discord, in even the humblest of His creatures.

The next experience was of a man, a brilliant lawyer, who had become a slave to the habit of strong drink, from which he had vainly tried to free himself. He had taken the Keeley cure four times, only to lapse into the old habit worse than before. Finally his condition became so desperate that his wife applied for a divorce, and the last hope of regaining his manhood seemed gone, when he had a talk with a Christian Scientist which resulted in his going to a Christian Science practitioner for help. In a marvelously short time the craving for drink was entirely gone, and he is to-day, in the words of Scripture, "Every whit whole."

A case was cited of a man of about sixty years, who had since early boyhood been addicted to the habit of tobacco chewing; had tried to break it off by will power, but the craving was so strong that he became so irritable under the strain as to make himself and those around him miserable. He finally applied to a Scientist, who gave him some helpful thoughts from the writings of our beloved Leader, Mary Baker Eddy, to repeat often and keep in mind. This he did for three days, then from sheer force of habit he put a piece of tobacco in his mouth, but it tasted so bitter that he at once spit it out, and involuntarily lifted his heart to God in prayer. He declared that he had never had the slightest desire for tobacco since.

A young man arose to tell how he was led to investigate Christian Science through the healing of his mother and brother, the latter having been twelve years an invalid, suffering from inflammatory rheumatism. When he saw its truth and beauty, and its application to all his daily needs, he felt that he could not do without it.

Next, a lady testified that she had been a great sufferer, and undergone a severe surgical operation, only to have the old disease return in a more malignant form, and be told by her physicians that nothing more could be done. She was made well in a few weeks, through Christian Science treatment. Her physician admitted that mental and nervous diseases might be healed through Mind, but this baffled his comprehension.

When the world can accept this simple statement, that in Science but one Mind is recognized, and that Mind, infinite, all power, all presence, all good—then mystery and miracle will disappear, and Christian healing will be seen.

Digitized by Google

as it really is, the most simple and natural thing in the world.

This thought is well illustrated by a young mother who told of her two little boys—the younger, naturally loving and affectionate, while the elder seemed to evince opposite traits of character. This condition was regarded as a hopeless reality, until through the study of Christian Science the thought dawned upon her that both were alike God's own dear children, governed by the same Mind, and that Mind, infinite Love. Holding persistently to this thought, the elder child began to grow loving and gentle, and the unlovely traits of character faded away. What a lesson is here for mothers!

Other testimonies of widely varied character were given, each illustrating the one central fact, that the words of the Psalmist are as true to-day as when they were first spoken: "Bless the Lord, O my soul, and forget not all his benefits: Who forgiveth all thine iniquities; Who healeth all thy diseases; Who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies" (Psalm 103 : 2–4). M. E. KILLIE.

In the *Denver Republican.*

Mortal Mind.

THE first thing that attracted my attention to Christian Science, was the beauty of a life that came under its sway. The world is full of doctrine; whole libraries teem with it; whole communities overflow with it—of the positive as well as of the negative variety. First there is belief, faith some call it; and then doctrine, or theories. Well, the subject of my observation announced, that only those things were worth anything that you could live, and added, *now.*

Away back, in an anterior period of my earth-life, there had swept across the path within my sight, a sort of breeze, of theologic aroma that its devotees called sanctification, or Christian perfection; and this Christian Science struck me as a sort of physical perfection, or bodily sanctification. It didn't seem to be doing any harm: and as the doctors' bills, which had always been somewhat luxuriant in my expense account, had ceased to grow, why,—let well enough alone. Being an invalid myself, one of those insomnia drones who spend nights, for weeks, with sleepless eyes and then pretend to attend to business in daylight—it seemed safe to let in any sort of hallucination that would militate against the doctors' accounts. It was a case that doesn't need details. There was neuralgia, asthma, sick-headaches, nervous prostration in the family, together with indigestion, bad teeth, croup, occasional typhoid fever, and a catalogue of diseases and ills,—such as every well (or ill) regulated family is presumed to have,—only we had had lots of 'em, and so were pretty well *ill-regulated.* Ten times out of nine it is the woman that seizes on to Christian Science, and this case maintained the rule.

But, behold! new phases appeared—or did a scale fall from my eyes? The irritability of nervousness had passed away—which at best is but a negative state, and then began to appear a reign of peace. Ah! this was positive. When a man has tramped through the theologies, native and foreign, and through the non-theologies, from innocent old Tom Paine to Voltaire, common-sense Hume and Stuart Mill, even to decoctive Colonel Ingersoll; has been raised on such pabulum as Calvinism, triturated by Scotch shorter catechisms, and American D.D.'s, like the Dwights, Alexanders, and Hodges, and been remanded to Gehenna for reading Swedenborg—he is not easily alarmed. So, lying in my hammock in that climate which is the Italy of America, where the soft gulf breezes come to meet those which cross the Llano Estacado from the lower Rocky Mountains,—where, if on earth, climate should be a commodity because it is so fine,—spending whole nights star-gazing and speculating, figuring out by logarithms how far back the race began and about the importation of the problem of evil, and calculating about when the golden age would begin—there came a demonstration: "As a man thinketh in his heart, so is he." The cultivation of insomnia was a most artistic performance. To nurse disease! It did look ridiculous. It seemed to me that my dog—my constant companion in these night wanderings—ought to laugh with me at the idea.

It was the sharp, quick point of a knife, gleaming in the moonlight of the mind's earth, but it had divided to the very marrow 'twixt the God-life—the life immortal—and mortal mind. No word of this was whispered to my family or to that little coterie of Christian Science *cranks* who were the associates of the family—people with calm faces, happy lives, intelligent—in whom it was plain to be seen that peace and joy reigned. They outphilosophized philosophy.

> Why search the future and the past?
> Why do ye look with tearful eyes,
> And seek, far off, for Paradise?
> Beneath thy feet, Life's pearl is cast.

Perhaps it is needless to say that this recital is from one who is now in perfect health; nor need it be added, except perhaps for some querist, that, as the mind, the soul, is the man—this physical manifestation is, in reality, the barest incident, though an essential and inevitable one, of the recognition of Immortal Mind,—"Mortal mind accepts the erroneous, material conception of life and joy." It cultivates, encourages, and gives reality to sickness, nervousness, sensitiveness,—to sin, to evil, to the devil, to hell itself. It is lame, blind, halt, of the very class who are to be healed, *now.* It acknowledges that there is life in that which, in its very nature, is death; mortal mind is afraid of life, being in constant fear of death; for that is its doom. "It is the mortal belief which makes the body discordant and diseased, in proportion as it is governed by ignorance, fear, and human will."

But the true idea is gained from the immortal side." From thence comes harmony. That alone is real. The despots of earth always claim power; but it lies only in the acknowledgment of the subject, not in the claimant. Evil says, "I am real;" and the subject answers, "I believe you," and passes under the yoke. But the free-born, standing in the light that is "the light of the world," laughs to scorn the claimant for the throne, which is God's throne; hurls back the pretender as a liar, and says, "I am a subject of Him whose right it is to rule." "All is infinite Mind and its infinite manifestation." To admit God, Immortal and Infinite Love and Life, into the mind only as a dream of historic import, or coming as an illuminating hope for centuries yet unborn, is to give mortal mind the throne in our lives to which it pretends. To admit God, immortal and infinite Love and Life, into the mind *now;* to set no limit, physical or psychic, is to have life and have it more abundantly. PAUL WASHBURN.

In the *New Church Independent and Monthly Review.*

From the Christian Science Department of the Florence (Col.) Daily Tribune.

ANY one will admit that a man can worry himself sick. Brain disease, insomnia, fevers, hysteria, insanity, and other like disorders are now recognized by the medical fraternity as the results of excessive worry, apprehension, or fear. In other words, their cause is mental. This is admitted by all rational people, regardless of medical affiliations or religious beliefs. It is so apparent that no physician's diploma is required to discover it. Now, if it be admitted that the condition of one's mind sometimes causes bodily sickness, is it unreasonable to look for a mental cause at the bottom of all diseases?

The disciples of *materia medica* have so long believed that physical effects come from physical causes that they

Digitized by Google

are reluctant to admit any other diagnosis of disease as being correct. However, all doctors are not fossils or bigots, and one can note a marked tendency among the advanced members of the profession to give closer attention to the condition of the patient's mind, urging cheerfulness, calmness, hope, etc. Less medicine and more good cheer seem to characterize the methods of the most successful practitioners of to-day.

Christian Science cures, not by doctoring the body, but by treating the mind. It teaches conclusively that a mental cause is back of every discordant physical condition, and that ignorance of the law governing them is the reason that mankind has not heretofore recognized such causes. These causes are not always apparent. They are often deep-seated and of long standing, and it is only through the exercise of a higher power than that of the human mind that they are uncovered and destroyed in Christian Science.

Christian Science differs from every form of mental healing, inasmuch as it is not based on the power of one man's mind over another's. Hypnotism, mental science, etc., may be so described, but not Christian Science. It recognizes only the one power and that is God—Good. The Scientist merely reflects this power, as a mirror reflects the sun, and to do this he must strive to live up to its teachings, wherein purity of thought and action, unselfishness, humility, and good will to man are essential. Hence children are frequently as effective in Christian Science healing as the strongest minded adults.

The Difference.

BY EDWARD A. JENKS.

It may have been a dream—but beautiful at first:
I found myself upon a breezy eminence
At sunrise; and the hill was one great flashing opal
In the bright morning sun, blushing resplendently
Beneath his passionate June kisses; and the oaks
That crowned the hill stretched out their glist'ning, pleading arms
For more—and more—and more. Their quivering foliage
Was full of bird-songs, and of airy whisperings
From Heaven and other far-off tributary hills.
The balmy air was laden with God's benison,
And all the happy spears of grass shook tambourines
Of jingling dewdrops to the music of their own
Wild laughter; and where'er the eye could reach, in this
Exhaustless realm of love, green valleys stretched away
Into one grand infinity of absolute
Perfection. Sweet Content seemed hovering everywhere,—
While over all, the turquoise sky, flecked here and there
With softest tufts of wool from flocks of sheep that feed
In grassy pastures on the sunny slopes of heaven,
Brooded and crooned as gently as a mother dove.

It seemed to me no sorrow, discord, sin, or pain
Could find a foothold there. My soul was full of love
For Him who made the world so beautiful,—when quick
My eyes discerned a moving speck far down the vale,
Distant, distinct, and ominous, portentous, black,
Which seemed to grow upon my bursting eyeballs to
A vast procession—feebly animated forms
Without a ray of hope in deeply cavernous eyes—
All journeying toward a Death's-Head Gateway 'tween the hills
Encompassing the shadowy Valley of the Dead:
And as it nearer came, I noticed to the left
Of this dark, undulating line, somewhat apart
From it, a figure, semi-uniformed, who seemed
To marshal and command; and some way back of him
Another, then another, till the whole great line
Seemed fully officered, commanded, and controlled.
It was a mystery—a mystery so deep
I could not fathom it—and so, unconsciously,
I said "What *can* the meaning be?" A voice from out
The blue above me came, so low and sweet and sad
It made the tear-drops tremble on my eyelashes:
"That is the daily tribute to the Vale of Death—
The daily pall that falls on living, loving hearts."
"And who are they who walk beside that grewsome line,
Conducting them so kindly to the sombre gate?"
"They are the good physicians, who have done their best—
Who hold the Keys of Death—commissions signed and sealed—
The *legal* warrants to contend with Death and Hell:
Alas! alas! that noble men should be so weak!"
And then I saw why "Failure"—writ so sadly oft—
Should ne'er be questioned. "Failure" and "Legality"
Were sisters. Who could question their divinity?
So the heart-broken crowd stood by, with streaming eyes,
And saw the long procession pass within the gate.

Just then I saw, approaching from the other side
Of that sweet valley, two I had not seen before.
"And who are these?" I said. The same sad voice replied,—
"Another pilgrim going home, and helping him
Is one who tried to heal his sins and sicknesses
By silent prayer—*but failed.* Alas! and yet Alas!"
A sound of wings—and then I heard the voice no more.
But other voices, angry and tumultuous,
Came up the grassy slope upon the shuddering air,—
And "Crucify him!" "Stone him!" were the sounds I heard—
"He has no legal right to heal!—*Stone him, we say!*"
And all the while he held, close buttoned in his breast.
A sealed commission from the *King of kings,* crimson
And stained and torn.

The Lectures.

At Pomona, Cal.

The Unitarian Church was well filled Monday evening, April 24. at the lecture of Dr. A. A. Sulcer on "The Science of Christian Science." Rev. O. Clute, LL.D., pastor of the Unitarian Church, introduced the speaker. He said,—

Over the entrance to one of the most famous of the ancient schools was the legend, "Know Thyself." Nearly all the great leaders of man have in some form given the same direction. That "the proper study of mankind is man" seems, thus, to be the general conviction.

As soon as a man begins carefully to study man he learns that there is something in man which we call mind, and that this mind is the most important part of the man. By aid of mind man studies himself and all things else. Mind organizes human governments, subdues and cultivates the earth, makes roads over the highest mountains and across the most dreary deserts, sails frail vessels over the stormiest seas, studies the earth and the skies and learns from them the laws of nature, which are the laws of God. Mind sings the songs that arouse love and patriotism, paints the pictures that express the artist's noblest dreams, carves the statues that reveal the entrancing loveliness of the human body, writes the scores that, being interpreted by the human voice or some instrument played by the human hand, fill the very heavens with melody. Mind carries us to the presence of the Eternal, reads for us the story of His power and glory, of His love and wisdom as they are revealed to us in the world of matter and the world of man. Such is the beauty, the dignity, and the glory

Digitized by Google

with which we were endowed when the Creator "made man in His own image."

In recent years certain strange stories come to our ears concerning powers of mind which have hitherto been but slightly known to us. We are told that mind is able to heal all diseases without the use of any material remedies. That diseases which have baffled the skill of the most highly trained physicians of all the old schools yield readily to this mental treatment, nay, more and greater than this, that ignorance, sin, despair, fly before its renovating word. Whatever may be our private convictions as to the proven validity of these claims, I think that all thoughtful men and women will hope that they may be found true, and that soon through their aid all disease and pain, all sin and degradation, all wretchedness and despair may be conquered; that all minds may be filled with God's truth, that all hearts may overflow with God's love, that in all lives the glorious light of righteousness may shine.

That movement which makes such strong claims for the power of mind is known as Christian Science. Some of its friends live among us. They have secured a lecturer to speak to us to-night on the subject which they think so important, and whose importance, if their claims are verified, we shall all be glad to allow. The gentleman who will discuss the subject is one of a small number who have been selected by the most eminent believers in Christian Science to explain its principles and philosophy to the American people. He comes to us, therefore, with the highest endorsement of the people whom he represents. I have the honor to introduce to you Dr. A. A. Sulcer, of Riverside, who will lecture on "The Science of Christian Science."—*The Daily Progress.*

At Atchison, Kan.

The Opera House was crowded Thursday night, May 4, with an audience composed of Atchison's most cultured and intelligent people, to listen to a lecture by Mrs. Annie M. Knott, C.S.D., of Detroit, Mich. Mrs. H. Graybill, First Reader of First Church of Christ, Scientist, of Atchison, introduced the speaker of the evening as follows:—

Ladies and Gentlemen:—Under the auspices of the First Church of Christ, Scientist, of this city, we are to be entertained this evening with a subject upon which much has been said and written, pro and con.

One has said, "Agitation is education," and like all great questions, argued and discussed, scoffed and ridiculed, the prophet to-day clearly discerns that Christian Science is surely on the incoming tide of public opinion. You will find people admitting they know nothing about it; while in the next breath, volunteering positive information concerning it. The fact is, the public as yet is in comparative ignorance of this subject or its merits.

The question naturally arises, Where shall I go to ascertain the truth? Where would you go if you wished to learn music? Would you not go to a musician —one who demonstrates the principle and rule of music, or would you go to a stonemason? So in accepting instructions in Christian Science, the only person to whom you should apply is a Christian Scientist; one learned in this Science, one who understands and demonstrates his knowledge of this subject as laid down in our authentic textbook.

No one but a demonstrator of this Science has any right to attempt an explanation of this subject, neither is any one else capable.

The speaker of the evening is well fitted by years of experience, to speak intelligently and instructively on this subject; therefore, it gives me the greatest pleasure to introduce to you Mrs. Annie M. Knott, of Detroit, Mich., who will address you on Christian Science.

The Atchison Champion.

At Independence, Iowa.

The Gedney Opera House was well filled Friday evening, April 21, by a critical audience composed of citizens of this place, supplemented by considerable delegations from Waterloo and Cedar Falls, to listen to the lecture delivered by Edward A. Kimball of Chicago, on Christian Science. It was made up of all shades of opinion—the minister touching elbows with the unbeliever who came solely as a matter of curiosity, the physician who rejects all theories of faith cure with the devout adherent of the power of mind over matter. The meeting was a creditable one to the society, as all expenses had been raised without outside solicitation. The speaker was introduced by Miss M. A. Hughes, who spoke as follows:—

Friends:—Perhaps no subject is claiming more attention to-day throughout the world than Christian Science, and certainly no subject is more misrepresented, condemned, criticised, ridiculed, and less understood. With the view to clearing away some of the misconceptions held in regard to the religion which has for its basis the healing of sin and disease as taught by our Master, and of explaining a little of what its mission is, a Board of Lectureship has been established by the Mother Church of Boston.

The name of our beautiful city is a misnomer if the thought of its people is not untrammeled, free, and ready to investigate, recognize, and appreciate that which teaches a higher and fuller understanding of God and man, and their relation to each other.

From his varied experiences I know of no one better fitted to talk on this subject than Mr. Kimball. Given up to die by his physicians, he turned to Christian Science and was healed. Since then his time has been devoted to healing others, teaching, and lecturing. I now have the pleasure of presenting to you Mr. Edward A. Kimball, of Chicago, who will speak to you on the subject of Christian Science.

The Bulletin Journal.

At San Mateo, Cal.

Dr. F. J. Fluno delivered a very interesting lecture on Christian Science in Library Hall, Tuesday evening, April 25. The hall was well filled, and the lecture throughout was listened to with closest attention.

Mr. D. Bromfield introduced Dr. Fluno in the following language:—

More than eighteen centuries ago, our Master, Jesus the Christ, when leaving his students, said to them, "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover;" and his students did go and preach everywhere, healing the sick and casting out devils. This good and Christly work went on for several centuries, until man became so blinded by worldliness that the divine Principle of this healing became obscured and finally disappeared.

For eighteen long centuries man groped along in the darkness of mortal guesswork, trying this and that as a relief from discord and inharmony. In the year 1866 Mrs. Mary Baker G. Eddy discovered Christian Science. Since then, thousands have received the benefits of this wonderful discovery and healing.

There are to-day very few intelligent men and women who have not heard of Christian Science. In order to more generally inform the people as to what Christian Science is, and also what it is not, a National Board of Lectureship has been instituted by those in authority. One of the two members of this Board for the Pacific Coast is Dr. F. J. Fluno who will now address us.

San Mateo Leader.

At Peoria, Ill.

The Grand Opera House was completely filled Monday

Digitized by Google

evening, April 24, to listen to the lecture on "Christian Science," by Edward A. Kimball, C.S.D., of Chicago. The lecturer was introduced by Mr. Alex. G. Tyng, who does not himself claim to be a member of the Christian Science Church, under whose auspices the lecture was given, but he expresses himself as feeling a deep sense of gratitude for the benefit received in his family through Christian Science.

Mr. Tyng said,—

Ladies and Gentlemen:—Christian Science is a religion; its healing properties are only a portion, not the entirety, of its creed. It has been persistently maligned, attacked, and ridiculed by parties who do not understand it. In this, however, it only shares the fate of all new thoughts for the betterment of our race, morally or intellectually.

Any careful, disinterested observer of the believers in Christian Science, who will compare the lives of such persons before and after their following of its teachings, will find in every case that they are better spiritually, morally, and physically than before. Any doctrine that improves all who follow its teachings and harms none, is at least worthy of thought and investigation by intelligent people.

The principal reason that Christian Science is so misunderstood is because of the lack of knowledge as to its teachings, and confounding it with many beliefs with which it has no association or similarity. In order to remedy this condition so far as can be done in one evening with this audience, I have the pleasure of introducing to you Mr. E. A. Kimball, who will speak to you upon Christian Science.—*The Peoria Journal.*

At Fresno, Cal.

Barton Opera House was quite comfortably filled Thursday night, April 27, by people who had assembled to hear Dr. A. A. Sulcer of Riverside, speak on Christian Science. Among the auditors were quite a number of well-known people. The lecture was given under the auspices of the First Church of Christ, Scientist, of Fresno.

Mr. E. J. Harrah introduced the speaker as follows:—

It gives me great pleasure to welcome you here to-night to hear some of the teachings of Christian Science, expounded by one who is authorized to speak on this subject. I say some of the teachings, because the subject of itself is infinite, and no one could possibly do more than touch the hem of the garment of Truth in one evening or in many evenings. There has been for about four years a small band of Christian Scientists in Fresno, following the teachings of the great yet meek and lowly Nazarene to the best of their understanding, working strongly in the face of all opposition, knowing full well that the Truth must and will prevail, and He whose right it is shall reign. Owing to the general misunderstanding of the subject in hand we thought it best at this time to give a lecture, knowing that when Christian Science is understood it will not be opposed.

The Fresno Morning Republican.

At Mt. Vernon, N. Y.

A large audience listened most attentively to the lecture given in Willard Hall, Thursday evening, April 27, on Christian Science. Many of Mount Vernon's representative citizens were present, and a number from Brooklyn and Manhattan Boroughs, and surrounding country towns.

The lecture was given under the auspices of First Church of Christ, Scientist, of this city, and its First Reader, Mr. Charles Rockwell, introduced the speaker, in the following thoughtful words:—

Friends:—We have invited you here this evening to listen to a lecture on the subject of "Christian Science; it is Christian; it is Scientific."

Many of you may already know much of Christian Science; a few may know nothing of it; and some of you may have a very wrong opinion of this subject.

For the purpose of giving you all a higher idea of the truth of Christian Science—correcting erroneous impressions, and refuting false statements, we have arranged to have Mr. Carol Norton, C.S.D., of New York, speak to you this evening.

In order that you may gain at least a faint conception of this subject, I request you to give attention to the remarks of Mr. Norton, whom I have the pleasure of presenting to you.—*The Daily Argus.*

At Cedar Rapids, Iowa.

Thursday, April 6, Mr. Edward A. Kimball of Chicago, lectured for the second time before a Cedar Rapids' audience. The first lecture was listened to by an audience that filled the Universalist Church; the second lecture was delivered in the Opera House to an audience more than double that which greeted Mr. Kimball in 1898. This evidence of growth will be gratifying to all workers in Christian Science.

Mr. Kimball was introduced by our mayor, Mr. John M. Redmond, in a few fitting words, in which he expressed his pleasure in complying with the request of the Christian Scientist to introduce the speaker. He quoted aptly, "There are none so blind as those who will not see; and none so deaf as those who will not hear," and then stated the purpose of the lecture.

Mr. Kimball's lecture has proved a blessing to our Church. With firmer step, we are pressing on "toward the mark of our high calling." ADA J. MILLER, Clerk.

At Jefferson City, Mo.

Thursday night, May 4, Edward A. Kimball of Chicago, lectured on Christian Science before a large and appreciative audience in the hall of the House of Representatives. It was a little after half past seven when Rev. Penkerton, pastor of the Christian Church, in a brief and appropriate speech introduced the speaker of the evening.

Mr. Kimball took the platform, and in his preliminary remarks thanked the people of our city for the consideration shown him and his associates while in the city.

As a speaker Mr. Kimball has few superiors; his language is perfect and beautiful; his theme was logically discussed from start to finish, and at times his eloquence kept the audience spell-bound. Every one who failed to hear this lecture missed an opportunity of hearing an interesting subject ably presented.—*Jefferson City Courier.*

At San Antonio, Tex.

Mrs. Annie M. Knott of Detroit, Mich., lectured here on Thursday evening, April 20. There was a heavy rain storm in the afternoon such as is rarely seen in this section. But despite the inclemency of the weather, an eager audience assembled at the Opera House early in the evening. The lecturer was introduced by Hon. F. M. Paschal, who in a few words, well calculated to insure the respectful, earnest, and thoughtful consideration of the audience, called their attention to the significant fact that some of the brightest minds of the day were deeply interested in the humane principles taught by Christian Science. BELLE BLACK.

At Greensburg, Pa.

An appreciative audience was present Friday evening, May 5, to hear Carol Norton, C.S.D., of New York City, lecture on Christian Science. Mr. C. H. Miller and wife, of Pittsburg, accompanied by some twenty-five or more representative citizens of Pittsburg and vicinity, came out on the evening train, and the former in a neat address introduced the orator of the evening.

Greensburg Daily Tribune.

A Helpful Suggestion.

Kansas City, Mo., April 7, 1899.

Dear Editor:—A gentleman (Mr. K.) prominently connected with one of our Western railroads, has been an invalid for many years. He was finally compelled to quit work and sought relief at Hot Springs, Ark. But his seeking was in vain, and his friends and associates were becoming disheartened over his condition.

About the middle of March, the general manager of the railroad suggested to all of his (K.'s) friends, that they write to him on a certain day to "cheer him up." They did so, and various were the subjects of those letters.

Among those who wrote was one Mr. M. who is also prominently connected with the same road. Mr. M., knowing what Truth had done for members of his family, selected Christian Science as the subject of his letter. I happened to obtain a copy of that letter and enclose it herewith for your perusal, and for publication if you desire.

As Mr. M. insisted that he was not a Christian Scientist, it occurred to me that this letter is good evidence as to the hold on the people Truth is obtaining, when a man, not in Science, can preach the Gospel of Truth in such a manner.

I will add, that on the strength of this letter, Mr. K. has returned home, and is under treatment, and his health is improving; and further, that Mr. M. (the non-Scientist) has since given up the use of tobacco and pool playing. Verily, what a power is Truth!

Yours in Christ,
W. E. Benson.

Kansas City, Mo., March 14, 1899.

My dear Mr. K.:—Prompted by various reasons, I thought I would write you a letter on the efficacy of Christian Science. I am thoroughly acquainted with the fact that I am a very weak and unworthy vessel to attempt to convey such tidings as are contained in the teachings of Christian Science to those, perhaps, who have lived and are living more truthful lives than I. I have seen many who had been prostrated upon beds of affliction and who had been given up by the doctors as incurable, fully restored to health through this agency. In view of the fact that you have been for a long time incapacitated for duty, and have been unable to find help through the use of material means, I write you to say that I firmly believe you can be healed through the agency of Christian Science.

As I understand the teachings of Christian Science, God is Love, is Truth, and is Life; God is Principle, and therefore fills all space; man is a spiritual being and not a material being, and if our lives, our thoughts, and our actions harmonize with the laws of God, we shall not be subjected to all the ills of the flesh, but shall have, as the Bible tells us, dominion over the fish of the sea, the fowls of the air, and everything that creepeth upon the face of the earth.

Jesus, the Christ, declared when he was on earth that we would have power to do the works that he had done. That promise of his has been fulfilled in hundreds of thousands of cases, and is being fulfilled every day and every hour. Christian Science is looked upon as a humbug by those who have never given it a thought, but if you will procure "Science and Health with Key to the Scriptures," written by Mary Baker G. Eddy, you will find that it is a subject which will bear investigation. It is being studied by the more enlightened class of people of our country, and I might say of the world; and will in time revolutionize the world.

Some look upon Christian Science with a sneer, because it was discovered by a woman, but when you remember that the dearest friend on earth to you, the one in whom you placed the most confidence, the one who has suffered most for you, is your mother, and, as you well know, woman was the last to leave the cross, and the first at the sepulchre after the resurrection of our Saviour, you cannot help but bow in respect and adoration. Then again, this doctrine is found in Holy Writ. It does not teach us that God is a corporeal being, but it teaches us that God is Spirit, is Life, is Love; that God is Truth, and therefore must be Principle.

As you are well aware medicinal properties were discovered in roots and herbs by a heathen nation or an idolatrous people, four hundred years before the birth of Christ, that medicine has advanced but very little from that time to the present date, and from its inception the human race has been more or less afflicted with all the ills of the flesh, and as days go on, become weaker and weaker. Therefore, I think we should look around us for something more substantial to cling to, and I feel that if you will investigate Christian Science as I have suggested, you will find that with it alone can men live and enjoy the real life which is man's birthright.

In Genesis you will find two distinct accounts of creation. In the first chapter you will find where God made man in His own image, which was spiritual and without form, and in the second chapter where Lord God formed man out of the dust of the ground and breathed into his nostrils the breath of life. In Isaiah you will find that the word of God is medicine to the flesh. In the last chapter of Mark you will find where our Saviour appeared to the eleven as they sat at meat; upon which occasion he gave his last will and testament to man. He said to the eleven: "Go ye into all the world, and preach the Gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be damned. And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; . . . if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick and they shall recover." And they went on their way with signs following. You will find in the book of Romans, where Paul says, "to be carnally minded is death; but to be spiritually minded is life and peace;" therefore, you will understand there is no death; that the Life and the Love and the Truth that is in you and in us all never had a beginning and can never have an ending, and therefore if our lives harmonize with these, God will give us the dominion mentioned above, and we shall not be heir to all the ills of the flesh.

I believe the teachings of Christian Science to be true in every particular and the only perfect Guide, yet I make no pretensions to live such a life; but to those who are afflicted and who have employed every other means to rid themselves of the effect of sin, without avail, I feel it is my duty as well as a great privilege to point them, in my humble way, to the Source of all relief. My son was afflicted from his infancy to the age of fourteen years with a running from one of his ears, which continued to grow worse until at one time it was so bad that the doctors could not relieve it in any other manner than by administering morphia or some other remedy. I wired a Christian Scientist, giving him the condition of the boy as we believed it to be, and in a few hours he was perfectly healed and the trouble never returned. My wife had a tumor under one of her ears, and for a number of years had suffered excruciating pain with it. We applied to a Christian Scientist; the pain was relieved and has never returned. My second son was afflicted with quinsy; for several years we doctored him eight and ten weeks at a time without effecting any relief; we applied to a Christian Scientist, since which time we have not had to call in the services of a physician. When I was assigned to Springfield I visited the hospital and found lying there Doctor S., our company's physician, who was for a long time at Chicago, a young man with apparently a very bright future before

Digitized by Google

him; a man who was considered by every one who came in contact with him as not only possessing more than ordinary intelligence, but a brilliant young man. He was lying on his back with what the physicians called "the decaying of the backbone." I took a great deal of interest in him; I would talk to him from time to time, and finally broached the subject of "mind cure" to him. He grasped it at once and said to me that papers on the subject were being read at all the conventions held by the physicians throughout our country. I then broached the subject of Christian Science to him, and asked him if he would read Science and Health if I would furnish him the book. He said he would. He took the book and read it, and in less than six weeks' time he left the hospital, has never returned, and is now practising his profession in the West. His healing was without the assistance of even a believer in Christian Science.

There are hundreds who have been entirely healed by reading and studying Christian Science works. I know a gentleman in Logansport, Ind., who was in the last stages of consumption, had sold out his business, and had given up to die, when he was healed by Christian Science. I corresponded with a lady who was sick for eleven years, confined to her bed for this length of time, and was blind for five years, who was healed by Christian Science. A Scientist in Fort Wayne, went into a room where a madman was strapped down to a bunk, having been thus placed by six stalwart men, ordered every one out of the room but the patient, unloosed the straps, and healed him immediately. I could go on for an unlimited time and tell of just such cases as I have mentioned above, but with a man of your intelligence, I feel this is not necessary.

When Jesus was on earth he said that the believer in every age would be able to do the works he had done. This promise is being fulfilled every day, and has so thoroughly convinced me of the truthfulness and the efficacy of Christian Science that I take great pleasure in pointing any one to the method of healing that was practised by our Saviour. The Bible says the wisdom of this world is foolishness with God; but regardless of this assertion, we strive to gain worldly knowledge; we strive to gain as large a portion of this world's goods as lies in our power; we strive to gain worldly honors; we strive for worldly pleasures, and, to sum the whole matter up in a nutshell, we live lives of selfishness. If we would expect any benefits from the teachings of Scripture, we should live lives of humility, of obedience to God's law: lives of Truth and Love. We should then be in a position to do what the Saviour has said we should do, and to exercise the power that is in us.

You are a man who is blessed with more than ordinary intelligence, with a goodly portion of this world's wisdom, and as this class of people especially are taking up the teachings of Christian Science and making a study of it and thereby reaping the benefits that are natural from such a course, I cannot see why you should not be enlisted in this cause. You are certainly aware of the sorrows, sufferings and bereavements that come to all who are heirs of the flesh, but if you will follow my advice, I feel confident that you will soon begin to realize there is no life, substance, or intelligence in matter; that man is a spiritual being and not a material being; that God is Life, and Truth, and Principle,—omnipotent, omniscient, and omnipresent.

As I have said in the first place, prompted by various reasons to write to you on this subject, I trust you will realize and appreciate my sincerity. I believe that man is his brother's keeper, and I believe the Bible teaches that all the life and the love and the truth that was in Jesus Christ, is in us; that we are all one in Christ, and that it becomes us all to relieve one another of the burdens that sin has placed upon us; and as my heart has gone out after you in sorrow for the various afflictions that you have been called upon to bear, especially during the past few years, I feel to-day like enforcing upon you all the life and truth and sympathy that my finite being commands.

I trust that you may be brought out of the darkness of the carnal life, into the bright sunlight of a spiritual life, which you will find to be one of pleasure and peace.

Trusting that I may learn at an early date of your restoration to perfect health, and that your paths have been through green pastures and beside still waters, I remain,

Very sincerely yours,

M.

A letter from Mr. K. has come to hand dated April 10, 1899, a little over one month from the time he received the letter Mr. M. wrote, from which we quote the following:—

"Our mutual friend M. was in to see me this morning, wearing a smiling face and thoroughly imbued with the Christian Science idea and determined to *live* as well as to preach it in the future, which he says he has never done in the past. I am feeling exceedingly well and am more glad every day that I was wise enough to follow your advice."

The Appeal of a Great Awakening.

BY J. B. WILLIS.

In the history of earthly struggles it sometimes happens that the anticipation of an easy victory has imperiled the consummation of a great cause.

The over-confidence and abandon that was forgetful of discipline and the fulfilment of immediate duty, weakened and hindered more than temporary discomfiture. If the promise and prophecy of Christian Science to-day beget enthusiasm, they should the more surely lead to thoughtfulness and consecration, for the sequence of a supreme opportunity is determined by the right apprehension, the responsive adequacy of those to whom it is committed.

When we consider the present condition and prospects of Science, we may find it difficult to realize that at the present rate of increase the number of its active friends will exceed ten million within ten years. The significance to our race history of such a realization simply cannot be expressed, and yet the assurances of this stupendous growth seem well grounded.

The dissatisfaction of the people with old forms of religious life and activity is very general and intense, and while the conviction of the reality and power of Christian truth is relatively undisturbed, the inadequacy of our past conception and embrace of that truth grows more and more manifest.

The emphasis given to the spiritual interpretation of nature, of revelation, and of life; the rapid growth of Christian idealism and the ever-increasing concession of ultimate scientific authority to mental causation, these are but indications of that enlarging vision, that dawning freedom, that awakening expectancy which open wide the door of a new spiritual era.

The growing recognition of the naturalness and lawfulness of the miracle has shorn it of its magic, and the world's philosophic preparation for the supreme assertions of Christian Science is well-nigh complete.

Then, too, the common sense of the people chafes for freedom from wearisome burdens. Suffering humanity grows restless and less content to languish under the dictum of "divinely provided" material means for the relief of "divinely imposed" affliction, for there's a song in the air which echoes about ten thousand firesides, and a new hope is lighting up a multitude of faces which are turned toward Jerusalem.

Further, the present achievements of Christian Science; its multiplying sanctuaries; the intelligence, earnestness, and sincerity of the great body of its adherents; its challenge to investigation, and its beneficent and indisputable works are

Digitized by Google

impressing the religious world and contributing to that mental stir which, while it intensifies the antagonism of the ignorant and bigoted, emancipates and illuminates the thought of a far greater number of those who love the Truth more than they venerate human authority as to its interpretation.

One of Boston's most eminent divines, when asked recently how he accounted for the crowded attendance at the Christian Science Churches, answered, "The facts are exceedingly interesting and significant, I cannot explain them, but it would be well for every minister to study them."

Other facts, such as the dissemination of Christian Science literature, the public discussion of its philosophy and teachings, and, above all, the unnumbered demonstrations of physical and spiritual healing which, in every instance, serve to awaken inquiry and banish doubt in at least one family circle and which in the aggregate yield a testimony whose weight and authority every fair and judicial mind must recognize, these account for and explain that rising tide of interest and inquiry which is rapidly sweeping away the traditional and conventional barriers which have so long delayed the Truth.

The rediscovery of that secret of spiritual consciousness whose power was revealed in the healing of the sick by Jesus and his disciples will soon be recognized as the supreme, the most blessed event of this century. The common people hear and gladly accept its benediction as of old, and intellectual inquirers, though hesitant, speedily yield to the manifestation of faith's richer inheritance, while even those who have been manacled by prejudice are taking up the cry of Thomas, "My lord and my God."

If these considerations enlarge our realization of the extent and significance of the spiritual awakening for which Christian Science stands, they define and emphasize in corresponding degree the nature and compass of the attendant responsibilities, and occasions for watchfulness and self-surrender.

And here it is well to remember how exalted and uncompromising is the ideal of life and thought and conduct which Christian Science re-presents to men, and imposes upon its followers. That God, the everlasting Good, is the only source of reality, life, truth, and power; that evil is a gigantic lie and fraud, without principle and without inherent force; that man is not a weak composite of the angelic and the animal, but God's own child, and therefore wholly spiritual, possessing and reflecting by inheritance the wisdom, love, and beauty of his Father; that it is normal and natural, as well as incumbent, that men live the ideal life of the Master and do his works; that sickness, disease, and death may be overcome by the word of Truth, to-day as of old; these, in the thought of the world, are most startling and presumptuous assertions, and the exactions laid upon those who thus challenge the teaching and authority of the past will be correspondingly searching and severe.

The world has grown accustomed to the contrast between the conception of spiritual freedom and supremacy embodied in the life and teaching of Jesus, and the feeble manifestations of faith and spiritual dominion as seen in representative Christianity, and its attitude has been one of tolerance if not indifference; but in the presence of these declarations of Christian Science, an immediate change takes place and men are again critical and insistent, as they ought to be, that life and conduct shall be in strict keeping with profession.

Humanity at heart is sick of cant and inconsistency, and when awakened by the re-assertion of the ideal it will be alert to detect and swift to condemn every evidence of sham, and its exactions are no less legitimate than inevitable. They are the world's true and just response to religious profession. In the past, Christian people, if not Christian creeds, have virtually denied the feasibility of the ideal of life lived and enjoined by Jesus Christ, and the absence of demonstration as the natural evidence of efficient faith has resulted in the tolerance of one of history's saddest incongruities, a professional, but inadequate, Christianity. Christian Science re-asserts the practicability of this ideal and declares its demonstration, both in the individual life and in the complex relations of society.

There can be no compromise, no evasion, no mental reserve. He who does not demonstrate the power of Truth, in the spirit of unfailing love, cannot meet the demands of either God or man; and failing, he will be made to companion with hypocrites and be visited, as he ought to be, with the Nemesis of public contempt.

The unvarying constancy and clearness of the revealings of the Mind that was in Christ Jesus become, therefore, of supreme importance, and the sense of their high calling and responsibility ought to and will abide with every worthy representative of Christian Science, as a persistent stimulus and inspiration. To him the words of the Master when he said, "The works that I do, ye shall do also," have become no less mandatory than prophetic. To him the holiness which Wesley well named "The healing state," appeals, not as a far-removed, after-death possibility, but as the normal realization of that spiritual sense of oneness with God, which is to find its daily demonstration and yield its perennial joy.

To the true ambassador of Christ, there belongs to-day, as always, an equipment, an authority, an honor and a privilege which is limited only by the embrace of his vision, the grasp of his faith.

With these splendors of opportunity to be improved, there are dangers withal to be anticipated and intelligently met, of which *superficiality is not the least.* It is so much easier to assume the garb of a great truth, than to become its embodiment, and in this Christian Science, with all other important movements will suffer most at the hands of its friends.

The metaphysics of Science and its unusual words and phraseologies furnish peculiar temptations to those who treat the transcendent as a lightsome thing, while its wake is likely to form an inviting retreat for the flotsam of a religious tide. Unable, as yet, to apprehend or fittingly represent Science thought, these nevertheless will be most frequently noted by objectors, as its exponents, the product of its influence, and to bear with them and the criticism and misjudgment of the cause which they inevitably beget, supplies a severe test of that patient self-command which has been so wondrously disclosed in the life of the Founder of Christian Science, a loving appreciation and regard for whom but expresses the sense of the world's indebtedness.

To the weak and wearisome, as to all, must ultimately be revealed, however, the wholesome sanity, the hard common sense which comports with righteousness and Truth, till volatile self-assurance shall give place to thoughtfulness and spiritual understanding, and the term "A Silly Scientist" shall be heard no more.

The aggregation and increasing intensity of the opposition, against which the Truth must ever stand, emphasizes again the importance and seriousness of the hour. Old systems die hard, and in their last throes they forget all differences and unite ever to resist a threatened invasion of traditional authority and vested right. Sin, too, is so organized and entrenched in mortal consciousness, and so acceptable to it withal, as to seem invulnerable to human sense. Its powerlessness and nothingness may be easily asserted; but its subtle seduction and accumulated inertia will yield to those only who have deep spiritual insight and understanding, who *know* God and who have put on His "whole armor." "It was just before the great battles which he foresaw would be great victories that the Great Commoner marshalled his forces on their knees."

With the healing power of Truth again revealed, the rule of efficient faith and service disclosed, a needy world

Digitized by Google

waiting for guidance out of darkness into day, out of sickness and sorrow into health and happiness, and in the hour of such expectation and demand for unfailing results and the rapid elimination of the time element in demonstration, unnumbered voices call to the highest consummations of the spiritual life; to that genuineness and sincerity, that unimpeachable right living, that unselfish devotion to altruism, that joyous absorption in the daily ministry of healing, that irresponsiveness to social and worldly allurements and inanities which should characterize every disciple till error is dethroned and "all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Our Inheritance.

BY FLORA DE WOODY.

IN trying to be a Christian Scientist, we are striving to gain our God-given inheritance. God made us in His image, after His likeness, but through ignorance of the truth of Being, this fact was lost sight of. In Christian Science we learn that we have an inheritance, and are shown how to gain a clear title to it. Whereas we are poor in good things we realize we should be rich in them. When we learn our relation to God and why we are His heirs we shall indeed gain our true inheritance, and become possessed of riches that are ever replenished, for the supply is equal to every need.

If we would only strive to gain our own inheritance, by being honest and truthful, not wasting valuable time looking up back records of our brothers and sisters, to see if they have a right to be an heir to the kingdom, we would much sooner gain this inheritance, and as we are lifted up, we would lift others with us.

Miscellany.

Hufkins uses a Doctor Book.

Mr. Hufkins of Indiana Avenue came home one night last week with a big book under his arm.

"There, I reckon there'll be an end of doctor's bills in this family after this," he said. "When the Hufkinses get sick after this we'll do the only sensible thing—diagnose the disease ourselves, take some simple remedy, and save five hundred dollars a year in useless doctors' bills."

After dinner Mr. Hufkins spent two hours in reading about rheumatism, gout, consumption, whooping cough, and insanity. The next morning he got up with a crick in his back.

"Louis," he said briskly to his oldest boy, "go over to the drug store and get me half a pound of citrate of salsoda, and twelve four-grain tablets of pheanigamia."

Louis came back in half an hour with a bottle of citrate of magnesia and a dozen phenacetin pills, and said the druggist thought they would fill the bill.

"That's what I said; that's what I sent you for," remarked Mr. Hufkins loftily, as he swallowed six of the tablets and took a teaspoonful of the magnesia. By night Mr. Hufkins said the symptoms had changed and he recognized in himself a victim of gout.

"No, thank you, Mary; no pie for me this evening; no more sweet stuffs; no more wine, no more cigars. This gout is settling around my heart, and even with the strictest precautions I may be a dead man in twenty-four hours."

He put on a flax-seed poultice and sat up in bed and read some more in his doctor book.

"Hum-m—queer, queer," he mused after reading about three hours. "I thought this was the most extraordinary case of gout I ever heard of. By jingo, I see now; it's lung trouble in the fifth stage."

He waked the servant girl up and sent her post haste for a bottle of cod-liver oil. When the girl came back she walked on tiptoe, ran into a looking glass, and forgot to wind the clock. Mr. Hufkins informed her, as he gulped down the cod-liver oil, that she had paresis in an advanced stage, and that he would prescribe some simple remedy in the morning. In two days Mr. Hufkins was not able to go down to his office. On the third day, sitting up in an easy-chair, he perused the doctor book from ten o'clock in the morning until eleven o'clock at night. Before the week was over both the Hufkins children had stopped going to school to take treatment for whooping cough, scarlet fever, measles, and mumps.

Mrs. Hufkins is living in hope that the list of diseases in the doctor book will soon be exhausted.—*Selected.*

Dillon Off the Stage.

The fact of John Dillon, the veteran comedian, being a Christian Scientist caused just a wee bit more than the usual degree of curiosity among the church folks in Albert Lea. Mr. Dillon never misses an opportunity of placing himself and his religious belief before the people, and this he generally does after he has appeared in the city so that he cannot be accused of using his church connections for advertising purposes. He greeted the writer very cordially after the play Tuesday night, and before he had spoken five minutes he bubbled over with pure joy because of the fact that he is different from the old John Dillon who once in a while used to send his audiences home because he could not appear before them. John Dillon and "John Barleycorn" wrestled for years and years, and the happy fun-maker declares that he would be wrestling yet, or would have passed from earth, if it were not for the fact that through the influence of a near relation he was induced to investigate Christian Science. "It has done for me what nothing else on earth can do," said the actor. "In former years, half of my baggage consisted of different medicines and dopes, but you don't see any of the stuff now. Our belief is a Science—a Christian Science, pure and simple. It is based on reason, founded on fact, and supported by the broadest and deepest and grandest Science known to man. I owe all to it. Certainly I should speak favorably of it, as will all others who take the trouble to investigate it. I am growing younger instead of older. I am happy and contented."

Albert Lea (Minn.) Tribune.

Stopped All Street Preaching.

The clergymen of Atlanta, Ga., are stirred up because of the recent action of the police in arresting several persons who attempted to hold religious meetings on the streets. Mayor Woodward had decided to refuse any permits to street preachers, giving as his reason that this class of ministry had degenerated into mere abuse of orthodox religion, and that the only thing accomplished by the meetings was an obstruction of the thoroughfares of the city. An attempt was made to hold meetings in two places in the very heart of the town, and all those assisting in the service were conveyed to police barracks in a patrol wagon.

New York Sun.

Victoria's Giddy French Sabbath Breaking.

We find in a report on Sabbath observance just presented to the Free Presbytery of Lorn by the Rev. Ewen Macleod of Oban this statement: "The Queen and royal family, it is deeply to be deplored, have not shown a happy example to the people in the matter of Sabbath observance. Her Majesty's recent journey to France and arrival there on a Sabbath day must have been a grief to every enlightened Christian subject of her own, and very pernicious in its influence over the giddy and godless French."

Questions and Answers.

Is it in accordance with the teaching of "Science and Health with Key to the Scriptures," in treating disease, to have lists of causes of special sins for each disease? For instance, rheumatism, "Treat or deny supposed anger," etc.—L. R.

The above inquiry contains a long list of diseases. Over against each specific disease, or affected part, some mental quality is assigned which must be specifically handled, the list of mental qualities corresponding to the number of diseases manifested on the body, whether large or small.

We answer the above question by saying that such methods of treatment are not only not in accordance with the teaching of Science and Health, but directly opposed. No such mental argument is anywhere authorized by our text-book, and to the extent that such practice prevails it must be the outgrowth of misapprehension on the part of individual teachers or students. We do not hesitate to pronounce it a pernicious practice, bordering close upon mind-cure and mesmerism.

This question was gone into at considerable length by the Board of Education at its January session, and those attending that session have the authority of the Board for declaring this practice to be unscientific and unwarranted. Science and Health and the other writings of our Leader and Teacher sufficiently point out the only true method of healing disease. Students should be careful in their study of "Science and Health with Key to the Scriptures," in order to be clear upon so important a matter. They should not rely upon promiscuous or unauthorized rumor. The healing of disease is too serious a thing to be lightly dealt with. Only through a deep understanding of the great healing truth taught in our text-book, and earnest, constant, watchful care, and prayer, and consecration, can the practitioner of Christian Science truly perform his sacred mission.

What is the derived meaning of "chemicalization," and is it an incongruous word?—W. N. J.

The word "chemicalization" was introduced by the author of "Science and Health with Key to the Scriptures," for the purpose of conveying a definite idea of the change that takes place in mortal mind while Truth is destroying the errors of sense. The mental process is analogous to the action of chemicals, as may be seen from the following extract from Science and Health, page 420: "As when an acid and alkali meet and ferment, bringing out a third condition, so mental and moral fermentation change the material base of man, giving more spirituality to mortal sense, and causing it to depend less on material evidence. The changes which go on in mortal mind serve to reconstruct the body. Thus Christian Science, by the alchemy of Spirit, neutralizes disease."

If man is at ease in error he becomes dis-eased, dissatisfied with his condition, before he gains a higher condition or has a desire to do so. Truth is a constant rebuke to all error. Error does not at once yield to Truth, and because of its failure to yield it is troubled. Then there results a struggle between Truth and error in human consciousness, which continues until Truth is victorious. This unsettled condition, more or less prolonged, is what is meant by "chemicalization."

To the one who is familiar with the Principle and practice of Christian Science, "chemicalization" is the only word that conveys a clear and definite idea of the mental process referred to, hence it is not an incongruous word but, in the sense in which it is used, it is not only legitimate but indispensable.

Testimonies.

Another Case of Locomotor Ataxia Healed.

In September, 1894, my ailment was pronounced locomotor ataxia (erroneously called creeping paralysis), by my family physician.

He advised me to consult a specialist on nervous diseases, who likewise diagnosed my case as locomotor ataxia, and put me under a thorough course of treatment. I tried static electricity every day; I was hung by the neck for two minutes (to stretch the spinal cord) every day; I took an injection of gold in the back, close to the spine, every day, and syrup of hypophosphate with strychnine internally three times a day. This course of treatment was faithfully followed for six months, and at the end of that time I was hardly able to walk; my speech was gone, and I was unable longer to conduct my business. The pain in my limbs was insufferable; I was helpless, despondent, and willing to die.

I then went to Europe and consulted the best authorities on nervous diseases in Vienna and Germany. Here my disease was also called locomotor ataxia, and the German professor advised a thorough course of massage and baths at a celebrated resort, Bad Nauheim (*Bad* means Bath), near Frankfort. I took this course, remaining there eight weeks, and was helped considerably. I returned home, and for eighteen months tried Faradic electricity (as instructed by the German professor,—static electricity being pronounced of no value) with cold baths every day and a tonic of iron to make blood, as I was anæmic. At the end of that time I broke down again and returned to Germany, taking the same course under the same professor's instructions, and came home feeling very much encouraged, looking forward to a complete recovery.

But, alas! I was doomed to disappointment again, for I only lasted six weeks this time. The pains came on even more severely than ever, my physician gave me sixteen injections of morphine and one hundred and ten grains of acetanilid in thirty hours (not to mention a quart of whiskey), but the pain would not cease. I then called in a celebrated local physician, a man known for his honesty and candor, and gave him the history of my disease, what I had tried and whom consulted, and he replied, "You evidently know as much about locomotor ataxia as I or any physician, and what remedies *materia medica* offer for relief. If you wish further to try these remedies and get relief, well and good; if not, there is nothing further to offer you. I don't want your case." Some friends who were calling at the time suggested Christian Science to my wife, who at once asked me if I would not try it as a last resort. I rejected it with scorn, calling it nonsense.

She, however, went for a practitioner the next day, and a smiling, good-natured, honest-looking gentleman was introduced to me, while I was in bed. What could I do? I did not want his help, but tolerated him to please my wife. I argued that here was a man come to heal me by prayer, he had to be paid for his services, and as prayer did the healing, why not do all in my power to aid him? I did—while he treated me, I repeated the Lord's Prayer.

He came again the next day and asked me to come to his office on the morrow. I thought him crazy for thinking such a thing possible, nevertheless, I called on him for my next treatment. In a few days I felt better but would not admit it, as I did not think it possible that Christian Science could do the work. I kept on improving, the pain was all gone, the mental depression disappeared. I improved in walking and that awful imaginary weight resting on my shoulders was a thing of the past.

I am well, healed by Christian Science that I scoffed at in my ignorance. I thank God—omnipotent Good—for this blessing, and am now ready to go out into the world

Digitized by Google

and proclaim it from the housetop, having attended to my business for a year without discomfort.

R. W. K., Chicago, Ill.

Seed Sown by the Wayside.

As there is so much interest being manifested in the distribution of Christian Science literature, I will relate for the encouragement of many who are engaged in this splendid work, how seed, when not even intentionally sown, but carelessly or accidentally dropped by the wayside, springs up and bears fruit. I had known of this Science for several years, as my wife was trying to interest herself in it for physical healing. She had not become sufficiently well to live in the climate where our home was, still I could not help but see she was being benefited by simply reading Science and Health. But as this book taught purity, patience, and unselfishness, as well as other graces, it antagonized my thought, for at that time my graces were better spelled with the prefix "dis."

My wife was at home for a few weeks in the summer of 1895, and I was glad to notice her improvement in health, and especially pleased because of the inexpensive way in which the healing was being done, yet I did not care to read or know anything about Christian Science. She returned to California and left me alone on the farm, where I lived along in the same selfish way I had lived for years, living the life every man does who is interested only in his own gratification. This continued for some months, when suddenly, from no cause I could then explain, for I thought I was well, I was seized with an overwhelming desire to know what Christian Science was. My wife's letters scarcely ever mentioned the subject, so I could get no light from them, and I was hundreds of miles from a city or a Scientist, so I searched the house high and low, hoping to find something to enlighten me—I did not even have a Bible. After much *earnest* seeking I was rewarded by finding a few pages of an old Journal that my wife had accidentally left, and this supplied the present want. I think from the moment I found that piece of Journal I have never uttered an oath, and this was four years ago. I eagerly read every line, even the printed matter on the one cover that was left. I read it over and over night and morning. This, with my feeble attempt at prayers, constituted my morning and evening devotion. From this I gained sufficient understanding to demonstrate over many little ills, which proved to me the greater ones could be overcome in the same way. I soon learned I was anything but a well man, yet I had found that which taught me how to overcome all forms of error.

I soon had a Bible and some entire Christian Science Journals; but this little piece of Journal accidentally left behind by my wife, was what started me—and others through me—on the way to Life, Truth, and Love. I am most grateful to the Discoverer and Founder of Christian Science. This experience also shows the power of the Christian Scientists' prayer, for no doubt many a silent desire had gone out from the faithful wife for the erring opposing one at home.—*T.*

Convinced by Demonstration.

Dear Sentinel:—Although I had seen the great benefit one dear to me had received through Christian Science, it seemed as though there was nothing tangible in it.

I gradually began to understand the logic of its teachings, but only as an intellectual statement. I never dreamed of its possibilities until after my first demonstration, and then I remembered the dear Mother's thought, "Truth is demonstrable, when understood, and that it is not understood until demonstrated."

This was the demonstration. I was taking a trip with my family to the Pacific coast. Between traveling at night and sight-seeing during the day, the trip, to mortal sense, was a hard one. The fifth day was exceedingly hot and sultry, and our little girl was suddenly prostrated. It seemed perfectly clear to me then that a good God never caused that. I realized for the first time the absolute nothingness of the mortal law under which the child had apparently come, and the love and omnipotence of the ever-present Good.

In less than twenty minutes the child had completely recovered. A faint tinge of wholesome color appeared on her cheeks, her eyes were bright and joyous, and she asked for something to eat. There was no relapse.

This demonstration meant much, and since then I have had many victories over sense-testimony.

James E. Patton, Jr., Milwaukee, Wis.

Healed at the Lecture.

Fishkill-on-Hudson, March 15, 1899.

My Dear Mr. S.:—I feel I must tell you of my experience since the lecture on Christian Science in Poughkeepsie. For many years I had been a great sufferer.

I have had three tumors removed by the knife and I spent four months in a hospital. For the past six years I have suffered almost constantly, and all the time in mortal fear of another tumor. A friend told me one day that I need not suffer; that I could be made whole by Christian Science. This was at the time you were advertising the lecture of Mr. Carol Norton, C.S.D. I attended that lecture and was healed before I left the hall. I have not had a pain since, nor a fear of tumor nor a sign of one. Just how this wonderful change has come about I cannot say, but that it came by Christian Science and through that lecture, I am sure. I have talked with others who have been healed by Christian Science after all other means and methods had failed. This manifest power, together with the beautiful lives I observe in Christian Scientists, is a proof to me that herein is found the lost element of the Christian religion, and if such cases as mine are a frequent occurrence as a result of Christian Science sermons, then the Millennium has begun.

MRS. W. C. TAYLOR.

Notices.

To correct an erroneous impression that I am not receiving subscriptions for the support of the Mother Church, I will state that I am always glad to receive contributions or subscriptions. The by-law requires each member to pay not less than one dollar per year as per capita tax, but you may pay more, and many do. When sending your per capita tax or subscription please state which you desire to have it credited to.

The year for payment of per capita tax will commence June 1 and end May 31 instead of beginning October 1 and ending September 30 as heretofore. Will the Field kindly accept my thanks for the general promptness in meeting their obligations to the Mother Church.

STEPHEN A. CHASE, *Treasurer.*

Box 56, Fall River, Mass.

Those who intend to be present at the annual meeting of the Mother Church to be held in Boston, Mass., June 6, 1899, can secure reduced rates by getting certificates for the same from their local agents when they purchase their tickets. Reduced rates are good from May 29 to June 9.

The lecture of Edward A. Kimball, C.S.D., appearing in the Christian Science Journal for May is now published in pamphlet form. One copy or more, each, 10 cents; 12 copies to one address, $1.00; 25 copies to one address, $1.75; 50 copies to one address, $3.00.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2 50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Poston, Mass.

Published by the Christian Science Publishing Society.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REVEREND MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada. No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles — cloth and leather. Cloth. per copy, prepaid, $1.15 each: per dozen $0; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen $6.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church. The First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

Pamphlets.

HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 24 pp.

Congress of Peace.

THE Peace Conference called by the Czar of Russia was opened at two o'clock on the afternoon of May 18, in the hall of the Huis Ten Bosch, or the "House in the Woods," two miles from The Hague. M. De Beaufort, president of the council and minister of foreign affairs of the government of the Netherlands, delivered the inaugural address and welcomed the delegates.

M. De Beaufort spoke of the high honor of the choice of The Hague as the meeting place for the conference, and extolled the noble initiative of the Czar, saying this would be a red-letter day in the history of the century, and expressing the hope that his majesty would be able to look back at to-day as the most glorious day of his life. He concluded with calling attention to the allegorical group over the doorway of the hall, Peace entering to close the temple of Janus, and said, "I trust this beautiful allegory will be a good augury of your labors, and that after you have completed them you will be able to say that Peace, whom art introduced into this hall, left it to spread its blessings among the whole of humanity."

The text of the Czar's proposition is as follows:—

"The maintenance of general peace and the possible reduction of the excessive armaments which weigh upon all nations present themselves in existing conditions to the whole world as an ideal toward which the endeavors of all governments should be directed. The humanitarian and magnanimous ideas of his majesty the emperor, my august master, have been won over to this view, in the conviction that this lofty aim is in conformity with the most essential interests and legitimate views of all the Powers, and the imperial government thinks the present moment would be very favorable to seeking the means. International discussion is the most effectual means of insuring all peoples' benefit—a real durable peace, above all—putting an end to the progressive development of the present armaments.

"In the course of the last twenty years the longing for general appeasement has grown especially pronounced in the conscience of civilized nations, and the preservation of peace has been put forward as an object of international policy. It is in its name that great states have concluded among themselves powerful alliances. It is the better to guarantee peace that they have developed in proportions hitherto unprecedented their military forces and still continue to increase them, without shrinking from any sacrifice. Nevertheless, all these efforts have not yet been able to bring about the beneficent result desired—pacification. The financial charges following the upward march strike at the very root of public prosperity. The intellectual and physical strength of the nation's labor and capital are mostly diverted from their natural application, and are unproductively consumed. Hundreds of millions are devoted to acquiring terrible engines of destruction, which, though to-day regarded as the last work of science, are destined to-morrow to lose all their value in consequence of some fresh discovery in the same field. National culture, economic progress and the production of wealth are either paralyzed or checked in development. Moreover, in proportion as the armaments of each power increase they less and less fulfil the object the governments have set before themselves. The economic crisis, due in great part to the system of armaments *l'outrance*, and the continual danger which lies in this massing of war material are transferring the armed peace of our days into a crushing burden which the people have more and more difficulty in bearing. It appears evident that if this state of things were to be prolonged it would inevitably lead to the very cataclysm it is desired to avert, the horrors whereof make every thinking being shudder in advance. To put an end to these incessant armaments and to seek the means of warding off the calamities which are threatening the whole world—such is the supreme duty to-day imposed upon all states. Filled with this idea, his majesty has been pleased to command me to propose to all the governments whose representatives are accredited to the imperial court the assembling of a conference which shall occupy itself with this grave problem. This conference will be, by the help of God, the happy presage for the century which is about to open. It would converge into one powerful focus the efforts of all States sincerely seeking to make the great conception of universal peace triumph over the elements of trouble and discord, and it would at the same time cement their agreement by a corporate consecration of the principles of equity and right, whereon rest the security of States and the welfare of peoples."

Count Muravieff suggests that it is desirable to arrive at an understanding on the following points:—

First, to agree not to increase naval or military forces and the corresponding budgets for a fixed period.

Second, to endeavor to find means of reducing the forces and budgets in the future.

Third, to interdict the use of any new weapon or explosive of a power fuller than now made.

Fourth, to restrict the use of the most terrible of existing explosives, and to forbid the throwing of any explosives from balloons or similarly.

Fifth, to forbid the employment of sub-marine torpedoes and similar contrivances.

Sixth, to undertake not to construct vessels with rams.

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

Seventh, to apply the Geneva convention to naval warfare.

Eighth, to neutralize vessels saving those wrecked in naval battles.

Ninth, to revise the declaration concerning the laws and customs of war elaborated at Brussels in 1874.

Tenth, to accept the principle of mediation and arbitration in such cases as lend themselves thereto.

The circular re-affirms that nothing touching existing political relations shall be discussed. It suggests that the ultimate conference be held at the capital of a secondary power, probably Brussels or Copenhagen.

Items of Interest.

The Filipino commissioners to confer with the American commission regarding surrender has arrived at Manila, and the people at Manila are confident the end is near. It is reported that the insurgent army has decreased from about nine thousand to twenty-five hundred. Aguinaldo's acceptance of the only terms General Otis has to offer, unconditional surrender, with general amnesty and self-government, is expected by the members of the administration within the next few days, and they believe that, whatever Aguinaldo may do, the end of his rebellion has come, and that there will be no more serious fighting.

The following cablegram was addressed by the President to the emperor of Russia on the occasion of the opening of the disarmament conference:—

Washington, May 18.

To His Majesty Nicholas II., Emperor of All the Russias, St. Petersburg:—

On this day of good omen I send my heartfelt congratulations on the opening of the conference at The Hague, which had its origin in the enlightened and generous initiative of your majesty.

(Signed) WILLIAM MCKINLEY.

The Cuban situation is once more engaging the attention of the administration almost as much as the Philippines. The Cuban army is unwilling to disarm and disband, but the administration declares that the three million dollars must be promptly accepted or it will be withdrawn, and that the disarmament and disbandment of the Cuban troops must take place at an early date, whether they take the money or not.

President McKinlay sent the following cablegram May 18:—

To Otis, Manila:—Convey to General Lawton and the gallant men of his command my congratulations upon their successful operations during the past month, resulting in the capture this morning of San Isidro.

WILLIAM MCKINLEY.

Colonel Reide, who has been inspecting the forts around Havana, says that enormous sums were spent by the Spaniards which are now utterly worthless. Cabanas fortress alone cost fourteen million dollars, but two or three well directed shots would demolish it. The same can be said of all the other fortifications, including Morro castle.

The United States Supreme Court has decided that the French steamer, Olined Rodriguez, which was captured off San Juan, Porto Rico, last July, and has been held since by this government, shall be returned to its owners, on the ground that it was not proven that the steamer's officers intended to enter the blockaded port.

Mrs. May Wright Sewall, president of the International Council of Women, sent a cablegram to the Peace Conference reporting resolutions passed at meetings in fourteen states. There were present at these meetings 27,482 women, who represented, by actual count, a constituency of 85,561.

Germany proposes to grant three hundred thousand dollars for the expenses of an Antarctic expedition, to start in 1901. The expedition will go as far as possible in a wooden ship, and attempt to reach the South Pole by means of dogs, sleighs, and a captive balloon.

The national committee which has been appointed to take charge of the fund with which to purchase a house in Washington, D. C., for Admiral Dewey, has announced that subscriptions to the fund will be received from whatever quarter they may come.

President Diaz of Mexico and Lord Minto, Governor-General of Canada, and their cabinet, have accepted an invitation to meet President McKinley and his cabinet in Chicago, October 9, at the laying of the corner-stone of the Federal Building.

The eighth annual Harvard-Yale debate was a victory for Harvard, who had the affirmative of the following question: "Resolved, that the present method of electing United States senators is preferable to a method of election by popular vote."

President McKinley is disposed to recognize the gold Democrats in the distribution of the census patronage, and will bestow the first favor on General A. V. Rice of Lima, Ohio, who will be appointed purchasing agent for the census bureau.

Owing to the refusal of the Senate to vote the bill providing increased pay for postmen, recently passed by the Chamber of Deputies, the whole force of mail carriers in Paris, numbering three thousand men, went out on strike.

Governor Roosevelt of New York has signed the bill authorizing the construction of a tunnel under the East River. The tunnel will cost about six million dollars and it will require two and a half years to construct it.

The Duke of Abruzzi for Scandinavia has started on a polar expedition. The journey is expected to last about eighteen months and cost six hundred thousand dollars, a fourth of which has been furnished by the king.

General Joseph Wheeler will be the Memorial Day orator at Boston. This will be the first occasion on which a Confederate officer ever delivered a eulogy on the deeds of his former opponents under such circumstances.

The American and British delegates are endeavoring to get the question of international arbitration, which is now the eighth article on the programme at the Peace Conference, advanced to the first place.

The women of Michigan University held a mass meeting recently and passed resolutions endorsing the peace conference and petitioning it for the establishment of an international board of arbitration.

The Legion of Spanish War Veterans was recently organized in Boston. Seventeen applications for charters for branch camps have been received from all parts of the United States.

After six weeks' experience the Daily Mail of London has been convinced that the British public does not take kindly to seven-day papers, and has discontinued its Sunday edition.

The seating arrangements for the Peace Conference gives the United States the first bench on the left, and the president of the German delegation the front position on the right.

Archbishop Ireland declares that all civilized nations favor the underlying principles of The Hague conference, and that the piling up of huge armies is the bane of Europe.

Hon. Edward Atkinson will continue the publication of his famous pamphlets, for such a period as may be judicious, in a weekly publication entitled, "The Anti-Imperialist."

New York City has appropriated one hundred and fifty thousand dollars to pay expenses of the proposed celebration on the arrival of Admiral Dewey.

Rev. Dr. Charles A. Briggs, who was found guilty of heresy by the Presbyterian assembly, has been ordained a priest of the Episcopal Church.

An immense plant for the construction of steel freight cars is to be established in Chicago by a corporation having a capital of ten million dollars.

General Lawton's advance guard has taken San Isidro, the second insurgent capital, and driven the enemy northward into the mountains.

The United States transport Kilpatrick, has arrived from Havana bringing five hundred cavalry troops whose term of enlistment has expired.

The women of Baltimore will present Admiral Schley with an album and a beautiful silver service of six pieces.

Major Eugene F. Ladd has been appointed treasurer of Cuba, and James A. Buchanan treasurer of Porto Rico.

General Miles has received an invitation to be present at the coming military manœuvres at Windsor, Eng.

A trial of compressed air as a motive power for street cars has proved satisfactory in Chicago.

The excess of merchandise exports over imports for the fiscal year 1898 was $615,432,676.

The Postal Telegraph Company will operate both telegraph and telephone lines in Cuba.

Chicago now has a population of nearly two millions.

Miscellany.

Resolve in Favor of Roger Williams.

The following petition and resolve was recently presented to the Massachusetts Legislature:—

"Whereas, The General Court of Massachusetts Bay, at their session in Cambridge (New Town), passed a sentence of banishment against Roger Williams, October 9, 1635.

"Whereas, Hon. John Winthrop, governor of Massachusetts Bay, requested that Roger Williams be recalled, his sentence revoked, and be duly honored, which was refused,

"Whereas, Roger Williams's doctrine of religious liberty, for advocating which he was banished, has become the fundamental sentiment of Christendom,

"Be it resolved, We, the citizens of Cambridge, Mass., petition the honorable Legislature at your earliest convenience to pass an act revoking said sentence of banishment, and your petitioners will ever pray, God save the Commonwealth of Massachusetts."

The resolve provides that the sentence of expulsion against Roger Williams in 1635 be revoked.

Boston Evening Transcript.

Secured the Hall.

After much debate in the House, E. A. Kimball of Chicago was given the use of the hall the night of May 4 to deliver a Christian Science lecture. Jones of Howell and Delzell opposed the adoption of the resolution on the ground that they objected to "letting such fakes use the hall." Tubbs said the House had actually adjourned one day and allowed two women to have the hall to speak on women's rights, and that he was in favor of allowing Kimball to use the hall. Tribble stated that to his personal knowledge some of the leading citizens of St. Louis and one man of this state who is at the head of the legal profession were Christian Scientists, and he favored the adoption of the resolution.

Johnston of Cooper moved to table the resolution, but the House refused by a vote of twenty-five to forty-three. Myers then offered a substitute providing that "the hall shall be open at all times to corn doctors, hypnotists, and especially, the medical profession." The Speaker declared the substitute out of order, after which the original resolution was adopted by a vote of forty-one to twenty-six.

Post Dispatch, St. Louis, Mo.

Creeds are being Tested.

Rev. J. Walter Morris preached his closing sermon in the conference year at the Franklin Methodist Episcopal church. His theme was "Creeds and Christianity; or, Why I am not a Liberal."

Rev. Mr. Morris said that this is an age in which creeds are being sifted and the Bible itself is being put to the test. He welcomed such investigation, and said if the Bible could not stand the test, then let it go. If the creeds are not good, let them dissolve. If we have lost the truth and must get it back through natural science, Christian Science, or any other science, for God's sake let us have it. Let us not be afraid of the higher critics or the advance of science. Rev. Mr. Morris announced his firm belief that the Bible will stand and Christianity triumph in the end.

Brockton Daily Enterprise.

Surgeon's Awful Error.

Montreal, April 23.—Seven years ago Thomas Stewart, then ten years old, lost the sight of one eye, the blade of a penknife having been accidentally run into it. Dr. Alexander Proudfoot attended him. Recently Dr. Proudfoot advised the removal of the useless eye, as the only means of preserving the other intact. This was agreed to, and the task was entrusted to Dr. Proudfoot, who is assistant oculist and aurist to the general hospital.

The operation took place at the family residence, and at its conclusion it was found that a terrible mistake had been made. The healthy eye had been removed. On recovery from the effects of the anæsthetic the patient found himself blind.—*Boston Post.*

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

A Great Uproar.

GOTHAM is in a great uproar. It seems to be agitated from center to circumference. Official New York, at least, as represented by the Tammany Board of Health and some of its officers, has put on its war-paint and taken the war-path. It has given a startling war-whoop, and with tomahawk and scalping-knife in hand is on the hunt for all the "irregular" healers of disease for the avowed purpose of annihilating them. It proposes to raid the so-called fashionable as well as the so-called unfashionable precincts of greater New York. It will spare none.

The Board of Health, through its president, has instructed its inspectors to arrest and prosecute indiscriminately all who attempt to heal sickness or relieve pain of any kind or nature, without the use of drugs, narcotics, or poisons of some sort or description, duly and regularly administered by the members of the medical profession thereunto appointed. It is naively announced that the medical profession will assist.

Nevertheless, even thus early in the campaign, unlooked-for obstacles have presented themselves, and a formidable public sentiment in opposition thereto is developing with great rapidity. Divers and sundry serious objections, some of which are believed to be unsurmountable by many others than Christian Scientists, are being raised. It looks as if the Tammany army of extermination, if it carries out its declaration of war, may run across many thousands of the denizens of New York who have serious objection to being exterminated.

These remarks, however, do not apply to Christian Scientists. They are not at all alarmed. They are aware, however zealous may be the Tammany forces, the Christian Scientists do not belong in the hostile camp and cannot be brought into conflict with the raiders. They are in no sense violating any law of the State of New York, or ordinance or regulation of the City of New York. They can conceive of no statute or ordinance that can prevent them from thinking or praying, and, if by thinking and praying they are able to relieve the suffering of their fellows and heal disease which the army of regulars are unable to heal, they know it is their God-given, inherent, and constitutional right to do so. They are aware that the courts which are competent to pass upon this question, wherever it has been fairly raised, have decided they are not amenable to the laws regulating or governing the practice of medicine. Therefore, they feel themselves protected by divine and human law alike, and they have no part to perform in the warfare except to keep aloof from the fray, and go quietly and conscientiously on with their healing work, and their ministrations of love, in destroying sin as well as sickness.

We observe by the New York papers that much difference of opinion is arising upon the question of the right of the officials to interfere with the work of the Christian Scientists, both on the ground that they are in no sense practitioners of medicine and therefore violating no laws relating to the practice of medicine, and that their system of healing is a religious one, and they are therefore protected by the provisions of the Constitution of the United States and of the State of New York, guaranteeing to them civil and religious rights and the privilege of worshiping God and doing God's work according to the dictates of their own conscience.

The better legal opinion seems to be that all that could be done, under any circumstances, would be to prosecute in individual cases where gross neglect could be shown. Thus the New York authorities are obliged to pursue the same course against Christian Scientists that they would pursue against medical practitioners or any other class of healers or curers of sickness; and upon this ground Christian Scientists are quite willing to stand. They ask no especial protection for themselves or their practice, and their only claim is that they should not be discriminated against in behalf of any other system of healing.

It would seem as though the decisions of our American Courts, especially the Supreme Court of Rhode Island in the case of State *vs.* Mylod, and the decision of an Ohio Court, in the case of the State *vs.* Evans, as well as the decision of the English Court in the celebrated case of Harold Frederic, ought to be sufficient authority for the New York Board of Health, upon the question of the amenability of Christian Scientists to prosecution.

The question agitated in New York has set the Boston people to thinking along this line, and the Boston newspapers are raising the question as to what is the status of Christian Scientists under existing legislation in this state. Several of the Boston papers have published articles upon this subject, among them, the Boston Post, Traveler, and Herald. These papers have published fair, reasonable, and impartial views upon the question, especially the Herald. The latter contains the most extended article upon the subject of any. We print a long extract in this issue of the *Sentinel* from the Herald. It is interesting, also, to note the views of some of the officials of both the legal and medical professions, as given in the Herald, with reference to the status of Christian Scientists in the state. The conclusion of the Herald, in view of all the opinions it has been able to gather, is summed up as follows:—

The situation, in a nutshell, seems to be this: That the Legislature seems to be inclined to view with respect the claim or the belief of Christian Scientists that the science of healing disease is a part of the practice of their religion: that, in order to work this healing, they need not be registered M. D.'s; and, therefore, are not subject to the examination as to their qualifications which are required by regular physicians, and that only in a case of extreme neglect would the legal authorities venture to proceed against the Christian Science healer.

In such a case as the last named it would probably have to be shown that medical treatment was refused to a minor, or that the services of a registered physician were denied a patient who had requested such services and a Christian Science practitioner substituted, before the district attorney would venture to proceed legally against either the practitioner or those in charge of the patient.

Under the present law the legal officers of the commonwealth dare not attack Christian Scientists. Some physicians have urged that there is in this law authority which would justify criminal action, but the various district attorneys have been unable to see the force of the argument.

Digitized by Google

The State Board of Registration in medicine, in its report to the Legislature in 1898, offered an amendment intended to cover this point. The bill was aimed principally at Christian Scientists.

The committee on public health gave three hearings on this bill, and then gave the petitioners leave to withdraw. Among those who opposed the limitations set up by the bill were the Rev. B. Fay Mills, William Lloyd Garrison, and Prof. William James of Harvard. Supporting these gentlemen were several Christian Scientists, as well as the representatives of other religious societies. The protestants were victorious, and under the general construction of the law there is no legal barrier to the Christian Scientist practising as a healer.

Upon the question of the attitude of the officials, the Herald proceeds:—

Although the Mother Church of the Christian Scientists is located in what is known to the medical examiners of Suffolk County as the southern district, and thousands of Christian Scientists are grouped about in the near vicinity of the church on Falmouth Street, there has never been a case of death which the medical examiner has been called upon to investigate.

The authorities have, however, given the matter some attention, but until the time comes when a case shall be reported nothing can be done. Even then the individual case will be treated on its merits, and those who have looked into the matter say the probabilities are that the case will be very much like one that would be brought against a regular practitioner.

In the absence of District-Attorney Stevens, one of his assistants, Mr. McLaughlin, was seen by a Herald reporter in regard to the status of Christian Scientists in Boston.

"Personally, I have never had one of these cases," said Mr. McLaughlin, "and, so far as I know, they have never been reported officially to the office. By that I mean a case in which was involved the legal standing of Christian Scientists. The case of Mrs. Rivers of Chelsea did come to the attention of Mr. Stevens in some way, but I believe he found that there was no evidence upon which action could be taken."

The question, "What would you do in the case of the death of a person being treated by a Christian Science practitioner?" was propounded to a number of public officials by Herald reporters, and a number of opinions from the medico-legal standpoint adduced.

Dr. Francis A. Harris, medical examiner for the northern Suffolk district, said, "There isn't any hard and fast rule. There is no law, so far as I know, that prevents the practice of Christian Science healing."

Medical Examiner William D. Swan of Cambridge said, "I think, speaking off-hand, as the subject comes to me, that, if a case came to my attention where a person had died under the treatment of a Christian Scientist, it should be investigated and considered as an individual case. The case should be judged to determine if there had been any criminal neglect or criminal malpractice. The fact that a Christian Scientist had treated the person would not necessarily mean that there had been anything of a criminal nature done, any more than if any other person had rendered treatment."

Medical Examiner E. S. Jack of Melrose, in charge of the Third Middlesex district, said, "Everybody is a free agent. They can hire for medical treatment whomsoever they please, regardless of whether they are Christian Scientists, allopaths, or homœopaths. If the state recognizes Christian Scientists, as it does, I do not see what we can do. I doubt that, if we should take such cases into court, or the hemorrhage cases recently quoted in the newspapers of Chelsea and Medford, there could be a conviction."

He then quoted the case of the former Herald's correspondent in London, Harold Frederic, who was treated by a Christian Scientist. The woman was arrested and afterwards discharged from custody. He said that there had been similar cases in this state.

The above is a fair analysis of the situation, and certainly Christian Scientists have no reason to find fault therewith. The most important thing for them to consider, is not the question as to what may result from the legal standpoint in case of the loss of a patient, but to more and more earnestly strive to attain to such a spiritual altitude and understanding of divine Truth, as to prevent the possibility of such an event. While it is not claimed by Christian Scientists or by its Discoverer and Founder, the Rev. Mary Baker Eddy, that death in all cases can be now overcome, it is held that death as the result of what may be termed disease from the ordinary standpoint, should be prevented, because disease is an abnormal condition, and death resulting from such condition is an abnormal result. Therefore it is maintained, that if the spiritual import of Scripture, as unfolded by the teaching of the Christian Science text-book, "Science and Health with Key to the Scriptures," were sufficiently understood to be applied as it may be applied, not only could all kinds of sickness be healed, but death from sickness prevented. This is a present claim. They further maintain, when the time comes that the world will believe as firmly in the unreality or impossibility of death as it now believes in its inevitability and necessity, death will be altogether overcome, and mortals will emerge from discordant and unhealthful conditions to concordant and healthful conditions,—in other words, from the material to the spiritual,—as naturally as plants and flowers grow and give forth their beauty and fragrance.

As it is, Christian Scientists point with absolute certainty to their healing work, which by comparison with the best achievements of *materia medica*, is nothing less than marvelous; for they have healed thousands and thousands of cases which by the admission of the medical profession are beyond its reach or power. Therefore, Christian Scientists stand firmly and fearlessly in the face of all such attempts at prosecution and interference as those now talked of in New York and elsewhere. In no arrogant or boastful spirit do they this, but because of their profound conviction and knowledge that they are doing the work of divine Providence, and will be accordingly sustained and protected therein.

The Mail and Express.

In view of the agitated state of the newspaper waters of New York, it is pleasant to note that in the Mail and Express of that city, issued Saturday, May 13, 1899, there appears a concise, truthful, and dignified account of Christian Science and the author of the Christian Science text-book, and the Discoverer and Founder of the Christian Science system, the Rev. Mary Baker Eddy, together with a creditable and well-executed portrait of her, of her former home in Lynn,—where she wrote the text-book,—and of her pleasant, unpretentious, but beautiful and cosey, home in the suburbs of Concord, N. H., as well as a finely executed cut of the Mother Church in Boston.

The article is largely biographical of Mrs. Eddy and historical of her work and achievements in establishing the Cause. We take the liberty of briefly quoting from the article.

"Possessing from childhood a highly spiritual nature, and with unusual mental endowments, she attained prominence as an authoress of religious prose and poetry at a very early age.

"Her desire to improve the condition of suffering humanity led her to investigate allopathy, homœopathy, and mind-healing on a material basis, none of which satisfied her

Digitized by Google

aspiration for a system of cure for disease. In 1866 she discovered the Principle which she afterward named 'Christian Science.' . . . Mrs. 'Eddy is now actively directing the Christian Science movement from her home in Concord, N. H., appearing occasionally at the Mother Church, and has recently taught a class of seventy in Christian Science Hall in Concord, N. H. In addition to her vast dictated correspondence, many of the letters to her large corps of field workers are in her own handwriting."

Christian Science Views.

THE following is an extract from an article which appeared in a recent issue of the Boston Herald:—

The following statement regarding Christian Science and its attitude toward the action of the New York Board of Health is the result of interviews by Herald reporters with Christian Scientists. Their names are not given because they carefully avoid controversy.

From the point of view of the Christian Scientist the science of healing is a part of his religion; therefore, any attack on or abridgment of this science of healing becomes obnoxious in a double sense: first, as an abridgment of his constitutional right to worship as he pleases, and, second, because it attacks that dearest and tenderest thing to man—his religious belief.

He regards sickness as sin, or the consequences of sin, and he believes in obtaining deliverance in the same way that he secures deliverance from sin—by prayer.

If all this be a delusion, then it is a delusion which is constantly obtaining new believers and growing with a rapidity which cannot fail to impress even the most casual observer. Moreover, the believers in this religion are not those who would be selected as the victims of a charlatan. They constitute, as a class, not only wealth, but intelligence. It is estimated that in this city alone there are fifteen thousand members, while the number of those who are investigating the truths indicated in their text-book would probably number as many more.

✙

In 1894, the Mother Church, a magnificent structure located at the corner of Norway and Falmouth Streets, was erected at a cost of about $200,000. Since that time three branch churches have been started, one in Cambridge, one in Roxbury, and one in Chelsea. The attendance at these three churches has been drawn in the main from the Mother Church, yet so rapid is the growth of the Mother Church that it is crowded at every service. It holds about fifteen hundred persons, and there are few churches in Boston that can show such a uniformly large attendance.

One point in this connection is worthy of remark. The Christian Scientists do not build their churches until they have raised the money to pay for them. They give no mortgages, and they depend for their building funds upon the free-will offerings of themselves and such of their friends as choose to contribute. Church fairs and all such devices for raising money for religious purposes they eschew.

The Mother Church in this city is the "hub" about which the other three hundred and fifty societies of this religion revolve throughout the world. Boston is generally considered the birthplace of this religion, but it would be more exact to give Lynn that credit. It was in Lynn in 1866 that Mrs. Eddy conceived the idea which has attained such remarkable fruition.

She had been treated by many physicians and pronounced a chronic sufferer. She prayed and read her Bible. She formed a new conception of what the Bible really meant, and, applying that conception to herself, she proceeded to disprove the opinion of the doctors by getting well. The results of her prayer and meditation she embodied in a book entitled, "Science and Health with Key to the Scriptures," which she published. It is estimated that nearly two hundred thousand copies of this book have been distributed.

This is the Christian Science text-book. It is read in the churches every Sunday in connection with the Bible. Those who look casually into this book assert that they cannot understand a page of it—that it is a mass of unmeaning words. Those who study it and believe in it declare that it is as clear as Revelation.

Mrs. Eddy now resides at Pleasant View, Concord, N. H. From her home she conducts a correspondence with friends and pupils in all parts of the world. Various reports have been circulated about her during the past few years, the one most prominently repeated being to the effect that, although she claimed to be well in health, and able to keep so because of her application of the principles of Christian Science, she was really almost totally paralyzed. These stories find their completest denials in two facts—first, her daily appearance driving through the streets of Concord, and, second, the prodigious amount of work daily done by her.

Her religion proclaims no revolutionary doctrines, unless the part of it relating to healing the sick may be so considered. She proclaims the divinity of God and the inspiration of the Bible. To the latter she has applied a special interpretation. So far as the principle of healing is concerned, she says that, far from having discovered something new, she is simply applying a principle which dates back to Christ himself, and even farther.

Christian Scientists use various synomyms in place of God. One of these, for example, is Good. Nothing evil can come from God, they argue. Sin is not derived from God, who is Good. It is a product of ourselves. So with sickness. Sickness is another form of sin, and can be thrown off in the same way as sin, that is, by a spiritual uplifting. It is not in any way associated with the mind cures, hypnotism, mesmerism, or anything of the sort.

They claim that they are following the example of Christ, and obeying the precepts of the Bible. They point to the various cures effected by Christ while he was upon earth, and to those worked by his apostles after his ascension. They claim that Christ's injunction to his apostles, "Go into all the world, preach the gospel, and heal the sick," is something more than a mere form of words. They accept the injunction literally.

There is no prescribed form for healing, according to Christian Science rules. There is no formal prayer required. According to the best authorities on Christian Science, no spoken words need be used. But there must be a spiritual uplifting, however secured. It is better if the patient is a believer in Christian Science, or willing to accept it, but such a condition is not necessary. There are recorded cures when the patient was even opposed to the practice of Christian Science.

The character of some of the cures reported strikes the average investigator as impossible. The unbeliever scoffs at the suggestion of a severe surgical operation or the treatment of a severe case of contagious disease by spiritual means, but the Christian Scientist piles testimony upon testimony to confirm this point. Moreover, the character of this testimony is such as to add to the weight of confirmation. Unequivocal testimony in this respect could be obtained from some of the most intelligent and respectable families is this city and vicinity.

✙

According to the theories of Christian Science, there should be no such thing as death. Man should live forever.

Digitized by Google

And so he does, you are told, when you touch upon this point. He lives forever; perhaps not in the same form as that which he occupied on this earth, but in some form. To them there is no such thing as death. It is simply a "passing over." There is to them a future life, but its nature is purely speculative. The doctrines of hell fire and infant damnation are scouted by them. They claim that both of these ideas are preposterous in connection with the thought of a loving God.

The doctrine of Christian Science advocates a higher spiritual state of living. It admonishes the observance of the golden rule. The criticised point in its teachings is that which relates to healing the sick. If there is one thing more than another to ruffle the temper of a believer in Christian Science, it is to have some one ask: "What explanation do you give when a person dies under Christian Science treatment?"

The chances are that he will reply: "What explanation does the regular physician give when a person dies under his treatment? And then he will probably ask why the thousands of failures on the part of physicians are not chronicled with the same eagerness as the few cases in which the Christian Science treatment is not successful. They make the assertion, and claim that it is susceptible of proof, that fewer people die under Christian Science treatment, in proportion to the number of patients, than in any other system of healing.

So far as the action of the New York Board of Health is concerned, they declare that they feel no uneasiness. They believe that that body is exceeding its authority. A year ago the New York Legislature refused to pass a law which would restrict Christian Scientists from healing. The sentiment was overwhelmingly against it.

With reference to the Muller woman, the Scientists declare that she was not practising Christian Science, and that it is not honest, even in controversy, to throw the stigma of every mountebank or charlatan upon them. Believing in the justice of their cause, they declare that they have no ultimate fear, and that truth is bound to assert itself in place of error.

In two states where the fight has been continued to the supreme court, the final verdict has been in favor of Christian Scientists. The statute in these states was somewhat similar to that now in effect in this state. In Rhode Island it was held that Christian Science healing was not the practice of medicine, and in Ohio it was declared by the supreme court that Christian Science was a religion, and as such had a constitutional right which was above the power of legislation.

The Politics of Religion.

Modern Idolatry vs. Christian Science.

In every so-called civilized country, in all ages, the politics of the nation has been drawn, to a greater or less extent, from the religion of the people. In the degree that a religion has reflected divine Truth, in that proportion has its moral force dominated the judiciary and civil government of the people.

Man-made theories and opinions about God which lack the force to demonstrate their truth and practical application to the every-day needs of men and nations, constitute the dogmas on which are founded the idolatry of religious and political creeds, with their accompanying superstitions and slavery.

It makes no difference under what form of government it appears, or under what disguise it may seek to conceal its character, the fact that the effects of legalized oppression are manifest on every hand is the evidence that both our religious creeds and civil government are out of tune and sympathy with the "universal law of harmony."

The word "conservatism" is the dignified mask that is often used to cover up ignorance and bigotry, which are always combined with religious and political idolatry.

Every rediscovered Truth—for Truth being coeval with eternity cannot be discovered—meets with persecution, opposition, and, if it were possible, annihilation at the hands of those "conservatives" who have unconsciously become the selfish beneficiaries of the existing order of things.

Conservatism of the kind that enables one to exercise wisdom is both commendable and exalting; but that form of conservatism which always entrenches itself behind the breastworks of prejudice, and stands like a mighty Gibraltar on the seeming rock of its own ignorance, is ever found to be the especial guardian of the various fortresses of religious and political slavery.

In every age of the world the rulers of all man-made governments have both directly and indirectly enslaved the race of Adam. Prior to the dawn of Christianity this was done by kingly sanction and in the name of many gods. Since the time of Constantine, however, the princely rulers of the earth have, in the name of one God, Jesus Christ, and hundreds of religious creeds, made subject to themselves and their greed, the great masses of humanity.

Our wisest statesmen and most profound thinkers attribute the era of dark ages to the influence of the Roman Emperor, Constantine, who was believed to have been converted from Paganism to the primitive teachings of the early Christian Church. Subsequent history has proven that politics alone caused Constantine to become Christian in name. Wise in worldly wisdom, the almost superhuman intellect of this giant politician foresaw the downfall of every worldly kingdom should the doctrines of the Nazarene become the practice of the human race. Too well he knew that whosoever practised what the Master taught rose far above all human law, and became a law unto himself.

Thus it was that the human instinct of self-preservation and personal idolatry actuated Constantine, and made very clear his motive in becoming Christian.

Like a Divine essence the life-giving and health-inspiring teachings of Jesus had permeated the remotest sections of the Roman Empire until its Truth threatened the very existence of the military despotisms of the Cæsars.

Jesus was the greatest statesman and political economist the world has ever known.

The Roman Emperor was philosopher enough to perceive this fact, therefore he knew that the success of Christianity meant the overthrow of every worldly government, wherein one creature exercised arbitrary power over the liberties of another.

Should Jesus' legal code, as outlined in the Sermon on the Mount, become the rule of action of the Roman people and their subjects, it would establish the Kingdom of Heaven on earth, and thereby leave no room for the kingdoms of men.

Combining a religious and political system of ecclesiastics that would deify the personality of Jesus, and thereby teach the ignorant and helpless masses the lesson of personal adoration, would also result in the personal worship by the masses of the princes of the earth, who assumed the cloak of Christianity to perpetuate their selfish rule.

The success of this plan is too well known to require any comment here. Suffice it to say that the fruits of this form of government have resulted in the denial to the people of their God-given right and power to partake of that light and liberty which is the heritage of every man and woman. Hence the "Politics of Religion" has established an unnamable mass of creeds and isms in both our civil laws and religious practices. The truth of this is manifested in the conflicting theories that govern our economic activities and religious dogmas.

All religious creeds and politics in Christendom have

Digitized by Google

been more or less guided and controlled by the same spirit of self-aggrandizement and aggression that caused the Emperor Constantine to use the cloak of Christ to better serve the human law of evil.

This same spirit is abroad in the land to-day, only in a more subtle form. That element of priestcraft and *materia medica* which still adheres to the worship of its ancient gods and worn-out customs, are always arrayed in solid phalanx against the advance of any Truth that conflicts with their opinions. Recognizing the fact that the practice of Christian Science, as taught by Mrs. Mary Baker Eddy, is demonstrating that the statesmanship, philosophy, and therapeutics of Jesus are not only true, but practicable and applicable to the needs of the world to-day; they, like the Pharisees of old, are loudly crying, "Crucify the Truth."

When the Apostle Paul preached the same economic and religious principles that Mrs. Eddy preaches, the same cry arose from the selfish beneficiaries of the then existing order. They excited the ignorance of the multitude to riot by playing upon the religious prejudices of the people who had for generations been taught the idolatrous worship of the mythological goddess Diana.

In this day the religious and political prejudices of the people are being played upon in like manner.

You let any honest statesman voice in the halls of Congress any great Truth, and the following morning you will find in the columns of the American subsidized press either a column or more of vituperation and abuse of that man's personality, or a contorted and misrepresented statement of both the subject and the man.

As a student of current events, and a journalistic critic of public men and measures, the writer, whose business it is to investigate and analyze, both the religious and political creeds of many lands, has after much labor, and without prejudice come to the conclusion that the abuse of Christian Science and its Founder, Mrs. Eddy, springs from ignorance of what it does and teaches.

The writer is not a member of any Christian Science Church or Society; but believing the hour has come which will emancipate the human race by the honest voicing of the Truth, we feel that the world owes a great debt of gratitude to the noble woman who has been such a benefactress to her race, and has spoken as no woman ever did before her.

A majority of our statesmen and journalists know that the statements made in this article are correct, both as to the philosophy and evidence of cause and effect, as seen in our religious and political activities.

The journalist or leader of any ism, who at this late day assumes the responsibility of disproving the truth or efficacy of the teachings of Christian Science, or confounds it with faith cure, hypnotism, or the many other isms that seek financial profit by assuming its name, would only exhibit the weak effort of an ignoramus to disprove the fundamental laws of universal wisdom.

For centuries religious mysticism, combined with economic and political fallacies, have played the farce of Dr. Jekyl and Mr. Hyde to the audience of nations.

For centuries have the toiling millions been bound by chains of steel to these false deities.

For centuries has the smothered cry for spiritual bread gone forth, and in return the people have received the stones of human theories.

For centuries the gentle emissaries of love and unity have gone forth like some inquiring dove to find the olive branch of brotherhood, and for centuries they have returned again weary and leafless.

Never more will our appeals go forth unheeded. The hour has struck that makes all human codes powerless to enslave. The *fear* to speak God's Truth has become the vanishing cloud of a once existing danger.

The Assayer, Philadelphia, Pa.

Christian Science is Practical.

THE evasive answers, that healing the sick as practised by Jesus and his disciples was for their age alone, does not satisfy the honest Bible student. With diseases becoming more complicated as medical colleges increase, is there not as great need to-day, as in the first year of the Christian era, that these works be repeated? Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father" (John, 14 : 12). This is the record left of Jesus' disciples, "And they went forth, and preached everywhere, the Lord working with them, and confirming the word with signs following" (Mark, 16 : 20).

In a monthly periodical called Progress, issued by The University Association, in the interests of University and World's Congress Extension, these questions were asked: "How did Jesus heal sickness and sin? How can we? What evidence of this doctrine can be given?" For ages both sage and philosopher have pondered these questions, but it remained for Rev. Mary Baker G. Eddy to work out the solution and show to the world that Christianity has a principle which is fully set forth in her textbook, "Science and Heath with Key to the Scriptures." Thus primitive Christianity is re-established, and the understanding gained as to how Jesus healed sickness and sin, and how we can, and how we must do likewise if we would be obedient to his command, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick" (Matthew, 10 : 7, 8). He did not use nor command his disciples to use material remedies, but through his word the multitudes were healed.

An inquirer asks, "Has there been any healing done in Dayton? Are there any living witnesses here?" In Biblical language we would say, "Come and see." At the Wednesday evening meetings of this church, to which the public are cordially invited, many instances of healing have been given.

Two members testified to being healed of nervous prostration that medical skill could not reach, and at a time when death stared them in the face.

A gentleman in giving his experience, stated that he spent seventeen years searching for health, traveling from one part of the country to another, consulting the best physicians to be found, but could not get relief. As a last resort, he sought Christian Science, and was healed of paralysis, paroxysms, and catarrh.

Another man told of the condition he was in prior to seeking Christian Science, and what this Truth had done for him. For ten years he sought help from physicians in Boston, Cincinnati, and Dayton. They informed him that he had Bright's disease, liver trouble, and lung trouble (the lungs were partly gone, according to their diagnosis), and all hope of being well again had fled. "Man's extremity" was found to be "God's opportunity," for through Christian Science he was healed.

A lady spoke of the practical application of Christian Science in the home. When this Truth was presented to her she was in poor health and poverty-stricken, but through Christian Science those bonds were broken, bringing health instead of sickness, plenty instead of poverty. She also spoke of the healing of her little girl of defective eyesight.

Another mother told her experience in raising a family of children. Through Christian Science diseases were overcome in one third of the time required by *materia medica,* and it had never failed to bring relief when fully trusted.

Many other testimonials were given. The healing of severe trouble of the eyes that specialists could not reach, resulted in converting a household from infidelity to Christianity.

A gentleman stated that he never knew what it was to

Digitized by Google

be well until he heard of Christian Science, having been in poor health since a child.

A lady spoke of being healed of a complication of diseases of twenty-five years' standing. Another testified of being healed of rheumatism, with which she had been troubled for twelve years, a portion of this time being unable to walk.

A father told of the healing of his son of hip disease, ossified joints, partial deafness, and the morphine habit.

There were some instances mentioned of the desire for tobacco and intoxicating drinks overcome. Other instances could be cited. Fuller details of healing will be given to any inquirer who may call at the meetings.

Most people needing help seek Christian Science as a last resort, after the doctor could give no encouragement. Fully seventy-five per cent of the cases brought to Christian Science for treatment are healed, and when a better understanding of God's law is attained greater will be the result.

No one can be treated in Christian Science for a physical ailment, and not be made better morally and spiritually. While Christian Scientists are grateful for the physical healing, they value the moral and spiritual healing more highly.—*The Dayton Evening Herald.*

Mr. De Camp's Views of Christian Science.

THEOLOGIANS object to the theology of Christian Science, physicians to its medicine; whereas, it offers an unfailing medicine for the healing of sin, and a scientific theology which heals every ill to which flesh is heir. Its theology and medicine have one principle.

What do we mean by the healing of sin? Even that change of thought by which selfishness, sensuality, dishonesty, impurity, self-righteousness, etc., are rooted out of human character—not without the suffering which inevitably follows the awakening to a knowledge of one's self, but lasting only while the sin lasts—to be replaced by those positive elements of character, for which all Christians are striving, such as unselfishness, spiritual-mindedness (which St. Paul says is life, contrasting this condition of thought with that carnal-mindedness which is death), practical honesty in all one's dealings, purity of thought and life, and that true meekness which is the crown of manhood.

And what is the effect of the application of this system to the cure of disease? It is without doubt the most safe and potent method of healing extant, truly a scientific method. Thousands upon thousands of intelligent people have applied and are applying this system as their sole remedy in disease of every nature, whether organic or functional, with results incomparably superior to those obtained by the use of any other remedial agent. This statement can be easily verified by any unbiased inquirer. Living witnesses to its beneficent ministrations can be found in nearly every city, village, and hamlet in this country, and in many places in the Old World.

Christian Science has no secrets from the public. It has no hierarchy, no professional class. All its disciples or students, because of the impulsion of Truth which necessarily communicates itself, undertake the ministry of this gospel of healing to the sick and sinning.

Its Science, theology, and medicine are one, governed by one infinite Principle—God.

This great and wonderful name—Principle—does not change God into a cold abstraction. On the contrary, as this teaching becomes better understood it will be seen to be the very largest and clearest word in the language by which we may know more and more of the great Heart of Love, whom—with Jesus—we call Father.

Our text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, Discoverer and Founder of Christian Science, speaks of Jesus, the Christ, as "the most scientific man who ever trod the globe." This teaching has brought to light the unerring Science of his theology. It may be summarized thus: "To know God is life." He proved this to be true for himself and for others in all the phenomena of human experience, and taught others to prove it; in fact, he clearly taught that all who understood Him would forever afterwards be able to prove it.

Life, then, which includes health and happiness and sinlessness, consists in and may be demonstrated by knowing something; that is, by mental action. This being true, it follows that death, which includes disease and misery and sin, consists in and is the negative phenomenon, so to speak, of not knowing something.

Surely, then, if this knowledge brings to human experience those things most prized, and the ignorance or want of knowledge brings those most dreaded, all the earth will rejoice that the light has at length dawned on human consciousness of which Isaiah prophesied when he said, "The earth shall be full of the knowledge of the Lord as the waters cover the sea."

It is readily conceded that sin and sorrow may be destroyed by mental action, and why should it be thought a thing incredible that right mental action should destroy sickness? This mental action consists in constantly seeking to be governed by the Mind which was in Christ Jesus. He knew God aright and proved that this knowledge destroyed sickness most effectually, as well as sin. In dealing with disease, Christian Scientists look wholly for mental causation. They find it to be phenomena of the human mind, the result of ignorance, and destroy it in proportion to their Scientific understanding of the infinite, divine Mind.

This Science is not yet fully demonstrated, because not yet fully understood.

But, says one, will right thinking heal a cancer? Yes. Will it destroy a tumor? Yes. Can it be possible that it will restore the lost substance of the lungs? It has done so repeatedly. In fact, the adherents of Christian Science are largely made up of those who have been healed under its ministrations from maladies pronounced incurable by the regular physicians.

We earnestly invite an investigation of these statements by all fair-minded people. ARTHUR P. DE CAMP.

The Republic, St. Louis, Mo.

Not Mrs. Judge Ewing.

THE report that Mrs. Judge Ewing of Chicago is dead is a mistake. The lady who died was the sister-in-law of Judge Ewing and wife of Adlai T. Ewing a practising attorney of Chicago.

Mrs. Judge Ewing is the Second Reader of First Church of Christ, Scientist, of Chicago, and an active Christian Scientist. Mrs. Ewing is, and for years past has been in good health and able to perform all her duties.

The Lectures.

At Minneapolis, Minn.

The doctrines of Christian Science were expounded to a large audience at the Lyceum Theatre, Friday evening, May 12, by Mrs. Annie M. Knott of Detroit, Mich., who is one of the pupils of Mrs. Eddy and speaks with authority. The gathering was one of high intelligence, and many well-known attorneys, teachers, and others of scholarly attainments were noted among the audience, which gave the speaker the closest attention. The preponderance of feminine listeners was noticeable.

W. G. Hollis, chairman of the Lecture Committee of the First Church of Christ, Scientist, of this city, presented the

Digitized by Google

speaker, in the absence of Dr. Marion D. Shutter, who had been invited to make the introduction. The latter was compelled to be out of the city on account of business, but expressed his regrets in the form of a letter, in which he took occasion to bespeak a tolerant attitude for the Science. The letter, which was read to the audience and received with generous applause, is as follows:—

W. G. Hollis, Chairman Lecture Committee, First Church of Christ, Scientist, Minneapolis, Minn.

My Dear Mr. Hollis:—I should accept with great pleasure your kind invitation to introduce Mrs. Knott at the Lyceum on next Friday evening, but for the fact that I shall be in Chicago at that time. I feel gratified to know that you had sufficient confidence in my breadth and charity to extend such an invitation. Having once suffered on account of my opinions, I am disposed to be charitable to others who may be passing through a similar experience. It is only fair to say—what you already well understand—that I am not a Christian Scientist; and that I should much rather see most of the old sects pass out of existence, as separate bodies, than a new one come into existence. But this, of course, is a matter entirely for the judgment of those most interested. What I am in favor of, now and always, is the freest kind of free discussion, and for this reason, if for no other, I should be willing to introduce the speaker of the evening. What I insist on for myself, I claim for every one else—the right to express my opinions and to proclaim the truth I believe. When a new prophet arises, I want to hear his message, and I want the world to hear it. I commend to every one the wise words of old Rabbi Gamaliel: "If this counsel or this work be of men, it will come to nought; but if it be of God, ye cannot overthrow it." In the mean time, let us give it a fair hearing.

I confess there is much in the literature of Christian Science that I cannot understand, on account of its perplexing terminology, but I think I can understand enough to see that you believe that mind is the supreme fact in the universe, and so do I. You believe that mind may dominate and control the body to an extent that the world has never known. So do I. You believe that God is a present fact and power, and not a past and obsolete one. So do I. You believe in the final and complete victory of God and of goodness. So do I. Whether we differ in the application of these principles or not is not so much to the purpose. Nor does it matter so much how we have reached the principles themselves. For my own part, I have come to them largely through the study of physical science. Every pathway of investigation has led me to God, to a spiritual interpretation of the universe. "The paths to God," says the eastern proverb, "are more in number than the breathings of created beings. Whatever road I take joins the highway that leads to thee." It is only fair that I make this explanation, as I am sometimes held to be a materialist.

I repeat my regrets that I cannot listen to the address of Mrs. Knott, who has won a wide reputation as an exponent of your views; but I bespeak for her a fair and unprejudiced hearing on Friday night. Present her with my kindest regards. Sincerely yours,

MARION D. SHUTTER.

Church of the Redeemer, May 10, 1899.

The Minneapolis Journal.

At Omaha, Neb.

As defender and advocate of the Christian Science theories as curative influence for diseases of the flesh as well as for weaknesses of the spirit, Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., lectured in Boyd's Theatre, Tuesday evening, May 9. The audience was large and embraced all classes of people, lawyers, doctors, and other professional people, railroad officials, merchants, and workingmen, with their wives and families.

Judge J. R. Clarkson introduced the lecturer as follows:—

Alone, alone save for her God, in 1866, Mary Baker Eddy, beloved Leader of the Christian Science cause, began her battle to lay anew before the world the Christianity taught and practised by Jesus and the apostles. She had been roused from what was thought to be the sleep of death, made whole and sound, by what she knew to be the power and love of her Almighty, All-loving God. Restored to health and strength she, not dull of ear, heard and heeded His commands—"Do thou my will." "Have thou no gods but Me." "Preach the gospel." "Heal the sick." "Cleanse the lepers." "Bind up the broken-hearted." "Raise the dead in trespasses and sins." "Immolate self." "Take up the cross and follow Christ,—the Way, the Truth, the Life." "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

She, not dull of ear, heard. She, as a little child, trusted and obeyed, His assuring caution, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee, yea, I will uphold thee with the right hand of my righteousness." She, the chosen human instrument of God, then began her work.—to think, to read, to speak, to write, to act, to live as became God's elect in the midst of men steeped to the lips in misery and sin, yet yearning, in cases countless, to escape from thraldom, find and pursue the path to God.

There came to her a follower or two; there came followers by tens; by hundreds; by thousands; by hundreds of thousands. Ten years from now, if the present rate of increase continues, the number of her followers will have mounted up into the millions.

What is not understood is prone to suffer from misapprehension. Christian Science is not excepted from the rule. Condemnations visited upon it and its adherents, proceed, for the most part, from the thoughtless, inconsiderate ignorant, from the misinformed, or from a grade of thought so low as to be in natural antagonism to all that is good, and pure, and true. To understand Christian Science is to love it, and no lover is a reviler. It is not to the ignorant; it is not to the hostile, that recourse should be had to glean a subject's truth. Christian Scientists want to efface false impressions left by false, misleading information—to give the desiring public some facts regarding Christian Science, and to these ends, in addition to a widely distributed literature, have established a Board of Lectureship.

The members of this Board are experienced exponents of what Christian Science *is*. They have felt its effects upon themselves; they have seen its effects upon others; they have prayed to God as Christian Science has taught them to pray, and He has, to their positive knowledge, time and time again, favorably answered their prayers. He has become to them a living, present, all-powerful, all-loving God, such as Jesus the Christ described, not such as men have since conceived.

It is my privilege to introduce to you one of our lecturers, Mrs. Annie M. Knott of Detroit, who is fit for the holy work to which she has been called. She needs no further praise.—*The Omaha Evening Bee.*

At Los Angeles, Cal.

Under the auspices of First Church of Christ, Scientist, Dr. F. J. Fluno, C.S.D., of Oakland, Cal., lectured on "Christian Science, and the World's Great Need of it," at Simpson's Auditorium, May 4. An intelligent audience of nearly two thousand listened attentively to the lecture.

J. P. Filbert, C.S.D., First Reader, presided and introduced the lecturer in the following words:—

Ladies and Gentlemen, Friends:—History repeats itself.

Digitized by Google

Primitive Christianity healed the sick and sinner, through Science "which voices the Infinite and governs the universe." Why has this element of Christianity lain dormant for centuries, and that, too, after the Great Teacher, Jesus Christ, has left his spiritual code for all time, in these memorable words: "And these signs shall follow them that believe"? Because the builders have rejected the chief corner-stone of Christianity—Christian healing. Thirty-three years ago, a God-fearing New England woman, standing within the confines of mortality, discovered primitive Christianity,—aye, the living, palpable Christ-Truth,—and was healed instantly from an injury pronounced fatal by the best medical faculty of the schools. She found Christ-Truth, and with it the redemption of the body, and called her discovery Christian Science. This woman is Mary Baker G. Eddy, of Concord, N. H., the author of "Science and Health with Key to the Scriptures." Many misconceptions have passed current for Christian Science. The aim of the speaker this evening is to correct these errors, and to tell us what constitutes genuine Christian Science. We are confident he will fulfil the high commission he bears. I now have the pleasure of introducing to you Dr. F. J. Fluno of Oakland, Cal. EMMA S. DOUGLAS, Clerk.

At Meadville, Pa.

"Christian Science and Common Sense" was the title of an interesting lecture delivered Tuesday evening, May 16, by Carol Norton, C.S.D., of New York, in the Academy of Music, and an audience which overtaxed the seating capacity of the house was present to hear him. The speaker was introduced by Mr. J. A. Stone, First Reader of the Meadville Church of Christ, Scientist, as follows:—

Ladies and Gentlemen:—More than eighteen hundred years ago the great Apostle to the Gentiles, when contemplating the conflict between mortal man and the spiritual man, was forced to cry out with deep feeling, "Oh, wretched man that I am! who shall deliver me from the body of this death?" Such has been the feeling of the most devout people from that day to the present time, and it is only within the last third of a century that a religion has been promulgated which settles this question of Paul's to the entire satisfaction of all who give it their undivided attention.

We have a gentleman with us to-night who will present the subject to you and explain as fully as possible in one lecture its cardinal principles. I have the honor of presenting the speaker of the evening, Mr. Carol Norton, C.S.D., of New York City.—*The Tribune Republican.*

At Des Moines, Iowa.

Edward A. Kimball, C.S.D., of Chicago, spoke Tuesday evening, May 9, at the Y. M. C. A. auditorium on the subject of Christian Science. About five hundred people listened to his discourse. In introducing the speaker Dr. J. Everist Cathell said,—

It is a privilege and a pleasure to have one with us who is authorized to promulgate the subject of Christian Science, and who is fully conversant with the belief. Des Moines people have a happy faculty of welcoming representatives of great movements, and I have no doubt will be glad to recognize the speaker of the evening as such a person. I hail with delight anything that will tend to save the stomach from being the recipient of nameless drugs and narcotics, and I am glad of this privilege of introducing such an eminent man as Mr. Edward A. Kimball, who will lecture to you this evening.—*Des Moines Leader.*

At Philadelphia, Pa.

An interesting description of Christian Science, its tenets and claims, was given by Carol Norton, of New York City, at the First Church of the Christian Scientists, Twenty-first Street below Fairmount Avenue, Wednesday evening, May 3, Mr. Norton gave a lucid exposition of just what Christian Science is, and at the same time took care to point out what it is not.

He based his arguments on behalf of Mrs. Eddy's teachings largely upon the foundation that Christian Science is essentially Christian, and said that the world accepts without comment the great discoveries of science, and yet a perfect tidal wave of scepticism and opposition is aroused when Christian Science proclaims that what is "impossible with man is still possible with God."

The Sunday Inquirer.

At Beatrice, Neb.

The lower part of the Paddock Opera House was well filled Friday evening, May 12, with an interested audience to hear the lecture on Christian Science delivered by Edward A. Kimball, C.S.D., of Chicago. The speaker was introduced by Judge A. Hazlett, who defended the cause of the Christian Scientists in the famous trials in the district court here several years ago, and succeeded in securing the acquittal of his client, Rev. E. M. Buswell. Judge Hazlett, in introducing the speaker, stated that he was not connected with any church organization, but that he believed in the fair presentation of any proposition by the advocates of any religious faith, and had for this reason accepted the invitation to present Mr. Kimball to his Beatrice friends.

The Daily Express.

At Elkhart, Ind.

Mrs. Annie M. Knott of Detroit lectured on Christian Science at the Bucklin, Sunday evening, May 14, to a large and interested audience. The lower part of the house was completely filled and some of those in attendance were compelled to find seats in the gallery.

Mrs. Knott is an earnest and convincing speaker, but makes no pretension to oratorical ability. Her discourse was a plain statement of the faith professed by the Christian Scientists, backed up by Scripture references. Her subject was "The Science of the Bible as Revealed in Christian Science," and the manner in which she quoted passages of Scripture to establish the tenets of her faith was a surprise to many of her auditors.—*Elkhart Daily Truth.*

At Amsterdam, N. Y.

Mr. Carol Norton, C.S.D., lectured on "Christian Science, Is it Christian? Is it Scientific?" at the Opera House, Monday evening, May 1. Mr. Norton was introduced by Judge Westbrook, the mayor of the city. A heavy storm came up just before the lecture, so the attendance was not so good as it would otherwise have been.

MARY S. WARRING.

How to get hold of a Faith that Heals the Sick.

BY HENRY D. NUNN.

FAITH, according to the Scriptures, is a lever that will remove all difficulties from the path of any one who chooses to employ it. Taking this word to mean blind credulity, worldly philosophers have treated with undisguised contempt, this fundamental doctrine of Christianity. To them it seems pure foolishness.

It is such a simple, easy thing—just to have faith and "see the salvation of the Lord"—so it seems, to one who supposes that faith means credulity. Why should it not be classed with other feeble speculations indulged in by the race in its childhood? Men know that since the early centuries of the present era, at least, faith has not figured very largely as an ally in fighting the battles of life. If faith be

Digitized by Google

so potent, the doubters naturally ask why Christians have not made more effective use of it in battling with poverty, wickedness, and disease.

If faith is of no avail in the struggle of life, it is time to stop teaching that it is. If faith is supremely powerful, it is time to find out what it is and how to get hold of it.

It may be settled at once that credulity is not faith, for it neither clothes the naked, feeds the hungry, heals the sick, nor solves the problems of existence. Credulity is not unknown in the world, and it is usually associated with ignorance.

Edison solved many problems in regard to the manifold application of electricity to the service of mankind, but he did not come at the solution of them by means of any help he could have received from blind credulity. Patient experiment and proof led him step by step to a more thorough understanding of electrical phenomena than any one before him had acquired. Doubtless he would say that his understanding of the nature and possibilities of electricity is as a grain of mustard seed compared with the immensity of the subject, yet what marvelous results he has achieved. Edison has faith in electricity because he understands how to utilize this immeasurable force in numberless ways for the assistance and amusement of men. Electricity was just as ready to work for Cæsar as it is to work for Edison, but Cæsar lacked the understanding to avail himself of this subtle agent.

Blind faith (belief) in the power of electricity to help a man would never help him, and neither will a blind belief in God's power be of the least avail. To receive divine aid men must learn how to co-operate with God, which is quite a different thing from blindly believing in divine protection.

Christain Science is sometimes miscalled "faith cure." For the reason that most people understand this designation to mean that disease is cured by earnestly believing that God will cure it, its use as a synonym for Christian Science is objectionable. Without any previous experience, the mind swayed by the testimony of the senses would hold it to be a self-evident impossibility for street cars to be run by an invisible, intangible current of electricity. Experience reverses such supposed self-evidence, and the practical demonstration of running cars all the time by electrical power settles the question. The faith of Christian Scientists in the availability of divine power as an infallible, though unseen, help in time of sickness and trouble reverses the testimony of the senses, and it is not supported by the past personal experience of very many people, but it is being established by present demonstration, so that thousands recognize the fact of Christian Science healing who are ignorant of the scientific steps essential to secure the results, as most of us are in regard to the method of getting the powerful unseen arm of electricity to propel street cars.

All who have faith in electricity are not equally able to apply it, for the practical demonstration of its potency requires understanding, arrived at through experience. When the machinery is perfectly adapted to receive and transmit the current, and is perfectly adapted to the performance of the service desired, and if the one who operates the machinery understands perfectly every step in the process, and is vigilant, faithful, and closely attentive to his duty, the results will be almost infallible.

Christian Science is the science by which men may adapt their faculties to receive and transmit the resistless power of divine Love, which heals every hurt and lightens every burden. But all who believe that divine Love is powerful to help mankind are not equally able to avail themselves of this aid, for to do so requires that faith which Jesus sought to establish—the faith of understanding, acquired in no other way than by patient and persistent practice. When any man attains a perfect understanding of the science of co-operating with God, and is vigilant and faithful in practising it, perfect results will follow. The degree of perfection in results depends upon the degree of understanding attained.

The faith that heals the sick scientifically is not something that comes with a spasm of enthusiasm, any more than is the faith that causes street cars to be run by electrical power. One cannot be ignorant of electrical engineering one day, and by merely deciding to believe in it the next day summon to his aid the knowledge necessary properly to design a dynamo. Ignorant of God and His modes of manifesting Himself, mortals cannot become suddenly illuminated and begin forthwith to heal the sick and raise the dead.

In "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, faith means understanding; the mature fruit of moral purification, the mastery of appetites and passions, patience, experience, and self-renunciation. Every thought must be purified; every act, however insignificant, must be enriched by a right motive. As the soil of human character is thus subdued, the elements that prevent the growth of spiritual discernment, or the faith which heals, are destroyed. These elements are envy, jealousy, pride, malice, selfishness, impatience, irritability, and readiness to find fault. By the same slow process the elements of fertility are imparted. These elements are patience, meekness, humility, compassion, and good-will. By means of such intensive cultivation the atmosphere, and warmth, and light, of divine Love permeate and energize human thought.

There may be some persons who shrink at the thought of trying to subdue this wilderness within. They may feel that their strength is not sufficient to carry them successfully through such a struggle as the one here pictured. It is true that one's present strength is not equal to the strength of all the foes in the wilderness, and he would be overwhelmed were all the fighting to be done in a day, but subduing a wilderness is usually the work of a lifetime.

Divine Love does not exact more of the penitent struggler than he has strength to accomplish. Emerson somewhere says that certain peoples of ancient times believed that the strength of the vanquished warrior passed into the arm of the victor. In the moral battles of life the strength of a temptation that is overcome does pass into the arm of the victor. Thus, every wild beast of the wilderness within us, when it is destroyed, imparts its own strength to its conqueror, to enable him to vanquish fiercer foes in the harder struggles a little further on.

In the land of sensuality and sin there is no abiding life, and we must get out of it. Jesus has gone before and blazed the way. In spite of all the outward turbulence through which he passed, the Master found great inward peace in traveling his road. There can only be shame, despair, disappointment, and death at the end of any other road.

Jesus tells us how to avoid self-torture. He said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy and my burden is light." Professor Drummond says, "Christ's yoke is simply his secret for the alleviation of human life, his prescription for the best and happiest method of living. Men harness themselves to the work and stress of the world in clumsy and unnatural ways. The harness they put on is antiquated. A rough, ill-fitting collar at the best, they make its strain and friction past enduring by placing it where the neck is most sensitive, and by mere continuous irritation this sensitiveness increases until the whole nature is quick and sore."

As one goes on in the road that Jesus trod, honestly wishing to abandon selfishness, he begins to catch glimpses of Truth. This quickens the spiritual vision and more of Truth comes to him. In this way dawns the faith or un-

Digitized by Google

derstanding based on proof, which enables Christian Scientists to heal the sick. As more of Truth is gained, greater power over error will be exercised. The sick are being healed now. Many people are well to-day who were rescued almost from the grave by Christian Science. As the example of living set for men by Jesus is more and more closely followed, more and more of the works that he did will be reproduced.

The life-giving power of the least expression of unselfish love—who can estimate? It shines into a despairing heart and hope is kindled. It beams on the outcast prodigal and warms his benumbed affections, awakening a desire to return to his father's house. If one, to begin with, will only have just enough interest in this subject to test the effect of a little heartfelt selfless love bestowed upon some hopeless mortal, he will be ready to believe that a larger dose would heal the sick. And why not? Many a sickly plant hidden in some dark corner of a cellar needs only to be exposed to the warmth and light of the sun for health and beauty to return. So it is with sickly men and women.

The Denver Sunday Times.

Science and Health.

Mrs. Mary Baker Eddy's Authorship of the Work Sustained.

Portsmouth, N. H., May 13, 1899.

To the Editor of The Portsmouth Times:—In view of the fact that the Arena is publishing articles attempting to disprove Rev. Mary Baker Eddy's authorship of Science and Health, I would like to ask space in your paper for some extracts from an article printed in the Grand Rapids (Mich.) Sunday Democrat, and prepared by the Board of Directors of the First Church of Christ, Scientist, of that city. Before presenting the matter referred to, I would like to mention that there is in this city a gentleman of my acquaintance who knew the late Dr. Quimby, personally, for many years, and he entirely repudiates the claim that Dr. Quimby's views were at all similar to Mrs. Eddy's. Dr. Quimby used to jot down, after treating, certain ideas that came to him relative to the patient, and in some manuscripts he gave his views in regard to man's relationship to God, but they were totally different from Mrs. Eddy's. His method of treatment was to convey electricity through or by manipulation; whereas Mrs. Eddy's convictions, after years of careful experiment in homœopathy, were assuming this form, that the Divine Mind is the only physician.

I would state here, that, when the father of one of his patients offered him one thousand dollars if he would explain his method, he replied he could not, as he did not understand it himself. There is proof that this statement is entirely authentic. Both his theories and methods were utterly dissimilar; and, as he was a good man, no doubt, were it in his power, he would object, vigorously, to these false charges.

The book, Science and Health, proves, logically, God's omnipotence and omnipresence, man's unity with his maker, and the practicability of destroying beliefs of discord and disease, through a realization of the facts of being.

"Science and Health with Key to the Scriptures," has now passed its one hundred and sixtieth edition, and in the early edition this Quimby charge was fully met and answered. The falsity of this charge was fully established by decree in the United States Circuit Court in the district of Massachusetts, held in Boston, which decree bears date September 24, 1883. After this decree was made, Mrs. Eddy again, in the *Christian Science Journal*, of which she was then sole editor and proprietor, went fully into the charge, gave a copy of the decree of the court which established fully the validity of her copyright, in a case where the answer set up this same Quimby claim of authorship, and also gave a copy of the injunction issued thereon, and a full history of her acquaintance with Mr. Quimby and his views and writings; also offering to pay the expense of publishing the writings of Mr. Quimby, that the public might determine for itself whether she had purloined from the Quimby manuscripts.

Again, in her work entitled, "Miscellaneous Writings," which has passed its thirtieth edition, the charge was fully answered, also in a pamphlet written many years ago, entitled, "Historical Sketch of Christian Science Mind Healing." After this full and, it would seem, widespread and complete answer, Mrs. Eddy dropped the subject in her subsequent edition of Science and Health.

The charge having been recently renewed, the *Christian Science Sentinel*, published in Boston, in its issue of February 16 last, again reviewed, in a lengthy article, the whole subject and contains, among other things, a recent letter of Mrs. Eddy upon the charge, and also quoted from the Quimby writings to show how utterly unlike his views were to those expressed in Science and Health.

Christian Scientists feel assured that any one reading this review in the *Sentinel* will be forced to admit how overwhelming, unanswerable, and satisfactory are the proofs of Mrs. Eddy's authorship.

The Church, about four weeks ago, mailed to the ministers of this city and other prominent persons, about five hundred copies of this issue of the *Sentinel*.

About the same time throughout the United States and Canada and also in England, thousands of this issue had been distributed.

This is mentioned to show how thorough and widespread the answer to the charge has been made.

Any one desiring to ascertain for himself the completeness of this answer, will, on application to any member of the Church, be furnished with a copy of the above-mentioned issue of the *Christian Science Sentinel*.

In conclusion, we wish to say that we believe Science and Health will stand the test of the severest scrutiny. This book, from beginning to end, emphatically teaches that Christian Science is the polar opposite of hypnotism.

Some of the brightest lawyers, ministers, doctors, judges, editors, and scholars of our land, as well as business men of ripe experience and marked success, declare publicly that they have read this remarkable book till they have found it to be a very treasure-house of healing Truth, and a veritable key to the Scriptures, which, read in its light, is found to be a "tree whose leaves are for the healing of the nations."

Thanking you for your courtesy, I am,

Very truly,

ADA G. WHITE.

From Beatrice, Nebraska.

IT is rather remarkable how unanimously the clergymen of the orthodox churches are assailing Christian Science at this time. Severe denunciatory sermons are being preached every Sunday, and still the Scientist Church continues to increase its membership in a most astonishing manner. Many of the clergymen who are preaching against the alleged Science are making a mistake in being so severe; they seem to look upon the Scientists as enemies to good morals, which they are not, by any means. After all, this is a country in which civil and religious liberty is guaranteed by the Constitution, and we fail to see that anybody has the right to abuse or denounce anybody else because of the religious beliefs he may hold. The Scientists are not aggressive; they interfere with the altars and the fires of no man; they have a perfect right to worship the Almighty as they may elect; and while there may be room for criticism of their claims to healing, the same may be said of the claims of allopaths, homœopaths, and all kinds of earthly physicians.—*The Daily Express.*

Questions and Answers.

Is it true that the Board of Education at its January session gave out that class teaching should be stopped, or did individual members of the Board so announce?—A student of Mrs. Eddy.

It seems utterly inconsistent that the Board of Education or any member thereof should have made any such declaration or announcement, in view of the fact that the mission of the Board was to authorize a certain number of students to teach. This fact of itself should be a sufficient answer to all rumors of the kind mentioned in the above question. The Board of Education was established by due authority, and the fact that such a provision for teaching was made, coupled with the other fact that only a short while before the session of the Board, our Leader, the Rev. Mary Baker Eddy, had taught a class, ought to be a sufficient answer to such queries, and ought to put a quietus upon such rumors or assertions.

It is doubtless true that during the session of the Board views of its individual members were expressed upon the general subject of teaching, and some of the shortcomings and deficiencies which have been apparent in connection with class teaching were pointed out. This indeed was a part of the work of the Board; but this fact furnishes no ground for the supposition that class teaching should be dispensed with. Like everything else in Christian Science work, teaching should be placed upon the highest and best possible plane, and all objectionable features and methods remedied.

When the time comes that our Leader sees there should no longer be personal teaching, doubtless she will unequivocally announce the fact. May we suggest in the most friendly spirit that it ill becomes any students to undertake to say in advance of her action what her views or purposes are, with reference to class teaching or other matters.

What is the distinction between the word "Soul" as used in "Science and Health with Key to the Scriptures," where the capital S is used, and the small s?—A Reader.

Wherever the word "soul" is capitalized—that is, the first letter, S—it is used as a synonym of God. God is Soul, the Soul of the universe and man. It is used in the same sense as the other terms to indicate Deity, such as Mind: God is the Mind of the universe and man; Love: God is the Love of the universe and man; Life: God is the Life of the universe and man; Principle: God is the Principle of the universe and man—of all that really is—creative Principle.

When the small "s" is used it signifies, as a rule, material or physical sense, as distinguished from spiritual sense.

Science and Health, page 478, says: "Out of Science soul is identical with sense," meaning the material or physical senses. The first paragraph on this page clearly defines the distinction between Soul, which signifies God or Deity, and its contrary sense.

Also read in Science and Health, pages 462 and 485.

Testimonies.

With God all Things are Possible.

About a year and a half ago I heard of a wonderful case of healing in Christian Science, and was advised to buy Science and Health, which, I was assured, would reveal to me the secret of perpetual health, harmony, and peace.

Several months after this I went to the Publishing House for the book, and was told there in answer to my question, "Can this treatment help any one who is troubled with dyspepsia?" that "Christian Science cures everything."

I had been troubled for six years with dyspepsia, which had become so serious during the past six months that I was beginning to be greatly alarmed and discouraged, for neither medicine nor dieting relieved me.

I thought that if Christian Science would enable me to eat the simplest food without discomfort, I should expect no more. Therefore, when I was told that it could not only relieve, but absolutely cure, a case of chronic dyspepsia, and every other disease as well, it seemed to me the most unreasonable statement that I ever heard.

I believed that I could receive no help from a system which claimed to do such impossible things, and instead of going to a Scientist I continued with the medicine and the dieting.

I tried to read the book, however, but found, to my disappointment, that I could scarcely understand a sentence, and after struggling through the first chapter, laid it aside.

About six months after this my trouble had become so serious that I felt as though I would give anything that I possessed to know that the words I had thought to be so unreasonable could be true.

Then, at last, some impulse—or, should I say, the divine Love that is always with us, guiding us, ofttimes unknown to ourselves, toward the kingdom of peace and Love—made me determine to go to a Scientist whose address had been given me, and give Christian Science a full and fair trial.

In less than eight weeks I was not only absolutely cured of every phase of my physical trouble, but I was able to read the book, to know that it contained the Truth, and we have only to live according to its teachings in order to know the peace, health, and harmony of which my friend had assured me.

Words could not express all that the Truth has done for me and mine, but I would like to tell one of the many demonstrations which we have had.

Two years ago, before I knew about Christian Science, I sprained my knee. Although I was careful not to use it excepting to take a few steps about the house with a cane, it rapidly grew worse, so that I was confined to my bed for six days, and it was three months before I could place my foot on the floor and walk a little with crutches.

At the end of six months, walking was difficult and often painful, and the lameness did not disappear until I began to understand the Truth, nearly eighteen months afterward.

A few weeks ago I turned my ankle one evening, and sprained it as badly as I had the knee.

I treated it as well as I could, but in the morning it seemed much worse, being stiff and helpless, and so badly swollen that I could not wear my boot.

It seemed such a serious matter that my first impulse was to send for a Scientist, but when I read in Science and Health that "Mind is the source of all movement," and that "the Truth is always victorious," I knew that this was not necessary.

I walked as much as usual during the day, going about a mile out of doors, although sometimes it seemed as though I could not take another step, but at night it was much better, and the next morning it was well. Two days after that I walked three miles.

Caroline N. Poole, Boston, Mass.

Work among the Colored People.

A lady writes from South Carolina the following interesting account of her work among the negroes on her plantation. This account is a strong hint of the work that may be done, and ultimately will be done, among the colored race. These simple children of Nature—God—are receptive to this Truth, and although their first applications

Digitized by Google

seem small, they, nevertheless, prophesy of the larger and greater demonstrations which are certain to follow.

I am trying to do for the negroes on my rice plantations. They are very poor, in belief, and very ignorant and full of superstitions, but they are responding to the call of Truth, and make their slight understanding of Christian Science of real practical use. At our Wednesday evening meetings they give their little demonstrations, like young children. One will tell how he crossed the river in a small boat when it was very stormy, to go to his work, when in the old thought he never could have done it, but remembering what we had read in Science and Health, referring to page 384, line 10, he had gone over without fear.

Another, of how his cart broke down, and with his understanding of what we had read him and told him of Christian "Signs" (he meant Science, but I thought what he said beautiful) he had gone to work and fixed it, when before he would have left it. If you think at any time you can make use of these little demonstrations, I should be glad. The young girl who teaches my children (and who was healed by Mrs. M. D. of Boston) and I are the only Christian Scientists in this county. I had such a beautiful demonstration getting our Mother's glorious message in our county paper, that I send it to you with my first attempt at writing for publication.—*Mrs. E. W. H.*

From the Southland.

The following account of work accomplished in one of the large Southern states comes to us.

You will be interested to know I have recently taught a splendid class, thoroughly representative, and I have never seen students more in earnest. From beginning to end personality was left out and absolute Science only was brought to the students. The students were from all the walks of life, and by way of illustration I will say, that among them were the wife and daughter of the late Senator P.; three gentlemen who are heads of large business concerns; plantation owners; architects; two lawyers, one of them a distinguished author; also one M. D., who enjoys the reputation of never having lost a case in his four years' practice of medicine (he will now practise only Truth-healing), and three ministers of the gospel. The ministers will devote themselves entirely to the cause of Christian Science.

A great deal of false teaching has been corrected and replaced by the knowledge of true Science. Five from one town (where so-called mental science seemingly had the field) have now been thoroughly equipped, and will organize to build on the Rock. Some who, in ignorance, had opposed Mrs. Eddy, wept tears of gratitude on having their eyes opened, and now recognize that "Science and Health with Key to the Scriptures," and the Bible is the *only way*, and that Mrs. Eddy was God-appointed to reveal Christian Science.

I am doing all I can to spread the true gospel, and since January have distributed one thousand Sentinels, lectures, etc.; a number of copies of Science and Health, and "Miscellaneous Writings," besides two or three hundred tracts.

Paralysis Healed.

"How firm a foundation, is laid for our *faith* in His excellent word." A short time ago I was called to the bedside of a man seventy-six years old who had been struck down with paralysis, one entire half of the body being badly affected. Christian Science treatment was not asked for until after the third stroke, the two former strokes having been slight. Two hours after the first treatment, he had a refreshing sleep, from which he awoke able to speak. He was able to get out of bed that afternoon, and in five days was entirely healed, and returned to his daily work.—*Mrs. Flora De Woody, Dallas, Texas.*

A Loving Tribute to Mrs. Eddy.

Ozona, Fla., May 11, 1899.

Dear Mother:—Please accept from our little Church assurances of our love and loyalty. Though the world should turn against you, no loyal Christian Scientist could be moved. Do we not *know* the reason of the hope within us? The stately ship of Truth will move steadily forward with our brave and noble captain at the helm. Can the puny emptyings of a cesspool affect the flow of the mighty ocean? No more can the petty malice of those enemies of Truth affect you or the mighty cause which you guide and guard so nobly.

Ever yours in Truth and Love. First Church of Christ, Scientist, of West Sutherland. T. H. Bell, Secretary.

"Let Not your Heart be Troubled."

BY JESSIE M. DRULLARD.

Let not your heart be troubled,
Have faith, believe in me.
I go to prepare a mansion
In the "Father's House" for thee.

Let not your heart be troubled,
Although I go away;
I will come again and receive you
Unto myself some day.

Let not your heart be troubled,
A comforter to you I'll send,
So I am with you always,
Even unto the end.

Let not your heart be troubled,
My peace I leave with you,
Not as the world giveth,
Give I unto you.

Let not your heart be troubled,
How sweet those words to me;
That where He is, there also
I shall forever be.

"When Christians come to realize," says the Watchman, "that it is as much a Christian duty to be agreeable as to be honest, the world will be much cheerier and the church membership much larger."

Notices.

Those who intend to be present at the annual meeting of the Mother Church to be held in Boston, Mass., June 6, 1899, can secure reduced rates by getting certificates for the same from the local agents when they purchase their tickets. Reduced rates are good from May 29 to June 9.

The lecture of Edward A. Kimball, C.S.D., appearing in the *Christian Science Journal* for May is now published in pamphlet form. One copy or more, each, 10 cents; 12 copies to one address, $1.00; 25 copies to one address, $1.75; 50 copies to one address, $3.00.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2 50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JUNE 1, 1899. | Vol. 1 No. 40

President M. de Staal's Address.

By a process of elimination the work of the Peace Conference is being reduced within practical limits. M. de Staal's speech is accepted as a definite abandonment by Russia of all attempts to secure action toward the limitation of armaments, naval or military, so far as this convention is concerned. The committee on this subject will devote its attention exclusively to the minor points assigned to it, namely, the use of new explosives, projectiles, submarine boats and other engines of destruction. There is little hope of agreement on any restrictions concerning these, and therefore the scope of Count Muravieff's circular is already reduced one half.

The important work will be concentrated on the sole question of arbitration, and one man's opinion is as good as another's regarding the prospect of agreement on any plan. It is probably too much to expect that any complete permanent scheme will be definitely adopted at the present session, but a large body of the delegates hope some progress will be made toward that end. A considerable number believe that a partial or tentative plan of optional arbitration with provisions for the necessary tribunal, can be devised and referred to the governments for their action or taken up at an adjourned session of the conference.

✤

The address of President M. de Staal delivered Saturday, May 20, has been made public and is as follows:—

"To seek the best means of securing the benefits of peace to all nations is, according to the circular of August 17, the principal object of our deliberations. The name of peace conference, which, by instinct, was given in advance of the decision of the governments to our assembly, indicates in the best way the essential aim of our work. Therefore the conference cannot fail to fulfil the task assigned to it and to secure tangible results for humanity. The great willingness with which all countries accepted the invitation to partake in the conference is most eloquent proof of the unanimity with which the pacific proposals were received. It is a most agreeable pleasure to me to express to the delegates the thanks of the Russian government.

"The composition of this meeting is a great guarantee of the spirit with which it will fulfil its mission. It will be a vast gain to the world if diplomacy succeeds in establishing here some rules for the peaceful solution of international disputes, to generalize, to codify the application of arbitration and mediation. It seems to be the essential purpose of our efforts to prevent conflicts by pacific means. It is not our mission to attempt to reach Utopia. We must reckon with what is possible in the work we are going to do, and must not pursue abstractions. Without sacrificing our ultimate hopes, we must keep on the ground of reality, so as to get a solid foundation and a fixed basis.

✤

"No nation can remain isolated even if it so desired. Of course there are rivalries, but only on economical grounds. The different nations seek only to bring the over-production which they cannot consume to other markets. These rivalries are salutary, because they lead to a spirit of human fraternity. If the nations are bound by so many ties, why not study the effects toward which they are tending? When there are disputes between two nations the others cannot be indifferent, because all are affected. Then acts of conciliation should come in. These are old maxims which are always recognized by statesmen and thinkers, but they impose themselves now more than ever, and the fact that they may be proclaimed by such an assembly as this would certainly be of prime importance in the history of humanity.

"The nations have great need of peace, and we owe it to humanity and the governments which have given us their confidence to protect their interests, and it is due to ourselves to accomplish a useful work in settling upon some means of insuring peace.

"Among these means are arbitration and mediation. These have been practised for a long time by diplomacy, but they have not been precisely established, and their employment in cases in which they should be applied has not been defined. It is our duty to do this, sustained by the conviction that we labor for the welfare of humanity and in the direction which was pointed out by preceding generations. But as we are firmly resolved not to approach Utopia, and as we recognize that our present task, however grand, has its limits, we must also occupy ourselves with another phase of the situation. Inasmuch as it is not yet possible to render armed conflicts between nations impossible, we must minimize the horrors of such conflicts. The governments of the civilized States have already taken great steps in that direction, but we want to go further, and the most competent men for the solution of these questions are here.

✤

"Besides other matters of high importance which also enter into the idea of the maintenance of peace, and which the Russian government thinks might be included in our deliberations, there are reasons to ask if the welfare of nations does not demand the limitation of progressive armaments. But it is for the governments to decide in the interest of their respective countries what action to take in this direction. We are sure that we are going to ex-

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

amine these questions in an earnest spirit of sincere conciliation, and so go in the ways which lead to the consummation of peace. Thus we shall do a useful work, for which future generations will be grateful to the sovereigns and the chiefs of the States represented in this hall."

It is rumored among the delegates that the Czar himself wrote the above speech.

Items of Interest.

The Washington Peace Jublilee, May 23 to May 25, was pronounced a success in every respect. Numerous parades and patriotic addresses were the chief features. Prominent among the parades were the civic parade on the second day, consisting of all the civil and trade organizations of the city, together with a long procession of floats, and the historical pageant on the third day.

The subjects of the floats in this parade were as follows: "History," "Columbus at the Court of Spain," "Landing of Columbus," "The Birth of our Flag," "Washington Crossing the Delaware," "Liberty and the Thirteen States," "Perry on Lake Erie," "Tableaux of Mexican War," "The North and South War," "Victory," "Peace," "Uncle Sam's Nursery."

President McKinley with his cabinet and a distinguished company, reviewed the parades from a stand in front of the White House. The Jublilee closed with a magnificent display of fireworks, including a representation of the battle of Manila, and a masked ball at Convention Hall.

Queen Victoria's eightieth birthday anniversary was very generally and enthusiastically observed throughout the world. Four generations of the royal family were gathered at Windsor Castle and participated in the ceremonies. Numerous messages of congratulation were received by the Queen. The following was from President McKinley.

Executive Mansion, Washington, D. C., May 24, 1899.
To Her Majesty the Queen, Windsor Castle, England.

Madam:—It gives me great pleasure to convey on this happy anniversary the expression of the sentiments of regard and affection which the American people cherish toward your Majesty, and to add the assurance of my own cordial respect and esteem. May God grant to your Majesty and to the countries under your government many years of happiness and prosperity. WILLIAM MCKINLEY.

The *Westminster Gazette* gives a forecast of the Czar's peace programme which formulates an ideal, practically of a federation of the world, with the disarmament conference as a starting-point. The conference is to become a permanent tribunal, meeting every three or five years. In regard to armaments it is proposed to arrest their increase and to proportion military and naval estimates to the total expenditure.

Ex-President Benjamin Harrison said to a reporter of the *New York Evening World* recently, that "The things which Dewey has done and the things which he has left undone since that memorable May day have made him as great a diplomat as he is a fighter. He is the great hero of the Spanish-American war, and deserves all the praise which the American people can give him."

Mr. James Mortimer, the veteran journalist, for many years connected with the *London Figaro,* has published in the *Anglo-Saxon* a number of kindly letters of approval from Lord Dufferin; Joseph Chamberlain; Alfred Austin, the poet laureate; Algernon Charles Swinburne, and other influential persons commending the object of a closer union of the United States and Great Britain.

Professor Rudolph Virchow, the leader of German liberalism, said in an interview on the subject of the Peace Conference: "Disarmament is in the air. Sooner or later it will be realized by all nations under the law of development. The programme of Emperor Nicholas is comprehensive and complicated, but the fact that the powers accepted his call is significant enough.

The Cologne *Gazette* of Berlin, in publishing a sketch of the American delegates to the Peace Conference at The Hague, praises the tact of President McKinley in avoiding the appointment of political favorites, and says of the Americans: "They are well known and universally respected men of great capacity in their professions and honorable gentlemen of blameless reputations."

Lord Charles Beresford said with reference to the homecoming of Admiral Dewey from Manila: "There is nothing we would like better than to have Admiral Dewey call at an English port on his way home. Every one of us would show him in true British fashion how much we recognize his brilliant work at Manila.

Professor Arthur T. Hadley has been elected president of Yale University. Professor Hadley graduated from Yale in 1876 and is a liberal and progressive educator. He will assume his new duties at the end of the present college year, June 30.

Admiral Dewey has arrived at Hong Kong where he will remain for two or three weeks while his ship is being docked and cleaned. When the Olympia steamed up the bay she was saluted by the ships of all nations in the harbor.

The Central Cuban Relief Committee of New York City has just published its report showing that the total amount collected was three hundred and seventy thousand dollars. There is a surplus of seventy-five hundred dollars.

England is eager to welcome American troops. The Seventh New York regiment has been invited to march with the Westminster Volunteers in Hyde Park when the Prince of Wales reviews the British troops July 8.

Rather than be taken to the pest-house, where the sufferers of small-pox are taken, Charles E. Linsley of Kansas City, Mo., an engineer, held the police at bay and refused to be taken out of his own home.

The rebels have rejected every offer made to them and fighting has been renewed. It is reported that a number of prominent and wealthy citizens of Manila have surrendered and asked for American protection.

Fifty-five years ago the first telegraph message was sent. During the year 1898 the Western Union and Postal Telegraph Companies handled 77,580,767 messages at an average toll of about thirty cents.

Admiral Dewey's last concern before leaving Manila was for the safety of the Yorktown's men held captive by the Filipinos. General Otis is now able to supply them with necessary food and clothing.

The transport Sherman has sailed from San Francisco for the Philippines bearing eighteen hundred men and

Digitized by Google

seventy-five officers. General Fred Grant commands the expedition.

American consulates at San Juan, Porto Rico, and Manila are to be abolished after July 1, because Congress did not make an appropriation for their maintenance.

San Francisco proposes to erect a hundred-thousand-dollar monument to commemorate the deeds of the American navy, especially the victory of Admiral Dewey.

According to the latest reports peace prevails in Samoa. It is expected that the commission will be able to complete its labors and return very soon to Washington.

Admiral Dewey started for home on the cruiser Olympia on the afternoon of May 20. It is not expected that he will reach New York before October 1.

The measures to preserve the secrecy of the deliberations at the Peace Conference have been redoubled. Only delegates and their secretaries are admitted.

The Cuban soldiers will surrender their arms to mayors of Cuban cities, who will transfer them to United States armories in Havana and Santiago.

The main portion of Dawson City was destroyed by fire April 26. One hundred and eleven buildings were burned. Loss about four million dollars.

The United States commissioners and many American officers celebrated Queen Victoria's birthday on the British cruiser Powerful at Manila.

The growth of our trade with China has exceeded that of any other country, and now amounts to over twenty million dollars annually.

The desirability of having the Armenian question settled at the Peace Conference has been urged by the Anglo-Armenia Association.

As a result of the great increase in postal receipts, hundreds of postmasters all over the country will receive larger salaries after July 1.

Secretary Alger has agreed to order troops to the Moqui Indian reservation in Arizona to force the Indians to submit to vaccination.

An expedition under Professor Nathorst has left Stockholm for the northeast coast of Greenland in search of Professor Andree.

The New York Assembly has appropriated seventy-five thousand dollars for the state's expenses in the proposed Dewey celebration.

The receipts at Cuban, Porto Rican, and Philippine ports for the first four months of the present year amount to $1,701,600.

A number of American educators have been elected honorary members of the Royal Institution of Great Britain.

The form of government has been proposed to the Filipinos which is similar to that now in operation in Cuba.

With copper at nineteen cents a pound, the use of aluminum is being widely extended, as it much cheaper.

The Czar and council are considering the question of abolishing the Siberian exile punishment.

The application for its new charter will cost the Carnegie Company nearly one million dollars.

Andrew Carnegie has subscribed five thousand dollars to the Gladstone Memorial Fund.

China has consented to Italy's occupation of San Mun Bay as a commercial port.

Gunmaker Krupp of Essen, pays the biggest income tax of anybody in Europe.

Sampson's fleet will be in Boston harbor on Bunker Hill day, June 17.

How Can You Find a Realm?

How can you find a realm where sickness is?
There is no faltering fear in Love divine,
And if you are a child of that great Love
Can you not claim all Good for me and mine?

If Good has always been, and always will
Be constant Love, and boundless as the sea,
Can you not bravely say the "Peace be Still"
And claim the promise now for you and me?

How can you find a realm where sin can be?
There is no dismal darkness in His Light,
For if that One Great Mind could sinful be
Then every sinful son would die to-night.

Ah, no! this Truth is Infinite and All,
There is no other God upon the throne,
There is no sin or sickness to be found,
For this great God is One and One alone.

How can you find a realm where death is king?
Is not your God a God of Life and Love?
Has he created man a living thing,
Then taught him he must die to go above?

No, child; there is no realm where sorrow is,
No place in all the universe for fears;
For Love divine is all, and always is,
And Good has come to wipe away your tears.

Oh! do not seek a seeming realm of sin,
Cling closely to the omnipresent Mind;
There is no place where Love has never been,
And so that realm of fear you'll never find.

EUGENE F. VOORHIES.

Some people think they are keeping the Sabbath when they are not at work; no matter what else they are doing, —talking about their neighbors, gormandizing, or reading some folly, to make themselves and others miserable. Such might far better spend the day in some useful employment.

Otay (Cal.) Press.

The *Sunday School Times* says: "If a man wants to be on the winning side, let him be on the right side. If a man is on the right side he will be on the winning side. The right side is God's side, and God's side is sure of a triumph in the end, however it looks to the world just now."

Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

An Amazing Statement.

WE have read somewhere a most remarkable statement to the effect that the Rev. Mary Baker Eddy ostensibly gave up her college and retired to Concord, N. H., at the very period when a Massachusetts district attorney was looking for evidence of that institution's illegally conferred degrees, of which there were thousands, punishable with a fine of five hundred dollars for each offense. This statement is followed by the query: "Is this the reason that for ten years Mrs. Eddy has not visited Boston on a week-day, when she would be subject to arrest?"

It is a sufficient answer to the above anomalous query, that Mrs. Eddy has visited Boston on week-days within the time mentioned. Her visits have been in connection with the Mother Church, and have been limited for time, not for any such reason as that insinuated in this query, but because of her busy life and the necessity of her early return to her duties at Concord. Nevertheless, as we have said, she has been here on week-days.

A very conclusive answer to the above inuendo is the fact that all the certificates ever issued by Mrs. Eddy as President of the Massachusetts Metaphysical College, were authorized by a charter granted to her by the Commonwealth of Massachusetts; hence, all her certificates were legal, and the supposition or charge that they were not is the merest fiction.

We have carefully examined the statute under which the College was incorporated, and also the Articles of Incorporation, and there is no doubt of the authority of the College to issue such certificates as were issued by it.

We herewith republish from page 271 of "Miscellaneous Writings," by Mrs. Mary Baker G. Eddy, the following article published in the *Boston Traveler*, explicitly setting forth the facts with reference to this College and the certificates issued under its auspices.

The Massachusetts Metaphysical College.

Much is said at this date, 1889, about Mrs. Eddy's Massachusetts Metaphysical College being the only chartered College of Metaphysics. To make this plain, the Publishing Committee of the Christian Scientist Association has published in the *Boston Traveler* the following:—

"To benefit the community, and more strongly mark the difference between the true and false teachers of mental healing, the following history and statistics are officially submitted:—

"Rev. Mary Baker G. Eddy obtained a college charter in January, 1881, with all the rights and privileges pertaining thereunto (*including the right to grant degrees*) under Act of 1874, Chapter 375, Section 4.

"This act was *repealed* from and after January 31, 1882. Mrs. Eddy's grant for a college, for metaphysical purposes *only*, is the first on record in history, and no charters were granted for similar colleges, except hers, from January, 1881, till the repealing of said Act in January, 1882.

"The substance of this Act is at present incorporated in Public Statutes, Chapter 115, Section 2, with the following important restrictions:—In accordance with Statutes of 1883, Chapter 268, any officer, agent, or servant of any corporation or association, who confers, or authorizes to be conferred, any diploma or degree, shall be punished by a fine not less than $500, and not more than $1,000.

"All the mind-healing colleges (except Rev. Mrs. Eddy's) have simply an incorporated grant, which may be called a charter, such as any stock company may obtain for any secular purposes; but these so-called charters bestow no rights to *confer degrees*. Hence to name these institutions, under such charters, *colleges*, is a fraudulent claim. There is but one legally chartered college of metaphysics, with powers to confer diplomas and degrees, and that is the Massachusetts Metaphysical College, of which Rev. Mrs. Eddy is founder and president."

A still further evidence of the absurdity of the above intimation is that even if it were true that Mrs. Eddy had issued illegal certificates, or had in any way violated the criminal laws of this commonwealth in such a way as to be subject to arrest, the district attorney or attorney-general could at any time have caused a requisition to be sent by the governor of Massachusetts to the governor of New Hampshire for her arrest, under which she could have been brought to Boston.

The supreme folly of such attempts at falsifying as are involved in the above incident, is of itself a sufficient refutation of this and the many other falsehoods, equally far-fetched and ridiculous, emanating from the same source.

Peterborough, Ont.

In the April, 1899, *Journal*, under the head of "Churches and Societies," we published a statement to the effect that the building on Aylmer Street, recently occupied as Jackson's piano warerooms and formerly a Baptist Church, had been purchased by the Christian Scientists for the use of the local members of that society.

Later, in the *Sentinel* of May 4, 1899, on page 4, under the head of corrections, we published the following:—

"The clipping copied from *The Review*, Peterborough, Ontario, in the April *Journal*, page 47, is, we find, incorrect; the services are held at No. 414½ George St."

We have since learned that the statement, as published in the Peterborough *Review*, was according to the fact. We deem it only fair, therefore, to make this correction of our statement published in the *Sentinel*.

An Apparent Impostor.

Letters are coming to us from Wichita and elsewhere in Kansas, to the effect that a man with deformed feet, dressed as a farmer in working-clothes, and representing himself as a Christian Scientist, has been visiting Scientists, asking for money and other aid. His stories disagree as to the purpose for which he desires the money, and he gives different names, one of which is Armstrong and another Clark. He promises to return the money borrowed, but thus far has failed to fulfil any of his promises.

It is well for Scientists to be wise in the giving of their charities, as there are persons ready to take advantage of the well-known predisposition of Scientists to extend charity to the needy. It is mistaken charity to encourage fraud and dishonesty. We have heard of a similar character in Boston.

Digitized by Google

As to Republishing Articles from the Journal and Sentinel.

In reply to inquiries we will again announce that there is no objection to republishing articles or parts of articles from the *Journal* and *Sentinel,* by newspapers or other publications. Scientists causing such articles to be republished, however, will please see to it that due credit is given to our publications, as all matter published in the *Journal* and *Sentinel* is copyrighted. This is necessary to avoid violation of the copyright law, and also is due to our publications as a matter of courtesy and comity.

Human Vivisection.

PEOPLE of normal sensibilities are beginning to question the righteousness of the atrocious experiments that are now being carried on so extensively by doctors of medicine, in the name of science. It is quite generally conceded that the cruel murder of men, women, and little children cannot be necessary to any science that God has anything to do with, if He is longer to be adored as a loving Father.

The American Humane Association, of which Rev. Francis H. Rowley, D.D., of Fall River, Mass., is secretary, has just issued and sent broadcast over the country, a pamphlet, with the startling title: "Human Vivisection." It is an earnest protest against the growing practice of subjecting helpless human beings and animals to torturing experiments, which often prove fatal.

In the introduction to the pamphlet readers are asked to record their opinion of Human Vivisection by writing to the secretary. Then follow seventeen pages, in part reprinted from United States Senate Document No. 78, showing the results of doctors' and surgeons' experiments. Following are a few extracts:—

"In December, 1895, and the early part of 1896, Dr. Wentworth, the assistant physician in a department of Harvard Medical School, performed an experimental vivisection of a considerable number of babies, in order to determine whether tapping of the spinal canal was dangerous or otherwise. He reported his experiments to the *Boston Medical and Surgical Journal.* If that journal ever made any protest against such vivisection of infants, it has not been observed.

The following is a brief abstract of some of these experiments:—

> Case I. Female, aged 29 months. Entered hospital December 8, 1895. Lumbar puncture performed at time of death.
>
> Case II. Female, aged 20 months. First puncture January 16, 1896; second puncture January 23, 1896; third puncture February 16, on the day of the patient's death.
>
> Case III. Female, aged 4 months. Puncture, January 17, 1896. Patient died January 22.

"In a lecture before the Medical Society of Stockholm, May 12, 1891, Dr. Jansen of the Charity Hospital of that city reported certain experiments he had made.

> When I began my experiments with black small-pox pus, I should, perhaps, have chosen animals for the purpose. But the most fit subjects, calves, were obtainable only at considerable cost. There was, besides, the cost of their keep, so *I concluded to make my experiments upon the children of the Foundlings' Home,* and obtained kind permission to do so from the head physician, Professor Medin.
>
> I selected fourteen children, who were inoculated day after day. Afterward I discontinued them, and used calves. . . . I did not continue my experiments on calves long, once because I despaired of gaining my ends within a limited period, and again *because the calves were so expensive.* I intend, however, *to go back to my experiments in the Foundling Asylum at some future time.*

✠

"In the *Deutsche Medicinische Wochenschrift* (The German Medical Weekly) of 1891 (p. 306), a writer says:

> I am sorry to say that it is very difficult to obtain subjects for such experiments [*i.e.,* inoculation with germs of consumption]. There are, of course, plenty of healthy children in consumptive families, but the parents are not always willing to give them up. Finally, I got a little boy for the purpose. The treatment to which I subjected him was to be a sort of punishment for some slight bit of naughtiness of which he had been guilty at home. I had been entreating the parents to let me have the boy for some time, but the father relented only when the child deserved punishment. He said to him: "Now you shall be inoculated." . . . My patient was *very susceptible to the poison.* After I had given him an injection of one milligramme, *the most intense fever seized him.* It lasted three or four days; one of the glands of the jaw swelled up enormously. *I cannot yet say whether the boy will be consumptive in consequence of my treatment."*

Reference is made to a paper read by Professor Cornel in June, 1891, before the Academy of Medicine at Paris, on the deliberate grafting of cancers, and also to experiments of a similar nature reported in the *Medical Press* (England) of December 5, 1888.

"In the *Bulletin of the Johns Hopkins Hospital* for July, 1897, appears an article entitled, 'Poisoning with preparations of the Thyroid Gland,' by Henry J. Berkley, M. D., of the Johns Hopkins University. Recognizing the fact that the extract of the thyroid gland, when administered to human beings, produces poisonous symptoms, and that 'when this administration is pushed even to a moderate degree, *death is almost invariably the result,'* he decided to experiment upon eight insane patients of the City Asylum. There is not the slightest intimation that the administration of the poisonous substance was given for any beneficial purpose to the patient. On the contrary, Dr. Berkley states that 'it was directly for the purpose of ascertaining the toxicity (or poisonous qualities) of one of the best-known varieties of the thyroid extract that *the following series of experiments* was undertaken. [Several of the patients died during the experiment.]

✠

"Because in the foregoing instances Human Vivisection seems to select for its victims the new-born babe, the deserted or outcast mother, the friendless, the ignorant, the poor, perhaps some reader may fancy that at least no danger of this nature can ever threaten his own loved ones. It may be that he says: 'Let science work her will on these lower orders of humanity; we, at least, are secure, guarded by social position, protected by wealth.'

"If so, one forgets history. Once the foundations of morality are undermined concerning the sacredness of human life, and there is safety for no one.

"Dr. Clifford Allbut, in delivering the Gulstonian lecture before the Royal College of Physicians, London, denounced in no uncertain terms methods of medical practice which certainly have a very close affinity to Human Vivisection. Referring with compassion to the sufferings of women, he mentioned *the morbid chains* and the *mental abasement* into which fall certain patients, 'the women who are caged-up in London back drawing-rooms, and visited almost daily, their brain and active spirits broken under a FALSE *belief*

Digitized by Google

in the presence of a secret and overmastering malady, and the best years of their life honored only by a distressful victory over pain.'—*Medical Press,* March 19, 1884."

The foregoing extracts are representative of the contents of the pamphlet. This startling presentation of facts shows the tendency of materialistic medical science, so-called. It is based on the false conception that man is material and that his life is materially created and maintained; and any effort to stay vivisection, to be successful, must attack the foundation and not the superstructure.

Nature's Cures and Christian Science.

GRAVE men of science like Professor James, the psychologist, a member of the faculty of Harvard University, testify that the Christian Scientists have accomplished many wonderful cures. He says that the evidence in behalf of these latter-day miracles is overwhelming. Therefore, he has argued before a committee of the Massachusetts Legislature, this new sect, which professes to bring back the age of Bible miracles, should be unmolested by harassing laws. On the other hand, Mr. Mallock, the famous Catholic writer, a man of brilliant qualities, although alarmingly inconsistent, urges that Christian Science and its alleged cures are a delusion, a nineteenth-century madness. It is astonishing to find an eminent Catholic author, in a century which has seen the rise of Lourdes to the dignity of a world-famous shrine where healing goes on continually (if we may believe not merely Catholic but outside testimony), it is surprising, we say, to find such a man discrediting the cures effected by the Christian Scientists.

We are not arguing for the Christian Scientists; we have neither part nor lot with them, but we are merely trying to look at the matter impartially, and we must repel the unfair attacks of a Mallock who belongs to a vast body of Christians that still holds to the possibility, indeed, the actuality, of miracles of healing. In Russia, John of Cronstadt, a famous priest of holy life, is reported, on credible testimony, to have effected wonderful cures by the power of faith. We have no personal knowledge of his cures, but the array of testimony in their support is sufficient to carry conviction to any court in Christendom.

That something does cure the ailments of man and beast, outside of the usual means, that the healing power of nature, does exist, none will affirm more strenuously than physicians. The best of them only profess to aid it, to give it a chance to work, and this is what underlies the modern antiseptic treatment of wounds.

May it not be fairly argued (and we do not say that this is the right explanation) that Christian Scientists often cure because they give nature, that mysterious power for which we have but a name, a clear field? In Von Hartmann's "Philosophy of the Unconscious," an attempt to show that a great, unconscious intelligence works continually in nature, there are many instances given of the wonderful power of reproduction in the lower forms of life. Spiders throw off injured legs and regenerate them. So do crabs. Fishes likewise regenerate their fins; lizards their tails. The Asterias reproduce their rays; so do snails and beetles their injured and lost antennæ and tentacles. Pigeons, according to Voit, have been known to regenerate their destroyed cerebrum, together with its function. Birds renew lost feathers, fishes their injured scales, and frogs their broken legs.

Some species of animals, belonging to the lower orders of the vertebrata, manifest powers of regeneration of lost or injured parts almost equaling in marvelousness those of the Annelida. For example: "Spallanzani saw among salamanders the four legs with their ninety-eight bones, besides the tail, with its vertebræ, reproduced six times within three months; in others, the lower jaw, with all its muscles, vessels, and teeth, was regenerated." The eye, in this species, according to Blumenbach, has been known to reproduce itself when the optic nerve escaped injury and a part of the eye remained intact. Would any one dare to deny that these marvels of conservation and repair are not due to psychic power?

And not only are lost, or badly injured, organs restored, but the animals know how to cure their diseases. When sick, they refuse to eat, but drink water freely. When suffering from fever, they bathe in water, seek outdoor air, and avoid the light. If likely to die, they seek places of seclusion, where they may be free from annoyance and be at rest. Dogs and cats, grievously wounded, will lie down in a running stream till their flesh heals. A dog run over by a carriage sought a brook and lay down in it three weeks till it recovered. A dog, stung by a viper, held the wounded part in running water several days, thus effecting a cure. All living things, even the most minute, display a profound instinct.

There is something which tends towards health in all nature: doubtless, as the Christian Scientists declare, the idea of being ill, the anticipation of successive symptoms, induces disease, and favors its development according to the expected course thereof. Every doctor employs suggestion; it is half the battle. That disease is always a mere "belief" we do not accept; that wise physicians, employing the resources of science, do cure is an every-day demonstration. But that outside of human science, beyond all our speculation, there is a something which makes for health we fully believe. *Nature tends towards perfection, towards symmetry;* no artist is comparable to that Great Artist who works in silence, carving the delicate shell and coloring it with a delicacy and an imagination beyond all human striving. In the world of nature one sees the Artist ever at work.

There is a Force, or better said, an Intelligence, at work to procure symmetry, harmony, and perfection in all animate things. Does the Christian Scientist invoke this power for curing human ills? Can it, by an act of faith, be enlisted for the healing of the sick? The little band of Christian Scientists who have organized here contain many intelligent people. Perhaps they may give an answer to our questions.

Editorial in the *Mexican Herald,* Mexico.

Enteric and its Cure.

IN an article on "Enteric" on Saturday we stated that "so far medicine has failed, honorably failed no doubt; but that the failure is complete there can be no two opinions." In the same article we advocated a trial of serum inoculation now being proposed by Surgeon-General Taylor. We give admission to the remarks of a contributor, on the subject:—

In the days of the ancient Roman empire, when the world was sick unto death of the moral diseases engendered by corrupt universal domination, a Great Teacher arose who professed to cure all disease. His most striking cures were effected upon those who were epileptics or violently insane, or, as his narrators described it, "possessed with a devil" or demon.

Times change and diseases change with them; we still have epilepsy and violent madness with us as a reminder that what has been may be again, but our thoughts now run, at least in India, upon plague, cholera, and enteric, a list sufficient for our purpose, though it might be almost indefinitely extended. Enteric is a typical European disease. It seizes hold upon unseasoned officers and privates,

Digitized by Google

upon those who still have the "fear of the climate" upon them. It is mostly a man's disease. He at last has an attack of country fever. The conversation at mess and in the barrack-room is always upon enteric and cholera. He has always feared enteric since the day he landed in India. Now that he is on his back his thoughts buzz, his brain teems with enteric. "I shall get Enteric! Enteric!! Enteric!!!" His medical advisers and nurses, with their long faces and clattering heels, do not help him. He will get Enteric! Enteric!! Enteric!!! The evil thought dominates him day by day, till within a fortnight the dreaded disease makes its appearance. The doctor feels a professional satisfaction in being able to assure him that he has got Enteric, and so his own thoughts of evil and all those daily in attendance, find their full fruition, and after weeks of struggle he dies, the victim of evil imaginings. A brave man on the field of battle, he has not learned to conquer his thoughts, to *compel* them into a healthful channel. Those about him, dominated by their methods of material cure, do not and cannot help him. He is helpless so long as he fails to realize that "a man's life consisteth not in the abundance of the things which he possesseth." His cure will come; disease will diminish and become nonexistent, when he learns to recognize the Truth as taught by the Master. The appreciation of Truth is a most perfect method of cure when one is laid upon a bed of sickness and the thoughts need to be compelled into sensible courses. "But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

The disease and the cure are the same also in cholera and plague. Here are the words of the Great Teacher: "These signs shall follow them that believe; In my name shall they cast out devils; . . . if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

All that is needed for this cure is a willingness by physician and patient to believe in the fact of our continued existence on the higher plane, and that it is possible to derive help from above.

The Mystery of Evil.

WHY does evil exist in the world? Why doesn't God kill the devil?

These questions, the one as asked by the philosophers of all time, and the other as asked by the children of all time, are still waiting for a conclusive answer.

The latest writer to essay an answer to the questions is Dr. John Fiske, in his little volume, just out, on "Thru Nature to God."

To account for evil, some have gone so far as to conclude that the world was originally created by the devil, and Christ has set himself to purify and reclaim it. Others have held that God is not omnipotent, and is compelled to strive perpetually to eliminate evil from the world. Mill held this view. Others have held to God's omnipotence, but have thought the Creator of the world to be an inferior emanation from God; hence this imperfect world. Others believe that there are distinct sources of existence, the one of good, the other of evil. And still another view has been that God is the Creator of both good and evil, but that His purpose in creating evil is past finding out, because of the limitations of human knowledge.

To this last view Dr. Fiske holds, and he thinks that science, especially evolutionary science, teaches us the same thing. He proceeds, not to disperse the mystery of evil, but to show that its existence is not a dissonance in the harmonies of creation, but is essential to development, and, indeed, to the very existence of a moral nature and of consciousness.

Constant change is essential to consciousness; it is what makes conscious life. Lack of it for an appreciable interval means unconsciousness. "It is only by virtue of this endless procession of fleeting phases of consciousness that the human soul exists at all." And this constant succession of changes that constitutes consciousness is impossible except for antagonistic forces. We cannot know anything except by contrast. If all sounds were one sound, it would be the same as no sound. If we never tasted anything but sugar, we would not know what sweetness means. So, "without knowing that which is morally evil, we could not possibly recognize that which is morally good." If we are to have a world of conscious life, we must have a world of sin and suffering.

But these forces of good and evil must be *antagonistic*. It will not do to sit down and say that since evil is a necessary part of the scheme of the universe, and cannot be destroyed, we will let it alone. It is in the struggle against it that we gain moral consciousness and preserve it.

The theory is interesting, if not altogether new. But what about heaven? The general idea of heaven is a place where this struggle ceases. Does conscious life also cease there. Is Nirvana the condition of future existence?

If Dr. Fiske's theory be accepted, we must dismiss the idea that has widely prevailed that heaven is a place free from sorrow, strife, and pain; or else we must accept the Buddhist idea of unconscious existence.—*The New Voice.*

From What Cheer, Iowa.

CHRISTIAN SCIENCE is growing so rapidly that a great many ministers deem it to be essential for the good and welfare of their "flocks," that they take a "smash" at the new doctrine with the intention of annihilating it, or at least crippling it, so that the Science of Christ cannot pursue the even tenor of its way. There is not a more quiet, law-abiding, unassuming, and unobtrusive faith in existence than Christian Science. It is noticeable, also, that those who believe in the doctrine are a very intelligent, well-to-do, wholesome class of people. Once a man believes that that which is, is right, and that God Almighty is his friend and on his side in the battle of life, he has a wonderful start toward retrieving a wasted life or fortunes wrecked by poor judgment. He ceases to wear out his nervous energy in worry, accepts conditions as they are, and goes to work to make the best of them. We do not understand the new doctrine and have no words of censure or recommendation. It seems queer to us whenever we think of it, that the real article of Christianity should have been hidden so long, but then we know that it is doing good and has done good in the world, and is it not reasonable that any movement accomplishing good in this wicked old world of ours, is worthy of respect? If the orthodox ministry would devote as much of its time and talent to a battle against Satan as it does to picking flaws in some other fellow's creed, the poor old spike-tailed devil would not have so much as a tax-title to any man's soul nowadays. "The ways they are many, the end is but one," and there is no time to be wasted among religious denominations in quarreling about the correct road to the gate of paradise. Let everybody start for the gate and get as many as possible to go along. A unanmious movement will leave mighty few people to "shoot chutes."

What Cheer (Iowa) Reporter.

Greatly begin! though thou have time
But for a line, be that sublime,—
Not failure, but low aim is crime.

The Lectures.

At Beloit, Kan.

Mrs. Annie M. Knott of Detroit, Mich., lectured to a large audience in Cooper's Opera House, in Beloit, Kan., May 5. One of the local papers published the address in full. Mrs. Knott was introduced by Attorney F. J. Knight, who spoke in part as follows:—

Ladies and Gentlemen:—We are met this evening to listen to a recital of the history and a statement of the principles of Christian Science. I need not assure you that they will be clearly and ably given.

From what I read in the newspapers of the day it seems to me that ere now your speaker of the evening must be soul-weary of the nightly iteration from the platform by respectable gentlemen that they "don't believe in Christian Science." Out of merciful consideration for her patience I purposely refrain from announcing my predilections. That is a question which can have very little interest for you. As the lawyers say, it is "incompetent, irrelevant, and immaterial." It is a matter of trivial significance to you what I may believe, or what another individual, or many other individuals, may believe, or may not believe, in regard to Christian Science. The important thing for you is to learn what Christian Science is, and what Christian Science does. That I take to be the purpose for which you are here this evening.

I believe it is fair to say that, generally, some judgment of the nature of a principle or a creed may be justly formed from the character of those who espouse it. Character reflects itself, and the character of its sponsors is inevitably reflected upon the cause which they advocate.

In any community you know that the character of the members of an organization or society is an earnest and index of its character and purposes; and in your own community, as in other communities, you know that the Christian Scientists are a body of sincere, intelligent, and earnest men and women, devoted to the advancement and uplifting of their kind mentally, morally, physically, and spiritually.

Once in a while, not so often as formerly, but now and then, you find a very good man saying that Christian Science "comes of the devil." This argument has the advantage of being very easy, much more easy than satisfactory or conclusive. The same argument was used by the same kind of people against the discoveries of Kepler and Galileo. Eliminate from the domain of natural science the things that these good people said "came of the devil," and you leave it a desolate waste, "a howling wilderness." If they want to rest their case and go to the jury on that proposition Christian Science will beat them, "hands down," every time.

All that Christian Science asks is a fair, "open field and no favors." Give it its "day in court." Let it have a fair and impartial trial in the forum of public opinion. If, then, it is, after all, only a fad and a delusion, it will "step through a thin place in the crust of oblivion," and be relegated with other fads and other delusions to a far corner in the lumber-room of forgetfulness. But if it is indeed the Truth which its friends claim it to be, it will live and go on its beneficent way forever to heal and to elevate, to bless and to redeem.

Ladies and Gentlemen, I have the honor to introduce to you Mrs. Annie M. Knott, of Detroit, Michigan, who will address you upon the history and principles of Christian Science. LYDIA E. BROWN, Clerk.

At Olean, N. Y.

There was a large and representative audience at the Academy of Music, Monday evening, May 9, to listen to a lecture delivered by Carol Norton, C.S.D.

Olean Herald.

The meeting was opened by Judge S. M. Norton, a relative of the lecturer, who delivered the introductory address as follows:—

Ladies and Gentlemen:—Perhaps with nothing are people so intolerant as a differing from their religious views. They are usually ready to condemn unheard and untried any departure from the ideas and beliefs they have adopted. All Christians, we assume, have the same object in view, but strive to attain it by different methods, and great good is accomplished through the instrumentality of each denomination. All believe in the Bible, the Christian religion, spiritual healing and improvement, and the forgiveness of sin. The Christian Scientists go further and believe in the healing of physical ills by the same means that the spiritual ailments are cured.

This system of healing is not new. Nineteen centuries ago both sin and sickness were alleviated in the same manner, and although we speak of the demonstrations of that time as miracles, Christ assured us that the works he did we should do also. Can we think of any reason why those who believe in him, and have understanding, should not accomplish now what he promised then that they might do?

There have been within the last thirty years, since this doctrine of Christian healing was promulgated anew, since it was given to the world as a reiteration of the Gospel of Christ as taught by him, many wonderful cures of the so-called diseases of the mortal body, and among those healed have been numerous cases where medical science has proved to be entirely inadequate to afford the slightest relief. Whatever practice, whatever belief, has been able to accomplish such results must certainly be worthy of investigation and arrest the thoughtful attention of all thinking people.

There are to-day a vast number of the inhabitants of the world who are believers in the efficacy of the healing power of Christian Science, and the numerous societies and church edifices of the Scientists everywhere attest the ever growing belief in its divine attributes. The Creator of the universe has the same Love for mankind that He had in that long ago time when healing was accomplished without the aid of drugs, and if He then permitted the development of a science of healing which was effectual, who shall say that He does not do so at the present time?

I have not known of Christian Science long, and do not know much of it now, but am sure that it is a Christian religion in which its students learn to live happier and nobler lives, to grow spiritually better and stronger, to escape the pain and suffering which mankind believes itself heir to, and to alleviate the distress of mortals.

That the people of the world may the better understand the Principle and teachings of Christian Science, that the misrepresentations against it may be dissipated, an International Board of Lectureship has been established which sends lecturers into all parts of the world to proclaim the Truth, that the people may hear and understand for themselves, and a representative of that Board is with us this evening whom I take great pleasure in introducing to you, Carol Norton, C.S.D., of New York City.

At Beverly, Mass.

The meeting at Odd Fellows Hall, Thursday evening, May 19, was well attended. A large and interested audience was present to listen to an explanation of the principles of Christian Science by Rev. Irving C. Tomlinson of Concord, N. H.—*Beverly Evening Times.*

The introductory address by Rev. Mr. Bulkeley was as follows:—

I have learned to-day that it is the custom of the organization under whose auspices this meeting is held often to invite a member of another religious organization than that which calls itself Christian Science to introduce their

Digitized by Google

speakers. And so far as this custom represents good fellowship I am very glad to respond to-night and accept the invitation of one of the Scientists of this city to open the meeting and introduce the speaker.

I may fairly say that I represent what all of you ought to represent, a larger body than Christian Scientists, Methodists, Episcopalians, or Unitarians,—namely, seekers after Truth. As such I think I may indicate what I think is the true attitude toward Truth.

I am not here because I have any special interest in Christian Science, not especially as a Unitarian, but I like to represent that attitude toward Truth which I trust all wish to occupy.

There are three attitudes maintained towards Truth. One is indifference; it does not care what Truth is. It makes no difference whether you present one truth or another. The second attitude is that which seizes upon a system of truth and says, this is *my* truth. It does not value the largeness of it, but says it is *my* truth, *my* denomination, *my* party, *my* way of looking at things. It is intolerance. When it is developed to its extreme it is bigotry. The third attitude towards Truth, is that which at one and the same time says not my truth, but that truth which is the opening into a larger vision, throwing open the windows of the soul to the light of God. This attitude is tolerant toward others. It seems to me we ought to take this attitude to-night.

Because of the brevity of our time, the speaker does not claim not to leave anything out, and he is quite willing to have you ask questions at the close of the lecture.

All denominations represented here, and others not represented, might be said to be pilgrims, who in our toiling up the ascent of knowledge are seeking that which Parson Robinson said would come, more light, more light! Yet we must feel, as we get higher and higher, that we come nearer together, till at last we shall become one, because we are seeking to understand God, who "is light and in him is no darkness at all."

The ways they are many and wide,
And no two ways are the same side by side.
We stand at the same little door when all's done.
The ways they are many, the end it is one.

We have here to-night one who is to tell you of one of these ways, and I have the pleasure of introducing to you the Rev. Irving C. Tomlinson, who represents the official Board of Lectureship of the Christian Science Church.

At New Paynesville, Minn.

Judge W. G. Ewing of Chicago was the guest of local Christian Scientists, Tuesday, May 16. He delivered an able lecture to a large audience on the subject of Christian Science at Tuttle's Hall that evening.

New Paynesville Press.

Mrs. Mary Gibson, First Reader of the New Paynesville Church, introduced Judge Ewing. Her address was as follows:—

Friends:—It is my privilege to announce that Hon. W. G. Ewing of Chicago, Ill., will speak to us this evening.

About a year ago the constituted authorities of the Christian Science Church at Boston appointed a board of lecturers, assigning them to different sections of the country. The call to hear the Truth as taught by Christian Science, has become so great that it was impossible for those who were assigned to this section, to meet the demand, hence the recent appointment of Judge Ewing to assist in the work, and it is in this capacity that we have him here to speak to us this evening.

The object of these lectures is to explain something of the Principle of Christian Science, for it is an indisputable fact that the world in general understands this great subject but little. It is misjudged, misrepresented, and ridiculed simply because it is not understood.

It is sometimes asked, If this is the religion which Jesus Christ taught, why is it so hard to understand? It may be answered that Jesus himself met with this same difficulty, for it is written that he sometimes said, "Why do ye not understand my speech? even because ye cannot hear my word." Yet we may suppose that those to whom he spoke had as good physical sense of hearing as we have. Again he says, "The words that I speak unto you, they are Spirit, and they are life." St. Paul tells us that "The natural man receiveth not the things of the spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned," and in many other ways he illustrates the impossibility of grasping spiritual and immortal things from a mortal and physical sense of things. I bespeak for the lecturer your careful and earnest attention. Let me now present to you the Hon. W. G. Ewing of Chicago.

At Grand Rapids, Mich.

The main floor and gallery of Powers' Opera House were completely filled Friday evening, May 19, by a refined audience to listen to Edward A. Kimball's address on Christian Science. Aaron Clark of Middleville, in introducing Mr. Kimball, said,—

The closing years of the century have disclosed many new things to the world. Thoughts that once startled men with their novelty and apparent impossibility have become accepted truths in every department of human activity. As one new thing or new thought after another has developed, mankind has thrown off the self-imposed limitations of the past. While the world still treads on material forces the fact becomes ever more prominent that Mind controls all. Wireless telegraphy and the transmission of photographs by the electric current prepare the mind for further advancement and almost impel faith that a breath shall, erstwhile, scatter the whole dark pile of human mockeries and a reign of Mind begin.

The century has shown marked improvements in forms of civil governments. Republics that have been founded on justice and equal rights, proclaim in a diviner sense than ever before in governmental organization, the brotherhood of man. The winds of time will sweep into oblivion all forms of false government, forms founded on something else than the everlasting foundation of Love, and put a stop to man's inhumanity to man.

No less marked than in other fields have been the changes in theological and religious thought. Among the changes is one that has profoundly moved the Christian world, the founding, during this generation, of Christian Science by the Rev. Mary Baker G. Eddy. Its growth has been unparalleled in ancient or modern times. It teaches us to look through nature up to nature's God. Both the universe and man must be interpreted through their Creator, their God. The revelation has been fruitful of good works, and the lap of the closing century is being piled high with immortal proofs of the truths disclosed.

Grand Rapids Democrat.

At Sharon, Pa.

The lecture given by Mr. Carol Norton, C.S.D., of New York, in Ashton Hall, Wednesday evening, May 17, on the work and scope of Christian Science, was well attended, the audience including many of Sharon's most prominent residents, whose close attention, Mr. Norton, by his eloquence and forcible arguments, held for over an hour. The speaker was introduced by Mr. E. W. Budd, in behalf of First Church of Christ, Scientist, of this place who spoke as follows:—

Digitized by Google

There are many people in this community, as well as elsewhere, who have heard of Christian Science, but have never taken the time or opportunity to investigate its teachings, who have, nevertheless, formed erroneous opinions about it; and its premises and fundamental principles have been misunderstood, for popular opinions regarding it are the direct antipodes of what Christian Science is or what it teaches.

The gentleman who will address you this evening comes to us with full authority and commission to speak upon the subject of Christian Science, and will explain what Christian Science is and what it is not. I trust his efforts in this direction will correct many errors and misconceptions that have hitherto obtained among some of the people upon this subject. And now, ladies and gentlemen, I have the honor and great pleasure of introducing Mr. Carol Norton, C.S.D., of New York City, your lecturer this evening.

The Sharon Herald.

At Denison, Iowa.

Edward A. Kimball, C.S.D., of Chicago, lectured here Tuesday evening, May 16, to a large and representative audience.

Professor Van Ness of the Denison Normal College introduced the lecturer as follows:—

Ladies and Gentlemen:—We have assembled here this evening to receive instruction on the subject of Christian Science. Considering the audience gathered here it is not to be expected that we all agree upon all questions, but this fact is always before us: as American people and a people that take pride in our country and the principles of our society, we all believe in listening to what others may have to say regarding what they believe and what their experiences have been. I have the pleasure of introducing to you Mr. E. A. Kimball who will address us.

A. OSWALD, Clerk.

At Malden, Mass.

Rev. Irving C. Tomlinson of Concord, N. H., lectured on Christian Science in Opera Hall Tuesday evening, May 16, to a large audience. He claimed that there was a misconception in the minds of many as to what Christian Science is, and that many people were opposed to Christian Science, not for what it is but for what they think it is. Mr. Tomlinson said that when Christ sent his disciples out to preach he commanded them not only to preach but also to heal the sick, and that one command was as binding as the other. He also claimed that for three centuries the followers of Christ possessed this power. Christian Science, he said, aimed not only to save souls from sin but to free the body from disease. It meant doing good.

The lecture was under the auspices of the First Church of Christ, Scientist, of this city. Mr. Tomlinson spoke for about an hour.—*Malden Daily Mail.*

At Seneca, Kan.

The recent lecture on Christian Science at the Opera House in Seneca, by Annie M. Knott, C.S.D., under the auspices of the First Church of Christ, Scientist, was largely attended, although a wind storm was howling through the town.

Mrs. Knott was introduced by Judge A. Wells of the Kansas Appellate Court. The lecturer spoke for about an hour and a half. The *Tribune* of this city published a synopsis of the lecture, and the other papers referred to it briefly.—*J. P. C.*, Clerk.

At Nebraska City, Neb.

Saturday evening was a gala time for the Christian Scientists, for they listened to a very interesting lecture by Edward A. Kimball of Chicago. The speaker was introduced by the Hon. J. Sterling Morton, ex-secretary of agriculture. There were some two hundred and fifty or more at the Overland to hear the tenets of this order explained. The Scientists were well pleased with the lecture.—*Nebraska City Daily News.*

At Providence, R. I.

Under the auspices of the First Church of Christ, Scientist, of this city, Rev. Irving C. Tomlinson of Concord, N. H., delivered his second address here Friday evening, April 14, to a large audience in Y. M. C. A. Hall. Mr. Tomlinson was presented by Robert Fessenden.

The subject of his address was, "The Unknown God Made Known."—*The News.*

At Austin, Minn.

Mr. Kimball's lecture of April 17, a notice of which was given in the *Sentinel* of May 4, was delivered at Austin, Minn., instead of Austin, Ill., as reported.

Answer to Rev. Mr. Packard's Third Sermon.

WE are pleased to see that our brother in his tirade against Christian Science has to go outside the Bible in his attempted support of drugging and taking medicine, and it is amusing to see how he has "bottled" himself up. While it is well known that the Apocryphal writers, on account of their "doubtful and spurious views," were shut out of the "sacred canons of Scripture" (see Webster's definition of Apocryphal). Christian Science is based upon the Scriptures, whose sacred pages are filled with instances of the power of Mind over matter, and of Truth over error, all teaching the grand lesson of entire dependence upon God alone for health and all things needful, and emphatically denouncing human means and methods. Jesus, our great example, in speaking to the hypocritical Pharisees of that day, said, "Woe unto you, Pharisees! for ye tithe mint and rue, and all manner of herbs, and pass over judgment and the love of God." Can a drug destroy fear or sin, which is the foundation of all disease? "But perfect Love casteth out fear." "By sin came death and all our woes." Christian Science deals with cause instead of effect. Remove the fear and evil thought, then the effects of sin will disappear, and this is scientific. Job found in his dire afflictions the worthlessness of drugging, and said, "But ye are forgers of lies, ye are all physicians of no value." "In vain shalt thou use many medicines" (Jeremiah, 46 : 11). How many to-day there are all over our land who are in the same condition as the woman spoken of in Mark, 5 : 26: "And had suffered many things of many physicians, and had spent all that she had, and was nothing bettered, but rather grew worse." And yet our brother, in his denial of Christian healing, would perpetuate these very conditions, holding the people in bondage; but hear Isaiah, 28 : 16: "Therefore, thus saith the Lord God, Behold, I lay in Zion for a foundation a stone, a tried stone, a precious corner-stone, a sure foundation: he that believeth shall not make haste. Judgment also will I lay to the line, and righteousness to the plummet: and the hail shall sweep away the refuge of lies, and the waters shall overflow the hiding place. And your covenant with death shall be disannulled, and your agreement with hell shall not stand: when the overflowing scourge shall pass through, then ye shall be trodden down by it."

We are pleased, indeed, to have our brother enlighten the public in regard to the thorough and efficient educational system established by the Discoverer and Founder of Christian Science. The Massachusetts Metaphysical college, chartered by the state in 1881, and the institutes for instruction in Christian Science, established by its normal

Digitized by Google

graduates in all the leading cities of our land, present a thorough and practical system of education that certainly commends itself to all investigators. It is without a precedent in history, considering its practicability and utility, and every one who is competent to judge, will declare that the value of such education cannot be estimated in dollars and cents. Methinks a well-informed orthodox minister, who is also paid by the people for his preaching and praying, would have had to pay almost as much for theological training. "One of the forms of worship in Thibet is to carry a praying machine through the streets, and stop at the doors to earn a penny by grinding out a prayer; whereas civilization pays for prayers by the clergy, in lofty edifices. Is the difference very great after all?" (Science and Health). But the sick are not healed, but consigned to the doctors. To such do not the Scriptures apply in Matthew, 23 : 23? "And have omitted the weightier matters of the law, judgment, mercy, and faith: these ought, ye to have done, and not to leave the other undone. Ye blind guides, which strain at a gnat and swallow a camel. Woe unto you, scribes and Pharisees, hypocrites! for ye make clean the outside of the cup and the platter, but within they are full of extortion and excess. Thou blind Pharisee, cleanse first that which is within the cup and platter, that the outside of them may be clean also."

The Christian Scientists, instead of paying out their money for doctors' bills, drugs, tonics, and stimulants, use it in building churches and extending this grand and noble cause of Truth and Love, which is breaking out everywhere like springs in the desert.

Does it not seem strange for our brethren professing to be ministers of the gospel, and followers of the meek and mighty Nazarene, to rise up and denounce Christian healing? We are informed that it is contemplated by the members of the Ministers' Alliance in this city, to take turns in preaching against Christian Science. They do not seem to be at all disposed to take Gamaliel's advice, Acts. 5 : 38: "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought. But if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." And we say again, brethren, you are too late; the edict has gone forth. Christian Scientists believe in expansion, and you can do nothing "against the Truth, but for the Truth;" and "whom the gods would destroy, they first make mad."

Christian Science presents a system of therapeutics which at present is only in its infancy, and yet it is positively known to heal ninety per cent of its cases; when, with a greater development, "what may not the harvest be?" It is destined to supersede all other means and methods.

Our brother's citations of the Harold Frederic case and other instances, are certainly remarkable for their far-fetched and bright (?) conclusions. His many excellent quotations from Science and Health are commendable indeed, and we hope some day he will get weary of "kicking against the pricks" and come over on the right side; then he will not be "dropping buckets into empty wells, and growing old in drawing nothing up," but will draw water out of "the wells of salvation," and "drink the water of life freely," and his "youth is renewed like the eagle's," and "prove all things, holding fast to that which is good." If he had been preaching in favor of Christian Science, he could not have used a better text. CHARLES M. HOWE.

Ingratitude.

BY G. W. DUFFUS.

IF a person who had been rescued from great peril by another person, should fail to appreciate the kindness shown, should repudiate the obligation to be grateful, and instead should vilify his rescuer, the world would stamp such an one an ingrate, some would go so far as to say, he was not fit company for man or beast; but Scientists should know that one who, to sense, manifests in so marked degree, lack of understanding and of love, was not manifesting his true self, but is allowing animal magnetism to becloud his consciousness; and that the real man, God's man made in the image and likeness of Him who is Omnipresent Good, does not speak in the words of error uttered by such a one.

We should regret that our brother had turned his face away from the Light temporarily, for we should know that he was punishing himself by abiding in darkness; for as a plant, which is a manifestation of Life, cannot thrive in darkness, so man, who is a higher manifestation of that Life, cannot thrive without the sunlight of God, Love. And as the eye, denied beneficent light, to mortal sense suffers pain when brought again into it, so mortal man, who shuts out the divine Light, must suffer in contrition when he returns to the intensity of that Light.

The following extract from Science and Health, page 136, shows how mortal man must pay the full penalty before he atones for the evil he has done: "In trying to undo the errors of sense one must pay, here or hereafter, the utmost farthing, until the body is fully brought into subjection to Spirit."

History shows that all great characters have had to meet ingratitude in greater or less measure, according to the degree of their greatness; and one test of their greatness lies in their manner of meeting it. Cæsar shows his greatness over ordinary mortals when, surrounded by those who conspired against him, in place of resorting to denunciation, he with dignity shows his false friend the depth of his ingratitude, in those simple yet noble words, "And thou too, O Brutus!"

The greatest character the world has ever seen, even measured by this test, a character so great in the sublimity of its simplicity and in the tenderness of its love that we might expect ingratitude to have been changed to loyalty by it,—even he has to drain the hemlock cup of ingratitude. He meets it not with reproaches or denunciations, but with loving looks and that sublime supplication for the ingrates, "Father, forgive them, for they know not what they do."

How she who stands as a sentinel on the watch-tower of Science, and is a mark for the shafts of malice, meets the atacks of ingratitude, needs no explanation, for thousands, yes, hundreds of thousands, of those who have been lifted from the depths of sin and sickness and set on the sunlit heights of duty, testify with an eloquence which neither pen nor tongue can utter. By their fruits ye shall know them."

There is no sadder picture in the gallery of the world's history than that night scene in the garden of Gethsemane, in which the lonely, self-sacrificing Nazarene who, after three years of assiduous labors and self-denials for mankind, leaves the little band which, out of all the multitudes that had received his bounty, might have been expected to have shown gratitude by compliance with his request, "Tarry ye here, and watch with me;" and returning finds them all asleep, not one having watched with him. Then realizing in its fulness the nothingness of human friendship, he utters these plaintive words which will echo through time while man is thrilled by them, "What! could ye not watch with me one hour?"

If the recipient of the love of Jesus of Nazareth, if one who was trusted by him above his brethren with the care of that which the world prizes most, could fall so deep in ingratitude as to betray his friend who trusted him, should we be surprised if mortal man to-day proves ungrateful?

It behooves us to avoid attempting to controvert the

Digitized by Google

deep things of God, lest we be overwhelmed. The humble Nazarene, brought by envy and ingratitude before the power of the Roman tribunal, demonstrates a force which the benighted ones who brought him there, had no conception of, for lo! the majesty of Truth changes the prisoner into the judge, and for the moment the role of power is transferred from the shoulders of Pilate to those of Jesus; and we see the spectacle of this man, the representation of a power so despotic that our own age presents no parallel to it, trembling on that borderland which separates Spirit from matter, and showing that a glimpse of Truth has revealed to him that the man before him is not like unto other men, for in tones of mingled awe and admiration he cries, "Ecce homo!" "Behold the man!"

"Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap."

Though the mills of God grind slowly, yet they grind exceeding small:
Though with patience he stands waiting, with exactness grinds he all.

Not in the sense of resentment are these words used, but in that of a sad commentary on retributive justice, for those who are protected by the shield of Truth are not injured by the shafts of malice or ingratitude, these shafts rebound off that shield and wound only the one who hurled them. Christian Scientists do not worship the personality of Mrs. Eddy, nor do they make an idol of her, but they do feel a deep sense of gratitude to God for the clear light of His Truth that is reflected for them by the individuality of the author of Science and Health.

Patience.

BY PAUL R. MAYBURY.

WEBSTER defines patience as, "Endurance without murmuring or fretfulness. The act or quality of waiting long for justice or expected good." When one "waits long for justice or expected good," his faith in the existence of that justice or good, must be very real. Such a faith, which by degrees becomes understanding, the student of Christian Science possesses in the Principle and laws of this Science. And this is why sincere Scientists are becoming more and more generally acknowledged to be just, charitable, and patient—without self-righteousness.

The Christian Scientist needs prayerful patience in handling specifically the errors that seem to form an actual part of his true being, and, in a general sense, those that appear to belong to his neighbor. When in earnest, he constantly strives to know that evil is no part of God's creation; that it neither has influenced, nor ever can influence, his true selfhood, or that of his brother. It is to be regarded simply as an illusion—nothingness. Therefore he must instantly cast out these subtle suggestions of evil, as a startled dreamer turns from the thought of some terrible nightmare, and thankfully turns his awakened sense to the assured realities about him.

The mother is patient with a fretful or fearful child; and because she understands that this inharmonious condition will soon disappear, she tenderly quiets it with her presence. In like manner do we need forbearance and wisdom in dealing with those who are new-born of Spirit. We should not become discouraged or neglectful because of their apparent weakness or slowness of growth; but should encourage and help them until they are strong enough to stand alone. Then they will help and cheer us along the upward way.

*Im*patience shows failure to suffer without murmuring; and *un*willingness to wait for justice or expected good. This state of mind clearly indicates a belief in the actuality of some power that can intervene between the individual and the goal of his efforts, preventing its attainment. But since God is Good; since "Justice and judgment are the habitations of thy throne" (Psalm 89 : 14); and He is Omnipotence, what power can exist to deprive man of eternal justice and infinite Good? For the true Christian then, the slightest sense of impatience is inadmissible, because it implies a lack of faith in God's almightiness. On the other hand, patience includes charity, love. Possessing it, we may press steadily onward, no matter even though the true image may seem to be hidden for a season.

And what an example of Christlike patience we have in our midst to-day! For how many long, weary years has our beloved Mother prayerfully striven to bring again to a starving world her understanding and demonstration of the spiritual Life! Because of her self-immolating love, we may truly say, in the words of our hymn, "The Truth to-day, to us has been by word and deed attested." What gratitude and inspiration there is in the knowledge that we can best repay her lifelong sacrifice and wise guidance by faithfully laying hold of man's divine birthright, which she has so fully revealed to this age!

In Common Justice.

THE charge that Christian Scientists have so often to meet and refute is that they "worship Mrs. Eddy." That such is not the case we know, and that the tendency has been a subject of warning and loving admonition her writings attest.

This tendency to exalt and worship personality has been one of the strongest impulses of the human race. But as a matter of fact, the Founder of Christian Science has been one of the wisest of all leaders of any movement, in that she has eliminated her personality as far as is consistent with the success of the Cause.

On the other hand, looking abroad over the history of the world from earliest times up to the present day, we see religious, philosophic, and other systems so identified with the personality of their founders as to be called by their respective names, a pitfall which in common justice it must be acknowledged Mrs. Eddy has avoided.

Let us look at the list of religious systems. Among them we find the Mohammedan, Buddhist, Calvinist, Lutheran, and Swedenborgian. The early Church carried this so far as to deify and worship the personality of the man Jesus, so that branches of the orthodox church of to-day consider as heretics all who do not.

We commonly hear the churches called by the names of their respective idolized pastors, and yet there is no remonstrance nor any such charge as is laid at the Christian Science doors.

We hear of Platonics, of Roentgen rays, of the Edison lights, and so on, *ad infinitum*, without a murmur from the public.

George Washington is called the Father of his Country in loving recognition of his services in establishing the freedom and independence of this our beloved land. Shall Christian Scientists be criticised because they give the reverent name of "Mother" to the sweet woman who, in all love, meekness, and selflessness, has shown the way of freedom to the human race?—a freedom much larger than political freedom,—a freedom, moral, spiritual, and physical,—freedom from all evils of sin, illness, and the "grim enemy" himself.

S. EDITH MOSES.

Miscellany.

Has Flourished in Spite of Opposition.

The lecture on Christian Science by Edward A. Kimball, at the Academy of Music, suggests a retrospective view of a denomination which is unique in the annals of contemporaneous religious history, declaring, as it does, that the theology and healing of Christianity are inseparable.

Digitized by Google

Mr. Kimball is an official lecturer of the denomination, and comes here under the auspices of the local Church of Christ, Scientist, which holds services at Parson's Business College. His purpose is not to proselyte, but rather to convey to his hearers some conception of what Christian Science is, what it is not, and what it has accomplished.

It has been said that no prophet ever came to earth without finding that the first thing across his path was a stone wall—a wall whose mason was prejudice, the half-witted child of ignorance. Christian Science has found that this rule has no exception. Discovered by a New England woman, Mary Baker Eddy, it was by her presented to the world in the text-book of Christian Science, "Science and Health with Key to the Scriptures." This book has been cannonaded by the press, denounced by the pulpit, and derided by the medical fraternity, yet it has passed its one hundred and sixty-fifth edition, and is the text-book of a denomination numbering over a million and a half of adherents. In its ranks are to be found ministers, doctors, and lawyers.

There is no effect without an antecedent cause, and the question inevitably arises, What does Christian Science contain that attracts so large and representative a following?

Its professors know that Christian Science is Christian; its beneficiaries know that Christianity heals.

Kalamazoo Daily Telegraph.

A Handsome New Organ.

The Christian Scientists of this city have taken another step to demonstrate the permanency of the denomination by installing a handsome new vocalion organ in their place of worship in the Masonic Temple. The exercises attracted a good audience on Sunday morning, a number being present from Brooklyn.

The voluntary by Organist John C. Miller brought out the fine mellow tone of the instrument, and the heartiness of the singing by the congregation showed that the instrument gave a great impetus to the musical service. J. E. Smith, C.S.B., gave a history of the new organ, and how it was purchased. He spoke of the part which music had in the worship of God, the harmony of the earth giving some conception of the greater harmony above.

The new organ, which is of beautiful light green, was manufactured by Mason & Resch, at Worcester, Mass. It has two manuals and twenty-five stops and couplers. Its distinguishing characteristic is the fine mellow quality of its tone. The method of tone production is entirely different from that of any other instrument of its kind, it being guaranteed to be free from defects and objections common to other systems. The method employed gives the pitch as a fixed quantity, free reeds being used for the purpose. In connection with each reed, however, there is a pipe, or chamber through which the tone passes, and this determines the quality of the tone. By this means the reed is given a smooth, fluty quality of tone as well as resonance and remarkable power.—*Poughkeepsie (N. Y.) Daily Eagle.*

The Great Microbe Terror.

Theodore Roosevelt, Governor of New York, has approved an important act of the Legislature which then became the law of that State.

It was an act "to prevent the spread of disease by kissing the Bible."

The bill was generally supported by magistrates, although some of them were not fearful of microbes. They thought the custom foolish and unnecessary. One said, "There are cases of fatal results from kissing, but I've never come across one. The danger has been exaggerated. We are made of dirt, and we are of the earth, earthy. There is nothing like good, clean dirt.

How refreshing this is in these days of the great microbe terror. "Good, clean dirt"—how wholesome that thought is! The microbe has no hold on the man who can think of dirt in that fashion. He who thus defied the microbe superstition and spoke his mind on it, deserves to become as a little child and be permitted to go out and make mud pies.

St. Louis Post-Dispatch.

Lincoln's Advice.

Ex-Governor Oglesby was a lifelong friend of Abraham Lincoln and told with pride of the advice given him forty years ago by this friend. "Dick, keep close to the people," said Lincoln, "they are always right and will never mislead you." It was not so very many months ago that the ex-governor aroused the greatest enthusiasm at the University of Chicago by telling his reminiscences of Abraham Lincoln. When he entered on the arm of President Harper the aged statesman seemed bent and feeble, but once on the platform his spirit became young again and he spoke with evident pride of his age and his good health. He had dined with Lincoln at the last dinner of his life, and had stood at his bedside until he had breathed his last.

Boston Evening Transcript.

A Comical Anecdote.

Apropos to the contest over the ordination of the Rev. Dr. Briggs, a funny anecdote is reported as having been told at a recent meeting of the alumni of Union Theological Seminary. It was anent a boy who undertook to baptize by immersion a cat, after the manner of the denomination with which he was familiar. Pussy, true to her instincts, put up a strenuous resistance. Twice the boy strove to accomplish complete immersion, and was each time foiled. On his essay for the third time to put pussy under water, she turned upon him and gave him a sorry scratching. Then his patience gave out. He threw her down in disgust, with the despairing remark: "Well, go ahead and be an old Episcopalian, if you must." He had no other way of excommunicating his proposed neophyte.

Boston Herald.

Governor Rollins of New Hampshire gave an address at a united Fast Day service in Concord, recently, in justification of the statement in his proclamation that religion in that state is at a low ebb. "When," said the governor, "we take hold of religious matters in as practical a way as we do our business affairs, New Hampshire will blossom as the rose, and not before." In this connection he asked, "Why shall we men allow the women to do all the church-going?"—*Boston Evening Transcript.*

Colonel R. H. Thomas, editor Farmers Friend, Mechanicsburg, Pa., was a caller on the News Letter Monday. Colonel Thomas is Secretary and Treasurer of the Pennsylvania Editorial Association, and visited Washington to arrange for the June excursion of that society. The Colonel was healed with Science from what was regarded as an incurable disease, and naturally he loves the "little book" and Mrs. Eddy, the Discoverer and Founder of Christian Science.—*Washington News Letter.*

A history of the English Bible, just published, states that less than one hundred years ago only about twenty million people spoke the English language. To-day it is the mother tongue of more than one hundred and twenty million. The Bible has been the chief source of their enterprise, growth, and prosperity.

Boston Evening Transcript.

Justice Brewer of the Supreme Court of the United States says, "I predict that the twentieth century will be noted for greater unity in Christian life. The present century has been one of denominational rivalry and strife. The next will be one of Christian unity."

Questions and Answers.

Is Christian Science an enemy of orthodox denominations?—An Investigator.

The attitude of Christian Science toward the orthodox church is clearly expressed in the words of its Discoverer and Founder, the Rev. Mary Baker G. Eddy. "I love the orthodox church; and, in time, that church will love Christian Science." Again she exhorts the members of her church to "Love all Christian churches for the Gospel's sake; and be exceedingly glad that the churches are united in purpose, if not in method, to close the war between flesh and Spirit, and to fight the good fight till God's will be witnessed and done on earth as in Heaven."

Many Christian Scientists were numbered among the most faithful members of orthodox churches, and only left those churches because they had found that which gave them a higher and more practical Christianity. Christian Science is in perfect accord with all that is true and good, wherever it is found, and likewise opposed to all forms of evil. Christian Science rejects much of the teachings of the orthodox churches, especially that which relates to the reality and power of evil; but it cannot be rightly called an enemy of these churches. It duly recognizes the good they have accomplished and are still accomplishing, but Christian Scientists have an assurance, born of experience, that if these churches understood the Science of Christianity they would be able to add to their good work of preaching the Gospel, that of healing the sick as well.

***

Why are the Ten Commandments and the Sermon on the Mount given such an important place in Christian Science teaching?—A Reader.

Obedience to the teachings contained therein imparts that true spirituality which enables one to overcome sin and heal sickness. Because this power can be gained in no other way, it is a matter of greatest importance that the Ten Commandments and the Sermon on the Mount be understood and obeyed. It would be difficult, if not impossible, to conceive of a single question that could arise in human experience, which does not find its proper answer in these most wonderful presentations of Truth.

One does not always see just why he should live in accordance with these Divine rules; but when he obeys, the harmonious results which follow show him why he should obey. Thus by putting into practice what he has learned in the letter, he gains the spiritual understanding thereof, and is able to prove his faith in God by overcoming the works of evil.

Another Lawyer Heard From.

BY WM. HOLMAN JENNINGS.

It had been the cherished desire of my mother that I should become a preacher in the Presbyterian Church; but at the age of twenty-one, when I was prepared for a course in theology, my ideas of election, eternal punishment, and a personal devil were radically different from the accepted articles of that denomination. Also, all truths seemed in unity, and all days were the Lord's days; hence there was no distinction between sacred and secular rights, duties, and science. However, in the fall of 1892, I went from Virginia to New England and attended for one session a well-known divinity school. In the summer of 1893 the conclusion came irresistibly that I could never preach with sincerity any of the schemes or plans of salvation known to "Comparative Theology." A year before this thought had come to me:—

> Let Theologues lull drowsy heads to rest,
> He best knows God who loves his Maker best.

In time the thought of Love became dominant, and my heart's desire was to promote the brotherhood of man in politics and in business, thus bringing religion into everyday life. Later I was led into the practice of law, as a place to stand, while studying sociology—with special study of political and religious ideas and organizations.

In August, 1897, I came to Tecumseh, Nebraska; and Mrs. E. O. C. handed me a copy of a text-book that I had never seen before, entitled "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. We also had a conversation on Christian Science, and I consented to read her text-book. Before reading very many pages in the "little book," it dawned upon me that the teaching therein was inspired by Truth, or else there was nothing in the marvelous claims of Mind-healing. For several years I had cherished the thought that the sons of God ought to be able, by virtue of their sonship, to overcome sickness as well as sin; for the nature of God is the same as ever, and human nature is the same, and God is not a respecter of persons, and hence not a respecter of generations; man's relation to God being the same as of old, and man's needs the same, and God's good will being constant and unchangeable, and His promise being to supply one's needs, and one of our needs being health,—hence it seemed that Divine healing was in accord with reason and revelation. But I had not looked to God for healing of my own disorders, nor did I know of any Christian that relied on God for healing.

But Christian Science taught the practical power of God unto salvation from sickness as well as sin; and so I was intensely interested and uplifted by its teaching. My eyes were weak and I wore glasses. The first glasses were prescribed by an oculist in Virginia; and the second pair of glasses were prescribed by an oculist in New England, who told me I was far-sighted. When I read without glasses the letters would seem much smaller and soon began to blur, especially when reading at night. After reading a few chapters in Science and Health, I told Mrs. C. that, if the teaching of the text-book were true, then it was not necessary for me to wear glasses. She advised me to go on reading and the Truth would show me what to do. The next day I put off the glasses and kept on reading Science and Health. About ten days later I was reading the life of Lincoln and the foot notes were in fine print. Presently the letters became blurred and I turned to Mrs. C., who works with her husband in the law and abstract offices, and told her I could not make out the letters, and asked her if I had to go back to glasses. She silently denied the error and asserted freedom for me, and instantly the blurred letters were plain, and I have never gone back to glasses. Since then I have been a constant reader of the writings of the Rev. Mary Baker G. Eddy, and of the *Journal*, and lately of the *Sentinel*. Many claims of my own and of my people in Virginia have been healed. Last month my mother, who lives in Virginia, was taken suddenly very sick. She asked me to treat her, which was done, and she came out of the claim promptly. The Omnipresence and Omnipotence of Infinite Mind, Spirit, God, who "giveth to all Life and breath and all things" needful to the development, use, and enjoyment of life, is now made plain beyond all contradiction. As children of Spirit, we have spiritual thoughts, powers, and attributes, just as the sons of mortals have the feelings and motions and characteristics of their parents. Like begets like; hence as the offspring of Spirit, man is in the likeness of Spirit—Godlike—having dominion and power to overcome all obstacles and fears and to abide in the harmony of His Presence. God is with us, and we are within Him.

The self-constituted medical trust for the purpose of tyrannizing over the people, now covers forty states. The trusts seem bound to make a man's living and life as dear as possible. Has human liberty fallen out of the bottom of the republic, and greedy gain on a gold base taken its place?—*Otay (Cal.) Press.*

Patients Healed.

John L. Roberts, a trustee in the Church of Christ, Scientist, and one of the most prominent healers of the cult in this city, in defending the doctrine, admitted that he had treated persons who were dangerously ill. He claims to have made some miraculous cures, as follows:—

No. 1. Case of a man with cancer, on the operating table and given up to die by seven doctors; cured in three months; weighs one hundred and eighty pounds now.

No. 2. Case of woman eighty-two years old; doctor said she could only live one night; healed in a week.

No. 3. Case of pneumonia given up by doctors to die.

No. 4. Case of boy of fifteen, suffering agonies from rheumatism for four years; healed in two weeks.

No. 5. Case of boy run over across abdomen by an ice wagon; healed in two days.

No. 6. Case of injury to a man's knee, where the doctors had advised amputation.

New York Evening Journal.

Mayor Martin Endorsed.

At the mass meeting in the Opera House, Sunday night, held under the auspices of the New Hampshire Anti-Saloon League for the purpose of considering the situation in Concord, and endorsing the work of Mayor Martin in closing the saloons, the following resolution was unanimously adopted by a rising vote:—

"Recognizing that the complete abolition of the saloon, as the deadly foe of industry, good morals, and general prosperity, would be of incalculable benefit to our community,

"Therefore, Be it resolved, That we most heartily commend the mayor in his brave and vigorous action, that we pledge him our sympathy and every support in our power which may aid him in his endeavors; and that we call upon all citizens who have the highest welfare of this city at heart, whatever their political affiliations, and whatever their particular views as to the best methods of enforcing the temperance prohibitory laws, to lend him encouragement, both by word and act, that he may be most successful in the performance of his important and sacred trust."

The meeting was the most enthusiastic held in recent years. On the platform was seated a majority of the ministers of Concord. The audience room was crowded to the doors with Concord's best people of all shades of political belief, but they were a unit in endorsing the action of the mayor in closing the saloons, and every mention of his name and the work in which he is engaged was loudly applauded.

Rev. J. H. Robbins was the first speaker. He said that when the League found an official who tried to do his duty it was the object of the League to hold up his hands and aid him in the work.

Mayor Martin has shown his purpose to suppress the liquor traffic in Concord. We all know that this is a difficult undertaking,—a tremendous task. It is a hydra-headed monster; a combination and confederation of all evil, grinding under its cloven hoof the lives of men, the hearts of women, and the joys of children. How important it is then that the people should stand behind him and sustain him.

Rev. John Vannevar said in part: "There has come to us a brave man, whose courage is born of his devotion to his sacred oath. This man said when he was inaugurated as mayor that he would do his best to enforce the law; and unless all signs fail he is doing his duty. That man is Mayor Martin.

The fight before him is a hard one, and he should above all others have the co-operation of every man and every woman in the city, in his efforts.

This is not a question of politics. It is a question that appeals to every individual in the community. Let us all take this subject to heart and let us stand shoulder to shoulder with Mayor Martin in the brave fight which he is making and aid him in every way.

Rev. F. K. Chase of the Curtis Memorial Church said, "This is not a question of politics. It is a question of fundamental importance, and every man or woman who would put a straw in opposition in the path of Mayor Martin, or hinder him in his work, should forever renounce their claims to be patriots."

Rev. Mr. Tomlinson said this was the first city in which he had resided where there were strict temperance laws and where there was a mayor who considered it his duty to enforce them. He had seen evidence of that enforcement. The question before us is not the enforcement of, but obedience to, law. Non-enforcement of law leads to mob law. It is a healthy sign that the people of the capital city stand for the enforcement of the law. In closing he thanked the city and its people for giving him a home in a community whose people believed in the enforcement of law and the dictates of Almighty God.

People and Patriot, Concord, N. H.

Distinguished visitors have arrived in Boston the past week in the person of the Countess of Dunmore, with Lady Mildred Murray, her daughter, who have come over from England to attend the Christian Science session on the 4th of June. Another eminent person, Lord Fincastle, heir to the earldom of Dunmore, is expected in Boston shortly for the same purpose. Lord Fincastle comes directly from India, where he was with his regiment. He distinguished himself last year, both in the Nile campaign and in the recent Indian outbreak, receiving for his services the Victoria Cross from the Queen, which, as is well known, is the highest honor her majesty can bestow in recognition of brave deeds. Social attentions await Lord Fincastle as well as the Countess of Dunmore from people who knew them in London.—*Boston Herald.*

Notices.

The J. C. Derby Co. of Concord, N. H., who have brought out the photographs of the Rev. Mary Baker Eddy, have, for the convenience of Scientists visiting Boston, opened a show-room at 203 Huntington Avenue corner of Norway St., where a complete line of photographs and all sizes of paintings and crayons are on exhibition. These rooms are open to visitors at all times during the day and on Wednesday evenings.

Visiting Scientists are welcome at all times.

The lecture of Edward A. Kimball, C.S.D., appearing in the *Christian Science Journal* for May is now published in pamphlet form. One copy or more, each, 10 cents; 12 copies to one address, $1.00; 25 copies to one address, $1.75; 50 copies to one address, $3.00.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JUNE 8, 1899. | Vol. 1 No. 41

MESSAGE OF THE PASTOR EMERITUS,

MARY BAKER EDDY,

To the Mother Church, Boston, Mass., on Communion Day, June 4, 1899.

My Beloved Brethren:—Looking on this annual assemblage of human consciousness, health, harmony, growth, grandeur, and achievement, garlanded with glad faces, willing hands, and warm hearts,—who would say to-day "What a fond fool is hope"? The fruition of friendship, the world's arms outstretched to us, heart meeting heart across continents and oceans, bloodless sieges and tearless triumphs, the "well done" already yours, and the undone waiting only your swift hands,—are enough to make this hour glad. What more abounds and abides in the hearts of these hearers and speakers pen may not tell.

Nature reflects man, and art pencils him, but it remains for Science to reveal man to man; and between these lines of thought is written in luminous letters, O man, what art thou? Where art thou? Whence and whither? And what shall the answer be? Expressive silence, or with finger pointing upward,—Thither! Then produce thy records, time-table, log, Traveler's companion, *et cetera,* and prove fairly the facts relating to the thitherward,—the rate of speed, the means of travel, and the number *en route.* Now what have you learned? The mystery of godliness—God made manifest in the flesh, seen of men, and spiritually understood? And the mystery of iniquity—and how to separate the tares from the wheat—that they consume in their own fires, and no longer kindle altars for human sacrifice. Have you learned to conquer sin, false affections, motives, and aims,—to be not only sayers but doers of the law?

✙

Brethren, our annual meeting is a grave guardian, it requires you to report progress, to refresh memory, to rejuvenate the branches, and vivify the buds, to bend upward the tendrils and incline the vine toward the parent trunk. You come from feeding your flocks, big with promise: and you come with the sling of Israel's chosen one to meet the Goliaths.

I have only to dip my pen in my heart to say, All honor to the members of our Board of Lectureship connected with the Mother Church. Loyal to the divine Principle they so ably vindicate, they earn their laurels: history will record their words and their works will follow them. When reading their lectures I have felt the touch of the spirit of the Mars Hill orator, which always thrills the soul. I have the great pleasure to report that within the last month there have been added to this Board the talent, influence, and experience of the distinguished Hon. William G. Ewing of Chicago, Ill., and Judge Joseph R. Clarkson of Omaha, Neb.

The members of the Board of Education, under the auspices of the Massachusetts Metaphysical College, have acquitted themselves nobly. The students in my last class in 1898 are stars in my crown of rejoicing.

We are deeply grateful that the church militant is looking into the subject of Christian Science; for Zion must put on her beautiful garments—her bridal robes;—the hour is come: the bride (Word) is adorned: and lo, the bridegroom cometh! Are our lamps trimmed and burning?

✙

The doom of the Babylonish woman, referred to in Revelation is being fulfilled. This woman, "drunken with the blood of the saints and with the blood of the martyrs of Jesus" "drunk of the wine of her fornication,"—would enter even the church, and retaining the heart of the harlot and the purpose of the destroying angel, pour wormwood into the waters—the disturbed human mind—to drown the strong swimmer struggling for the shore—aiming for Truth—and if possible poison such as drink of the living water. But the recording angel, standing "with right foot on the sea and his left foot on the earth," has in his hand a book open (ready to be read); that uncovers and kills this mystery of iniquity, and interprets the mystery of godliness,—how the first is finished, and the second is no longer a mystery or miracle but a marvel, casting out evil and healing the sick. And a voice was heard, saying, "Come out of her, my people" (hearken not to her lies) "that ye receive not her plagues for her sins have reached unto heaven, and God hath remembered her iniquities."

"Double unto her double, according to her works: in the cup which she hath filled, fill to her double," . . . "For she saith in her heart, I am no widow. . . . Therefore shall her plague come in one day, death, and mourning, and famine; for strong is the Lord God who judgeth her." That which the Revelator saw in spiritual vision will be accomplished, the Babylonish woman is fallen; and who should mourn over the widowhood of lust, of her "that hath become the habitation of devils, and the hold of every foul spirit, and the cage of every unclean bird"?

One thing is eternally here: it reigns supreme to-day, tomorrow, forever. We need it in our homes, at our firesides, on our altars, for therewith win we the race of the centuries; and we have it only as we live it. This is that needful one thing—Divine Science, whereby thought is *spiritualized,* reaching outward and upward—to Science in Christianity; Science in medicine, in physics and in metaphysics.

Copyrighted, 1899, by Mary Baker G. Eddy.

Happy are the people whose God is All in all; who ask only to be judged according to their works; who live to love. We thank the Giver of all good for the marvelous speed of the chariot-wheels of Truth, and for the steadfast, calm coherence in the ranks of Christian Science.

On comparison, it will be found that Christian Science possesses more of Christ's teachings and example than all other religions since the first century. Comparing our scientific system of metaphysical therapeutics with materia medica, we find it completely overshadows and overwhelms it, even as Aaron's rod swallowed up the rods of the magicians of Egypt. I deliberately declare that when I was in practice, out of one hundred cases I healed ninety-nine to the ten of materia medica.

✤

We should thank God for persecution and for prosecution, if thereby ensue a purer protestantism and monotheism for the latter days of the nineteenth century. A siege of the combined centuries, culminating in fierce attack, cannot demolish our strongholds. The forts of Christian Science, garrisoned by God's chosen ones, can never surrender. Unlike Russia's armament, ours is not costly as men count cost;—but it is rich beyond price; staunch and indestructible on land or sea;—it is not curtailed in peace surrendered in conquest nor laid down at the feet of progress through the hands of Omnipotence. And wherefore? Because it is "Peace on earth, good will towards men,"—a cover and a defence adapted to all men, all nations, all times, climes, and races. I cannot quench my desire to say this: and words are not vain when the depth of desire can find no other outlet to liberty. "Therefore . . . let us go on unto perfection; not laying again the foundation of repentance from dead works" (Hebrews, 6 : 1).

A coroner's inquest, a Board of Health, or class legislation is less than the Constitution of the United States; and infinitely less than God's benign government, which is no respecter of persons. Truth crushed to earth springs spontaneously upward, and whispers in the breeze man's inalienable birthright—*Liberty*. "Where the spirit of the Lord is, there is liberty." God is everywhere, nor crown nor sceptre, nor rulers rampant can quench the vital heritage of freedom—man's right to adopt a religion, to employ a physician, to live or to die according to the dictates of his own rational conscience and enlightened understanding. Man cannot punish a man for suicide—God does that.

Christian Scientists abide by the laws of God and the laws of the land; and following the command of the Master they go into all the world, preaching the gospel and healing the sick. Therefore be wise and harmless, for without the former the latter were impracticable. A lack of wisdom betrays Truth into the hands of evil men as effectually as a subtle conspirator; the motive is not as wicked but the result is as injurious. Return not evil for evil, but overcome evil with good. Then whatever the shaft aimed at you or your practice may be, it will fall powerless, and God will reward your enemies according to their works. Watch and pray daily that evil suggestions, in whatever guise, take no root in your thought, or bear fruit. Ofttimes examine yourselves and see if there be found anywhere a deterrent of truth and love, and hold fast that which is good.

✤

I reluctantly foresee great danger threatening our nation,—imperialism, monopoly, and a lax system of religion. But the spirit of humanity, ethics, and Christianity sown broadcast—all concomitants of Christian Science—is taking strong hold of the public thought throughout our beloved country and in foreign lands, and is tending to counteract the trend of mad ambition.

There is no night but in God's frown; there is no day but in His smile. The oracular skies, the verdant earth—bird, brook, blossom, breeze, and balm—are richly fraught with Divine reflection: they come at Love's call. The nod of Spirit is nature's natal.

And how is man, seen through the lens of Spirit, enlarged, and how counterpoised his origin from dust!—and how he presses to his original, never severed from Spirit! O ye who leap disdainfully from this Rock of Ages, return and plant thy steps in Christ, Truth, the Stone that the builders reject. Then will angels administer grace, do thy errands, and be thy dearest allies. The Divine law gives to man health and Life everlasting—gives a soul to Soul, a present harmony wherein the good man's heart takes hold on Heaven—whose feet can never be moved. These are His green pastures beside still waters, where faith mounts upward, expatiates, strengthens, and exults.

Lean not too much on your Leader: trust God to direct your steps. Accept my counsel and teachings only as they include the spirit and the letter of the Ten Commandments, the Beatitudes, and the teachings and example of Christ Jesus. Refrain from public controversy; correct the false with the true—then leave the latter to propagate. Watch and guard your own thoughts against evil suggestions, and against malicious mental malpractice, wholly disloyal to the teachings of Christian Science. This hidden method of committing crime—socially, physically, and morally—will ere long be unearthed and punished as it deserves. The effort of disloyal students to blacken me and to keep my works from public recognition—students seeking only public notoriety, and whom I have assisted pecuniarily and striven to uplift morally—has been made too many times, and has failed too often, for me to fear it. The spirit of Truth is the lever which elevates mankind. I have neither the time nor the inclination to be continually pursuing a lie—the one evil or the Evil One. Therefore I ask the help of others in this matter, and that according to the Scriptures my students reprove, rebuke, and exhort. A lie left to itself is not so soon destroyed as it would be with the help of the truth-telling. Truth never falters nor fails; it is our faith that fails.

✤

All published quotations from my works must have the author's name added to them; quotation-marks are not sufficient. Borrowing from my copyrighted works without credit is inadmissible. But I need not say this to the loyal Christian Scientist—to him who keeps the Commandments. "Science and Health with Key to the Scriptures," has an enormous strain put upon it, being used as a companion to the Bible in all your public ministrations, as teacher, and as the embodiment and substance of the Truth that is taught;—hence my request that you borrow little else from it should seem reasonable.

Beloved, that which purifies the affections strengthens them, removes fear, subdues sin, and endues with Divine power; that which refines character humbles, exalts, and commands a man; and obedience gives him courage, devotion, and attainment. For this hour, for this period, for spiritual sacrament, sacrifice, and ascension, we unite in giving thanks. For the body of Christ, the life that we commemorate and would emulate—for the bread of Heaven "whereof if a man eat he shall live forever"—for the cup red with loving restitution, redemption and inspiration—we give thanks. The signet of the great Heart, given to me in a little symbol, seals the covenant of everlasting Love. May apostate praise return to its first love, above the symbol seize the spirit, speak the "new tongue"—and may thought soar, and Soul be.

Items of Interest.

The American plan of mediation has been unanimously adopted by the sub-committee of peace delegates. It provides that, in the event of a difference arising between two powers, each shall choose another power to act as its second. The powers thus selected shall do all they can to reconcile the opponents. These seconding powers shall, even when war has broken out, continue their efforts, with a view of ending hostilities as soon as possible.

The correspondent of the *London Daily News* has the following to say concerning Mr. Holls, the author of the plan:—

"Mr. Frederick Holls, secretary of the American delegation, is the author of the American mediation proposals. In one of the most forcible and lucid speeches the conference has yet heard, he argued the utility of special mediation, as illustrated by the lessons of the Hispano-American war. He said that had Spain and America been each assisted by a mediator, peace would probably have been arranged, after the battle of Manila."

Memorial Day was appropriately observed in Massachusetts. Many instances illustrated the fact that the North and South are drawn closer together than ever before. Confederate veterans joined with the Grand Army men in the duties of the day. At Boston the oration of the day was delivered by General Wheeler, a Confederate general. This was the first instance where a Confederate officer was the principal speaker at Memorial Day exercises. General Wheeler received an enthusiastic reception, and his address was frequently interrupted by applause. The culminating point was reached when he closed his address with the sentiment: "My country, may she always be right; but, right or wrong, my country."

President McKinley received the following cablegram from Queen Victoria, in response to his message of congratulation:—

Windsor, May 25.

The President of the United States:—

I am deeply touched by the words of your telegram of congratulation. From my heart I thank you and the American people for the sentiments of affection and good will therein expressed. V. R. I.

The text of the Russian proposals regarding mediation and arbitration has been published. Part one deals with the desirability of seeking a solution of international disputes by the mediation of friendly powers. Part two deals with international arbitration, which it declares "the most efficacious and equitable means of settling questions regarding the international application of treaties." Part three outlines a plan for a commission of inquiry and provides for the selection of its members.

Information is received from Manila that the rebels have again dishonored their own flag of truce. The cable ship Recorder recently landed a party in a launch at Escalaute on the island of Negros after a flag of truce had been hoisted by the rebels. The rebels waited until the party had landed and then fired upon them. It is feared that Captain Tilly of the signal corps was killed.

At the National encampment of the Grand Army of the Republic at Washington, D. C., May 11, 1870, an amendment to the rules and regulations was added making it compulsory upon the Posts to arrange special services for May 30, and decorate the graves of every comrade whose grave can be found. The day is now a legal holiday in thirty-four states.

May 31 bids were to have been opened by the Navy Department for armor for battleships, monitors, and armored cruisers now authorized by law, but no bids were received within the price fixed by Congress, which limited the amount to be paid to four hundred dollars per ton.

Rear-Admiral Sampson, officers, and men were given a grand reception at Newport, R. I., on Memorial Day. One thousand bluejackets joined in the procession, and their marching and deportment were superb.

The report of the Nicaraguan Canal commission has been presented to the President. The report favors the Lull route and estimates the cost at about one hundred and twenty-five million dollars.

The Duke d'Arcos, the new Spanish minister to Washington, has arrived. He spoke unreservedly of the outcome of the war and said, "That is past, and Spain looks only to the future."

A number of leading women have issued an appeal to the women of the country asking them to sign a petition to the President expressing disapproval of the present course in the Philippines.

Chief Justice Fuller and Associate Justice Brewer of the United States Supreme Court, members of the Venezuelan Boundary Commission which meets in Paris, have sailed for Liverpool.

M. Ballot de Beaupre has completed his report on the review of the Dreyfus case, and strongly urges a new trial. He recited ten important facts in favor of the prisoner.

It is reported that Admiral Dewey has decided to stop at Piræus, from which port he will go to Athens and pay his respects to King George of Greece.

It is reported that the Czar has ordered that the Don Cossacks shall not hold their usual manœuvres this year, owing to the Peace Conference.

The British War Office has placed exceptionally large orders for munitions of war, including one hundred thousand six-pound shells.

There seems to be but little enthusiasm over the Dewey home project. Less than five thousand dollars had been received up to June 1.

Mr. John Elijah Blunt, C. B., has been appointed consul of Great Britain for the states of Maine, New Hampshire, and Massachusetts.

While in Boston, General Joseph Wheeler became a member of the George J. Whitten Camp of Spanish War Veterans.

Swift & Co. of Chicago, have received the contract for furnishing fresh beef to the army in Cuba and Porto Rico.

The total ordinary treasury receipts for the month of May were $44,786,013 and the expenditures $40,509,000.

Rear-Admiral Schley recently visited Salt Lake City and made a short speech in the Mormon tabernacle.

Archbishop Ireland recently said, "The United States is sure to be first in peace as well as war."

Communion Service at the Mother Church.

THE annual Communion service of the Mother Church was observed on Sunday, June 4, 1899. Next to the Mother's visits, this service was the most important event since the dedication of the Mother Church. The occasion was a most inspiring one, and will prove to be memorable in the annals of Christian Science history. The thousands of visiting Scientists coming from all parts of the country—between Maine and California—and a number from England, Australia, and Canada, is strong evidence of the progress being made by the cause of Christian Science in spite of persecution and prosecution.

The most important feature of the service was the Mother's message which is published in full on the first page of the *Sentinel*. The message was finely read by Mr. John W. Reeder, the First Reader of the branch church at Roxbury, Mass.

The following Boston papers published good accounts of the meetings, and most of them published the Mother's message in full: The *Herald, Transcript, Traveler, Globe, Journal, Post*, and *Advertiser*. Space will not permit us to republish the accounts given by all these papers. The following extracts are from the *Boston Herald:*—

Four great congregations in succession filled the edifice of The First Church of Christ, Scientist, the Mother Church of Christian Science, yesterday. Morning, noon, afternoon, and evening witnessed the gathering of multitudes around this monumental structure. They came from near and far: from Oregon and California, from Maine and Florida, the four corners of the republic, and from almost every state between. They gathered from the Bahamas and from transatlantic countries, and from Australia and India in the antipodes.

From avocations crowded with large responsibilities and decorated with distinctions, and from humble callings wherein the only glory to be won is the sense of duty done, they gathered to this shrine upon which the only relics laid are the tender memories and hallowed associations that cluster around the cradle of a faith, reared out of the loving gifts of many lands to her whom they revere as Founder, Leader, and spiritual Mother.

A simple service, the annual Communion of the Mother Church, drew these thousands from their distant homes.

No gorgeous ritual, no panorama of ecclesiastical pageantry, no splendors of art no enthralling oratory, no magnetism of great personalities, nor even the expectation of spirited debate on questions of moment to their faith, attracted this host to Boston. A few minutes of silent prayer and a few words of exhortation, admonition, and instruction from their Leader alone marked yesterday's exercises different from the ordinary Sunday morning service in a Christian Science temple of worship.

Strangers to the faith looked on with surprise as, early in the morning, the streets around the Mother Church were filled with waiting multitudes, eager to gain admission to the edifice. Nearly three hours before the hour announced for the first service the throng began to gather, and no sooner were the doors opened than every pew and every aisle and every corner of the large auditorium was filled.

And then another throng began to gather in the street. As the hour for the noon service approached, the crowd extended up Norway Street a block away, and along Falmouth Street almost an equal distance. The first service was finished at 11.45 A.M., and those within the church poured out through the side doors, while the waiting throng were admitted through the main entrance.

Throughout the day this arrangement prevailed, and despite the great numbers in attendance, there was no confusion, no indecorum, nothing unfitting the sacred place or the occasion.

Within the auditorium the scene was as beautiful as it was unostentatious. The Sabbath morning sunshine drifted in through the stained windows, throwing a mellowed light over chancel, pews, and galleries. A wealth of hydrangeas, lilies, and palms adorned and almost concealed the front of the pulpit platform, while in the centre, beneath the Readers' desks, a large vase of beautiful cut flowers rested. Tall palms half concealed the columns on either side of the platform which support the clusters of electric lights, and a number of splendid ferns relieved the choir balcony above the platform. These flowers constituted the only attempt at decoration, the soft and harmonious colorings of the walls and windows assisting of themselves to lend a simple, refined, and fitting effect to the ensemble.

But perhaps the most pleasing color effect of all was that gathered from the compact congregation in the pews. The bright-hued June toilets of the women dominated the mass, and were aided in their effectiveness by the sober garments of the men. The circle of humanity in the large gallery, which sweeps around three sides of the auditorium served to prevent the quiet beauty of the upper walls and ceiling from being overpowered by the stronger colorings on the main floor. The bright morning light happily emphasized every pleasing feature of the scene, and it is safe to say, that rarely has a more beautiful spectacle greeted the eye of an occupant of a Boston pulpit than that which was gazed upon from the platform of The First Church of Christ, Scientist, yesterday morning.

The arrangements for seating the congregations were entirely democratic in character. Except a couple of pews in the gallery intended for representatives of the press and a single pew on the main floor, every seat in the house was at the service of whomsoever might first reach it. The reserved pew on the main floor was held for and occupied by the Countess of Dunmore, her son, Lord Fincastle, and her daughter, Lady Mildred Murray, who had come to America especially to be present at this annual communion. The countess and her husband, the Earl of Dunmore, are Christian Scientists, as are also their children. Lord Dunmore did not accompany his family.

Lady Dunmore and her daughter came from England, and Lord Fincastle, who is a gallant young officer in the British army, and who recently received the Victorian Cross in recognition of his services to his country, left his regiment in India to join his mother at this service. He will return to his duties immediately.

The reservation of a pew for the Countess of Dunmore and her family was wholly a matter of international courtesy, and not in any sense a tribute to their rank. It was intended simply as a compliment to the country of which the party were distinguished representatives. It was evi-

Digitized by Google

dently accepted in this sense, for when the church became crowded, and the aisles were filled, Lord Fincastle and his sister, who is a young woman about nineteen or twenty years of age, arose and surrendered their seats to two older women. They stood in the aisle during the remainder of the service.

At the ten o'clock service, Judge Hanna, the First Reader of The First Church of Christ, Scientist, made the announcement that the Rev. Mary Baker G. Eddy, the Founder of the denomination, would not be present during any of the services. This announcement was scarcely unexpected, as it has been Mrs. Eddy's almost invariable custom to remain away from the great gatherings of the denomination. Even on the occasion of the dedication of the Mother Church, when many of her followers ardently hoped to have her with them, and when the occasion was peculiarly a testimonial of love and reverence for her, she remained at her home in Concord, N. H.

It was then explained that she wished to discourage personal adulation as much as possible, and to direct the thoughts of those who accept her teachings to the faith rather than to the Founder of the denomination. Familiarity with this constant purpose on Mrs. Eddy's part prepared those present yesterday for the announcement that she would not be present at the services.

There was very little in the order of exercises yesterday to indicate the exceptional character of the occasion. Even the great size of the congregations is no unusual feature at The First Church, for every Sunday the services are attended by a throng which exhausts the capacity of the church. The main point of difference was the scene upon the streets outside the edifice and in the vestibules and corridors, which, before each service, were as crowded as the sidewalks.

Some of those who came to attend the exercises were prepared for the possibility of not being able to obtain admission to the morning services, and brought luncheon with them. After the noon service quite a number of these thoughtful worshipers could be seen seated on the church steps and at other points of vantage, quietly refreshing themselves with sandwiches and cake, preparatory to the opening of the doors for the afternoon service.

Each of the four services was exactly like the others. Perhaps, to a stranger, the least conspicuous feature was that which gave the occasion its name—the annual Communion. It consisted only of a brief period of silence, followed by the repetition of the Lord's Prayer.

No material elements lay upon the altar, no bread nor wine passed from hand to hand and lip to lip. With bowed head and bended knee, and in a silence so profound that it seemed itself to proclaim the resolving of substance into spirit, the multitude which had made this pilgrimage from distant states and countries to their mother shrine received the spiritual sacrament for which they had come so far. And high over organ arch and pulpit and the heads of the worshipers, the painted words of the beloved apostle reflected back the Sabbath light upon the congregation, laden with the message, "God is Love."

The dominant note of the Christian Communion service is Love. The word pervades all that the church teaches concerning the feast. There are no material elements present. The idea is communion with a living Christ, and not a memorial of Christ dead. Prior to extending the invitation to commune, Judge Hanna read the following exposition of the nature of baptism and the eucharist from the text-book, "Science and Health with Key to the Scriptures:"—

"Our baptism is a purification from all error. Our church is built on the divine Principle of Christian Science. We can unite with this church only as we are new born of Spirit, as we reach the Life which is Truth and the Truth which is Life, by bringing forth the fruits of Love,—casting out error and healing the sick. Our eucharist is spiritual communion with the one God. Our bread, 'which cometh down from heaven,' is Truth. Our cup is the cross, our wine the inspiration of Love,—the draught our Master drank, and commended to his followers."

The noon service may be taken for purposes of detailed description, as representative of all the others. After the congregation at the first service had departed, and the second congregation had been seated, the exercises began with an organ voluntary, followed by the singing of the 163d hymn of the Christian Science hymnal, the words of which were written by Mrs. Eddy.

In the pulpit were seated Judge Septimus J. Hanna, First Reader of the Mother Church; Mrs. Eldora O. Gragg, the Second Reader, and Mr. John W. Reeder, the First Reader of the Roxbury Church of Christ, Scientist, who had been selected to read the message of Mrs. Eddy to each of the four congregations.

In the choir gallery were the precentor, Mr. J. Melville Horner, and the soloist, Miss Marcia Craft, while Mr. Charles Albion Clark presided at the organ.

After the singing of the hymn, Judge Hanna read the Scripture lessons. They were Psalm 91 : 1–6; Isaiah, 54 : 11–17, and Revelation, 12 : 12–17. Then came silent prayer, after which the Lord's Prayer was recited, with interpolations giving the Christian Science interpretation from "Science and Health with Key to the Scriptures," the text-book of the denomination.

At this prayer the congregation does not kneel, but participates with bowed heads. Hymn 36 from the hymnal, "The lifted eye and bended knee," was then sung.

At the annual Communion it is customary to admit new members to the Mother Church. There is no ceremony attending this feature. Not even the names are read out. Yesterday Judge Hanna simply announced that upward of twenty-four hundred and fifty new members had been received. This makes the membership of the church at the present time about 14,843.

The tenets of the Mother Church were next read, and also a rule, recently adopted.

At the offertory which followed the reading of this rule Miss Marcia Craft sang with much feeling and expression the beautiful communion hymn of the denomination, "Saw ye my Saviour," etc., the words of which were written by Mrs. Eddy.

At this point in the services Judge Hanna said:—

"Our Mother and Leader is not physically present with us to-day. This fact, however, her thoughtful and loving kindness has compensated for by the message she has sent us; a helpful and strong message—strong in the strength God supplies through his appointed one."

Judge Hanna then presented to the congregation Mr. John W. Reeder, who, he explained, had been invited and was glad for the privilege of reading, the "Mother's message" at the services.

The reading of the message was listened to by the congregation with the closest attention throughout.

Hymn 166, "Here, oh my Lord, I'd see thee face to face," etc., was sung by the congregation at the close of the reading, and then came the communion service proper. Judge Hanna gave a brief and simple invitation. He said:

"I now invite all present, whether members of this church or not, and communicants of other churches if there be any present, to enter with us into the inner sanctuary of Soul, for a brief moment, into the Holy of Holies, into the secret place of the Most High and the most nigh, for there is nothing so near as infinite Love. Let us now kneel in silent, peaceful, joyous communion with our Father and Mother God."

The great congregation, which had not knelt at the earlier prayer of the service, with one accord arose and assumed the attitude of supplication. Only a few persons

Digitized by Google

in the church remained seated, indicating the fact that there was a comparatively small number of persons present who had been drawn to the service through mere curiosity.

During the period of silent prayer the breathing of the congregation could almost be heard. At its close, the congregation still kneeling, and led by Judge Hanna, repeated the Lord's Prayer with great distinctness and solemnity.

The "Scientific Statement of Being," a quotation from the text-book of the denomination, was given, and then the full, round, rich voice of Judge Hanna pronounced the benediction, "The grace of the Lord Jesus Christ, and the love of God, and the communion of the Holy Ghost be with you all."

And then the service, which had drawn thousands of men and women from regions thousands of miles away, was over.

The afternoon and evening services were attended by throngs almost as great as the earlier ones. Many persons waited in the vicinity of the church for the opening of the doors through the latter half of the afternoon. At the evening service there were numerous strangers present, among them several clergymen of other denominations. It was estimated last night that the aggregate number of attendants at the several services was nearly six thousand.

The Annual Church Meeting.

To meet her faithful followers face to face and to speak a few words of encouragement to them, the Rev. Mary Baker Eddy attended the annual meeting of The First Church of Christ, Scientist, in Boston, Tuesday afternoon, June 6. The meeting was held in Tremont Temple, in order to permit as many of the members as possible to attend, the Mother Church being much too small for such a meeting. This was the largest meeting in the history of the Church, fully three thousand persons being present.

At the last of the four Communion services held at the Mother Church on Sunday, June 4, S. J. Hanna stated that it would be best for those who had arranged to go to Concord, N. H., the home of Mrs. Eddy, to defer their visit until after Wednesday. It was then taken as a hint that some opportunity might be afforded the visiting Christian Scientists of seeing their Leader in Boston.

Mrs. Eddy arrived in the city Monday afternoon at half past four. A carriage was waiting for her at the depot, which took her to her town house, 385 Commonwealth Avenue, where Judge and Mrs. Hanna reside, and was hospitably entertained by them.

At a quarter past two o'clock, Mrs. Eddy entered the auditorium of Tremont Temple escorted by Judge S. J. Hanna. The audience arose and remained standing respectfully until she was seated. Mrs. Eddy was attired in a quietly elegant gown of gray satin covered with exquisite black lace. Her remarks were very brief.

Mrs. Eddy returned to Pleasant View, Concord, N. H., on the five o'clock train Tuesday afternoon.

The appearance of Mrs. Eddy at the annual meeting in person, her reception at her Commonwealth Avenue house, and her return journey to New Hampshire in one day, indicate that she is not at all paralyzed.

Judge S. J. Hanna presented Mrs. Eddy to the audience with the following words:—

Beloved Friends:—Whatever the disappointment we may have felt because of the absence of our Leader and Mother from our Communion service is more than compensated for by the fact that she is now here. You all know her and you all love her. She knows you all and loves you all; and perhaps it will not be amiss for me to remark, by way of parenthesis, that she is in the enjoyment of excellent health. (Laughter and applause.) I regret to say, so far as I am personally concerned, that she is here rather to hear than to be heard. Nevertheless, possibly we may hear from her before the meeting closes. I hope so, and yet I have no authority to say so. Now will the audience join in singing, "Shepherd, show me how to go."

After the singing of this hymn and also the Communion hymn, "Saw ye my Saviour?" both of which were written by Mrs. Eddy, the report of the Treasurer was read, after which Rev. Mr. McKenzie said:

I do not think that it has been customary to have a formal vote of acceptance of the reports from the Treasurer, so that with this reading of it we shall consider it accepted. The interruptions in our order of business are a perfect delight to us. I have to announce another interruption, that is, it means that the real order of business will be taken up, and our beloved Leader will speak a few words to her children.

Mrs. Eddy then addressed the audience as follows:—

My Beloved Brethren:—I hope I shall not be found disorderly, but I wish to say briefly that this meeting is very joyous to me. Where God is we can meet, and where God is we can never part. There is something suggestive to me in this hour of the latter days of the nineteenth century, fulfilling much of the Divine law and the gospel. The Divine law has said to us,—

"Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

There is with us at this hour this great, great blessing; and may I say with the consciousness of Mind that the fulfilment of divine Love in our lives is the demand in this hour—the special demand. We begin with the Law as just announced, "prove me now herewith . . . if I will not open you the windows of heaven, and pour you out a blessing," and we go to the Gospels, and there we hear,—

"In the world ye shall have tribulation; but be of good cheer, I have overcome the world."

The Christian Scientist knows that spiritual faith and understanding pass through the waters of Meribah here—bitter waters; but he also knows they embark for infinity and anchor in Omnipotence.

O, may this hour be prolific, and at this time, and in every heart, may there come this benediction: Thou hast no longer to appeal to human strength, to strive with agony. I am thy deliverer. Of His own will begat He us with the Word of Truth. Divine Love has strengthened the hand and encouraged the heart of every member of this large church. O, may these rich blessings continue and be increased! It hath opened the Gate Beautiful to us, where we may see God and live, see good in Good, God All, One, one Mind, and that Divine, love our neighbor as ourselves, bless our enemies. Divine Love will also rebuke and destroy disease, and destroy the belief of life in matter.

It will waken the dreamer; the sinner, dreaming of pleasure in sin; the sick, dreaming of suffering matter; the slothful, satisfied to sleep and dream. Divine Love is our only physician,—never loses a case. It binds up the broken-hearted, heals the poor body, whose whole head is sick and whose whole heart faint; comforts such as mourn, wipes away the unavailing, tired tear, brings back the wanderer to the Father's house wherein are many mansions, many welcomes, many pardons for the penitent. Ofttimes I think of this in the great light of the present, the might and light of the present fulfilment thereof. So shall all earth's children at last come to acknowledge God, and be one, inhabit His Holy Hill, the God-crowned summit of Divine Science, the Church militant rise to the Church triumphant, and Zion be glorified. (Prolonged applause.)

At the conclusion of her remarks Mrs. Eddy retired

Digitized by Google

from the platform, while the congregation rose and joined in the singing of the Doxology.

ORDER OF EXERCISES.

The meeting was called to order by the President of the Church, Mr. Albert Metcalf. The hymn, "O'er waiting harpstrings of the mind," by Rev. Mary Baker G. Eddy, was sung. The twenty-seventh Psalm was then read. This was followed by selections from the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy.

Then came the usual silent prayer followed by the Lord's Prayer.

It was announced that the following persons had been elected to fill the offices of the Church for the ensuing year. Rev. William P. McKenzie, President; William B. Johnson, Clerk; and Stephen A. Chase, Treasurer.

The retiring president, Mr. Albert Metcalf, then introduced Rev. William P. McKenzie, president-elect, as follows:—

Friends, it affords me exceeding pleasure to present to you the president-elect for the current year, the Rev. Wm. P. McKenzie of Cambridge.

Mr. McKenzie addressed the meeting as follows:—

Ladies and Gentlemen:—You have come from the north and from the south and from the east and from the west up to this Mount Zion, this height of spiritual exaltation heretofore unreached, and it is my pleasing task to give you greeting. I might have found many objections to myself as a candidate for this office of responsibility as the servant of the whole church. Such a position might seem to require greater age and experience and wisdom than I possess; but when I recognize that you are the elect of Christ, the chosen light-bearers for this age and for the world, I know in my heart that I love you all, and perhaps lowly love will compensate for other lack. I know that we all pray to our loving Father that we may have, through Divine graciousness, the strength to emulate the example of our beloved Leader, since through the meekness and the majesty of her love she has become the greatest in the whole world because she is the servant of all. (Applause.) For many years she has been bearing all things and enduring all things that she might protect the laborers in this great cause.

We have all watched with delight the patience and the zeal of the birds as they build their nests, as with twigs and threads and straws and locks of wool they make a protection for their little ones. Think of the fidelity of the mother bird! When the nights are chill with frost she warms her nestlings with her own heart. With her own body she shelters them from the drip of the rain or the beating hail; and that makes us understand the picture of the poet who gives us a description of the unseen Mind and lets us know the quality of the divine Love, when he says,—

"He shall cover thee with his feathers, and under his wings shalt thou trust."

And that picture makes us think also of the protecting care of our visible Leader and Teacher, who during these many years has been perfecting various organizations for the protection of the unfledged broods; but from the inclemency of human thought, and from the insidious approach of the serpent, herself has been our protection. And now the time is coming for us to understand that, as the bird must learn to use his wings, and must find his home in the whole heavens, so we must rise out of the limits of organization, out of that which is limited and temporal, into a higher glory of life. We read in "Miscellaneous Writings," by Mary Baker Eddy, that what mortals hear, see, taste, feel, smell, constitutes their present earth and heavens. But we must grow out of even this pleasing thraldom, and find wings to rise into the glory of supersensible light, even as the bird that soars into the clear ether of the blue temporal sky.

Why is it necessary for Christian Scientists to rise to higher glory of life and to greater beauty of holiness? Because Christian Science is the great active force in human consciousness to-day. There is not one thought or movement that claims leadership in human thought which has sufficient coherence and consistency to lead the van of progress. Everything else that is being presented to mankind to-day is a house divided against itself.

REPORTS OF OFFICERS.

The Treasurer's report was read showing a balance on hand of $10,098.26.

The report of the Clerk was then read as follows:—

To the Members of The First Church of Christ, Scientist, —the Mother Church.

Dear Brethren and Sisters:—Since the last general assembly of this Church, held October 6, 1896, events have taken place which are of utmost importance to the welfare and progress of the cause of Christian Science from both a material and a spiritual point of view. These have come to us through our beloved Leader and Mother, the Rev. Mary Baker Eddy; through her ceaseless love, her continued sacrifices, and her labors for the uplifting of all mankind.

As the time allotted for this meeting will not admit of giving to you a detailed account of all the good that has come to us from our Leader, and as these may be found in full in the back numbers of the *Christian Science Journal,* only a brief reference to them will be made here.

A MUNIFICENT GIFT.

January 15, 1898, Mrs. Eddy caused an instrument to be executed by which she gave to this Church the real estate of the Christian Science Publishing Society, which comprises the buildings now occupied by the Society at Nos. 95 and 97 Falmouth Street, Boston, Mass., and valued at that time at no less than $22,000. In this gift Mrs. Eddy has reserved for herself only the right to occupy such room as may be necessary to carry on the publication and the sale of the books of which she is the author, and the literature connected therewith.

By this instrument she also gave to this Church the *Christian Science Journal,* the *Quarterly,* and all the publications of the Society, and also every right and privilege whatever connected therewith, saving only the right to copyright the *Journal* in her own name. All the moneys and assets thereof are to be held in trust by three trustees, who are to manage the business affairs of the Society. All accruing profits over and above the actual running expenses of the business are to be turned over to the Treasurer of the Mother Church (February *Journal,* not Verbatim). At the time this gift was made the value was estimated at $50,000, but at the present date is very much increased. The following is a copy of the letter sent to our Mother acknowledging the gift.

January 18, 1898.

REV. MARY BAKER EDDY.

Beloved Mother:—Without formality, but with hearts overflowing with gratitude inexpressible, we hereby tender you our deepest thanks for your munificent gift to our beloved Church, The First Church of Christ, Scientist, in Boston, Mass.,—The Mother Church,—and thanking God meanwhile for His infinitely greater gift to us in you, our Mother in Christ, our divinely appointed Teacher, Leader, and Guide who leadeth us indeed "beside still waters."

This letter bore the signatures of those present.

THE DEAR CHILDREN REMEMBERED.

May 20, 1898, Mrs. Eddy deeded in trust to the Mother Church the sum of four thousand dollars to be invested in

Digitized by Google

safe bonds for the "Dear Children contributors of the Mother's Room," the said sum to remain on interest till it is disbursed in equal shares to each contributor when he or she shall arrive at the legal age to receive his dividend with interest up to that date.

SPIRITUAL PROVISION.

By the direction of Mrs. Eddy a Board of Education has been created consisting of four members:—a president, a secretary, treasurer, and a teacher in obstetrics. This Board is to act under the auspices of the President of the Massachusetts Metaphysical College which was chartered by the state in 1881. The object of this Board is to prepare for teachers of Christian Science those persons whose Christian lives and the fruits thereof—healing the sick and reforming the sinner—give proof of their worthiness to receive the honors conferred by the President of this college and thus be legally authorized to teach Christian Science Mind-healing. The first session of this Board was held in January, 1899.

BOARD OF LECTURESHIP.

Also by the direction of Mrs. Eddy a Board of Lectureship has been established by the advice of our Teacher and in accordance with a Church By-law, and under the supervision of the Mother Church.

Lectures have been delivered in more than two-thirds of the states and territories in the Union, and in Canada. These lectures have generally been attended by very large audiences, and in many instances the largest auditoriums were crowded to their utmost capacity. The newspapers in the places where the lectures have been delivered have printed copious extracts, and in several localities the entire lectures have been published.

The good that these lectures have done cannot be estimated to-day, but one result is clearly apparent, that through them the masses of the people are afforded opportunities to learn the facts about Christian Science and the practicality of its teachings,—healing the sick and destroying the desire to sin. Furthermore, misrepresentations, either through ignorance or wilful intent, in regard to Mrs. Eddy and her book, "Science and Health with Key to the Scriptures," are constantly being corrected by these lectures. Under the auspices of the Mother Church three lectures have been delivered, two in the church and the third, owing to the crowded condition of the church at these lectures, was given in Music Hall, which was filled to its utmost capacity, and many were obliged to leave the hall because of the lack of even standing-room.

Although our beloved Pastor Emeritus has not visited the Church in person since we last met, her love for her children has not been without a visible manifestation. Many here to-day remember with what joy the Church received her invitation on Communion Sunday, July 4, 1897, to visit her at her home in Concord, and the message of thankful acceptance that was telegraphed to her. The pilgrimage of the two thousand five hundred who went to Concord July 5, the many happy incidents connected therewith; the welcome by Mayor Woodworth; the address by our Pastor Emeritus, as well as remarks by other speakers were reported in the Concord and the Boston newspapers, and were also published in the August number of the *Christian Science Journal*, 1897. But these reports cannot express the unspoken joy and the feeling of gratitude for this great and unexpected privilege. Many who were present on that day, for the first time beheld the face of the one through whose love and labor they had been raised from hopeless invalidism to perfect health, and were enabled to greet her as she arose to deliver her address on that memorable occasion. Truly their cup of joy was running over.

SERMON.

June 5, 1898, our Pastor Emeritus preached to the whole world through that great message to this Church, "Christian Science *vs.* Pantheism," which was read at both services to overflowing audiences.

BRANCH CHURCHES.

Since January, 1899, three branch churches have been established in the suburbs of Boston: Chelsea, Cambridge, and Roxbury. These were organized for the purpose of supplying a need that was felt in their respective districts, and also to relieve the overcrowded condition of the Mother Church. The aggregate membership of these churches is 186 with an average attendance of 609. Notwithstanding the opening of these three churches, the attendance at the Mother Church is very large, and often the standing-room is severely taxed.

The total membership of the Mother Church to-day is 14,843. Of this number 2,469 were admitted at the last semi-annual meeting June 3. This membership includes residents of every state and territory in the United States; Canada, Mexico, England, Scotland, Wales, France, Germany, Hungary, Russia, Norway, Australia, India, Hawaii, and the Bahama Islands.

Truly the prophecy of Isaiah is being fulfilled: that the earth shall be full of the knowledge of the Lord as the waters cover the sea, and the isles that have waited for his law have received it. This law that is written in the hearts of men is that which bringeth forth fruits meet for His kingdom.

The members of this Church are preaching in many lands the gospel of Jesus Christ with the signs following. And this Church is the fruit of the life and the labors of one God-led woman, whose members love to call her Mother and themselves her children; and wherever Christian Science is taught and practised in obedience to the teachings of "Science and Health with Key to the Scriptures," the name of Mary Baker Eddy, its author, who has given to the world in this book the spiritual, practical, and demonstrable interpretation of Jesus' teachings will be revered, for Jesus himself has given his word that whosoever will serve him, his Father will honor.

The following report of the work in the Sunday School was read.

Report of the Children's Sunday School of the Mother Church from October 6, 1896 to May 31, 1899.

The Children's Sunday School of the Mother Church was organized October 5, 1895, by the Christian Science Board of Directors, and the following rule was adopted by them:—

"Children under twelve years of age shall be admitted to the Sunday School; but none shall remain therein as scholars after they are fifteen years old."

Since the last report was given there have graduated from the Sunday School twenty-four scholars.

Six new classes have been formed, making the total number of classes at present ten.

Nine teachers have been elected, three to fill vacancies caused by resignations.

The average attendance has been 109. The largest attendance was 162. The smallest attendance 44.

The average collection was $3.67. The largest collection was $6.51. The smallest collection was $1.52.

On Communion Days there have been no sessions of the Sunday School.

On two Easter Sundays the children of the Sunday School have visited the Mother's Room.

Officers elected for the ensuing year are:—

Superintendent, Thomas W. Hatten.

Assistant Superintendent, Miss Rachel T. Speakman.

Secretary, Miss Lillian Brainard.

Digitized by Google

"Shepherd, show me how to go," written by Rev. Mary Baker G. Eddy, was sung by Miss S. Marcia Craft, the solo singer of the Mother Church.

An hour and a half was then spent in hearing the most encouraging reports of the progress of the work in the Field. Reports were received from all parts of the United States and from Canada, England, Dawson City, and Australia.

Letters received from Kansas City, Mo., and Edinburgh, Scotland, and also a telegram from South Bend, Ind., were read.

After a most interesting and profitable session which lasted nearly three hours, the meeting closed by singing hymn No. 1, and the members of the Mother Church separated to go into their respective fields of labor feeling greatly strengthened and encouraged to labor unceasingly for the good of humanity by healing the sick, comforting the sorrowing and reforming the sinner.

Wrath Turned to Praise.

CAROL NORTON delivered a lecture on Christian Science in Carnegie Hall, New York City, December 19, 1898, which was attended by three thousand people and the event was ignored by the entire daily press of the city, with the exception of *The Postscript*, an afternoon paper published in Harlem.

The lecture was given at the time when the newspapers of the world were filled with stories and comments on the Harold Frederic case, and the metropolitan press almost unanimously condemned Christian Science.

An address of the Rev. Mary Baker G. Eddy to First Church of Christ, Scientist, Concord, N. H., read February 22 last, contained the following prophetic assurance: "Rest assured that the injustice done by press, and pulpit, to this denomination of Christians will cease, when it no longer blesses it. This I know, for 'God is for me.' Psalms. And in the words of St. Paul, 'If God be for us, who can be against us?'" Mrs. Eddy also quoted the following Scripture, as a reason why she could be patient with the press: "The wrath of man shall praise Thee: the remainder of wrath shalt Thou restrain."

In New York, this prophecy has been splendidly fulfilled, for the wrath of the newspapers has been turned to praise, and the remainder of wrath seems to have been restrained.

The totally unprovoked attack on Christian Scientists in New York lately by officialdom, doctors, and press, is current history. The leading journals were filled with sensational stories purporting to prove that Christian Science is the most transparent of frauds. They went so far in their effort to uproot Christian Science that they left public sentiment behind them, and, to their discomfiture, began to be hotly pelted by their subscribers. By reason of the prominence given to these slanders of Christian Science and Christian Scientists, they created a general public demand to hear the other side of the question, and so they were compelled to give prominence to the great meeting at the Metropolitan Opera House, Sunday afternoon, May 28, which Carol Norton, C.S.D., an official member of the Christian Science Board of Lectureship, addressed.

The Rev. William P. McKenzie of Boston, member of the International Board of Lectureship, presented Judge S. McArthur Norton of Allegheny County, N. Y., who introduced Lecturer Carol Norton. On the stage were Mrs. Laura Lathrop, C.S.D., member of the Board of Education of the Christian Science movement, and the Readers and trustees of fourteen churches of the Metropolitan district, as follows:—

First Church of Christ, Scientist, New York City.
Second Church of Christ, Scientist, New York City.
Third Church of Christ, Scientist, New York City.
West Side Church of Christ, Scientist, New York City.
First Church of Christ, Scientist, Brooklyn.
Brooklyn Church of Christ, Scientist, Brooklyn.
First Church of Christ, Scientist, Jersey City, N. J.
First Church of Christ, Scientist, Newark, N. J.
First Church of Christ, Scientist, Mt. Vernon, N. Y.
First Church of Christ, Scientist, Port Richmond, Staten Island, N. Y.
First Church of Christ, Scientist, Orange, N. J.
First Church of Christ, Scientist, Cranford, N. J.
First Church of Christ, Scientist, Englewood, N. J.
First Church of Christ, Scientist, Poughkeepsie, N. Y.

All the daily papers of New York published accounts of the lecture, and so did the newspapers of the East generally. *The New York Mail and Express* printed the lecture in full, and editorially gave its reasons for so doing, as follows:—

Christian Science—What Is It?

Sincerely believing that there is a widespread and intelligent popular interest in the spiritual movement known as Christian Science, *The Mail and Express* considers that it is rendering a commendable service to the cause of Truth in publishing to-day a full report of the lecture delivered in the Metropolitan Opera House yesterday by Carol Norton, of New York. It should be understood at the outset that this publication does not imply that *The Mail and Express* approves the doctrines and practices in which Mr. Norton and his associates believe. On the contrary, they have been more than once criticised in these columns, and the Christian Science profession of physical healing we have as frequently condemned as a peril to society. But the meeting in the Metropolitan Opera House was an event of public importance. It numbered upward of three thousand persons. It represented fourteen distinct Christian Science organizations in the metropolitan district, and the address of Mr. Norton was such in text and temper that no honest truth-seeker, be he friendly or hostile, will care to ignore it. For this reason we accord it this unusual space.

Mr. Norton has certainly made the strongest presentation of the philosophy and method of Christian Science that has thus far come to public notice. He holds that it is in harmony, not only with true science, but also with Christianity itself, and that it simply gives a broader and higher interpretation to the Scriptures. That the doctrines of this new creed have appealed to thousands of highly intelligent men and women is beyond question. The growth of the movement is remarkable and the spread of its influence is a fact which its opponents have nothing to gain by denying. If its teachings are false they will be disproved in due time by the inexorable tests of truth, and the way to the truth lies through the frank, free, and devout discussion which the leaders of the movement invite.

Following are brief extracts from the reports of the lecture in the prominent New York papers of Monday, May 29:—

Mail and Express.

The Metropolitan Opera House was well filled yesterday afternoon by an audience of upward three thousand people who gathered to listen to a lecture on Christian Science, by Carol Norton, C.S.D., of this city.

The lecture was under the auspices of the fourteen Christian Science churches in the metropolitan district. About one-third of the audience were Christian Science believers, who applauded generously at times. The rest gave the lecturer undivided attention. Almost every seat in the parquet, balconies, and in the boxes was occupied before

Digitized by Google

the lecture began. On the stage one hundred trustees and Readers of both sexes of the Christian Science churches occupied chairs.

Concerning the request of the lecturer for all in the audience who had been healed by Christian Science to stand up, and the response, the *Mail and Express* report is as follows:—

"In order to present a dignified confirmation of the claims set forth in this lecture, with no intention of presenting any spectacular effect, I now ask all who have been healed by Christian Science to stand."

[At this point about one-third of the Metropolitan Opera House audience, or about a thousand persons, arose.]

"In order to carry this confirmation further, and make it more convincing, I now ask all who have been healed of organic diseases through Christian Science to rise."

[Some four or five hundred persons arose.]

"This confirmation is unanswerable and presents a practical object-lesson in the argument for the system."

From the Herald.

Fully twenty-eight hundred listeners sat in the Metropolitan Opera House yesterday afternoon and patiently heard Carol Norton talk for nearly two hours on Christian Science. It was said to be the largest and most representative meeting in the interests of the Christian Science movement ever held in this city, and in view of the recent strictures put upon the Christian Scientists by the District Attorney and the Board of Health it was considered to be of unusual interest.

A singular test was made as to what proportion of the audience was composed of Christian Scientists. Members of the New York, Brooklyn, and New Jersey churches, by common consent, seated themselves in the box tiers and upper galleries, leaving the main floor to other visitors. When, toward the close of his lecture Mr. Norton asked all in the audience who had received any benefit whatever from Christian Science treatment to stand, the persons in the galleries and boxes rose almost *en masse,* while those on the main floor were nearly all seated. The result of this test was received with applause.

"Now," said Mr. Norton, "will all who have been cured of organic disease by Christian Science treatment please rise?"

The number of persons who rose to their feet was not so numerous as on the first call, but it represented fully one quarter of the audience.

From the World.

Carol Norton, C.S.D., lectured yesterday afternoon in the Metropolitan Opera House under the auspices of the fourteen Christian Science churches in the metropolitan district. Every seat in the spacious theatre was filled. It was the largest audience the preachers of the faith have ever gathered in this city, numbering thirty-five hundred persons.

It is doubtful if a gathering more intelligent in appearance was ever assembled beneath the same roof. For nearly two hours they sat and listened intently to the speaker. Sometimes they applauded by the clapping of their hands. It is estimated that one third of those present were professed Christian Scientists, and when toward the close Mr. Norton asked all who had been healed by Christian Science to rise, about five hundred responded. And then, while the organ pealed, the congregation arose and with one voice joined in singing the Doxology.

From the Times.

The Metropolitan Opera House was yesterday afternoon crowded to its doors on the occasion of a lecture on Christian Science by Carol Norton. The lecture was under the auspices of the fourteen Christian Science churches of the metropolitan district, and each of the churches was well represented.

The two upper galleries had been set aside for the exclusive use of the members, but these were wholly inadequate to accommodate all who sought admission to them, and many were forced to seek seats in other parts of the house. This was no easy matter, as a full quarter of an hour before the time appointed for the meeting, 3 P.M., every seat in the orchestra and in the boxes had been taken, and many people were standing in the aisles. On the stage were about 150 persons—leaders in the Cause—who sat behind the Chairman and the speaker.

Men and women, old and young, in every walk of life were present, and the interest which they took in the proceedings and the signs of approval which greeted the remarks of the speakers left no doubt in the mind of the layman that most of those in the gathering were Christian Scientists.

Probably the most remarkable feature of the meeting was when, in order, as he said, to prove the excellence and the direct and lasting benefits of Christian Science, Mr. Norton asked all those in the house who had been cured by Christian Science of any disease to stand up. In an instant over seven hundred people in the orchestra and the first three balconies—not including the regularly recognized Christian Scientists on the platform and in the two upper galleries—rose to their feet. This was the signal for a great outburst of applause. The applause was renewed a moment later when, in response to a second invitation from the lecturer, at least two hundred people rose from their seats to give standing evidence to the fact that they had been cured of some sort or other of organic disease.

"And that," said the lecturer, "is what you will find wherever you go among Christian Scientists. We have cured, and we will cure, thousands. Every time we fail that fact is published the wide world over and heralded as a sign that our science is a dangerous fad; yet when we cure hundreds upon hundreds not a word is said."

From the Press.

Christian Scientists of the metropolitan district, comprising fourteen churches, held a general meeting in the Metropolitan Opera House yesterday afternoon. The Opera House was packed to the doors, and the stage was filled.

From the Sun.

Carol Norton, C.S.D., delivered a lecture on Christian Science, yesterday afternoon at the Metropolitan Opera House to an audience of over three thousand persons. About one third of the audience appeared to be in sympathy with the speaker. The rest were attentive but undemonstrative listeners. The lecturer spoke for two hours, lauding Mary Baker Eddy, the Founder of this faith.

Near the close of the lecture the speaker asked all those in the audience who had received benefits from Christian Science to stand up. About one hundred and fifty men and women responded.

"Now let all those who have been cured of some organic disease rise," he said. About fifty persons stood up.

The lecturer was loudly applauded, and at the close of the lecture a crowd of men and women thronged about him in a room at the rear of the stage and extended congratulations.

The Tribune.

This paper published a brief abstract of the lecture without referring to the testimony of the audience to having received benefits from Christian Science.

The Evening Telegram.

This paper is virtually the evening edition of the *Herald* and republished the substance of the report from that paper.

The Journal.

The Journal published a brief extract of the lecture with a sketch of Mr. Norton as he appeared on the stage.

From the Daily News.

The lecture on Christian Science by Carol Norton at the Metropolitan Opera House has attracted much interest.

The lecture was given yesterday afternoon under the auspices of the Christian Science churches. Each church was well represented. It was evident that most of those in the audience were Christian Scientists. When Mr. Norton requested all those who had been cured of disease to stand up, more than seven hundred responded.

This is the history of an important victory for Truth in the Metropolis of the western hemisphere.

The Lectures.

At Toronto, Ont.

Mr. Carol Norton, C.S.D., of New York City, a distinguished Christian Scientist, lectured to a large and representative audience in Massey Hall, Friday evening, May 26. At a conservative estimate twenty-eight hundred people were in attendance. Mayor Shaw presided, and from his introductory address it must be inferred that his Worship has not only studied the tenets of Christian Science but is a believer therein.

To the believers in the audience, as well as to those who were present from mere desire to hear what Mr. Norton had to say, the lecture proved of exceptional interest. His address was entitled, "Christian Science alias the Healing and Saving Power of Christianity." He spoke clearly and dispassionately, and made no attack upon other religions or creeds. He laid down the principle that Christian Science is not the discovery of a new thing so much as the recovery of a temporarily lost element of the Christian religion, and upon this basis he proceeded to place concisely before his hearers the authorities upon which the religion is founded.

In opening the meeting Mayor Shaw said, "I accepted the invitation to be present here this evening with a very great deal of pleasure, partly because the distinguished lecturer is an American citizen, and we are desirous of showing our American cousins that we reciprocate the cordial feelings which they express toward us, and partly because the subject is an interesting one, namely, Christian Science, whose adherents are numbered to-day by millions. Christ, as you know, commanded his first followers to heal the sick and give alms to the poor; and his commands are just as binding on the Christians of this age as on those who followed him about, gathered around him, and sat at his feet and listened to his teachings. I do not know if there is any authority in the Scriptures for the use of medicine for the curing of diseases. With authority came power to heal, and the sick were healed without medicine, and the same power is given to those who believe in Christianity to-day. The believers in the teachings of our Lord have the same power to heal as had his first followers. To the patient, I suppose, it makes not a great deal of difference how he gets better. But the grand benefit of Christian Science in healing the body is that the mind also is healed, the mental condition is improved, and the moral system elevated."

His Worship then called upon the lecturer to address the gathering.—*The Globe.*

At San Jose, Cal.

Wednesday evening, May 10, the First Church of Christ, Scientist, in this city, had the pleasure of giving to the people of San José and vicinity the privilege, for the second time, of hearing a lecture on Christian Science.

September 7, 1898, Mr. Kimball of Chicago, delivered the first lecture to a full house, and Dr. Fluno of Oakland, gave the second just eight months later to a crowded house, some few even going away because they could not find seats, and both of these lectures were attended by many of our leading citizens, including a few ministers and doctors.

Mr. Armstrong, the First Reader of the Church here, introduced Dr. Fluno with the following remarks:—

This is the second time it has been my privilege to introduce to a San José audience a lecturer on the subject of Christian Science. The object is to state clearly the origin, character, and aim of Christian Science, to see that amid all the din of statement and counter-statement about it, there shall be occasionally a voice raised—not in defence but simply in explanation of what it is and does—this being understood, no defence is needed.

Christians generally concede that the only way of salvation is through Christ Jesus. Students of Christian Science not only believe, but understand, how true this is; they know that the oil and wine which is to revive the poor traveler fallen among thieves and half dead, flows not from any material source, but must still be of the same divine origin and nature as when it blessed humanity so plentifully centuries ago.

Jesus said to his disciples at one time, "Whither I go, thou canst not follow me now; but thou shalt follow me afterwards." Christian Scientists believe that the time is come when the disciples or students of the Christ may, if they will, follow him more closely than at any time since the third century, when ignorance and superstition sought to take the life of every representative of the then new Truth. This is made possible through the discovery of Christian Science stated in "Science and Health with Key to the Scriptures," by Rev. Mary Baker G. Eddy. The world never needed this knowledge more than it does to-day. It is with great pleasure that I now introduce to you one who taught me Christian Science some years ago, F. J. Fluno, M. D., C.S.D.

HERBERT D. EUSTACE, Clerk.

At Milwaukee, Wis.

A large audience assembled at the Pabst Theatre Tuesday evening, May 23, to hear Edward A. Kimball speak on Christian Science. A very nice class of people attended the lecture and listened attentively throughout.

Mr. Kimball was introduced by Joshua Stark, who in his introductory remarks said that this was an age of surprises and that the century just closing, especially the last half of it, was marked by inventions and discoveries which had advanced the interests of the human race physically, mentally, and morally. The accomplishments of the past fifty years were such as to challenge the admiration of thoughtful people. All these new things were judged solely by their ability to enhance the well-being of the human race. In the field of education scientific instruction is superseding the study of the classics, and manual training is taking a place side by side with mental work. Coming to the subject of the evening, Mr. Stark said that the large audience present proved the interest taken in the new faith—Christian Science. This Science promises great things for the human race, he said. It would lift mankind to a higher realm of thought, feeling, and action. The American people would give the new faith a respectful hearing, and would adopt it when it was thoroughly tested. If it exerted the influence which is claimed for it; if it alleviated human suffering as it was said it would, then it

Digitized by Google

will abide. Mr. Stark closed by saying that the audience would then listen to one of its teachers, and he introduced Mr. Kimball.—*The Evening Wisconsin.*

At West Chester, Pa.

There was an audience of probably five hundred people in the Assembly Building Monday evening, May 22. It was a representative gathering, too. Many of West Chester's leading people were there, and some people who had come in from the country for miles around. The announcement that Carol Norton, C.S.D., of New York City, was to lecture upon the theme, "Christian Science—It is Christian; It is Scientific," had brought the people together. Many were there to listen for the first time to a lecture on this theme by one of its advocates.

Mr. Norton was here under the auspices of the Christian Science Church, which has been maintained in West Chester for a long time past.

The speaker was introduced by Burgess Talbot, who took occasion to say, "Ever since the dawn of human intellect there has been an effort to solve the questions of disease and its causes. How to overcome the weaknesses to which humanity is subject has occupied the attention of many minds. There have been many theories, many schools of medicine. Experiments on human subjects have been numerous. At last Mrs. Eddy comes with a solution and Christian Science as the true way of deliverance. Mr. Norton is an able exponent of those teachings, and I take pleasure in introducing him to the audience tonight."—*Daily Local News.*

At Elyria, O.

Mrs. Annie M. Knott lectured in Elyria, Monday evening, May 15, under the auspices of First Church of Christ, Scientist, of Elyria, the Church of Christ, Scientist, of Rocky River Hamlet, and the Christian Science Association of Oberlin.

The Opera House was well filled, and the lecture was listened to with closest attention. Two papers noticed the lecture very kindly, and we have heard many appreciative comments from those present. One gentleman said he went in expecting to stay a few moments—would have stayed two hours longer, and would have liked to have gone the next evening.

There were present from Cleveland, three "specials"—cars containing one hundred and thirteen Scientists—one special from Rocky River Hamlet, and one from Oberlin.

This demonstration of Unity and loving-kindness, made quite an impression, "and we know that all things work together for good to them that love God," and that good always comes from being obedient. Our hearts overflow with love and gratitude to our beloved Leader, who has made all these blessings possible for us. Already, new interest has been manifested, and new work come to us, from the effects of the lecture.—M. THERESA BRUSH.

At Whitewater, Wis.

An audience of over four hundred people listened to a lecture delivered by Edward A. Kimball, C.S.D., of Chicago, on Christian Science, Monday evening, May 22.

The lecture was given under the auspices of First Church of Christ, Scientist, of this city, and was held in the Congregational Church. Rev. Dr. Johnson of the Episcopal Church introduced the speaker.

About thirty Scientists from Madison, Janesville, Beloit, Fort Atkinson, and Oregon, were in attendance, bringing their love-offering with them, showing us that, although our number is small, we thoroughly demonstrate that Love is the source of all supply. After all expenses were paid we have quite an amount left in the treasury.

It has been a great time of rejoicing with us, because we have been able to help spread this great Truth, by being obedient, trusting, and faithful, and we *know* that the seed sown will bring forth much fruit.

GRACE F. STEPHENS, Clerk.

At Peterborbough, Ont.

The doctrine of the Christian Scientists was clearly, forcefully, and eloquently expounded in a lecture delivered Thursday evening, May 25, in the Sons of England Hall, Hunter Street, by Mr. Carol Norton, C.S.D., of New York City. The address was given under the auspices of the First Church of Christ, Scientist, 414½ George Street. J. C. Parker, Reader, presided. The audience was fairly large, the rain doubtless deterring many from attendance, and all present were deeply interested.

Mr. J. C. Parker introduced Mr. Norton to the audience. He spoke a few words. Christian Science inspires us, elevates us to the Temple not built with hands. It helps us to look into the realm of Spirit, raising humanity above self into purer and holier desires. It gave Mr. Parker great pleasure to introduce a member of the Board of Lectureship, Mr. Carol Norton, C.S.D.

Daily Evening Review.

At Salem, Ore.

An audience of about seven hundred people attended the lecture at the Opera House, Wednesday evening, May 17, given by Dr. F. J. Fluno, one of the national official lecturers of the Christian Scientists.

Dr. Fluno was presented to the audience by Hon. R. S. Bean, associate justice of the Supreme Court. The lecturer is a middle-aged man and an accomplished speaker. He held the undivided attention of his audience during the delivery of the lecture, which required about ninety minutes. He very clearly outlined the belief of Scientists, and by illustrations, argued the world's great need of Christian Science as the sole medium through which true civilization could be attained, and by the application of which only, could the Golden Rule be successfully practised.

A synopsis of the lecture appears on the sixth page.

Oregon Statesman.

At Nashua, N. H.

The Rev. William P. McKenzie, C.S.B., delivered a lecture Tuesday evening, May 23, at Beasom Hall, under the auspices of the First Church of Christ, Scientist, of this city. The audience was a good-sized one, and was by no means composed of Scientists alone.

The Rev. Enoch Powell, minister of the Unitarian Church, introduced the lecturer with a few brief remarks. He stated that he knew but little of Christian Science aside from the fact that it is arousing a great deal of interest throughout the country of late. He said in substance that he believed it should be given a hearing just as other religions were, and that the citizens should decide for themselves upon its merits.—*Nashua Daily Telegraph.*

At Grand Forks, N. D.

A large audience gathered at the Metropolitan Theatre, Monday evening, May 22, the occasion being the delivery of a lecture by Judge Ewing of Chicago, on "Christian Science." Judge Ewing is an elderly man, somewhat spare, of fine, scholarly appearance, an eloquent, impressive speaker, and a man who is evidently thoroughly in earnest. No better evidence of the latter fact could be given than his resignation of a position on the bench of the Superior Court of Illinois to take up his present work. He was introduced last night by Hon. Willis A. Joy, and for over

Digitized by Google

an hour he discussed in clear and forceful language the doctrines of Christian Science.—*Daily Herald.*

At Los Angeles, Cal.

At Simpson Auditorium Thursday evening, May 4, Dr. F. J. Fluno lectured on Christian Science, explaining its origin and aims. The keynote to his address is contained in this paragraph:—

"That spirit of investigation in man, which can find a flaw in a solution of his being, naturally and necessarily demands a solution that will bear investigation; a solution that has no flaw, a solution that will bear the closest scrutiny, and yet no imperfection can be found."

"Such a fabric," said he, "is Christian Science—the Science of Being—that comes to-day to fill the world's great need."—*Los Angeles Record.*

At Erie, Pa.

Thursday evening, May 18, a representative audience assembled at the Tabernacle to hear a lecture by Carol Norton, C.S.D., of New York City. The lecture was given under the auspices of the First Church of Christ, Scientist. The subject was, "Christian Science—It is Christian; It is Scientific."

The profound attention given was a marked feature of the evening. In a very pleasant manner, and a few well-chosen words the speaker was introduced by the Rev. Leon Harvey, pastor of the Unitarian Church.

ALICE M. CAREY.

At Winnipeg, Man.

The noted Christian Scientist, Hon. W. G. Ewing of Chicago, lectured before a large audience at the Winnipeg Opera House on Sunday afternoon, May 21. Mayor Andrews occupied the chair, and introduced the lecturer with a few appropriate remarks, to the effect that while he, with perhaps the majority of those present, had given but little study to the ethics of Christian Science, they were nevertheless gratified at having the opportunity of learning from so distinguished a citizen of the United States as Judge Ewing undoubtedly was.—*The Daily Tribune.*

At Weeping Water, Neb.

Edward A. Kimball, C.S.D., of Chicago, one of the leading Christian Science demonstrators of the country, delivered a free lecture on the doctrines and beliefs of the Scientists, at the Opera House here, Monday evening, May 22. The attendance was large and the audience for two hours listened with marked attention to the words of the speaker. Mr. Kimball is a good talker and explains very plainly the principles of this new Science which is being investigated by some of the brightest minds all over the country.—*Weeping Water Republican.*

At Riley, Kan.

A large audience which completely filled the Opera House listened to the lecture on Christian Science delivered by Mrs. Annie M. Knott, Monday evening, May 1.

The lecture was well received even by those who thought they were opposed to Christian Science. Delegations from Junction City, Clay Center, and Leonardville came over to hear the lecture.

We thank Mrs. Eddy for sending out those who reflect so much divine Love.—IDA E. NIXON, Clerk.

At St. Louis, Mo.

Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., who for fourteen years has been a pupil of Mrs. Eddy, Discoverer and Founder of Christian Science, and who is regarded as one of the ablest lecturers, delivered an address at the Olympic Theatre, Sunday evening, May 7, on the doctrines of Christian Science. The house was well filled.

St. Louis, Globe-Democrat.

At Evanston, Ill.

Saturday evening, April 29, Mr. Edward A. Kimball, C.S.D. of Chicago, lectured on Christian Science, in the First Baptist Church. The lecture was given under the auspices of the First Church of Christ, Scientist, and the church was well filled with a very appreciative and intelligent audience.—MRS. EMILY D. PIERSON, Clerk.

The Joys of Jesus.

BY WALDO PONDRAY WARREN.

So much has been said and written about the sufferings of Jesus that many people imagine his earthly career must have been one perpetual thrill of pain. But this is certainly far from true, and the contemplation of the Christ-life from such a standpoint must necessarily cloud the sense of the omnipotence of Love, and hinder the demonstration of it.

While it is well known that Jesus suffered many things, going as he did directly across the evidence of the senses and the established creeds and opinions of the world, yet the possession of such a priceless understanding of the allness of Truth and the nothingness of error as made possible his marvelous works must certainly have made his life far more joyful than the world has been accustomed to think. He lived the precepts which he taught, and he taught that "the Kingdom of Heaven is at hand," "rejoice always," "my yoke is easy and my burden is light," "be of good cheer, I have overcome the world," and referred to himself as the "Son of Man who is in heaven." These sayings, and the necessary presence of that spirit of triumphant joy which inspired them, put to flight all doubt but that his life was bathed in joys of which the world has not yet tasted. In his prayer to the Father (John, 17 : 13), he said, "These things I speak in the world, that they might have my joy fulfilled in themselves."

Love slapped in the face by the beloved—this was the suffering of Jesus. The distrust and misunderstanding of those for whom he labored, the meagre appreciation of his message to mortals, and the bitter censure from those he sought to inspire with the joys of a higher life,—this filled his cup.

Paul, who partook in a great measure of the spirit of the life of Christ, and like his Master suffered many things from the malice of the world, wrote, "For I reckon that the sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us. . . . For I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

Let us dwell less on the sufferings "which are not worthy to be compared," and see in the Christ-life the Way of salvation, even the way out of all suffering. Acknowledging the inability of evil to accomplish aught but its own destruction, let us see through the clouds the divine process of the destruction of evil, and know that at every step Love is triumphant, and so "count it all joy," knowing that our labor is not in vain. The Christ-life saith unto every suffering one, "Come unto me, and I will give you rest."

It appears from the tables of statistics of the churches of the United States, prepared by Dr. H. K. Carroll that the total number of ministers for 1898 is 143,320, churches 187,100, and communicants 26,651,969.—*Boston Traveler.*

Digitized by Google

Questions and Answers.

What authority have Christian Scientists for believing that all will be saved when the Bible declares that no murderer shall enter the kingdom of heaven?—A. C. B.

The Scriptural declaration is that "no murderer hath eternal life abiding in him." In the same passage a murderer is defined as one who hates his brother. There are but few, if any, persons who have not at some time hated a brother, but must we conclude that the great majority of mankind are forever lost? No murderer, or one who hates his brother, with or without cause, has eternal life, or has the true sense of Life which is eternal. Jesus defined eternal life as the knowledge of God (John, 17 : 3), and John declares that God is Love. He who has a sense of hate is not conscious of the presence of divine Love which is infinite; but it does not follow that such an one must forever dwell in a sense of hatred. When man ceases to hate he ceases to be a murderer.

It is generally admitted that even a murderer may receive pardon and enter heaven, but he must first be purified and every murderous thought be destroyed. This is in perfect accord with the teaching of Christian Science. He who sins in thought, word, or deed is not ready for heaven. He must depart from his evil way; be saved from all unrighteousness before he has eternal life.

That all *may* be saved if they will avail themselves of the plan of salvation is in accordance with all religious teaching of the present day. The question of universal salvation, then, depends upon whether all *will* avail themselves of the opportunity afforded them. Christian Scientists believe they will. If their love for the true and good does not cause them to do so, suffering for sin will at length compel all to forsake sin. Suffering will become so great as entirely to destroy the sense of pleasure in sin, and when mortal man forsakes his sin he is no longer a sinner. It is the sin and not the man which is to be destroyed. This fact is clearly presented in 1 Corinthians, 3 : 15, "If any man's work shall be burned, he shall suffer loss; but he himself shall be saved; yet so as by fire."

In support of the statement that all will turn to the Lord we quote Romans, 14 : 11: "As I live, saith the Lord, every knee shall bow to me, and every tongue shall confess to God."

❧

Where it seems necessary to do so, is it not the proper thing for a branch church to have two female Readers?
A Church Member.

The Church Manual provides that the Sunday services shall be conducted by two Readers, a male and a female, but we presume that in the smaller fields, where it is impossible to comply with the rule entirely, it may justly be considered as one of the things we must "suffer to be so now," to have the services conducted by two female Readers. This arrangement would of course be only temporary, or until a suitable male Reader could be provided. No impossible thing is required, and it is better to have services conducted by two female Readers than not at all. The members of such churches will improve the present opportunity to the best of their ability and, working together in harmony, will wait patiently for divine Love to supply all that is needed to enable them to conduct their services in strict accordance with the rules.

The *Register* asks, "What is practical preaching?" and replies, "It is an exposition of the way in which a thought may be transformed into a sentiment, a sentiment into a law of conduct, an impulse of the will into a deed, the translation of a thought into life. The beatitudes represent practical preaching in its highest form."

Abiding in Love.

BY R. McCLYMONT.

If ye abide in me, and my words abide in you, ye shall ask what ye will and it shall be done unto you.—JESUS.

BEFORE coming to Science how few of us believed that these precious words of our Saviour could ever be proven to be true in this age. But now those who have touched the hem of this Christ-robe know that these immortal words of our Master were as much intended for each and every follower of the Christ, as they were for those whom he immediately addressed.

The mistake of the ages has been in relegating to the early years of the Christian era the monopoly of healing the sick and reforming the sinner through the divine power.

Yet, as our beloved Leader says, "This healing power of Truth . . . is as ancient as the Ancient of Days. It lives through all Life, and extends through all space" (Science and Health, p. 40, lines 12, 13).

As yet we have but dimly comprehended the priceless import of the teachings of our great elder Brother, as illustrated in his life-work and explained to us in this age by Christian Science, which is the Comforter, promised by him. One thing is certain, however, that this Comforter, this divine Guide, is leading, and will continue to lead, all who follow its effulgent rays, into all Truth, when sickness and sin will fade from our consciousness, like the mist melting into nothingness before the sun's bright radiance, leaving in our enlightened thought nothing but the everlasting and supernal realities of God's creating. Let us consider what the Messiah meant when he gave us this immortal and beautiful promise.

In order to be able to demonstrate this word of his, we must first be abiding in him, and his words, or teachings, must be abiding in our consciousness as the sole law of our being. Mark well what Jesus says, that we must abide in his word and his word in us.

It will not do for us to have but a wavering or doubting trust in his word, but it must be incorporated in our very being in order that we may receive the reward. If we are abiding steadfastly in Love, and Love's teachings are being thought and acted through each day, then indeed we shall ask what we will and it shall be done unto us.

Dear brothers and sisters in Truth, if each and every one of us who have named this holy name of Christian Science, were but abiding in Love's pure teachings, we should revolutionize the world. We should then prove our great Way-shower's words, by doing the wonderful works that he did and which he said we should do. Error of every sort would then be as naturally and instantaneously destroyed as it was by Jesus and his apostles; for if we were abiding in that consciousness of Good, we should reflect health, holiness, harmony, as readily as the sun reflects light, or the rose emits fragrance.

This is indeed the goal to which we must attain before we can reach the perfect Science of healing. Love must have the first and only place in our consciousness, ere we can emulate Jesus' mighty works. If our thoughts are permeated with this Love-light that guided his every footstep, we too shall do the glorious works which he did; but if instead our minds are filled with error,—envy, sin, and discord,—we shall be helping no one to a higher sense of Life, but shall be blocking our own progress heavenward. Let us each, then, give up our earth-weights, and press forward to the Mount of Vision, where pure reality is revealed, where the mist evaporates, and the radiant images of our Father's creation dawn on our understanding.

And in this struggle to be perfect let us not forget that infinite Love is ever with us to guard and guide us out of this mortal vale of tears to our God-bestowed inheritance,—eternal Harmony.

Though error seems to thunder with a thousand tongues, it but sounds its own death-knell, for above, around, and

Digitized by Google

about us the divine Love reigneth omnipotent, and the God who guides the starry legions doth also watch over each and every one of His children well, delivering them from the wild beasts of mortal mind, and guiding them safely up the mountain steeps up to our home in Love.

May we all strive daily to express in every thought the Love and Truth which is our eternal birthright, perpetually striving to realize the ever-presence of that divine Love who is our God and Father as indicated so beautifully in this stanza of our beloved Mother's "Evening Prayer:"—

Love is our refuge; only with mine eye
Can I behold the snare, the pit, the fall:
His habitation high is here, and nigh,
His arm encircles me, and mine, and all.

Missionary Work.

SOME months ago my daughter and I sent the names of three persons as subscribers to the *Sentinel* for six months, hoping thereby to interest them in Christian Science.

A few weeks since my daughter received a letter from one of these persons on a matter of business. In closing she said, "Some kind friend has been furnishing me for some time with the *Christain Science Sentinel*, and I have suspected it came from your mother. Whoever it is, I think I feel toward her (I am sure it is a woman) as some of the Christian Scientists do toward Mrs. Eddy, for it has furnished me with excellent reading, and I understand and accept much of it. When I have an opportunity to do so, I shall read Science and Health."

What Scientist would not be glad to plead guilty to such a charge? I hastened to write her, and acknowledge my part in the matter, and offered her the loan of a copy of Science and Health.

She gladly accepted the offer, and in a more recent letter expressed great pleasure in what she has read. She said that the name Christian Science attracted her, and that while she had never talked with a Christian Scientist on the subject, she found much in Science and Health and the other reading, that she had long been impressed with and believed. "Whence cometh it but from the Father?" were her words concerning it.

Soon after this the second person brought me a dollar and asked if I would send for the *Sentinel* for her. She is one who has a great many places for all the dollars she gets, but she did not want to give up the paper, and this dollar was of her own earning and must be used for this purpose. As soon as she can spare the money she intends to have more Christian Science reading. We have not heard from the third person and may never know the results in that case, but trust that some one has been helped by that effort also.—*Mary M. Gallup, Palermo, Cal.*

Miscellany.

Largest Business Concern in the World.

Many people will be surprised to learn that the postal establishment of the United States is the greatest business concern in the world. Postmaster-General Charles Emory Smith, writing in the May Cosmopolitan, tells us that it handles more pieces, employs more men, spends more money, brings more revenue, uses more agencies, reaches more homes, involves more details, and touches more interests than any other human organization, public or private, governmental or corporate. The Postoffice Department directs 73,570 postoffices, musters an army of 200,000 employees, spends this year $105,000,000, and counts receipts of nearly the same amount. It handled last year 6,214,447,000 pieces of mail matter, of which 2,825,767,000 were letters, so that every minute confides 12,000 new messages to its hands. It manufactured and delivered postage stamps to the number of 3,623,821,608, and the value of $71,788,333. It carried 2,069,742,000 newspapers.—*Boston Evening Transcript.*

Thoughts for Busy Men.

Christian Science teaches how to live, not how to die.

If there were no sick thoughts there would be no sick bodies.

Don't reject anything good just because it is old. Nothing is older than truth.

Endeavor each day to bring a little more of Heaven—Harmony—into the lives of those about you. This is the highest form of Christian Endeavor.

When mankind understands and practises Christian Science, the jails, asylums, and hospitals will be empty and stay so. This can also be said of true Christianity—and that is just what Christian Science is.

The mind that habitually sends forth thoughts of goodness and love is like a battery of guns using smokeless powder. The effect is seen and felt but whence it comes you cannot tell; there is this difference, however, the guns have to be aimed and sometimes miss. Good thoughts do neither.—*Florence (Col.) Daily Tribune.*

A Boy Sentenced.

Perhaps the most peculiar sentence ever passed upon a person in the courts of Ohio was passed upon James Firsden in Bowling Green by Mayor A. R. Campbell, who made himself widely known by fining himself for a misdemeanor. Young Firsden, although thirteen years of age, has just finished a thirty-days sentence in jail. When arraigned before Mayor Campbell he was sentenced to attend Sunday School and church for eight weeks every Sunday or go to jail for twenty days. Upon presenting a certificate from his Sunday School teacher at the close of the time he is further to be paid one dollar by Mayor Campbell for his good conduct. On refusal to attend church the boy is to be locked up and the sentence carried out.—*New York Times.*

An Idea of Abraham Lincoln's.

No man is good enough to govern another without that man's consent. When the white man governs himself, that is self-government; but when he governs himself and also governs another man—that is despotism. Our reliance is in the love of liberty which God has planted in us; our defense is in the spirit which prizes liberty as the heritage of all men in all lands, everywhere. Those who deny freedom to others deserve it not for themselves, and under a just God cannot long retain it.

Buffalo Evening News.

Notices.

The lecture of Edward A. Kimball, C.S.D., appearing in the *Christian Science Journal* for May is now published in pamphlet form. One copy or more, each, 10 cents; 12 copies to one address, $1.00; 25 copies to one address, $1.75; 50 copies to one address, $3.00.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We are requested to announce that Edward A. Kimball, C.S.D., of Chicago, will continue in the lecture work. His address is 5020 Woodlawn Avenue, Chicago, Ill.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by **mail**, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Testimony to Cures.

From the Boston Herald, June 8.

THE First Church of Christ, Scientist, commodious as it is, was not large enough to hold the thousands of visiting Christian Scientists who wished last night to attend the testimony meeting which is a weekly feature of the church work. The meeting was therefore held in Tremont Temple, and the large auditorium of that edifice was scarcely able to accommodate those who sought to enter. Every seat was occupied, and hundreds of persons stood in the aisles and corners.

Many remarkable instances of recovery from apparently hopeless illness through the instrumentality of Christian Science were related by persons in the congregation, and were listened to with almost breathless interest. But perhaps the most dramatic feature of the evening was an impromptu confession of faith by the congregation in the distinctive claims of Christian Science, and also in several of the fundamental principles which are held by other bodies of Christians. This occurred at the close of the testimonies.

Judge Septimus J. Hanna, who presided over the meeting, addressed the congregation in these words:—

"I would be glad to extend this meeting, but I think the time has arrived when we should bring it to a close. These testimonies could continue all night, and many of us would be glad to hear them, but it is not wise to prolong it much longer. Before closing, however, I will ask those present who know of a certainty that they have been healed through Christian Science to please rise."

Almost every one on the main floor, in the two galleries, on the platform, and in the choir gallery, promptly stood up. When they had resumed their seats, Judge Hanna said,—

"Now, I wish to ask those who know that they have been healed through simply reading 'Science and Health with Key to the Scriptures,' and the Bible, in the light thrown upon it through the reading of this book, to rise."

In response to this request about three hundred persons scattered throughout the house, arose.

"Our beloved friends of the churches, and especially of the pulpit,—some of them,—have been somewhat in the habit of charging Christian Scientists with being a Godless people," Judge Hanna said. "Will those who believe in God as the *only* saving power in their lives, please rise?"

Promptly everybody stood up.

"Our good friends have also charged us with being a Christless people, with denying Jesus Christ. How many are there here—Christian Scientists—who believe in Jesus Christ, absolutely and unqualifiedly?"

So far as the reporter could see, not more than a dozen persons remained seated.

"We are also sometimes charged with being a prayerless people. Will those who believe in prayer, and in the power and efficacy of prayer to heal the sick as well as to destroy sin, please rise?"

In response to this request, almost the entire audience rose.

"I will ask those who believe that prayer, in the highest and best sense of the word, is the only healing efficacy, to rise."

There was the same general response to this request.

The meeting opened with a brief religious service. On the platform with the presiding officer, were about fifty of the First Members of the Mother Church, who constitute the governing body of the congregation. The Countess of Dunmore and her daughter, Lady Mildred, also occupied seats on the platform.

The method of procedure in the giving of testimonies was simple. Judge Hanna opened this portion of the evening's exercises with a few remarks.

"I will," he said, "detain you with but one word, and then we shall be pleased to hear from the field and to receive testimonies as to what Christian Science has done for you and can do for the whole world. May I ask you to speak distinctly, so that you may be easily heard. And, inasmuch as there are many visiting Scientists present, we would be glad if you would make your remarks short and concise, so as to give an opportunity to as many as possible to speak.

"I will say that we have heard, of course, of the return to her home of our beloved Leader and Mother, refreshed and strengthened as the result of her visit to her church. We are all glad to know that she had a most enjoyable occasion with us, one which she will never forget, and certainly one which we shall never forget. I might also remark here that, strange as it may seem to some, although she arrived in Boston during the business hours of Monday, and remained in Boston all day yesterday, she was not arrested. [Laughter and applause.] I think the world will come to understand some time, and that very soon, that eternal Truth and its representatives cannot be arrested. [Applause.] The meeting is now in your hands."

Some thirty or forty persons arose in succession and spoke. Most of the testimonies lasted but a couple of minutes. A few of the speakers occupied five or ten minutes. Some of the experiences related were very interesting. A convincing air of sincerity marked all of them, the voices of several indicating deep emotion.

Among the afflictions designated as having been relieved by the power of Christian Science were spinal meningitis, cancer, consumption, gouty deposits in the hand, the liquor habit, defective vision, nervous prostration, and numerous other troubles. One speaker said that he had

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

been a cripple, and that Christian Science had cured him.

One of the most interesting speakers was an ex-medical student.

"In justice to Christian Science," he said, "as well as from a heartfelt desire, I wish to give a personal experience—a personal experience which typifies the growth of an individual consciousness living in darkness and ignorance, and coming into the light, the glorious light of Christian Science. Four years ago found me with all preparations made to enter a medical college. At the time I was attending operations as an assistant.

"For eighteen years my mother had been an invalid. Throughout this time physicians and surgeons in New York, Boston, Chicago, Omaha, Cleveland, in number twenty, had striven, but vainly, to cure her of a complication of chronic and organic diseases. The doctors had said that a surgical operation might aid her, and that there was a slight possibility of her recovery. Through fear of this operation she went to a Christian Scientist and was healed in six weeks. I began investigating.

"At the end of a year, having found cases which, to my consciousness, seemed to be cures of consumption and cancer, as well as the cure of my mother, I desired to become a Christian Scientist. From that time to this I have been endeavoring to live the life of a Christian Scientist, and what have I found? I have gained an understanding which enables me to partake of three harmonious meals a day, I obtain the requisite amount of sleep at night, and the other hours of the twenty-four I am living in harmony with divine Principle. My mother gave her testimony in the Mother Church on February 1 last. At this moment she is giving her testimony in a Church of Christ, Scientist, in New York city."

A man from North Dakota said,—

"Christian Science found me a physical wreck in 1888. I had been to six or eight different physicians. Each of the physicians said that I had a different disease. To the last one I said I thought it was something else, and he agreed with me. This completely destroyed my faith in *materia medica*.

"As a last resort I turned wholly to Christian Science. The first thing I noticed was that it was a new tongue, that it was not in learning. There was no Christian Scientist within fifty miles of where I then lived. While I was praying to God in the ordinary way I began to reason, and I saw that in Christian Science God is Love; and, getting a glimpse of the spiritual idea of God as taught in the little book by the Rev. Mary Baker G. Eddy, I was healed instantaneously, while believing that I had not one hour of life. I had not been able to turn over in bed, nor move any of my limbs one inch. But I got out of bed and walked to the window, and the next day rode seven miles on horseback."

A lady from Spokane, Wash., said that five years ago she was given up by the best physicians in the city to die. A friend visited her, and said, "Dear, Truth will heal you." A Christian Science healer visited her the next day, and in three weeks she was healed. Three years later, error again assailed her. A terrible hemorrhage came upon her. Her husband said to her, "You will soon be at home; you will soon be with your God." She realized instantly that life was not in the blood, and replied, "No, God is my Life, and Life is eternal. I have work to do here, and I dare not pass on."

This speaker said, in conclusion: "Science and Health has taught us that sickness is a temptation, as well as sin; that it is weakness for us to yield to sickness, and even to yield to death. This is what our Leader, our beloved Mother, has given to the world to-day through Science and Health. And, think of my great joy yesterday that I was able to look on her face and hear her speak in the power of Truth, to hear her loving words that filled this house with love and harmony. I cannot tell you what it was to me. I crossed the continent for this; for the church communion, and in holy, happy expectation that I might look upon her face."

A speaker from Fort Worth, Texas, said that six years ago she was ready for the operating table. She went to a Christian Scientist and was instantaneously healed. Last winter there was an epidemic of spinal meningitis in Fort Worth. The doctors lost every case, but not one case treated by a Christian Scientist was lost.

These testimonies are fair samples of the numerous others related last evening. At the close of the meeting there appeared to be no lack of others willing to speak, and the exercises ended only because the hour was late.

Three Thousand Cured.

Brief Extract from the Boston Globe, June 8.

THE "testimony meeting" of the Christian Scientists, held in Tremont Temple last evening, proved quite a prodigious affair to those who took part in it, despite the modest characterization, as the regular Wednesday evening meeting of The First Church of Christ, Scientist.

The whole edifice was decorated from top to bottom with fresh, bright-colored bunting, flags, and streamers in a way that showed not only a liberal disposition as regards quantity, but really superior artistic taste also; and with such a gay background the audience made perhaps the most brilliant picture that has ever been seen in the new temple.

There were surely three thousand people present, for besides all the seats every foot of standing room, even where not a glimpse of the stage could be had, was occupied. It was a splendid looking audience. The first part of the meeting was much like any ordinary week night church gathering—Scripture reading, prayer, and congregational singing.

Then followed a good account of the meeting.

Pulpit Charges Refuted.

Brief Extract from the Boston Post, June 8.

TREMONT TEMPLE has been the scene of many remarkable gatherings. Within its walls men of nearly all faiths or phases of belief have met and given hearty assent to the proclamation of their creed, yet never in the history of the revered hall, revered because of association, has there ever been a more remarkable demonstration than that of last evening, when the Christian Scientists met to give testimony of their belief.

It was at the close of the interesting service that the great altitude was reached, that fairly seemed to carry the vast audience into the seventh heaven of blessedness. The faces of the throng were aglow with a great aspiration and conscious joy; and the close of the day came to the assembled people like a benediction fraught with consecration. They were exalted because they believed in the triumph of their faith, and it seemed like the coronation day of "Love divine." They had just heard testimony after testimony of the power that had healed from sin and had restored to health, and, above all this, they had just witnessed more than two thousand people rise and publicly refute certain charges that had been made against the tenets of their faith.

For an hour and a half people from all over the country, those who had come to attend the annual communion of the Mother Church, had been telling of the power of this "Love divine" through personal experience and experimental knowledge. This might have continued all night,

Digitized by Google

but Judge Hanna, the presiding officer, deemed that there had been sufficient expression.

Some of the testimonies given were as remarkable as the wonderful closing demonstration. Any person was allowed to speak who so chose, and from all parts of the building men and women rose to give utterance. Frequently two and three were speaking at one time, so that Judge Hanna had to designate who had the floor. They told of the growth of the Church in all parts of the country, as well as of the healing that had been accomplished.

A gentleman from Rochester, N. Y., who occupied a seat in the upper gallery, said that some time ago his father and brother had passed on, being taken away by tuberculosis, and that he had been given up on account of the same disease. It was then that he had called upon a practitioner in Rochester to be healed by Christian Science, and that in eight months he had gained twenty pounds, and now the symptoms of the dread disease had entirely gone. He had been led into the way of Truth, and had found God, for whom he had been seeking.

A lady from California told of having been a sufferer from organic troubles for ten years, and of having lain for four months in the hospital in San Francisco, acquiring strength to undergo an operation. At the end of that period it was agreed that she was too weak to stand the operation, and she was removed to her home in Louisville. There, as a last hope, she consulted with a Christian Scientist, having been led to do so by reading a book on the subject, with the result that she was completely cured. She wanted to return thanks to God and to Christian Science for the great light and health and beauty that had come into her life.

A lady on the platform said that Christian Science had found her an invalid and a cripple, and that it had set her free. Several others followed and testified to the power of Christian Science as a redeemer from the curse of strong drink, by convincing the sinner that there was no pleasure in sin.

A man in the first gallery said that fourteen years ago he had stood in the old temple and witnessed Mrs. Eddy defend herself against the accusations of others. Then there had been not more than fifty Christian Scientists in the temple, and now the building was full of them. Christian Science had saved him twice from death, and his wife once. "The effort," he said, "was due to myself, the praise to Mrs. Eddy, the glory to God."

And thus did many more offer testimony to the healing power of Christian Science.

Tributes to Christian Science.

Brief Extract from the Boston Journal, June 8.

THE weekly meeting of The First Church of Christ, Scientist, of Boston, was held in Tremont Temple last night, in order to accommodate more fully than could be done at the church edifice the large number of visiting Scientists from all parts of the country.

Judge S. J. Hanna, the First Reader, presided, and as he looked out over the hall he saw an audience which filled the place entirely from floor to upper gallery, between twenty-five hundred and three thousand being present. There were some thirty or forty speakers, representing all parts of the United States, and some forty-three testimonies of healing, about a third being of organic diseases.

Among the testimonies was one of healing from nervous prostration, one from consumption, one from cancer, meningitis, paralysis, dyspepsia, typhoid fever, scarlet fever, and numerous other diseases, while two or three testified that they had been saved from the operating table by this agency.

Scientists Declare Faith.

Extract from Boston Transcript, June 8.

IF it had not been for the great crowd which filled Tremont Temple at the testimony meeting of the Christian Scientists, last evening, there would have been little of interest or significance in the declaration of faith that came as the result of several questions asked by Judge Hanna, the presiding officer, at the end of the meeting. As it was, the declaration was noteworthy. Just before closing the meeting, Judge Hanna said,—

"These testimonies could continue all night, and many of us would be glad to hear them, but it is not wise to prolong the meeting much longer. Before closing, however, I will ask those present who know of a certainty that they have been healed through Christian Science, to rise."

The audience rose almost unanimously on the main floor, in the two galleries, on the platform, and in the choir gallery. There must have been nearly three thousand standing. He then asked them to be seated.

"Now I wish to ask those who know that they have been healed through simply reading 'Science and Health with Key to the Scriptures' and the Bible, in the light thrown upon it through the reading of this book, to rise." About three hundred people scattered throughout the house stood up.

"Our beloved friends of the churches, and especially of the pulpit—some of them—have been somewhat in the habit of charging Christian Scientists with being a Godless people. Will those who believe in Almighty God as the only saving power in their lives please rise?" Apparently everybody stood up.

"Our good friends also have charged us with being a Christless people, with denying Jesus Christ. How many are there here—Christian Scientists—who believe in Jesus Christ absolutely and unqualifiedly?" It seemed to one upon the floor that not more than a dozen people remained seated throughout the house.

"We are also sometimes charged with being a prayerless people. Will those who believe in prayer, and in the power and efficacy of prayer to heal the sick as well as to destroy sin, please rise?" In response to this request, almost the entire audience rose. "I will ask those who believe that prayer, in the highest and best sense of the word, is the only healing power, to rise." There was the same general response to this request.

In opening the testimony part of the meeting, in which every one in the audience was invited to tell something of what Christian Science had done in the way of healing them, Judge Hanna spoke incidentally of Mrs. Eddy as follows:—

"I will say that we have heard, of course, of the return to her home of our beloved Leader and Mother, refreshed and strengthened as the result of her visit to her church. We are all glad to know that she had a most enjoyable visit, one which she will never forget, and certainly one which we shall never forget. I might also remark here that, strange as it may seem to some, although she arrived in Boston during the business hours of Monday, and remained in Boston all day yesterday, she was not arrested. [Laughter and applause.] I think the world will come to understand some time, and that very soon, that eternal Truth and its representatives cannot be arrested."

There were thirty or forty testimonies in all, the meeting continuing from half past seven until about nine o'clock.

In the evening edition of the *Herald* and *Journal* the reports of the meeting given in the morning editions, were republished in full.

Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Retrospective.

THE events of the past few days, beginning with our preliminary meetings of Saturday, June 3, and continuing to the close of the Wednesday evening meeting in Tremont Temple, have a deeper significance than we are now able to comprehend. They mean much for the cause; much to the workers in the Field, whether present or absent. The wave of Truth and spiritual power which went out as the result of this series of meetings will reach and encourage and uplift every laborer in the vineyard, however isolated or remorte from the headquarters and busier centres of the movement. Let each take courage therefrom, and press on with renewed zeal in the line of true Christian endeavor —healing the sick and saving the sinner.

We can speak from personal knowledge of the intensity of joy which welled up in our Mother's heart, as she beheld the great sea of faces before her at Tremont Temple, radiant with love for her, to whom, through God, they are indebted for the blessings of this festal occasion.

She remembered that all present in the Temple were members of the Mother Church and most feelingly referred to that fact; although her heart went out none the less to those who have not yet reached the point of admission to the Church, but who are looking with eager expectancy toward that happy event in their lives. It is not strange that she should have been delighted with such an audience, for truly, to behold it was an inspiration. Those present stood as the representatives of the great host all over this country and other parts of the world, who, though not physically there, were looking intently Zionward, and were present in spirit and in truth; and all will share in the joyousness and blessings of the occasion.

It was a Pentecostal season, full to the brim, and yet only dimly prophetic of the many more glorious Pentecostal Days yet in store for the faithful and true.

"The white wings of the Holy Ghost stooped unseen" but not unfelt, over that great assemblage. The spirit of Truth was there; "Love was reflected in love" there; Good radiated from heart to heart there, and all was peace, harmony, and heavenly hope.

It was our Leader's original purpose to have been present at the Communion service, but at the last moment she was led to defer her coming until the Annual Church Meeting. Did not the finger of God point her thither? What so appropriate as that she should have appeared before the great multitude of her own Church members—more than three thousand in number—in a new temple recently rebuilt on the very spot where stood the temple (since burned) in which, about fourteen years ago, she was grudgingly accorded ten minutes to define the infinite subject of Christian Science, and to the audience filling the same, was introduced by the Rev. Joseph Cook as the "so-called" Christian Scientist. The discourtesy—amounting almost to insult—then shown to her, is sufficiently atoned for by this recent grand demonstration, and is another striking fulfilment of the prophecy we read with so much delight in Isaiah, 54: "No weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of Him."

Two of the silly falsehoods recently set afloat by malicious hearts have thus been most effectually silenced, namely, first, that she was too feeble by reason of ill health to appear in public, and second, that she did not dare to appear in Boston during week days for fear of arrest, because of having issued illegal certificates as President of the Massachusetts Metaphysical College. The fact is, she never appeared in better health, and there was abundant opportunity for the administrators of the law to have enforced its mandates against her, if, as a matter of fact, she had been guilty of any violation thereof.

In her conversation with the writer, she spoke in terms the most magnanimous and loving of those who have assumed the role of her detractors and defamers, for she declared that the only power they possessed was to drive her nearer to God, and to compel her the more closely to wrap about her the mantle of divine Love.

At the Annual Meeting.

At the Annual Meeting of the Mother Church held in Tremont Temple, June 6, 1899, letters of congratulation and telegrams were received from Edinburgh, Scotland; Kansas City, Mo.; and South Bend, Ind.

Interesting reports of the present condition of the work were also made, either in writing or verbally, from various parts of the Field, including the following places:—

Wilmington, Del.; Chicago, Ill.; New York, N. Y.; Brooklyn, N. Y.; Buffalo, N. Y.; Montreal, Canada; Parkersburg, W. Va.; Kansas City, Mo.; Philadelphia, Pa.; Washington, D. C.; Pittsburg, Pa.; Fort Wayne, Ind.; Troy, N. Y.; Newark, N. J.; Denver, Col.; Rochester, N. Y.; St. Louis, Mo.; Melbourne, Australia; Dawson City, Klondike; London, England; Leavenworth, Kan.; Utica, N. Y., and Toronto, Canada.

Christian Science and the Press.

WITH the majesty of meekness, and clothed in the beauty of holiness, our consecrated Leader stood before nearly three thousand of her rescued ones, at the Annual Meeting, June 6, and declared that God's promised blessing was in that hour bestowed upon His children. Standing in "the watch tower in the wilderness" (2 Chronicles, 20 : 24), she saw the destruction of the enemy before her followers realized that God had gone before.

Our Leader said, "The divine Law hath said to us, 'Bring ye all the tithes into the storehouse, that there may be meat in mine house, and, prove me now herewith, saith the Lord of Hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it.' There is with us at this hour this great, great blessing."

How great that blessing is we are just beginning to see. The news—the health-giving news—first of the Communion service and the Gospel Message, then of the visit of our Leader to Boston and her address, then of the magnificent choral testimony for Truth at Tremont Temple—all this news of peace and health on earth and good will toward men, flooded the press of Boston, and was

Digitized by Google

sent reverberating over telegraph wires to the uttermost parts of the earth through the instrumentality of the Associated Press. This was the best news the daily press of the world ever published, for it went forth from the Great Heart of Love fraught with power to heal the sick.

The daily newspapers have in times past championed many a good cause, and nations have been saved from calamities through their fearless exposure of the evil machinations of selfish public servants, but now they enter a field of higher usefulness. What a glorious mission for the newspapers is opening! To be publishing words of love that will heal the sick and redeem the sinner!

Some of the reporters who wrote the accounts of the different meetings for the Boston papers, had never attended Christian Science meetings before, and yet they were so imbued with the Truth that they unconsciously wrote from the spiritual point of view. God has poured out His blessing to all the world through the newspapers.

For a week before Communion, the newspapers of Boston contained advance accounts of the event, telling of the crowds that were coming and of the character of the services to be held. The Associated Press also sent out advance reports. The day following Communion, the Boston papers had excellent accounts of it, three of them publishing the Message of our Leader in full, accurately following her method of capitalization and punctuation. All the papers treated our cause respectfully and fairly. The Associated Press sent out to nearly all the daily papers in the United States and Canada, the full text of the Message with a good account of the day's proceedings.

Again, after the Tuesday meeting at which our Leader was present, the Boston papers gave much space to reports of the meeting giving her impromptu address word for word. The Associated Press also sent out a full report to the newspapers of the world. Many representatives of the press were present at the meeting and they both heard and saw Mrs. Eddy, and their testimony through their papers having an aggregate circulation of nearly a million in New England, and the testimony that went out to the world through the Associated Press, reaching many millions of people, in *one day* sweeps away the accumulated falsehoods of years about our beloved Teacher.

The great Wednesday evening meeting at Tremont Temple constituted another falsehood-destroying tidal wave. Newspaper men were again present and saw and heard for themselves, and they wrote about it with minds inspired by the same Spirit which brooded over the meeting.

The editorial comment so far has also been very favorable. Newspapers that are daily arriving from all parts of the country contain accounts of our Communion, varying from two hundred words to four columns. In the succeeding pages will be found press extracts showing the general attitude of the newspapers of Boston and elsewhere in reporting the recent events in connection with the Mother Church and its Pastor Emeritus.

Mrs. Eddy's Visit.

THE Boston press gave a great deal of space to accounts of the visit of Mrs. Eddy and her address to her followers assembled at the Annual Meeting of the Mother Church, Tuesday afternoon, June 6. Three leading papers published the address in full.

Following are brief extracts from the afternoon papers:

Transcript.

If one asks these people why a visit from Mrs. Eddy means so much to them, he will find that they associate no element of worship with her personality. They evince for her a love and regard that might at first seem inexplicable when many of them have never seen her, but such reverence as is shown her is the reverence by which a loyal body of followers recognize the fitness of the Leader to lead, and her insight and wisdom in pointing out the way that must be followed. It is to be remembered, too, that hundreds of the people who heard and saw Mrs. Eddy for the first time to-day, associate her name and the Truth as she has stated it with their own healing from physical infirmities and ills that they once thought incurable, and it seems hardly strange that such persons should feel an eagerness to see one to whom they feel they owe present immunity from the ills that flesh is heir to, or that their eagerness to see and hear their acknowledged Leader, should be mingled with a deep personal sense of gratitude. So far as Mrs. Eddy herself is concerned in the matter, as was said at the Communion service on Sunday, her reluctance to appear among her followers publicly is based on the desire to turn their allegiance altogether away from her own personality, and rather toward the Principle of life which she enunciates.

Evening Journal.

The fondest hope of the Christian Scientists, which has been an undercurrent ever since they began to come into this city from almost every corner of the globe for their annual Communion week, has been realized, for to-day their Leader, and the Founder of Christian Science, was in Boston. She spoke at the annual meeting in Tremont Temple. It was to Christian Scientists the greatest event that could characterize their annual gathering.

Evening Herald.

There was a very large meeting of Christian Scientists at Tremont Temple this afternoon. Every seat in the big auditorium was taken and the scene was inspiring.

To meet her faithful followers face to face and to speak a few words of encouragement to them, the Rev. Mary Baker Eddy attended this meeting, which was held in Tremont Temple in order to permit as many of the members as possible to attend, the Mother Church being much too small for such a meeting.

Traveler.

Something of the feeling which must have saturated the whole beings of those blessed enough to gaze upon the living features of Jesus, the Christ, was stamped upon the features of three thousand or more Christian Scientists who yesterday in Tremont Temple heard from the lips of their Leader, Rev. Mary Baker Eddy, from the woman whom they look upon as the authorized revealer of God's word, an inspiring message of love and faith.

The words spoken were not many, at times the tones of delivery were far insufficient to reach to the majority of those present, but all heard some of the sentences, and best of all the vast congregation was blessed with an opportunity of seeing the woman in whose works they have rested all their faith, all their hope, all their expectations.

During the congregational singing of the Christian Science Communion hymn every person in the Temple rose, except Mrs. Eddy. She was seated in about the centre of the platform near Judge Hanna the First Reader of the Boston Church. Directly in front was a mass of flowers of as many colors as the bright gowns of the Christian Scientists who stood before her on the floor, and in the two large balconies which extended on three sides of the auditorium.

Behind her on the platform stood the leaders in the Christian Science movement from all over the country, taking up every inch of space on the commodious stage. Higher up the organ loft was crowded to its utmost capacity with singers.

In the singing of the Communion hymn all joined, for

Digitized by Google

everybody present, with the exception of several newspaper reporters, was a member of The First Church of Christ, Scientist, Boston, and hence knew the words of the hymn by heart.

The scene when one comprehends its underlying meaning and spirit must be taken as altogether the most remarkable that Boston has seen. Women predominated in the audience. The great chorus, which swelled from three thousand throats, for everybody appeared to be singing, seemed the victorious, triumphant song of beings who believed, were saved, and were happy in their salvation.

A smile of inexpressible ecstasy dwelt upon every face. The eyes contained a light akin to that which imbues and makes Christian Science transcend the ordinary—the light of the spirit. An unspeakable joy seemed to have transformed the Temple and all it bore.

Mrs. Eddy, a slight, elderly woman, rose from her chair and looked at her people. Features and attitude showed the passage of time, the white hair told the usual story, but an expression of peace rested on the countenance which caused one to forget Rev. Mary Baker Eddy's age and think only of the character of the one who had borne witness to the truth of infinite Spirit, Wisdom, and Love. It was not, then, Mrs. Eddy whom the people heard, but they listened instead to the voice of God.

She spoke of the power of infinite Love and of the hope and certainty of salvation. When she had done her people gave her an enthusiastic and continued greeting, recognizing that applause but illy expressed the nature of their feelings.

Evening Globe.

At quarter past two this afternoon Mrs. Eddy entered the auditorium of Tremont Temple. The audience arose and remained standing respectfully until she was seated. Mrs. Eddy was attired in a quietly elegant gown of gray satin, covered with exquisite black lace. Her remarks were very brief.

The following extracts are from the morning papers:—

Morning Herald.

The presence of the Rev. Mary Baker Eddy at the Annual Meeting of The First Church of Christ, Scientist, which was held yesterday in Tremont Temple, was probably the most interesting feature of the annual Communion season to the members of the Church.

The appearance of Mrs. Eddy at the Annual Meeting, her reception at her Commonwealth Avenue home, and her return journey to New Hampshire, all within twenty-four hours, furnished convincing proof of the fact that she is in the enjoyment of excellent health.

Apart from the presence of Mrs. Eddy, the Annual Meeting was simply a gathering similar to the annual meetings of other churches, except that the attendance was extraordinarily large. This was due to the peculiar nature of the membership of the Mother Church, embracing, as it does, thousands who live at a distance, many of whom come to Boston at this season for the annual Communion.

Morning Journal.

While Mr. McKenzie was making his address there was a sound of hundreds of people turning in their seats, and watching eagerly for the coming of Mrs. Eddy.

Up the platform steps she came, under the escort of Judge S. J. Hanna, and showing no signs of weariness or inability. She walked with as sprightly a step as a girl, and only by her white hair showed signs of age. Her eyes were very bright, and her face showed no mark of the rough hand of time.

As she entered and was given the place of honor on the platform the entire audience rose, and remained standing until she was seated. She was dressed in a rich gray silk dress, covered with black lace and jet trimming. Her hat was a small but tasteful gray, which was very becoming. She wore a small black veil, which she soon removed. Her coming had been very warmly applauded by the audience.

Mrs. Eddy sat beside Judge Hanna, to whom she occasionally turned and spoke, and as she did so her face lighted up with a smile.

Morning Globe.

To the surprise of many of the Christian Scientists who attended the Annual Meeting of The First Church of Christ, Scientist, in Tremont Temple yesterday afternoon, but to the intense satisfaction of the great audience, Rev. Mary Baker G. Eddy, originator of the faith and Founder of the new religion, appeared on the platform and made a short address.

Her hearers hung upon her words as if they dropped from the lips of a prophetess inspired from on high. After witnessing the attitude of the great congregation assembled in the Temple, the splendid outburst of enthusiasm when the Mother walked upon the platform, the intense interest with which each pair of eyes watched her slightest movement before and after she began to speak, and the reverent and almost breathless attention which were given the words she uttered, no one, not even the most pronounced cynic, could doubt their whole-hearted devotion or absolute loyalty.

The newly elected president of The First Church, Rev. Wm. P. McKenzie of Cambridge, was in the middle of his address when some one behind him on the platform touched his arm. Those in the audience saw the signal and they knew just as surely as though it had been announced in so many words that Mrs. Eddy was then upon the platform and was making her way to the front, where she could see her followers and be seen by them.

In a moment she made her appearance accompanied by Judge Hanna and took her seat. The audience had risen and were applauding with something deeper than noisy enthusiasm. Mrs. Eddy allowed the hand-clapping to echo for the briefest space and then with a faint smile on her face arose and bowed.

While Judge Hanna was making an explanatory address, Mrs. Eddy leaned back in the stuffed chair in which she was sitting, waving her fan to and fro and smiling now and then at the words of the speaker. She was dressed in pearly gray satin, covered with exquisite black lace, and wore a hat to match. The dress harmonized well with the silver hair, which circled her head, and with the pallor of her face. She looked as she sat there the ideal of a gentle, kindly old lady, who had led an uneventful life, and who was enjoying the peace and quiet of a conscience-clear old age. The lines of her face were soft, and there was absolutely nothing about her in repose to indicate the force of character and the genius which she is credited with possessing.

Post.

Since Sunday, Boston has been crowded with Christian Scientists, many of them from remote parts of the world. Although it was not definitely known that Mrs. Eddy would be present at yesterday's meeting, eager and expectant members of the Scientist Church began to gather at the Tremont Temple doors three hours before the meeting.

Mrs. Eddy was driven in a carriage to the doors of the Temple at quarter past two, and remained at the meeting scarcely thirty minutes.

As soon as she was recognized the vast audience arose spontaneously and remained standing until Judge Hanna had addressed them before being seated.

About the Communion.

ALL the Boston daily newspapers the day after the Communion services at the Mother Church published excellent reports of the day's proceedings. The *Herald* report was reprinted almost entire in the *Sentinel* last week. The attitude of the other papers may be gathered from the following brief extracts from their reports:—

Globe.

There were twenty-four hundred and fifty persons admitted to membership in The First Church of Christ, Scientist, corner Norway and Falmouth Streets, yesterday, making the total membership of the church at present nearly fifteen thousand.

During the day there were four Communion services to accommodate the enormous number of people who desired to be present to hear the annual message from Mother Eddy, and the church was crowded at each service.

At the first service were many notable Christian Scientists who had made the annual pilgrimage. Among these were the Countess of Dunmore, Lady Mildred Murray, and Viscount Fincastle Edward, from London, Eng., who had a reserved seat, which, however, the two latter resigned to an aged couple before the exercises began.

Morning Journal.

Several thousand Christian Scientists worshiped in Boston at The First Church of Christ, Scientist, yesterday, filling the spacious church at four separate services, the occasion being the annual Communion of that body.

There were many so anxious to attend the services that a large number were quite willing to stand up during the entire time it was going on, and all the standing-room available was well occupied. Long before the time for the opening of the services, at ten o'clock, that being the hour set for the first one, the entire space inside the church was taken, and about the sides of the church and a great deal of space at the sides of the Readers' desks was filled with those who elected to stand during the hour, because there was not room to sit. Meantime large numbers outside waited the conclusion of the services that they might get inside the church themselves.

As soon as one service was over the audience inside was encouraged to vacate the room for the benefit of another waiting outside to take its place. So the process went during the day, services having been planned and held at ten, twelve, three, and half past seven. The street was full most of the time as well as the sidewalks.

Traveler.

One of the most remarkable religious movements of the nineteenth century yesterday experienced what was probably the most glorious day in the period of its being. Four times was the original church edifice of the Christian Scientists, called the Mother Church, on Norway and Falmouth Streets, filled even to its utmost standing capacity, and, in spite of this, many were turned away unable to secure seats. Setting aside all sectional consideration, Boston should possess a feeling of pride that she contains within her limits a structure destined to draw to her city thousands of believers from the world without so long as the religion of Christian Science may last.

So on yesterday, as in years to come, at least six thousand Christian Scientists attended service in the edifice where meets the Church founded by the Rev. Mary Baker G. Eddy. To the stranger to Christian Science the services must have been unusual but extremely interesting. Primarily noticeable, however, was the apparent high grade of intelligence in the worshipers, the majority of whom had journeyed from distant corners of America, and some of whom had come from Europe, merely to attend the service and the remaining exercises of the week, showing, at least, that Christian Science does not find its sponsors in the ignorant.

Post.

Like pilgrims worshiping at a sacred shrine, thousands of men and women, many bringing children with them, gathered in and about the Mother Church of Christian Science on Falmouth Street yesterday and patiently awaited an opportunity to attend the several services held there in connection with the annual convention which is to be opened to-morrow in Tremont Temple.

Four services were held, all identical in form and character, thus giving an opportunity to all of the five thousand visitors to the city, as well as most of the local adherents of the church, to be present and hear among other matters of vital interest in their faith the annual address of the Rev. Mary Baker G. Eddy, Founder of the sect.

Transcript.

Probably six thousand people attended the annual Communion service at The First Church of Christ, Scientist, yesterday. All day long there was a throng of people in Falmouth and Norway Streets, near the church, for though the Christian Scientists who wished to attend the service included men and women from England, Canada, Mexico, the Bahamas, and Australia, as well as many points less distant, only thirteen hundred or so could be crowded into the auditorium at one time, and those who did not get into the early services attended those held later. Four services were held, at ten, twelve, three, and half past seven. At each service the church was crowded, with many persons standing, but the greatest number was in attendance at the first service. This was over at half past eleven, and while the congregation was asked to take its departure promptly by the side doors, another congregation, that had been gathering in front of the main entrance in the street, was ready to be admitted. Many who did not succeed in getting inside the church at the noon service took up places on the steps or porches where they might be in line for the third service, and not a few took advantage of the wait to fortify themselves with a bit of luncheon. There was plenty of room at the evening service until the very moment of beginning, when the incoming of those who had been lingering outside took up all available space.

Advertiser.

The annual Communion service of The First Church of Christ, Scientist, the Mother Church, was held yesterday. Owing to the great number desiring to attend, four services were held, at 10 A.M., 12 M., 3 and 7.30 P.M.

The church was crowded at each, it being estimated that nearly six thousand were present at the combined services.

In that number were visitors from California, New Mexico, England, Australia, and New South Wales, who had come to Boston for the express purpose of being present at the Communion and becoming members of the Mother Church. Countess Dunmore, Viscount Fincastle, and Lady Mildred Murray were the ones from England.

More than twenty-four hundred names were put on the list of members, including forty-two from England.

Scientists Gathering.

Boston Transcript, June 3.

The gathering of Christian Scientists in Boston reaches its climax to-day and to-morrow. Strictly speaking, it is only sentimental reasons which cause thousands of the followers of the doctrines of Rev. Mary Baker G. Eddy thus to make the long pilgrimage from some of the uttermost

Digitized by Google

parts of the land. They do not come as delegates to a convention, for there is no convention; and they are charged with no mission, for there is no business awaiting their attention; they come solely because of their individual enthusiasm and faith in a cause which has brought them health and happiness, and whose praises they never tire of singing. Nor did the element of hero-worship enter into the spirit which prompted them to come, for they all know that it is very doubtful if their Leader will attend any of the services in person, and that their only hope of seeing her may lie in making individual journeys to her quiet home in New Hampshire.

Back Bay hotels and lodging-houses are filled with Christian Scientists. By special train of nine sleepers, two hundred came from Chicago yesterday. Two trains from New York brought one hundred each; two parties, the smaller of sixty, came from Kansas City, and there are delegations from Washington, Baltimore, Cincinnati, Buffalo, Cleveland, Portland, Or., San Francisco, Nebraska, Toronto, Can., Atlanta, Ga., Michigan, and Wisconsin—indeed, from almost every State in the Union. It is estimated that there will be seven thousand Christian Scientist visitors in Boston to-morrow, and with the resident members and those from the suburbs there will be ten thousand eager to attend the four services to-morrow. The Countess of Dunmore, her son, Lord Fincastle, and her daughter, Lady Mildred Murray, have been in Boston several weeks awaiting the meetings, at which they will represent the movement in England, and they leave at home the Earl of Dunmore, an ardent Scientist, and the eldest daughter, who is a practitioner of Christian Science.

The headquarters of the gathering are not formally established, but they are naturally the beautiful First Church of Christ on Falmouth Street, and the fine building of the Publication Society beside it. The Society building was filled all day to-day, and it seemed as if a reception of some kind were going on; but there were only the regular employees to receive, and there was no one to pay special honor. There are no "prominent speakers" announced, and there is no special programme of exercises prepared, yet ten thousand persons have come from the Pacific slope, the sunny South, and the rugged borders of Canada to assist in this informality.

There will be four services in the church to-morrow, at ten, twelve, three, and half past seven, and they will be exactly alike. The church will seat only eleven hundred, and perhaps five hundred persons may stand. The exercises are known as the annual Communion and semi-annual admission of candidates to the Mother Church, as it is always called, and they will not vary greatly from the regular services. No symbols are used in the Communion service, and in place of the wine and bread there is silent prayer. There are no ministers in the churches of the Christian Scientists—all are Readers. After an organ voluntary there will be the singing of a hymn and then Scripture reading by the First Reader. Silent prayer will next be followed by a repetition of the Lord's Prayer, with its spiritual interpretation as given in the text-book, "Science and Health with Key to the Scriptures," written by Rev. Mary Baker G. Eddy. Then a hymn, and the Scripture lesson will follow, the First Reader, Hon. S. J. Hanna of Boston, announcing the subject and alternating with the congregation in reading the responsive lesson; and the First and Second Reader, Mrs. Eldora O. Gragg, will alternate in reading passages from the Bible and Science and Health bearing on the subject of the day. A vocal solo, written by Mrs. Eddy, a congregational hymn, and then the congregation will be dismissed with reading the "Scientific Statement of Being" (the fundamental statement of the faith) and benediction. The annual address of Mrs. Eddy will be read at all these services, which may, therefore, be somewhat curtailed. The 2,520 candidates for admission to the Mother Church will be admitted merely by announcement, the First Members of the church, its governing board, having passed upon their application to-day.

Mrs. Eddy is always expected to attend the services and rarely does, because, as she says, she fears that her presence would be misconstrued by outsiders, and that the gratitude which her followers would be only too eager to show, might be mistaken for personal idolatry. She prefers, therefore, to remain away, as a rule, although no one has authority to state that she will not be present to-morrow.

The Chicago Press.

SPECIAL TO THE TIMES-HERALD.

BOSTON, June 4.—More than six thousand people attended the four Communion services in The First Church of Christ, Scientist, the Mother Church, to-day, having come from the four ends of the earth to be present. They came for worship in the centre of the movement that has spread throughout the land. They came to meet the workers, which to them is a great privilege. When a man or a woman has been battling almost alone in his or her own little bailiwick for twelve months, he or she delights to touch elbows with a throng having a common belief.

The first service was held at ten o'clock, the others at twelve, three, and half past seven. Each time the church, which will not contain more than sixteen hundred people comfortably, was crowded to the doors, and at one time this afternoon it was thought an extra service would be necessary.

No wine nor bread was used in the communion. The participants sat silently praying and inwardly examining themselves to see whether or not they have done all they could to possess a mind like the mind of Christ.

After the silent prayer the message of Mrs. Eddy was read, and it was listened to with great interest. There was evident among the auditors the deepest earnestness and sincerity. One could not fail to note the wonderful hold Christian Science has upon its followers, for the most part people of evident intelligence, refinement, and means.

At the evening service to-night it was announced that 2,520 new members had to-day been admitted to the Mother Church, making a total membership of about fifteen thousand for the Mother Church alone. The total membership of all the churches in the country is about seventy thousand.

Mrs. Eddy was unable to be present to-day. It has been her practice, ever since the growth of the Christian Science church became marked, to abstain from attending large gatherings of her followers.

Much that is false and absurd in regard to the Founder of this church has been published and gossiped about among those outside the faith, and the relations of Christian Scientists to their Founder and the nature of her mission have been misrepresented. Mrs. Eddy has consistently discouraged all manifestations of personal adulation on the part of the members of the church, and has even gone so far as to remain away from the most notable Christian Science gatherings, lest those whose zeal and reverence for her and her mission is greater than their intelligent appreciation of her relation to the cause, might indulge in injudicious or extravagant manifestations of their reverence. The profound reverence felt for her as the chosen agent for the revelation of what her followers believe to be a restoration of the Christianity of the primitive church, always renders her presence an occasion of extraordinary interest to them.

Mrs. Eddy's special address for to-day's services was entitled, "Message of the Pastor Emeritus, Mary Baker G. Eddy, to the Mother Church, The First Church of Christ.

Digitized by Google

Scientist, Boston." It was a paper full of interest to the people who heard it. She made mention of the fact that recently W. G. Ewing of Chicago and J. R. Clarkson of Omaha had been added to the Board of Lectureship.

Then followed the message of Mrs. Eddy in full.

Editorial in the Boston Herald.

THE gathering on Sunday in this city of Christian Scientists from all over the world was a notable event as indicating the existence in an age of scepticism of an exalted belief in the possibilities of spiritual faith. No doubt, by the great majority of people, the Christian Scientists are looked upon as fanatics, but this is obviously a term of reproach which agitators and reformers of all classes, good and bad, have had to endure. We imagine one would not have to go back a long way in the religious history of Europe and the United States—that is, more than two or three generations—to find a large number of persons who had cherished beliefs in no way vitally distinguishable from those now entertained by the religionists who associate themselves under the modern name of Christian Scientists. Certainly the belief that, through faith and prayer, cures to physical ailments can be brought about, is a conviction which a large number of people have entertained from the days of Christ's presence on the earth down to the present time.

The manner in which a miracle is to be worked—that is, through whose instrumentality—is a matter of minor importance when compared with the miracle itself. And if any Christian had convinced himself that a modern miracle was impossible, it would probably be difficult for him to give a satisfactory explanation why miracles were limited to the early days of Christianity, or to specify the time at which an end was put to the ability to bring about these supernatural changes. The Roman Catholic Church holds to a continuance of this divine power, and most Protestant denominations profess a belief in divine interposition in the affairs of men and of nations. The difference between the above and the Christian Scientist doctrine appears to be that the latter is a more literal interpretation of Biblical assertions.

That the practice of this faith makes it run counter to modern methods and experiences is not at all strange; in fact, it is this which gives to the movement, in the eyes of those who are associated in it, the greater part of its attractiveness. Whenever, during the last nineteen centuries, the trend of human thought and feeling has been toward what would be termed materialism, there have inevitably sprung up, in opposition to this tendency, efforts to exalt the spiritual side of life. These movements, both in their professions and practices, have frequently been extravagant, and sometimes absolutely absurd, and yet they have probably been essentially beneficial as preventives of the decay of religious vitality. A religious movement started in this way as a protest has for a time, perhaps for one or two generations, a wonderful amount of life and vigor, which, apart from excesses and crudities, influence contemporaneous religious thought and practice. Then, by degrees, the impetus originally inspired by some leader or group of leaders dies away, the religious denomination is classified with others, and, except in technical points of creed, is hardly distinguishable from them. Having thus ceased to fulfil its spiritual functions, some other movement or agitation has to be started in its place, and it is one of these historically numerous uprisings that we are witnessing in the Christian Science effort.

[We will simply suggest, in connection with the above able and most fair editorial, that the one wide distinction between Christian Science and faith-cure is this: faith rests largely on blind belief and trust, while Christian Science rests on the *understanding* that God—divine Love—is the all-present and always present healing and saving Power. —ED.]

The Boston Traveler.

THE following extract from a recent issue of the *Boston Traveler* shows how the fair-minded newspapers of the country are endeavoring to present the subject of Christian Science in its true light.

If Christian Science emerges from the current attacks made upon its truth, the legal right of its practice, and generally its power for good or evil, with its head above water, if you will—and every Christian Scientist is confident that such will be the outcome of the present denunciation—it will have passed through one of the most critical chapters in its career.

The great cry of the believers of Christian Science of to-day is that they are misrepresented. Surely in the past much injustice has been brought about to new sects or new religious movements by misrepresentation, and perhaps it is only fair to premise that the movement under discussion will receive its share of contumely. Naturally, it behooves all to understand the nature of Christian Science before seeking to attack it from a standpoint on which we may possibly find later we cannot logically maintain ourselves. Those who profess an acquaintance with the teachings and doctrines of the sect claim that much of the treatment of to-day, notably in New York and Brooklyn, declared to be carried on by members of their body, in fact is the work of fanatics, massage healers, sorcerers, or charm curists. Such cases must of course be eliminated in the consideration of the cases where death has resulted from Christian Science treatment.

Probably the death of Mrs. Barguet of New York may be said to have occurred while she was receiving Christian Science treatment, if the statement that the healer, Mrs. Fowler, is a Scientist is to be accepted. Mrs. Fowler and the two daughters of Mrs. Barguet have been held for the grand jury on the charge of causing the death of the mother of the girls.

Christian Scientists say that their great aim is to cure all disease, and finally to overcome death. Mrs. Eddy says in the preface of her book, "Science and Health with Key to the Scriptures:" "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness, and so disappear as naturally and as necessarily as darkness gives place to light, and sin to reformation. Now, as then, they are not supernatural, but supremely natural."

Although the object and hope has been to cure all, during the thirty years that the Christian Science healing has been practised that aim has not been accomplished, and believers ascribe as the reason the fact that the understanding of Christian Science is limited. How well it has advanced, how much it has done to relieve the sufferings of humanity is known on the interior but not, it is averred, outside the church.

Here we have another great claim and protest of the Christian Scientists. Never a word, they say, is said of the immense, immeasurable power the movement has been as a sanative influence, but violent outbursts of unfavorable criticism and calumny are created if once a healer should lose a case.

Then, go on the Scientists: How about the medical practitioners? When they cure, are the cures concealed? When their patients die, are the deaths heralded over the earth? Far from that. The work of the medical doctors is praised if it succeeds, and not much, if at all, remarked upon, if it fails.

Just why they should be singled out for abuse when their treatment of patients has happened not to have been

Digitized by Google

successful, Christian Scientists are not fully able to understand; still they have a sense that this is done because the faith they profess is moderately new, possibly believed by some to be dangerous as a fad, and by others to be feared on account of the extreme opposition manifested in its workings to the theory of medicine which has so long obtained.

When the Scientists see a list of thirteen names in a New York newspaper, names of those who, it is said, died though they received the treatment of the sect, they are sad at heart, but they wonder much that these thirteen names are regarded by the world as constituting an indictment of an abnormally criminal and monstrous nature against Christian Science.

This list was made out after an investigation into the number of deaths in the world during the past three years from Christian Science, from May, 1896, to May, 1899. The followers of Mrs. Eddy are willing to grant that thirteen people have died in the world after, or in the course of, treatment; indeed, they are not certain but what there may be more. When, however, they see the name of Harold Frederic, the American journalist, who died in England, among the list, they do not agree that it represents the facts of the case. They believe that they proved that Harold Frederic died while in the hands of regular physicians; that he received some Science care, but that the healers were not allowed to continue their demonstration, so that the saving power of the treatment was not accorded a reasonable opportunity.

Another name in the list is that of the wife of Judge Eller of Omaha, Neb. Judge Eller and his wife and daughter were all seriously burned, Mrs. Eller so badly that by no human aid was it possible to save her life. She was, however, according to the Christian Scientists, relieved from suffering by Science while she lived. In the case of Judge Eller and his daughter, both were treated and saved. Although painfully burned they were brought out of danger, and no scar remains to tell the story of the casualty.

Here is made an allegation against those who condemn Christian Science. The press dwelt upon the death of Mrs. Eller, but omitted entirely to notice in the slightest manner the happy recovery of husband and daughter. Two cases, then, out of the thirteen cannot, the Scientists claim, justly be said to be due to Christian Science.

Of scarcely less interest at this time than the matter of the number of deaths from Christian Science is the question of whether the courts in the United States can restrain healers of the sect from carrying on their work. In New York an effort is now under way to convict the woman practitioner and two girls on the charge of causing the death of Mrs. Barguet.

If the decision of the courts in New York is the same as in Ohio and Rhode Island, the attempt at conviction will fail.

In these states where the fight has been continued to the Supreme Court, the final verdict has been in favor of Christian Scientists. The statute in these states was somewhat similar to that now in effect in this state. In Rhode Island it was held that Christian Science healing was not the practice of medicine, and in Ohio it was declared by the Supreme Court that Christian Science was a religion, and as such had a constitutional right which was above the power of legislation.

In Massachusetts the one effort to limit the practice of the Christian Scientists was of no avail. Under the section of the law dealing with the penalty for practising medicine without being registered, the authorities dare not arrest the Scientists, for they scarcely come under the scope.

It was in 1898 that the State Board of Registration in Medicine suggested an amendment to the law so that it could be aimed at Christian Scientists. The hearings before the Committee on Public Health were notable in the testimony which came voluntarily from prominent citizens. The amendment was rejected.

At this hearing B. Fay Mills said in part,—

"I am opposed to any law that will affect masseurs, Christian Scientists, etc., so long as they advertise themselves as such. I do not see how we are to make any real progress in any direction if we confine ourselves to those who have passed through only a certain course. Some things that have benefited the human race to a great extent came from people who did not belong to any particular society. The progress that will be made over present conditions in the medical profession to-day will be as great as the progress of to-day is over the magicians. The people of the future will laugh at us just as we laugh at the ancients."

Mr. William Lloyd Garrison also spoke. Some of his remarks were as follows:—

"Our protest is not against education or skill, but for liberty, without which both must suffer. We concede that learning and carefully safeguarded methods of medical practice are excellent things, but, as when a limited gospel is preached, we dare affirm, in Lowell's words, that 'they didn't know everythin' down in Judee,' so we declare that medical truth is not confined to the faculty.

"One has only to read the candid opinions of eminent physicians of long practice to realize how tentative and purely experimental is the science of medicine. The death of a patient under irregular treatment, although it may be demonstrated that the greatest care and intelligence were used, is heralded abroad as something scandalous and dreadful, but if any regular physician were to make public the deaths coming to his knowledge from misapprehension of the disease, or because of mistaken remedies used, the public might well be alarmed."

Professor James of Harvard made an earnest plea against the acceptance of the amendment in the interest of the advance of medical knowledge. Mr. Septimus J. Hanna, the editor of the *Christian Science Journal*, also spoke. He pointed out that the manifest purpose of the bill was to rule out of the healing realm all who could not pass an examination in the branches of medical learning satisfactory to the examining board. Judge Hanna went on to say,—

"We claim also that we derive our license to heal our fellow-men from a higher than human power, and that there is no medical board or legislative body that can take from us our right of thinking and of prayer. If by virtue thereof the sick are healed,—and they are,—who shall say that we must cease to think and to pray? If reading our text-book, and the Bible in its light, will heal sickness,—and it does,—what human power is there to prevent our reading these books?

"It would be well for our medical friends to devote enough time to the investigation of this subject to learn something of what it is and what it is doing, before they seek prohibitory legislation against it. We assure them it is a deep and sacred subject. We assure them that they who make light of it, know not what they do."

The effort to put down the Christian Scientists, then, has failed in Massachusetts, it has failed in Ohio, it has failed in Rhode Island, and in 1898 it failed in New York. What this year will bring forth in New York remains to be seen.

In the interval, the Christian Scientists are asking that they be treated fairly and not misrepresented. They are asking men to look to the thousands of cases of cures, and not have their vision and reason too much obscured by the list of eleven deaths. They are thinking of the recent lecture in Music Hall, when two thousand people stood up as having been cured by Christian Science, and of countless others who are ready at all times to bear witness to the Truth.

The Lectures.

At Decatur, Ill.

An audience that filled the Opera House was present Sunday afternoon, May 28, to hear the lecture by Edward A. Kimball of Chicago. He spoke for two hours explaining the beliefs of the Christian Scientists, and referring briefly to some of the things that have been said about them. The audience included all classes of people, but for the most part was made up of the class that think and take an interest in religious matters. It could be called an audience of the intelligent people of the city. A great deal of interest was taken in what was said, as was evinced by the close attention to the lecture and the discussions that it started afterwards.

Mr. Kimball was introduced by Mrs. George S. Durfee, who said:—

Friends, Neighbors, Fellow Citizens, Sister and Brother Scientists:—In behalf of Church of Christ, Scientist, Decatur, I am requested to welcome all who have accepted our invitation to this lecture.

The two verse parable of the lost treasure regained through diligent search, wherein neighbors were called to rejoice, illustrates our motive in inviting you here on this occasion.

God's law is unchangeable, perfect, scientifically good,—love to God and the neighbor, "The same yesterday, to-day, and forever," and true Christianity demonstrates this unchangeable law of harmony and love.

After several years of investigation and practical proof of Christian Science in a large family, I gladly acknowledge its efficacy in destroying the discords of mortal sense, of fear, anxiety, doubt, discouragement, sense of lack or limitation, of sorrow, discords—mental and moral as well as physical. It is like "the shadow of a great rock in a weary land," as a cup of cold water to the thirsty, as food to the famished. It is "an ever-present help in time of trouble," and in proportion as its Principle is understood and as it is rightly received it brings a blessing.

We shall have the great pleasure of hearing somewhat of Christian Science at this time from one who was healed by its power, and who belongs to the authorized International Board of Lectureship of the Mother Church in Boston, Mass., Edward A. Kimball, C.S.D., of Chicago.

Decatur Review.

At Devils Lake, N. Dak.

A lecture on Christian Science by a member of the Board of Lectureship was delivered in this city, Thursday evening, May 18. Although we had very short notice, which prevented extensive advertising, yet Wineman's Opera House was comfortably filled, a number coming from outside the city.

The lecturer, Hon. Wm. G. Ewing, was introduced to the audience by Attorney J. F. Henry of this city, who said,—

Ladies and Gentlemen:—We have gathered here this evening to learn something of Christian Science—something of its principles and practice. Before introducing the speaker this evening, I wish to say that many of you are Christian Scientists, and many of you, like myself, are not, but believe there is much truth and good in this religion as there is in almost all religions.

Christian Science is a discovery of modern years and its growth has been remarkable. It is often subjected to severe criticism, much of which is hardly consistent with the broad toleration of our land and times. To the end that the public and the individual may know what Christian Science is, and what Christian Scientists believe, and practise, and have accomplished, and that if they are to be criticised it may be done with candor and intelligence, lecturers qualified are sent out to discuss and explain the same. It is for this purpose that you have been invited here to-night.

I have the pleasure, ladies and gentlemen, of introducing to you Judge W. G. Ewing of Chicago.

Judge Ewing prefaced his remarks by saying that it would be impossible for him, in one brief lecture even to begin to enter into the subject of Christian Science, but he would be satisfied if he could shed one ray of this Truth upon the hearts of his listeners. The lecture was a masterly effort, and was received by the audience with the closest attention. At the close the audience still remained seated and the Judge was obliged to arise and dismiss them. Many said they would have been glad had he continued much longer.

EDGAR LA RUE.

At Belleville, Ont.

The heavy downpour of rain Monday night, May 29, no doubt had something to do with the very slim attendance at the Opera House when Rev. Arthur R. Vosburgh of Rochester, N. Y., member of the Board of Lectureship of the Mother Church of Christian Science, gave his lecture on this work.

Mr. J. J. B. Flint acted as chairman in his usual graceful manner. In his opening remarks he stated that the Christian Science doctrine was one that was at present agitating the minds of a great many people. There were about one million followers, and temples were being built all over the world. He noticed in the Toronto papers a short time ago that an address on Christian Science was delivered in the Massey Hall before an audience of twenty-eight hundred people. This showed that the question was one that was taking up the attention of thinking men and women. Those who were opposed to it called it Pantheism, a relic of heathenism, and Hindooism. This was not true. Christian Science was not to be compared with these doctrines. There were many cures made by Christian Science all over the world and some within our own city. What will cure the lame and the sick must be good. The Christian Science workers were following the footsteps of the Master, whose work on earth was to help the distressed. As long as Christian Science was doing this work it would gain followers. The speaker of the evening was then introduced.—*The Daily Ontario.*

At Logansport, Ind.

Last evening at the Masonic Temple, to a large and representative audience, Edward A. Kimball, C.S.D., of Chicago, delivered a lecture upon Christian Science. Mr. Kimball is a very interesting talker and for an hour and a half held his audience perfectly in command. In the short space of time he was unable to enter very deeply into his subject, but he nevertheless touched upon all the various points of the religion. He was able, even in a short time, to take away the misconceptions which many who had come to hear him had of the religion. He plainly stated that a person could not understand Christian Science by merely reading or hearing a lecture upon the subject, but that it took study to be converted to the belief, and as an example he told of his experience with the religion. He said that he had on several different occasions tried to comprehend the text-book of the creed, but had always failed until after several years of suffering with disease he, in his dire extremity, had taken up again the book, and this time he was able to comprehend the work and the religion. Mr. Kimball has a straightforward way about him that leaves no doubt in the mind, and so interested the audience that they appeared loath to go even when he had finished.

Logansport Record.

At Tacoma, Wash.

Dr. F. J. Fluno of Oakland, Cal., lectured at Tacoma Theatre, Monday evening, May 22. The meeting was presided over by Judge G. A. Leavitt, who introduced the speaker in the following well-chosen words:—

Ladies and Gentlemen:—These are days of liberal and advanced thought, when the people are studying the spiritual as well as the material life of man more than ever before. Days when old creeds and dogmas are falling by the wayside and men and women all over the land are ready and willing to accept the Truth wherever they may find it.

Whether those calling themselves Christian Scientists have found the whole Truth or not, I cannot say. Let us watch and investigate. One thing at least is commendable in those people, and that is, their greatest desire seems to be for more light, more knowledge and wisdom; that they may have a better understanding of man and his Creator. We have with us to-night an advocate of that liberal and advanced thought, as it relates more especially to Christian Science. That distinguished gentleman is Dr. Fluno of Oakland, California, whom I now have the pleasure of introducing to you.—*The New Herald.*

At West Chester, Pa.

West Chester is a country town of eight thousand inhabitants. The church was organized in September, 1898, and now has a membership of fifteen and an attendance of from thirty to forty.

At a Wednesday evening meeting it was announced that the Board of Directors had decided that one hundred and twenty-five dollars would be needed to meet the expenses of a lecture. At the close of the meeting subscriptions were received amounting to one hundred and twenty-five dollars and fifty cents.

Monday evening, May 22, Carol Norton, C.S.D., addressed an attentive audience of six hundred and fifty people, his subject being, "Christian Science; It is Christian, It is Scientific."

The lecturer was introduced by the Chief Burgess.

EDITH S. DARLINGTON.

At Fargo, N. Dak.

Judge Ewing of Chicago, delivered a lecture on Christian Science, at the Opera House, Tuesday evening, May 23, and notwithstanding the inclemency of the weather, a goodly number turned out to hear him. His delivery was fine, his word pictures very clearly shown, and the language used was beautiful and impressive beyond description. He stated that in the past fifteen years there have been seven hundred and fifty thousand persons restored to health, five hundred thousand communicants added to the list, one hundred and eighty churches built, and over four hundred congregations established. He stated there were to-day one thousand practitioners in the field. Those who attended were well paid for going.—*Daily Argus.*

At Stockton, Cal.

Under the auspices of First Church of Christ, Scientist, Stockton, Cal., Dr. F. J. Fluno, C.S.D., of Oakland, Cal., lectured on "Christian Science and the World's Great Need of It," at the Yosemite Theatre, the finest and largest auditorium in the city.

An intelligent audience of about eight hundred gave close attention to the lecture for an hour and a half.

The lecturer was introduced by Dr. Grattan, an M. D. of fifty years' practice who is now learning to practise the new old way as taught by Mary Baker Eddy in Science and Health, the Christian Science text-book.

JESSIE M. STRINGHAM, Clerk.

At San Bernardino, Cal.

The lecture on Christian Science delivered by Dr. A. A. Sulcer of Riverside, at the Opera House Friday evening, May 26, brought together a large and attentive audience, which nearly filled the lower floor.

Flowers profusely decorated the stage, which was set with a forest scene. The speaker was introduced by Judge C. N. Damron, who prefaced the presentation with a few appropriate remarks upon the inherent right of every American to embrace that creed which appealed to him most forcibly, and to be given an unprejudiced hearing.

Daily Sun.

At Portland, Ore.

The Marquam Grand Opera House was completely filled Thursday evening, May 25, the occasion being the lecture on Christian Science by Dr. F. J. Fluno of Oakland, Cal. The lecturer was introduced by Judge Seneca Smith, who made a neat speech, in which he drew a humorous comparison between the professions of law, divinity, and medicine. He himself was not a Christian Scientist, which, perhaps, is the reason he was called on to make the introduction, but he was in favor of fairness, and believed in giving all a full hearing.—*The Oregonian.*

At Watertown, S. Dak.

The lecture on Christian Science delivered at the Grand, Thursday evening, May 25, by Judge Ewing of Chicago, drew a crowded house. The judge is a member of the Board of Lectureship established by the Mother Church at Boston, Mass. The speaker was introduced very pleasingly by Mr. J. D. Carle in a few brief, but eloquent, remarks.—*Daily Public Opinion.*

At Anderson, Ind.

Edward A. Kimball of Chicago, a lecturer on Christian Science, was attentively listened to at the Opera House, Saturday evening, May 27, by a fairly large crowd. The down-stairs was comfortably filled. This indicated that considerable interest is taken hereabout in the new faith.

Daily Herald.

Disease Induced by Mind.

THE fact that thought may affect the growth and functions of the body is coming to be regarded as a possibility by even the most conservative and material of Scientists. The more advanced and speculative members of the medical profession have experimented along that line for a number of years with very interesting results.

In speaking of the effect of thought on the body I am not exploiting Christian Science, faith cure, or anything of that kind; but am merely giving my individual opinion, which is based on a rather wide experience as a general practitioner of medicine.

In order to understand how a thought can influence the physical organs, it is necessary to have some conception of what is called the sub-conscious mind, which is that part of the mentality which carries on such involuntary actions as the circulation of the blood, the digestion of the food, etc. If these obscure functions were dependent upon the exercise of the conscious will, the very necessity of drawing the breath in and out several times a minute during one's lifetime would be such a stupendous effort as to appall the bravest and most energetic of creatures. But these matters have all been simplified by a beneficent Creator through the action of the sub-conscious mind. This mind, while distinct from the thought or intellectual faculties, may, however, be affected by them, and that sympathetic relationship

Digitized by Google

is the foundation of all the phenomena of the faith curist and the mental healer.

Though these effects are generally unconscious on the part of the subject, there is no reason why this should be necessarily so; and a few simple experiments will convince almost any one that the mind may have a conscious effect on the body. One of the simplest experiments, though one which is of no use in a practical way, is to fix the mind intently on a certain part of the skin, say the inside of the wrist. If the mind is not allowed to waver from the point, in a few minutes the surface of the wrist will be suffused by a warm glow and an itching, burning sensation will appear. One of the most general effects of this concentration of thought on some part of the body is the restlessness which ensues, and the consequent difficulty of holding the part still for any length of time. It is, therefore, easy to understand how the constant dwelling of the mind upon some slight or imaginary ill may aggravate the condition if existent, or even cause it to appear if imaginary.

A curious case of this kind came under my observation not long ago. A young woman patient of mine consulted me about a hard lump in her throat, which had been gradually getting larger for some time. She seemed very much troubled about it, and confessed to me that there were few moments in the day in which the fear of its developing into a malignant growth was absent from her mind. On examination I found in her throat the purple congestion which is frequently encountered in connection with cancer. After consulting another physician, I decided that, on account of her fear of cancer, it would be not only useless but cruel to enlighten her as to the real condition of her throat. So we constantly referred to the swelling as a simple and common enlargement of a gland. The patient, thus re-assured, ceased thinking about her throat, and after a few weeks the swelling actually began to diminish in size, and at last completely disappeared. Hers was doubtless an exceptional case, but it goes to show the influence of the mind on the body.

There is an old superstition, which doubtless originated among people who understood the principles of mental therapeutics, that if a child of stunted growth is placed beside a young sapling and a peg driven into the sapling on a level with the top of the child's head, as the young tree grows and the distance between the ground and the peg increases, the child also will begin to grow. If the child really were to become interested in the procedure and should earnestly watch the growth of the sapling, I can understand how such attention on its part might impress its sub-conscious mind with the idea of growth so strongly that its body would respond to the impulse and actually begin to grow.

I think that the rapid growth of a child has often been augmented by the constant exclamations of its relatives and friends of "Why, how that child is growing!" Nervous children become more nervous when their attention is called to their condition by doctors' consultations with anxious parents in their presence, while the little sufferers from St. Vitus' dance or chorea become much worse on seeing that their antics attract the pitying attention of their elders. Most doctors have found that a child whose parents are terrified when a case of measles or scarlet fever breaks out in the neighborhood is much more apt to contract the disease than is the little ragamuffin who comes and goes where he pleases without thought or fear of measles.

Every physician will remember the great number of dysenteric and diarrheal cases he was called upon to treat during the cholera scare a few years ago. At that time there were about three times as many cases of that kind as are usual during the summer months, and most of them were undoubtedly caused by fear alone.

A whole volume might be written on the subject of the paralyzing and ruinous effect of fear. I have known many middle-aged women in whose family histories there was not a trace of mental weakness, who have fretted themselves into a state bordering on insanity through the very fear of becoming insane. Another dread which often attacks women when they approach forty years of age is that of abdominal tumors, and I believe that such a morbid condition of the mind has often been the direct cause of a morbid growth in the body.

On the other hand, there have been many cases in which tumors have actually existed, and the women suffering from them have refused operation and practically ignored their existence, with the result that after a few months the neglected growths have begun to decrease in size and finally disappeared altogether. I am not arguing against operation, by any means, but am stating these instances in support of the contention that the body is powerfully affected by the mind. This subject of thought affecting morbid growths of the body has lately received some attention from the medical scientists of England.

The cases of imaginary heart disease are innumerable. Many women whose hearts are perfectly sound become possessed with the fixed idea that they are victims of heart disease, and the strangest part of it is that they exhibit many of the minor symptoms of the real affection. This notion sometimes becomes a monomania, and a woman suffering from nothing more serious than indigestion will go into a sinking spell and summon a physician, imagining herself at the point of death. To tell such a woman that her pulse is full and regular and her attack of heart failure a figment of the imagination would be quite useless, for she would not believe it. Hypochondria is a complaint which should receive very much more attention than it does at the hands of medical practitioners, and the wisdom of encouraging its victims in their delusions is a nice question of ethics and expediency.

It is very amusing to an old practitioner to receive the confidence of young medical students who fancy they have discovered in themselves symptoms of obscure and terrible diseases which they are studying. This experience is universal among medical men, and has given rise to many practical jokes. A well-known medical scientist is quoted as saying that every first year's student is suffering in silent agony from four diseases, one of which is heart disease and another cancer of the parotid, both diseases, of course, being purely imaginary.

If people, especially women, would realize the absolute uselessness of worrying over either real or fancied complaints, the general health and happiness of the human race would be very much improved. I have known nursing mothers to worry so persistently over crying babies that the poor little mortals were very nearly poisoned through drawing in the impulses of fear and nervousness with every drop of the mother's milk. If those over-anxious mothers could only understand that crying is one of nature's ways of expanding the infant's lungs, their children would stand a much better chance of becoming healthy men and women.

Nothing so enervates and demoralizes the whole nature as fear. In one form or another it is responsible for nearly all the evil which curses the world.

T. W. TOPHAM, M. D.
In the *Kansas City (Mo.)Star.*

The attempt to punish Christian Science healers for plying their vocation in New York will probably come to nothing. If people are determined to have this sort of treatment what has the state to do with it? And if it should become the fashion to imprison practitioners because of the death of their patients, all regular school physicians would be in jail and there would be nobody to practise medicine.—*Topeka (Kan.) Daily Capital.*

Questions and Answers.

Is it necessary or wise for Christian Scientists to purchase and read literature containing attacks upon Christian Science or our Leader in order to know how to handle the error?—A Student.

We cannot be the conscience for individual Scientists. We simply suggest two thoughts by way of counter-question:—

Is it necessary to fill our minds with error in order to handle it? Is it not better to keep them full of Truth?

Can you think of any greater encouragement for attacks than a liberal patronage of the periodicals publishing them?

If they sell thousands to Scientists, why, as a purely financial scheme, should they not make a business of it?

Think of this, please.

***

Is the divine Mind conscious that the individual real man has any consciousness of the divine Mind?—D. F. M.

Mind, God, is the source of all true consciousness. The individual, real man is the idea of divine Mind. God knows His ideas and must know all that they are conscious of. If man were conscious of that which God knows not, God would not be infinite but finite. Since God is the source of all true being, He is conscious of all that being includes.

The Great Question.

On Sunday, May 7, 1899, President Patton of Princeton University delivered an address to the graduating class at the Theological Seminary there. He spoke of the "new Christianity" as "a sort of ethical Christianity, containing sentimentality and sociology in almost equal proportions," which had become popular of late years though it is manifest that "our Christianity must be something more than ethical or we have no ethics to preach." That is, if Christianity is not something more, it is an imposture, a delusion, and proceeds from a corrupt fountain. Then Dr. Patton continued thus, according to a report in the *Herald*:—

"If you apply the philosophy of evolution to the origin of the literature of the Bible, you must apply it as well to its credibility. If you say that evolution accounts for everything, and that there are and have been no miracles, then you cannot possibly believe the Incarnation, the Virgin Birth, or the Resurrection. If you say that man came by a gradual evolution, then you cannot believe in the fall of man.

"You cannot get along by minimizing this evolution doctrine and compromising it with your theology. If you do you will become the laughing-stock of thinking men. You will get the credit of more faithfulness and more intellectuality and be standing on firmer ground if you cling to the authority and infallibility of the Scriptures.

"That man who stands in a Christian pulpit and denies the authority of the Scriptures and the divinity of Christ—the very essence of Christianity—is either dishonest or a fool. Theology and morality must stand or fall together.

"Ethics, morality, honest trade, and pure homes will not stay once we rest only on ethics. The only rubric that the mere moralist can offer means not that you ought to do right, but that you must, and if you don't you will suffer. Thus his only motive to do right is his own pleasure."

This goes to the kernel of the matter over which the controversy concerning Dr. Briggs is now proceeding. Dr. Briggs applies scientific tests to the Scriptures, and in so doing makes impossible their credibility, since their supernatural authority is beyond the reach of natural demonstration. It is and must be simply a matter of faith; and it is the same with the authority of the Church. That dogmatically asserted authority is a baseless arrogation unless it rests on a supernatural foundation perceivable only by the eye of faith. It contradicts science, for the Incarnation upon which the Church stands is incredible by merely natural law.

Bishop Potter, preaching at St. Mark's last Sunday, on the other hand, had this to say:—

"To you and me, whether we choose to see it or not, there has come in the domain of religion, and, with reference to all those august and sacred interests for which this church is here, a new day, with largely new demands. The era of submission to mere authority, whether blindly or conventionally—whether because men do not know or because they do not think—is ended.

"It is not that in things spiritual there is no longer room for authority. If that were so, then surely the fabric of our hopes would ere long be crumbling about our ears. It is that the basis of authority is not and cannot be any longer in the mere claim of those who assert it, whether in things temporal or spiritual, but supremely in this latter realm.

"After ages of traditional reverence, whether for a man or for a book, the world has come back to that one final ground of authority which Jesus Christ proclaimed when he said, 'If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works: that ye may know, and believe, that the Father is in me, and I in Him.'"

Now, what is the authority for that proclamation by Jesus Christ? Is it not "mere authority" of the Bible or of the Church, to which absolute submission is requisite? Are we to test the words and the works of Christ by a natural standard simply? If we do, we make of them no more than human utterances and performances, as to which criticism is possible and allowable. The Christian view of society was bitterly opposed by the contemporary paganism as anarchistic. The Jews still find fault with it as fallacious in its philosophy. Current scepticism is likewise critical of it as opposed intrinsically to the necessary and salutary organization of a complex civilization. To all this, faith replies that it is Divine and therefore beyond the domain of human criticism. But if "the era of submission to mere authority is ended," what possible foundation is there for that faith?

The proposition to ordain Dr. Briggs to the priesthood of the Episcopal Church has raised for discussion the gravest, the most momentous question which has ever been put forward for agitation in the whole history of religion. Authority? How can the world have a supernatural religion without "submission to mere authority"? That is the very question under dispute.—*The New York Sun.*

Texas Column.

The Devil! Leave off the first letter, D, and this mythical personality becomes (and correctly) The Evil. This as a principle, a condition, a habit, is accepted by all liberal Christians who have outgrown the childish superstitions of an ignorant past.

This mythological personage has been the recipient of altogether too much attention, too often sharing honor (?) with the Deity in the minds of honest ignorance, and has been brought to the front in sermons, essays, and exhortations. Probably no more amusing instance of the latter ever occurred than that recorded of a young rural school teacher of the past. The Bible being read every day in school, when the name of God occurred in the lesson, each pupil was taught to bow in reverence. A bright child, who had evidently imbibed a belief in the supremacy of his majesty over a portion of humanity, innocently asked, "Shall we

Digitized by Google

bow when we come to the devil?" The girl teacher hesitated a few seconds—then, as if a somewhat puzzling question was satisfactorily solved—she replied, "Yes; it is safest."

The world in which we live is a good world! It is God's world! It is a beautiful world! And all for the use and benefit of humanity.

Full of wonders and objects of interest. Soil, productions, climate, and scenery all contributing to the welfare and enjoyment of its inhabitants. Protected by noble mountains, fertilized by countless streams, rivers, and lakes; its shores washed by oceans that constitute a watery highway to earth's remotest bounds, and over-arched by the splendor of a starry dome, where myriads of other worlds are swinging in space,

> Forever singing as they shine,
> The hand that made us is divine,

what more is needed to make us, as mortals, the happiest, and best of all God's living creatures? What? Why, a grateful appreciation of all these blessings, and obedience to the physical, moral, and spiritual laws of our being, and a loving trust in God.—*The Universalist Herald.*

Miscellany.

The great need to-day is the application of the Gospel plan of salvation to the daily lives of the people. There is so much ecclesiastical machinery, so much to do generally, that we are in danger of merging our spirituality into morality, and then patting ourselves complacently on the back and saying, "Very good; very good."

No amount of morality will make religion.

Oh, that we could live the Christ-life! That is the need —the supreme need—of the hour. As I travel up and down the land and come into touch with thousands of men and women, I realize more every day that the thing that will make the Church progress in the next century is not methods of church, or plans for social reform; but more of Christ in the individual heart. The inflamed human heart is the only motive force that will drive the Church onward to victory. CHARLES H. FOWLER.

In *The Christian Guardian.*

Cured of Leprosy.

An anniversary meeting for the Sunday School was held at Grace M. E. Church on Oneida Street, recently. The attendance was good and the addresses delivered were the most profitable listened to in many days.

Mrs. Miller's address was on the work of Miss Mary Reed, missionary among the lepers of India, whose miraculous cure from leprosy has caused widespread comment. In telling of the career of this remarkable worker, Mrs. Miller stated that in 1884 Miss Reed was sent to India by the Cincinnati branch of the Women's Foreign Missionary Society of the M. E. Church, and reached her field in November of that year. The following January she was appointed to the Zenana work, or work among women, in Cawnpore.

After four years of successful work she was sent to the girls' boarding schools at Gonda and remained there a year, when in January, 1890, she returned home to regain her strength. While at her home in Ohio she found that she was a leper, and on learning the awful truth she went to the mountain retreat in India for lepers at Pithoragarh.

Here while at work among the lepers she was assured by God that she would be healed, and from that time, in the fall of 1892, she became better. She is well now. After eight years of exile she was in attendance at the North India conference at Lucknow held recently. Another favor which God has shown her is that any of the sick whom she attends at the mountain retreat are converted to the Christian faith. She goes among the lepers, dressing their sores and caring for them without fear.

Utica (N. Y.) Daily Press.

Alleged Fatal Vaccination.

The city was sued for three thousand dollars damages in the Superior Court yesterday for the death of William Fuller, son of Benjamin Fuller, from the alleged effects of vaccination. The declaration states that the boy was vaccinated March 13, by a physician of the health department, without the knowledge or consent of his father. It is alleged the boy died because the vaccination was unskilfully performed. The boy's father brought the suit, through Hardcastle & Wynn, attorneys.

Baltimore (Md.) Sun.

My Creed.

My creed is Love, and Love is God;
In all the universe abroad
  There is no other light
  To guide the soul aright.

But love, from out the depths of hate
Lifts man up to a high estate.
  Fits him for realms of bliss
  Ere he departs from this;

And brings the blessed angels near,
With their rich gift of Love, to cheer
  And guide us in the way
  That leads to perfect day.

It brings sweet peace to all mankind
And doth all men and angels bind
  To God with links of gold.
  And so I firmly hold

That human souls can never need
A more complex or larger creed;
  For all below, above,
  Are saved and kept by Love.

Frank Swee..

Notices.

We are happy to announce that Hon. Joseph R. Clarkson of Omaha, Neb., has been added to the Board of Lectureship. This valuable addition to so important an arm of service is cause for congratulation alike to Judge Clarkson and the Field.

The lecture of Edward A. Kimball, C.S.D., appearing in the *Christian Science Journal* for May is now published in pamphlet form. One copy or more, each, 10 cents; 12 copies to one address, $1.00; 25 copies to one address, $1.75; 50 copies to one address, $3.00

A lady's watch was found at Tremont Temple on the afternoon of June 6. The owner may secure the same by calling on or addressing Ira O. Knapp, C.S.D., 4 Batavia Street, Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

We are requested to announce that Edward A. Kimball, C.S.D., of Chicago, will continue in the lecture work. His address is 5020 Woodlawn Avenue, Chicago, Ill.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each $3.18
Two to Twelve books to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 12 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JUNE 22, 1899. | Vol. 1 No. 43

Use and Abuse of Property.

GOVERNOR ROOSEVELT was the principal guest and speaker at a dinner recently given by the Independent Club of Buffalo, N. Y. He received a most enthusiastic reception. The subject of his address was "The Use and Abuse of Property." He spoke in part as follows:—

I want to talk to you of what concerns all of us, particularly concerns those of us who for the moment occupy public position, and what is the attitude that should properly be observed by legislators and by elective officers toward wealth, and the attitude that should be observed in return by men of means, and especially by the organizations of men of means which we distinguish as corporations, toward the body politic and toward their fellow-citizens.

Now, of course a great deal of what I have to say must be trite. All the great truths up to which we try to act are trite. I certainly have not yet found any new principle of importance in public life, and, so far as I have been able to get, I have become more and more a convinced believer in the doctrine flouted a few years ago by a then eminent statesman, that, after all, the Decalogue and the Golden Rule are the two guides to conduct upon which we should base our actions in political affairs. I do not mean to speak in a spirit of cant, and I am about the last person who would advocate holding up to any body of men an impractical theory of life, for I grow steadily to feel more and more that if you make your theory impractical you will make your practice imperfect, and that if you set up a theory which no man can live up to you will in practice condone a course of life on the part of your public men which falls far short of what it is your right and duty to insist upon.

✙

I ask that you put into practice the doctrine to which I listened some years ago when I attended in this city of Buffalo a dinner somewhat similar to this, and heard a speech from a then prominent citizen of your city, who has now become a citizen of mine, Rev. Mr. Slicer, who phrased, in a way that I have always remembered, a doctrine that it seems to me all of us ought to take to heart, when he stated that what we needed at this time in our political life was not genius, not brilliancy, so much as we need the ordinary humdrum qualities and virtues of common honesty, common sense, courage, integrity. In other words, we need that our public men, that the representatives of the people, should possess those qualities which we value in the home and the counting-house; that they should show as public men the same type of value that we expect from a business man who dies respected by the community. I utterly distrust the man of whom it is continually said, "Oh, he's a good enough fellow, but of course in politics he plays politics." It is about as bad for a man to profess, and for those who listen to him, by their plaudits to insist upon his professing something which they know he cannot live up to, as it is for him to go below what he ought to do; because if he gets into the intolerable habit of lying to himself and to his audience as to what he intends to do, it is absolutely certain that he won't be able to stand up to what he knows ought to be done. The temptation of the average politician is to promise everything to the reformers and then to do everything for the organization.

A public man is bound to represent his constituents, but he is no less bound to cease to represent them when, on a great moral question, he feels that they are taking the wrong side. Let him go out of politics rather than stay in at the cost of doing what his own conscience forbids him to do.

I think there is no one problem that is so difficult to deal with as the problem of how to do justice to the wealth, either in the hands of the individual or the corporation, on the one hand, or, on the other, how to see that that wealth in return is used for the benefit of the whole community. The tendency is for men to range themselves in two extreme camps, each taking a position that in the long run would be almost equally fatal to the community.

✙

Oh, if I could only impress upon you, if I only had the eloquence and the power of enforcing conviction upon you, to make you understand the two sides of the question—not understand it, you may do that in theory now, but to make you realize it—the two sides, that the rich man who buys a privilege from a Board of Aldermen for a railway which he represents, the rich man who gets a privilege through the Legislature by bribery and corruption for any corporation, that man is committing an offence against the community which it is possible may some day have to be condoned for in blood and destruction, not by him, not by his sons, but by you and your sons. If I could only make you understand on one side, and make the mass of our voters understand, on the other—that the worst thing they can do is to choose a representative who shall say, "I am against corporations; I am against capital," and not a man who shall say, "I stand by the Ten Commandments; I stand by doing equal justice to the man of means and the man without means; I stand by saying that no man shall be stolen from and that no man shall steal from any one else; I stand by saying that the corporations shall not be blackmailed on the one side, and that the corporations shall not acquire any improper power by corruption on the other; that the corporations shall pay their full share of

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

the public burdens, and that when it does so it shall be protected in its rights exactly as any one else is protected!" In other words, if I could only make our people realize that their one hope and one safety in dealing with this problem is to send into our public bodies men who shall be honest, who shall realize their obligations, not their obligations to the rich man and the poor man, but between the honest man and the dishonest man!

The right use of property is to use it as any honest man would use his property in reference to his brother. Its abuse is to use it as any honest man would not use his property in reference to his brother; all that our public bodies have to do is to see that our policy, as a state and a nation, is shaped along those lines.

Now, send men into public life who, on the one hand, will be incapable of yielding to any demagogic attack upon men of means, merely because they are men of means, and men who, on the other hand, will not be blinded by those considerations to the fact that too many men of means strive to bring into public life the kinds of chicanery by which they have won in business life, and make them understand that they will not be allowed one advantage due to dishonesty, due to mere smartness, due to anything but proceeding along the recognized rules of morality.

When you have once made your public men take that attitude continuously and as a regular thing, it will be but a short time before you see the disappearance of demagogic attacks upon wealth upon the one hand, and of corrupt subserviency to the purposes of great corporations, on the other.

Items of Interest.

In the course of a recent interview in London, Mr. Samuel L. Clemens (Mark Twain) said, in referring to the closer relations between Great Britain and the United States: "It has always been a dream of mine which I hardly expected to see realized, but it has gone far enough toward realization to furnish me contentment."

Hard fighting still continues in the Philippines. The insurgents have been driven back constantly, and have suffered severe losses. As yet there is no prospect of an immediate cessation of hostilities. More troops are to be sent to General Otis immediately. He will soon have thirty-five thousand men at his command.

Diplomatic relations with Spain, which were broken off April 21, 1898, were formally resumed at eleven o'clock June 3, 1899, when President McKinley formally greeted Duc d'Arcos, the new minister to the United States. Appropriate speeches were made by both the President and the new minister.

It is reported that Admiral Dewey has cabled to a friend in Washington, D. C., that he must decline to accept the home which the American people are preparing to present him, but that if a fund was raised for that purpose, he would take the money and invest it in a home for sick and disabled sailors.

The campaign in the Philippines is to be prosecuted as vigorously as possible; no additional concessions are to be made to the natives, and no terms but unconditional surrender will be considered. The Peace Commission is to close up its negotiations and return to the United States.

Mrs. Ann Kendall, a colored woman, recently died in Boston at the accredited age of one hundred and six years. She was baptized at the age of one hundred and three years. It is said that she had never taken a drop of medicine.

It is reported that thirty thousand copies of Senator Hoar's great speech, translated into a dialect understood by the Tagalos, have been smuggled through the lines, and are now being distributed among Aguinaldo's followers.

The American and English residents of Belgium are greatly incensed over the issuance of a circular forbidding the town clerk to register the births of children whose Christian names are not found in the Roman calendar.

The Carnegie and Bethlehem companies have agreed to furnish the Harveyized armor at four hundred dollars per ton, and thus the completion of the monitors and continuance of work on the battleships is assured.

General Otis cables that the American victory at Las Pinas June 14, was greater than was first reported. The enemy numbered four thousand, and lost in killed, wounded, and captured more than one-third.

Harvard College will confer the degree of doctor of laws upon M. Jules Cambon, the French ambassador, in recognition of his services in the conclusion of peace between the United States and Spain.

Information is received from Madrid that the Marianne, Caroline, and Pellew islands have been ceded to Germany for five million dollars. Spain reserves for herself three coaling stations in each group.

Rev. W. H. P. Faunce, pastor of the Fifth Avenue Baptist church, has announced that he will resign the pastorate of that church immediately, to accept the Presidency of Brown University.

It is proposed to connect England and Ireland with a tunnel twenty-five miles in length under eighty-five fathoms of water. The estimated cost of the undertaking is sixty million dollars.

Only gold and silver coin will be sent to the Philippines in the future, as paper money cannot be used there on account of the ants, which eat almost anything and are very fond of paper.

The Merchants' Club of Boston has extended an invitation to Admiral Dewey to be the guest of honor at a dinner to be given soon after his arrival in this country in October.

United States Ambassador Choate and Lord Salisbury have reached an agreement which settles the Alaskan question until the meeting of the High Commission in August.

The first formal meeting of the Venezuelan arbitration commission was held June 15. The commission meets in Paris, and ex-President Harrison is one of the leading counsel.

During the year 1898 the United Kingdom produced two hundred and two million tons of coal, while the United States produced one hundred and ninety-six million tons.

An automobile recently made the trip from Cleveland, Ohio, to New York City, a distance of seven hundred and seven miles, in forty hours and four minutes actual running time.

Mrs. Julia Ward Howe recently celebrated the eightieth anniversary of her birth. She is enjoying good health and seldom puts on glasses for reading unless the light is poor.

One of the American exhibits at the Paris Exposition will be an electric road, upon which will be run model cars made by the different companies in the United States.

Mr. F. E. Leimer, a Chicago sculptor, will make a bust of President McKinley which will be exhibited in the United States building at the Paris Exposition in 1900.

The Board of Aldermen of New York City have passed a resolution appropriating one hundred and fifty thousand dollars for the reception to be given to Admiral Dewey.

Over eighty thousand Sunday School children recently paraded in Brooklyn, the occasion being the seventieth anniversary of the Brooklyn Sunday School Union.

Baron Christiani, who assaulted President Loubet with a cane June 4, has been sentenced to four years imprisonment and also to pay the costs of the trial.

The first American volunteers to leave the Philippines were the Oregon regiment and First Volunteer Signal Corps. They started for home June 14.

The Peace Conference at The Hague has been asked to consider the cause of the Spanish prisoners now in the hands of the Philippine insurgents.

About five billion gallons of petroleum are now produced annually in the world. About half of this amount is produced in the United States.

The city of Rochester, N. Y., recently dedicated a handsome monument to the memory of the colored statesman and scholar, Frederick Douglas.

Captain Dreyfus displayed the greatest joy on receiving the official confirmation of the news, cabled by his wife, that he was to receive a new trial.

The President has appointed a new commission to determine the most feasible and practical route for a canal across the isthmus of Panama.

Information is received that every member of the French cabinet has resigned, and President Loubet has accepted the resignation.

The George J. Whitten camp number one of the Legion of Spanish War Veterans has elected Miss Helen Gould to honorary membership.

In 1815 the Postal receipts reached one million dollars; last year the receipts amounted to eighty-nine million dollars.

The Lincoln Park Board of Chicago has decided to erect a hundred-thousand-dollar monument to Admiral Dewey.

According to the Treasury report the amount of gold in the United States June 1 was nearly one billion dollars.

Admiral Dewey's salary will be thirteen thousand, five hundred dollars, whether on duty at sea or on shore.

The iron and steel exports from the United States have increased nearly fifty per cent during the past year.

Rudyard Kipling had so far recovered from his recent illness as to be able to sail for England June 14.

Attorney-General Griggs has announced that under certain conditions Cuban ships may fly our flag.

The amount of money in the United States May 1, 1899, was nearly two and a quarter billion dollars.

Six revenue cutters have been detailed to patrol the Behring Sea and enforce sealing regulations.

Admiral Watson has arrived at Hong Kong and taken command of the Asiatic squadron.

Emile Zola, who championed the cause of Captain Dreyfus, has returned to Paris.

Mr. Bellamy Storer, United States minister to Spain, arrived at Madrid June 11.

"These Three."

BY E. E.

O, little heart, be brave!
The fight is hard to win;
The struggle long and fierce
With unbelief and sin.
But God is on thy side,
And He will hold thy hand.
Though foemen, lurking, hide,
Thou shalt possess the land!

O, little heart, be true!
The world with doubt o'ercast,
Hath need of simple truth,
That standeth firm and fast.
Thy quiet trust must show
To hearts grown faint with dread,
How blest are they who *know*
Love reigneth overhead!

O, little heart, be sweet!
Let gentleness control
Thy every word and act,
And dwell deep in thy soul.
Full many hearts are brave,
Full many hearts are true;
But that heart breasts each wave,
That hath God's *sweetness*, too!

Thou, then, dear little heart,
Be brave, and true, and sweet!
And let our earth-lives feel
Thy trinity complete.
So shall thy peace be great;
And thou, thyself, have place
Within the "Golden Gate,"
Before *Love's perfect face!*

Entered at the Boston, Mass., Post Office as second-class mail matter.

Recent Pamphlets.

SOME very important pamphlets have recently been published by the Christian Science Publishing Society. We will mention, first, "Christian Science History." This is a pamphlet of 44 pages, the purpose of which is to place the Discoverer and Founder of Christian Science—the Rev. Mary Baker G. Eddy—in her true light before the world, as the author of the only text-book upon the subject of Christian Science that ever has been written—and we have no hesitancy in saying that ever will be written—"Science and Health with Key to the Scriptures." While placing Mrs. Eddy in her proper light, this pamphlet also, by clear and unmistakable evidence, refutes the falsehoods which have been in circulation with reference to the authorship of said text-book. No fair-minded reader, desiring to know the truth, after having read the facts set forth in this pamphlet, will ever again question the fact of Mrs. Eddy's having originated the healing system as set forth and explained in her text-book. This pamphlet is well worth the careful perusal of every person who desires to know the real facts relating to the authorship of the text-book.

We especially commend its careful perusal to ministers of the gospel and editors of magazines and newspapers, some of whom have been accepting as true the falsehoods which have been so industriously circulated, and have written articles and delivered sermons based on the assumption of their truth.

This pamphlet is for free distribution. We do not mean by this, however, that it is to be recklessly or lavishly thrown about, but it is to be used discreetly where it will do good. It should be especially brought to the attention of the clergy, for we are sorry to observe a very marked predisposition on the part of many clergymen to accept whatever is said against Christian Science as being correct, and to preach against it from that erroneous standpoint. Those sending the pamphlets to the clergy, as well as to the press, should accompany them with the request that they be carefully and disinterestedly read.

The very able lecture of Edward A. Kimball, C.S.D., delivered in the First Church of Christ, Scientist, Chicago, March 1, 1899, has been published in pamphlet form, and is now ready for distribution. This lecture, it is almost needless to say, is a strong and exhaustive treatment of many of the phases of Christian Science. It also aids in refuting the falsehoods above referred to, and in presenting to the world our Leader in her true historical aspect. It should be widely read by Scientists, and distributed among non-Scientists.

In some respects, the most helpful and useful pamphlet yet issued by the Christian Science Publishing Society, is the one entitled "Legal Aspects of Christian Science." This pamphlet consists of the decision in full of the Supreme Court of Rhode Island in the case of the State *vs.* Mylod and Anthony, which, all who read the same in the *Journal* will remember, was a most able and exhaustive review of the question of the power of the legislature to control or regulate the practice of medicine and surgery, the effect of the decision being that Christian Science is not in any sense the practice of medicine or surgery, and that, therefore, Christian Scientists do not come within the existing legislation upon this subject. Also the decision of Judge Hollister of Ohio, in the case of Evans *vs.* the State of Ohio. This case is to the effect that Christian Scientists are not liable to prosecution under the statute of Ohio which was framed, in part at least, to prohibit them from practising, for the reason that Christian Science is a religion, and healing the sick being a part of the practical application of that religion, they are protected by the Constitutional provisions relating to the civil and religious liberty of the individual citizen. Both of these are most valuable authorities upon the general subject of the right of Christian Scientists to practise the healing of the sick, and taken together, are as nearly conclusive of every phase of the question which might arise as could be hoped for.

The pamphlet also contains extracts from an able article approving the decision of the Supreme Court of Rhode Island, which appeared in a leading legal publication, entitled *Law Notes*, published in Northport, N. Y., and being one of the standard legal reviews of the country. These decisions and this article constitute Part First of the pamphlet.

Part Second consists of an introduction by Carol Norton, C.S.D., and opinions of ex-Judges J. E. McKeighan, St. Louis, Mo., Joseph R. Clarkson, Omaha, Neb., William G. Ewing, Chicago, Ill., and Septimus J. Hanna, of Boston, Mass.

These opinions are in reply to two questions formulated by Mr. Norton and submitted to these gentlemen, viz.:—

Question (A).—What are your views on the legal rights and aspects of the practice of Christian Science Mind-Healing, *alias* Mental Therapeutics, as a system of healing disease?

Question (B).—Do you consider the practice of healing the sick through mental, psychical, or spiritual means, without drugs, a vital part of the Christian Science religion as founded by Jesus Christ?

The replies are able and interesting papers, in that they review from the legal standpoint the right of Christian Scientists to save their fellow-men from the effects of sickness as well as sin—their unanimous conclusion being that the practice of Christian Science is both theological and therapeutic; the two being so intimately associated that it is impossible for either courts or legislators to sever them and say that Christian Science shall be practised as a religion in destroying or overcoming sin, but not in destroying or overcoming sickness. These opinions are based as well upon authority already contained in the law books and decisions of the courts, as the inherent individual or personal right conferred upon humanity by the universal law derived from the Divine source.

This pamphlet will be especially useful for distribution among judges, lawyers, and editors. It contains 83 pages. For price and further particulars of the two latter pamphlets, please see Publisher's Department.

Do Not Deify Mrs. Eddy.

AT the recent great meetings of Christian Scientists in Boston the repetition of their interpretation of the Lord's Prayer by members of that Church caused the impression to go out that Mrs. Eddy was deified by her followers. This report annoyed all Christian Scientists, and, to correct the impression, Mr. Henry D. Nunn makes this authorized statement:—

The founders of this republic did not rebel against government, but against government in accordance with the ideas of King George III. Most people who call themselves atheists, agnostics, etc., are not in rebellion against God, but against the various conceptions of God presented to them by the different schools of theology.

Some of those who were eye-witnesses of the proofs Jesus was continually giving of the goodness and helpfulness of God by healing the sick and comforting the broken-hearted closed their minds against the true knowledge of Him which the Master could have imparted, by misinterpreting his words. He spoke of God as his Father, and of himself as the son of God. At once certain ones supposed that Jesus was trying to usurp the place of the Almighty, although he often spoke such words as these: "Why callest thou me good? none is good save one, that is, God" (Luke, 18 : 19).

Jesus said, in John, 5 : 30: "I can of mine own self do nothing." Because he was the channel through which Truth was expressed, men were prone to regard him as the power behind his words. Those of his followers who even faintly comprehended his teachings distinctly understood that their Master, so far from assuming to be God, was himself the humblest worshiper of God. It is a remarkable proof of the Godlike character of Jesus that he continually had to declare that he was not God. It is difficult to conceive how it was possible for either friends or enemies of the Master to misunderstand his relations to the Power he represented, but they did.

In this age a humble follower of Jesus has come teaching and exemplifying his doctrines—imparting the knowledge of God in a way that again heals the sick. This follower of Jesus is Mary Baker Eddy. Through misrepresentation and misapprehension, some persons get the notion that Christian Scientists deify Mrs. Eddy. Nothing could be more absurdly false, but just this absurd misconception blinds many people to the Truth they would otherwise be able to discover in this system of religious teaching.

Christian Science teaches that God is the whole of Being, embracing in His own character the perfect qualities of both fatherhood and motherhood; that He is not only just, wise, and powerful, but that He is also merciful, loving, and tender. There is nothing new in assigning the qualities of motherhood to God—only the emphasis is new. Because the all but universal conception of God had come to be that of a vague personality far more terrible than tender, Mrs. Eddy deemed it wise to present the tender side of God's nature to men in a way that would cause it to be interwoven with all their thought, and thus efface the last remnants of the old rabbinical conception of God as a man of war, responsive both to derision and flattery.

At all Christian Science meetings, of whatever kind, the Lord's Prayer is invariably repeated; at the meetings on Sunday it is accompanied by an interpretation thereof, written by Mrs. Eddy, which opens with the following words: "Our Father and Mother God." From the fact that Mrs. Eddy's students, purely from a sense of filial affection for her through whom great blessings have come to them, usually speak of her as "Mother," it is sometimes said that the prayer used in the services is a sacrilegious petition to Mrs. Eddy as God.

Christian Science has not one doctrine for the ignorant and another and widely different doctrine for an inner circle of a few of the elect; it has no exoteric or esoteric teachings. Christian Science is open to the investigation of all men in precisely the same way that music or mathematics is. It teaches that there is but one God, who is not, and never was, corporeal, and that there is but one Christ Jesus.

Mrs. Eddy's place in Christian Science is that of a Teacher and Leader—fitted to teach and to lead because of her spiritual perception of the true meaning of Scripture, having proved the same by practical works before promulgating her writings. The First Reader in the Mother Church in Boston, when he invites the congregation to join in spiritual communion, is in the habit of referring to God as "our Father and Mother God." This simply by way of expressing the Christian Science conception of the fulness of the godhead, and has no reference whatever to Mrs. Eddy.—*Boston Herald.*

The Baltimore Sun.

THE *Baltimore Sun*, which is regarded as the leading newspaper of the South, published excellent accounts of the recent series of Christian Science meetings in Boston, sent by wire by its special correspondent, Hermann S. Hering. While not endorsing Christian Science or any religious movement, the *Sun* recognizes that to live up to its motto, "Light for all," it must make room for news of the Christian Science movement in its columns.

Following are extracts from the reports published in the *Sun;* the dates of publication, in all cases, are one day after the events reported.

Saturday, June 3.

About sixty Christian Scientists left the city yesterday to attend the Communion service and Annual Meeting of The First Church of Christ, Scientist, in Boston, Mass., which will be held to-morrow and Tuesday.

The Boston church is the leading church of the Scientists, of which all local churches throughout the world are branches, including the First and Second churches of this city. The present membership of the Boston church is over twelve thousand, and it is expected to increase that number by several thousand at the coming meeting.

Monday, June 5.

The largest gathering of Christian Scientists ever held is now in session here.

About eight thousand delegates from all parts of the United States and Canada, and even from Europe and Australia, have been arriving during the last few days.

Four largely attended Communion services were held to-day at the Mother Church, The First Church of Christ, Scientist, in this city. As fast as one service was concluded and the congregation had departed, another crowd streamed into the church, and the simple service was repeated.

At each of the services was read the message of the Pastor Emeritus, Mary Baker G. Eddy, to the Mother Church.

The First Church of Christ, Scientist, where the meetings were held, is the parent, or "Mother" Church organization, of which all other churches of this denomination in the world are branches, but the branches are self-governed.

The branch churches bear about the same relation to the Mother Church as the various States of the Union bear to the National Government at Washington. There are now 304 branch churches, two of which are in Baltimore, and 111 additional regularly established Sunday services all

Digitized by Google

over the United States, in addition to a number in Canada, England, Scotland, France, and Germany, with a total membership of seventy thousand, while the church attendants number more than three hundred thousand.

The total membership of the Mother Church is now about fifteen thousand, of which over 2,450 were admitted to-day. There are about thirteen hundred resident members, the others being non-resident. There was an increase of seventy-five churches in 1898, against an increase of forty-four churches in 1897.

The Mother Church was built in 1894 at a cost of $220,000, not including the ground, which was given by Mrs. Eddy. It is built of New Hampshire granite and very handsomely finished and furnished, and was entirely paid for when dedicated, January 6, 1895.

The First Members held their semi-annual meeting on Saturday, elected over 2,450 candidates for membership of the Mother Church, and transacted other church business. The First Members constitute the governing body of the business affairs of the Mother Church. They were originally appointed by Mary Baker G. Eddy, and additions are now made only by the unanimous vote of all First Members, subject to the approval of Mrs. Eddy. They must be strict adherents to the doctrines and practice inculcated, and be spiritually qualified to act in this executive capacity. This board consists of fifty members, all of whom must reside within a radius of five hundred miles of Boston, and consists of the most prominent workers in the Field.

Christian Science was discovered by Mary Baker G. Eddy at Lynn, Mass., in February, 1866. The text-book of Christian Science, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, was first published in 1875. This book has reached its 168th edition of one thousand copies each.

Mrs. Eddy taught her first student the Science of Metaphysical Healing in 1867. She established in 1881 the Massachusetts Metaphysical College, in Boston, and has personally taught over four thousand students. At the height of its prosperity the college closed, in 1889.

Tuesday, June 6.

The only formal meeting of the annual gathering of Christian Scientists here to-day was that of the First Members of the Mother Church, who passed upon a number of questions relating to the movement.

Many informal meetings of teachers and their students were held during the day and evening, some of the attendants coming from great distances.

One of the interesting features of the Mother Church edifice is what is called the Mother's Room, which is a suite of rooms fitted up in a beautiful manner for the use of Rev. Mary Baker G. Eddy, Founder of the faith, whenever she comes to the city. The furnishings and appointments, which are of the richest order, were provided through a fund to which all Christian Scientist children, who were members of the band called Busy Bees contributed. After the Sunday services and during this morning these rooms were visited by a large number of the members.

The register of the non-residents, members, and visitors contains names from nearly every state in the Union, from Canada, Ontario, New Brunswick, the Bahama Islands, Cuba, England, Scotland, and India. Many are prominent in their social and business standing, and nearly every profession is represented.

Wednesday, June 7.

Interest in to-day's meeting of the Christian Scientists, at the Mother Church, in Boston, centred in the appearance this afternoon of Mrs. Mary Baker G. Eddy, the Leader and Founder of the denomination.

As she entered the auditorium the audience arose and remained standing until she was seated.

[The address of Mrs. Eddy here followed.—Ed.]

Thursday, June 8.

A test of faith in Christian Science was made to-night at the gathering of the followers of the teachings of Mrs. Mary Baker G. Eddy, who are assembled here in their annual gathering at the Mother Church.

Testimonies were called for of what Christian Science had done for those present. In response there were about thirty-five speakers during the hour and a quarter devoted to this part of the program. They reported forty-one cases of healing through Christian Science treatment, one-third of which were organic diseases. These included tuberculosis, consumption, blood-poisoning, tumors, cancer, invalidism of long standing, gouty deposit, deformities, liquor habit, and the desire for suicide.

Some of the speakers said they had been physical and mental wrecks before having the treatment, and several spoke of their healing as having been instantaneous. Three said they were healed simply through reading Science and Health, the text-book; some while attending the meetings; four were healed when at death's door, after all other means had failed. All of the speakers spoke very emphatically and enthusiastically of the benefits they had derived from Christian Science.

Reports have been made to the gathering from the Field in general. Among the most interesting were those from Melbourne, Australia, where the work was begun ten months ago, and from Dawson City, in the heart of the Klondike, where services are held every Sunday. At Dawson many of the congregation, it was reported, traveled sixteen miles by dogs and sleds and returned the same day.

Lady Dunmore spoke of the work in London, England, and of the great help her family had received.

Mrs. Eddy, who attended the meeting yesterday, appears to be in the best of health, and her appearance refutes the falsehoods recently spread about her. In appearance Mrs. Eddy is small, having a full face, smooth skin of beautiful complexion, deep blue eyes, and white hair.

Friday, June 9.

As a fitting end to the great gathering of Christian Scientists which has adjourned after annual meetings during this week at the Mother Church in Boston, several hundred Christian Scientists went to Concord, N. H., to-day, to visit Pleasant View, the home of Mrs. Mary Baker Eddy, the leader of this faith.

The house is a modest but beautiful one, located upon a well-kept tract of land of about one hundred acres, one and one-half miles from the city of Concord and about seven miles from the little town of Bow, beyond Bow Hills, where Mrs. Eddy was born.

Mrs. Eddy meets visitors only by special appointment, and so the pilgrims contented themselves by walking about the grounds. She recently gave $5,000 toward macadamizing the road from Concord. Last year she converted a large mansion in the heart of the city into a meeting hall and reading room at her own expense, and afterward gave $100,000 toward the erection of a church edifice when needed.

The First Reader of the Concord Church is Rev. Irving C. Tomlinson, formerly a minister of the Universalist faith. One of the Christian Science practitioners there is Dr. Alfred E. Baker, who was for many years a successful physician in Philadelphia.

Edson E. Dewey, a cousin of Admiral Dewey, is an enthusiastic Christian Scientist. He is with the State

Digitized by Google

Mutual Life Insurance Company, of Boston, and president of the Colonial Pen Company. He says that he formerly had a great deal of sickness in his family, was himself a physical and mental wreck, and his daughters had organic and other diseases. All, he says, were healed by Christian Science treatment, and the family is a happy one, the daughters both being healers now.

From the Baltimore Herald.

THE followers of Christian Science to-day observed Communion day with four largely attended services at the Mother Church, The First Church of Christ, Scientist, in this city.

Thousands flocked into the edifice, merely for the privilege of kneeling in silent communion, of listening to the reading of a brief message, and the exchange of kindly greetings with fellow members. As fast as the services were concluded and the congregation had departed, another great concourse streamed into the church, and the simple service was repeated.

Each gathering was a representative one, for all sorts and conditions of men and women were present.

Even the knowledge that the Leader, Mrs. Eddy, would not be present, had little effect on those who joined in the services, and her message, full of love and peace, was received with silent thankfulness.

Editorial, Tuesday, June 6.

The aggressively hostile attitude recently assumed by physicians and public health officers in different parts of the country toward Christian Science seems to have strengthened the cult rather than weakened it. The Annual Meeting of the Church in Boston has brought together thousands of believers, whose zeal and enthusiasm seem to have been stimulated by prosecution and threats of prosecution. In her formal message, Mrs. Mary Baker Eddy, the Founder of the sect, gives expression to the practical effect of efforts to suppress it by bringing charges of neglect or malpractice against persons who profess to cure bodily ills through the medium of Christian Science so-called, when she descants on liberty as the inalienable birthright of man, guaranteed under the American Constitution, and praises God for persecution. Attempts made in different parts of the country to secure the punishment of "healers" for alleged violation of health laws have intensified their resolution to persevere, and have caused not a few persons, who would otherwise have remained indifferent, to regard them as martyrs.

Naturally, professors of belief in Christian Science have been willing enough to be placed in this attitude. If insincere, they shrewdly calculated that official coercion would make them more interesting, and gain sympathy for them. Sincerity, on the other hand, readily resolves itself into fanaticism under pressure, and little good comes, as a rule, from combating fanaticism. Consequently, it is reasonable to assume that, excellent as may have been the impelling motive, the expressed determination of health officers and medical associations to proceed against the active exponents of Christian Science in the treatment of the sick does not commend itself for the value of the tangible results achieved.

That Christian Science has numerous absolutely faithful and conscientious adherents hardly admits of doubt. It may be argued that the "Science" is an egregious delusion. This is said of various other cults, which, nevertheless, appeal to many people. Notwithstanding the frequent exposures of pretended Spiritualist mediums the confidence of a great majority of Spiritualists in the "materialization" of the departed remains unshaken. Outside the realm of the knowable a vast region exists in which fancy may disport itself at will. There is no limit to the religious systems which the children of man can and do create for themselves. Only when the fruits of such systems affect injuriously the morals and the well-being of communities, or in the event of encroachments upon the rights and the happiness of others, is authoritative interference warranted.

Growth of Christian Science.

WHILE in various parts of the country the question of proceeding in criminal action against the Christian Scientists is being agitated, it is interesting to note that the first Annual Meeting of the Scientists is now being held at Boston, and the figures given out at that meeting indicate that they are a larger and stronger body than perhaps has been understood. There are about ten thousand members of the Church of Christ in attendance at the convention, and on Sunday last 2,550 names were added to the roll and received into the church. This includes several from England and Scotland, and three from Australia, who made the pilgrimage to Boston to unite with the Mother Church.

An address by Mrs. Mary Baker Eddy of Concord, N. H., defended Christian Science and reviewed what had been accomplished. There are now 304 branch churches, and 111 additional regularly established Sunday services in the United States and in several foreign countries, including Canada, England, Scotland, France, and Germany, with a total membership of upward of seventy thousand, while the church attendants number more than three hundred thousand.

The membership enrolled on the books of the Mother Church up to May 29 was 12,114. There were about 2,550 candidates. This will make to-day a total membership of about fifteen thousand. Of this number thirteen hundred are resident members, and the rest are non-resident, who are all, however, contributors. Members of branch churches are privileged to become members of the Mother Church also, if recommended by those who are already members of the Mother Church.

There was an increase of seventy-five churches in 1898, against an increase of forty-four churches in 1897. Branch churches have been established in Cambridge, Chelsea, and Roxbury.—*Daily Journal,* Syracuse, N. Y.

For Christian Science.

AT the meeting of the board of trustees of the Johns Hopkins University yesterday afternoon the resignation of Hermann S. Hering, M. E., associate in electrical engineering, was accepted. Mr. Hering will give up college work, and will devote himself entirely to the cause of Christian Science.

Mr. Hering is the son of a prominent Philadelphia physician, and is a graduate of the University of Pennsylvania, where he took his degree of bachelor of science in 1885, and mechanical engineer in 1886. He was instructor in the Philadelphia Manual Training School in 1886–87, and was professor in mechanics and applied electricity from 1887 to 1891. He has been prominent in the electrical department at Johns Hopkins for a number of years, and has been exceedingly popular with all the students who came in contact with him. He was active in building up the department of electricity, and organized and carried through many schemes of improvement. One of the most pleasing features of the electrical course was the annual excursion which he conducted to New York and other Northern cities for the purpose of investigating the electrical plants in operation there.

For several years Mr. Hering has been interested in the subject of Christian Science, having experienced the bene-

Digitized by Google

ficial effects of its treatment. He has been prominent in the meetings of the society here, and also figured in the convention which has within the past week been held in Boston. He intends hereafter to devote his whole time to the work.—*Baltimore Herald.*

Henry Jewett's Opinions.

Mr. Henry Jewett is well known in this city as an earnest Christian Scientist. In reply to many queries as to how the play of "The Christian" and the character of John Storm appeal to him as a Christian Scientist, he has written the following:—

To me, as a Christian Scientist, the most interesting feature of the play is the struggle for a higher ideal portrayed in the character of John Storm. John Storm is, to me, a modern John the Baptist, or a child crying for the light and as yet "with no language but a cry." From a Christian Science standpoint his methods at reform are crude and often fanatical, but his motives are pure and his struggles honest and unselfish. His capacity to love is great. I do not mean his passion for Glory, although even in his love for her he expresses a higher and nobler sense than the ordinary love of a man for a woman. The dominating note through it all is to save her from herself, not to get her for himself. Glory indicates the nature of his love for her in Act III., just after Drake's exit, when she says, "There is another sort of man altogether, one whose love has the reverence of a religion in it, who is ready to trample all the world under his feet for you and ask nothing in return."

But, apart from his interest in Glory, notice the thought of unselfish love given by him in the prologue: "What the world wants now is not so much the saint or yet the statesman as the Christian soldier and apostle, the man who is ready to do the hand-to-hand fighting with the world's sin and sorrow, its wretchedness and woe, to go down into the streets and slums for the beaten and broken of our bewildered cities, and to rescue them and to comfort them wherever they are, however low they have fallen, because they are his brothers and his sisters and he loves them." And then, in Act II., to Archdeacon Wealthy he says, "If God is our Father, all men are our brothers and all women are our sisters;" and to Polly, "The highest love is the love that thinks of itself last." His love certainly aims for that, and he is ready to sacrifice all that is dear to him in the world. A higher and more advanced thought is shown when he rejects the offers held out to him by the archdeacon, and in his rejection of the impractical life of a monastery, when he says to Glory in Act I., "The life was not for me. . . . I longed for work—active, earnest work; I could not live without it." He refuses a theoretical religion and strives to make his Christianity practical, as he says again to the archdeacon, "To apply Christianity to the practical life of our own time." This is very much in line with Christian Science thought, as is also his attitude in the last act, when in return for his toil and self-sacrifice he meets with ingratitude and hate from those for whom the sacrifice was made. Then he shows the purity of his love when he stands unshaken amid the seeming ruin of his hopes and plans, determined to rescue these very people and to love them still, in spite of all. Most of all, the Christian Science thought is expressed in his reply to Father Lamplugh in the same act: "What is Life if a lie can drive you out of it? No lie ever has, ever can, injure any man long. It may seem to do so, but the Truth alone can live." In these words is acknowledged the allness of God, Good; for in Christian Science Truth is synonymous with God, and the allness of God is the basic principle of Christian Science.

Boston Evening Transcript.

The Lectures.

At Phoenix, Ariz.

In the introduction of Dr. A. A. Sulcer, the lecturer upon Christian Science, at the Patton Grand on Wednesday night, Judge E. W. Wells of Prescott outlined the doctrine of the Christian Scientists as follows:—

For our entertainment this evening the Christian Science Society in Phœnix has provided an interesting and entertaining lecture by one who is authorized to speak on the subject of Christian Science, the old-new Truth which is rapidly spreading throughout the United States and Canada, and finding its way to foreign shores on the east and west of us. When I say the "new Truth" I speak with reference to its re-appearance and discovery thirty years ago by Mrs. Mary Baker Eddy.

But Christian Scientists inform us that this Truth was never new; that it is without a starting-time—always is, and never ends; that no era can claim its beginning, no age define its duration, no cycle of time foretell its ending. It is quite apparent to us all that there is a creation involving the universe including man. But its theory, its method of being, its genesis is as mythical and mysterious to human sense as our notions and ideas of the identity of the Creator are varied. It is claimed for this Science that he who earnestly enters into its study, not for the purpose of criticism, opposition, or ridicule, but with the intent to know and understand its truth, will meet with results so convincing as to dispel all these mysteries and doubts; that the desire for a perfect conception of the Science of life will be gratified; that the close relationship of man to the creative Mind, of whom he is the image and likeness, will be revealed; that man himself will become conscious of his being a responsible identity of some account in the world, and that he is not the sinful and evil being so gorgeously painted in pages of prose and lines of poetic rhyme.

The story of Christ's birth, his conduct through life, his perfect nature, purity of character, the practical part of his teachings wherein he demonstrated the principle of Truth by healing the sick, cleansing the lepers, casting out devils, giving sight to the blind, hearing to the deaf, and speech to the dumb, causing the lame to walk, and raising the dead; his trials, persecutions, death, resurrection, and ascension, are all a part of the world's written history, and is accepted as true by the Christian world.

And more. By woman the divine Mind came to the earth in the form of the man Jesus. She nourished him after his birth, and tenderly attended him through the years of childhood. In manhood she anointed his head with precious ointment and wiped his feet with her hair. We find her lingering at the foot of the cross, and the last to turn her steps from the sepulchre wherein was laid the mutilated body. She is the first to return to the tomb and discover the stone rolled away from its door and the body gone. To her the risen Lord appeared first. She knows of the ascension scene and of his promise to come again. These are also recorded facts on the pages of the same history. The admitted truthfulness of a part is a verity of the whole. Is it unreasonable that woman again should be the first to know of the coming of the Messiah? To-day, above the horizon in the eastern sky there hangs a bright and shining star, whose brilliancy is illuminating the clouded thought and unsettled belief of material man. It is announcing to the Christian world the glad tidings of the re-appearance and coming of the Truth which is to set mankind free.

"Science and Health with Key to the Scriptures," is the Christian Science text-book—a wonderful book of truths adapted to practical, every-day life. Its writer, Mrs. Eddy, is the most remarkable woman of this or any

Digitized by Google

age. Isolated and retired from the joys and pleasures of the social world, she has devoted the last thirty years of her life to the interest of her fellow-man, and at this hour in her quiet home in the outskirts of an eastern city, this inspired woman sits silently and alone, as she does day after day and night after night, sending words of comfort out into a distressed world.

The proof is abundant that like results and signs follow her teaching and its demonstration as followed the words and commands of the Nazarene. And the conclusion is irresistible that the divine system of therapeutics instituted and practised by him nineteen hundred years ago is restored and perpetuated to-day through Christian Science.

To aid in spreading this Truth throughout the land that its benefits may reach the homes of those who care to receive it, the Mother Church of Christian Science at Boston has established a Board of Lectureship composed of men and women of education and learning, whose minds are trained in thought and investigation, and who are competent to analyze this system of Truth and through its understanding demonstrate its philosophy.

Dr. A. A. Sulcer, who is with us this evening, is an accredited member of this Board of Lectureship. His years of earnest study and investigation of Christian Science thought, and his successful demonstration of the Truth fits him to tell us much of it. While I am not a resident of this city, still, I know enough of her people to promise Dr. Sulcer an attentive, fair-minded, unprejudiced, and appreciative audience. It is a privilege and a pleasure to introduce Dr. Sulcer to you, which I now do.

Arizona Republican.

At Beloit, Wis.

Mr. Edward A. Kimball, C.S.D., of Chicago, gave a lecture on Christian Science in the Opera House Tuesday evening, May 30, under the auspices of the local Christian Science churches. He is a fluent speaker, and made his lecture entertaining to all. Mr. Kimball was formerly a member of the firm of Barrett, Kimball, & Adams, the old Beloit Straw Board Company, and was also a member of the F. N. Davis Paper Co. in this city. His interests in Beloit gave him quite an acquaintance here. It was through his associations with Mr. E. J. Adams that he became interested in the Christian Science faith, and has since taken to the lecture field in behalf of a cause he believes in most implicitly.

Ex-Mayor C. F. Hardy introduced the speaker with the following remarks:—

Ladies and Gentlemen: Accepting the invitation of the committee of your churches to be present on this occasion and introduce the lecturer on the subject of Christian Science, places me in a somewhat embarrassing position. But when I remember that you have not come to hear me discuss the subject of the evening, and that the speaker is abundantly able to perform that duty, and that I am only a prelude to the rich feast of intellectual music in store for you, I am somewhat relieved, and shall only detain you a moment.

This is an age of development. The theories of a few years ago are being continually overturned by investigation and research in the material world, and just in the same proportion have changes been going on in the thought and ideas of our great thinkers with regard to the spiritual problem. By investigation and discussion we have arrived at our present state of advancement in the arts and sciences in every department, and who shall say we have reached the zenith of our greatness, or can equal the Great Teacher in goodness?

The Scriptures admonish us to prove all things, and hold fast to that which is good. If the advocate of any theory or doctrine believes that his theory possesses all that is true, all that is good, or all that makes for the betterment of the human race, that person is a bigot, and not in condition to receive the truth. You know it is said "the mind of a bigot is like the pupil of the eye; the more light you throw upon it, the more it contracts."

Any person who by research and investigation shall advocate ideas in advance of the masses is called a crank or fanatic; but we must remember that without these advanced thinkers we should make no progress. Doubt asks questions, questions bring answers, answers bring light. The crank of to-day is the conservative of to-morrow. Truth will live, and error will melt away before its light, like the dew of the morning. Reason must be allowed to sit upon the throne, judge the testimony, weigh the evidence, and decide if it be figs or thistles, Truth or error.

We see on every side the hunger for an enlightenment that will give health and happiness. The invalid reaches out for relief from suffering. I understand it is the aim of Christian Science to restore the enfeebled body and elevate the moral character of the individual. If it has this power in its keeping, surely none will refuse to give it praise.

Every pure thought, every lofty aspiration for the betterment and uplifting of the brotherhood of man, should be encouraged by all honest seekers after truth, not forgetting that "he that doeth righteousness is righteous."

Now, ladies and gentlemen, the feast is ready, and I take pleasure in introducing to you Mr. Edward A. Kimball of Chicago, the speaker of the evening.

Daily Free Press.

At Geneva, Ill.

Edward A. Kimball, C.S.D., of Chicago, delivered a lecture on Christian Science in this city, Tuesday evening, June 6.

The audience gave very close attention to the lecture which was a strong one, filled with loyalty to the cause he so ably represents, yet with charity for all and malice toward none.

He was introduced by the pastor of the Unitarian Church, Rev. C. E. Park, in the following language, indicating breadth of thought and beauty of spirit.

Ladies and Gentlemen:—Among the Chinese there is a proverb which declares that "something is learned every time a book is opened." If this be true, how much the more true must it be that something is learned every time a lecture is heard.

We have come together this evening to listen to a lecture upon Christian Science, delivered by one who, judging merely from the fact that he has been appointed to the official Board of Lecturers of the Christian Science Church, is eminently qualified to teach us that "something."

In the field of religion, there is perhaps no matter more prominently before people's eyes to-day than this newest form of faith, known as Christian Science. For this reason alone, we, as up-to-date men and women, should be glad enough to hear its doctrines and its tenets propounded and discussed in a simple, thorough, scholarly way.

But there is another reason why we should be grateful for the opportunity of hearing this lecture. This world has seen a vast variety in religious faith. Innumerable theological systems have been born into existence, have had their day, and have died and passed into oblivion, after winning for themselves devotees who have believed in them with all that firmness which alone can save man from the quagmire of hypocrisy. But not one of these earlier religions, however crude, however grotesque it may appear to us, has failed to hand down to human thought its little

Digitized by Google

quota of fresh discovery—its grain of undying truth. And so, for this second and greater reason, we should be glad to learn of this newer and, let us hope, fresher doctrine, for the sake of the truth which it has to offer for the service and the benefit of humanity. And if it is true that a tree is known by its fruit, there seems good reason to expect that the grain of truth contained in Christian Science will prove both large and sweet.

I congratulate you upon the privilege you are about to enjoy, of hearing this matter forcibly and intelligently treated by one who so heartily yields to others the right that he demands stringently for himself—the right of freedom in thought, and freedom in speech. Accordingly it gives me great pleasure to introduce to you this evening Mr. Edward A. Kimball of Chicago, who will talk to us about Christian Science. AGNES O. HOYT, Clerk.

At Logansport, Ind.

The announcement of Mr. Edward A. Kimball's appearance in this city to lecture on Christian Science led a large audience to gather at the Masonic Temple Friday evening, May 26, for enlightenment on this comparatively unknown subject. There is a general prejudice against Christian Science among the people who have made no study whatever of the subject. There have been so many misstatements that prejudice is the natural result, but Mr. Kimball did much to counteract the general misconception in the minds of those who heard his lecture. He did not attempt a defense of Christian Science, holding that it defends itself. He simply outlined the workings of the belief without attacking in any way the creeds and opinions of those not in harmony with his ideas. During the time he talked his audience was plainly interested in what he had to say. He declared that nobody could understand Christian Science by a superficial study, saying that it was a belief whose beauty was apparent only after careful and painstaking research with a desire to understand and be benefited. Mr. Kimball spoke of his conversion to Christian Science at a time when he had almost given up hope of finding relief from physical ailments. He impressed his hearers with the honesty of his convictions and gained their good will by presenting his views without casting reflections on the opinions of others. His talk was fair and impartial throughout, leaving the audience to draw its own conclusions. Mr. Kimball is a man of broad mind, a careful speaker, and undoubtedly one of the fairest and most intelligent exponents of Christian Science before the public. He draws largely from the Bible, and last night quoted frequently from the Scriptures to emphasize his remarks. Many of the ideas were a revelation to the class who labor under the impression that the Christian Science belief is a distorted creed embraced by ignorant and illiterate people. Mr. Kimball unassumingly referred to some of the most advanced thinkers of the age who are guided by the tenets of Christian Science, and also pointed to its rapid growth in the face of prejudice and obstacles that few religions have had to contend with.

He was greeted by a representative class of people. The hall was taxed to accommodate the crowd, it being necessary to procure chairs to add to the seating capacity.

Daily Reporter.

At Sheboygan, Wis.

Judge Ewing of Chicago, spoke at the First Church of Christ, Scientist, Thursday evening, June 1, to an audience that completely filled every inch of available space in the large edifice, and delivered an address that was as captivating as instructive. The reputation of the judge as a platform speaker had preceded him, and this, coupled with what seems to be a growing interest in the subject under discussion, Christian Science, conspired to draw out an exceedingly large audience and to make the evening a memorable one in the annals of the Christian Scientists.

The speaker was introduced by County Judge Andrew Gilbertson in a few well chosen words, and received a most favorable reception at the outset.—*The Telegram.*

At San Bernardino, Cal.

Friday evening, May 26, a lecture was delivered at the Opera House, by A. A. Sulcer, M. D., C.S.B., of Riverside, Cal. The lecturer was very kindly introduced by Judge Damron, who stated that he was not a Christian Scientist, having never investigated the teaching, but he was a liberal man in his views, and thought every one should have the privilege of worshiping God in his own way. For this purpose our forefathers left the old world and sought the new. His introductory remarks were very kind and liberal. The house was comfortably filled, seventy-five or more coming from surrounding towns. Over two hundred *Sentinels* were distributed.

MRS. LUSINA LORD, Clerk.

At Winona, Minn.

Through the combined efforts of a small but faithful band of Scientists, we readily found ways and means to call a lecturer to our city. We invited all to come on Tuesday evening, May 30, and hear what Judge Ewing would tell them about Christian Science. About five hundred persons listened to the fine address and expressed themselves as being much pleased to hear it. Now, we leave the rest with God, knowing He will give the increase.

The press gave us a very flattering notice beforehand, and published a synopsis of the lecture.

MRS. C. D. CRAIK.

At Nebraska City, Neb.

Saturday evening, May 13, was a gala time for the Christian Scientists, for they listened to a very interesting lecture by Edward A. Kimball of Chicago. There were some two hundred and fifty or more at the Overland to hear the tenets of this order explained. The Scientists were well pleased with the lecture.—*Nebraska City News.*

Practical Christianity.

ENTER any Church of Christ, Scientist, and there you will find living witnesses of the power of the gospel to heal the sick and reform the sinner. Jesus taught that the works he did, his followers should do, and even greater (John, 14 : 12). If all the healing and reformatory work of this Church were recorded it would seem astonishing. Space will not permit this, but we will give a partial report of an investigation made by the writer. I am at liberty to state that the names and addresses can be secured by writing to the clerk of this Church. What greater evidence would you ask of a scholar in mathematics as to whether he understood the principle thereof, than for him to correctly solve the problem? Likewise, these testimonials from residents of this city and vicinity verify the promise of our Master of not a theoretical but a practical Christianity. On the basis by which these demonstrations are made—the allness of God, Good, and the spiritually scientific interpretation of the Scriptures—we bid all lovers of Truth in this city to unite with us in overcoming the destroyer of happy homes—sin, sickness, disease, poverty, and death. When these individuals were accosted as to why they were interested in Christian Science, their faces beamed with happiness for the opportunity of bearing witness to this Truth.

Says one lady, "I am interested in Christian Science because it is practical Christianity. For eight years I was an invalid. Physicians stated I had cancer of the stomach, heart disease, catarrh, lung and female trouble, the latter in its worst form. I sought the different schools of medicine, but only received temporary relief. Patent medicines, magnetic treatment, and electricity, were resorted to, but all to no avail. My suffering was terrific. When hope of ever being well had almost fled, I heard of Christian Science. Now you can see I am the picture of health. To it I owe my life, but the most beautiful part is that it has taught me what God is."

Another lady remarked, "I should be ungrateful not to state what Christian Science has done for me. Twenty years I was afflicted with bone scrofula. I took treatment at the Surgical Institute, Indianapolis, Ind., having an operation performed, taking decayed bone from my limb. Afterwards I went to Hot Springs, Arkansas, and had another operation performed, and bathed in the hot water. This failing, I tried magnetic treatment, but I derived no benefit. I lost hope of ever enjoying health. I investigated Spiritualism and sought relief from this source, but only to be driven to deeper despair. In that dark hour I heard of Christian Science, and decided to give it a trial. I had been troubled with a running sore on my limb, but this was soon healed. I was bothered with dyspepsia, but this was soon overcome. I had worn glasses for seven years, but was soon able to lay them aside as useless. My greatest joy is the better understanding I have of God."

The writer called on an elderly lady to ascertain why she was interested in Christian Science. She is a lady of culture and refinement, and the happy and pleasant expression manifest but tells of the thought that governs. Her daughter and grandchildren have been healed of various ills through this Truth. She said, "I was a sufferer fifteen years, from indigestion, neuralgia, and nervous affections, accompanied by the most depressing mental conditions. I had ample opportunity in all these years of testing the curative power of both schools of medicine, with the usual unsatisfactory result, temporary relief, but no cure. Alternating from hope to despair, life seemed a burden. When, through the healing of a friend, Christian Science was brought to my knowledge, it was gladly accepted, and through its blessed influence I was perfectly and permanently cured. This freedom from mental and physical bondage brought about by the Christ-Truth ten years ago, made of me then what I am now, and always expect to be, an ardent Christian Scientist."

Sometimes it is said that Christian Science is only good for nervous trouble and similar complaints. It is well to have this much admitted, but my investigation brought more to the surface. I heard of a case of fever pronounced typhoid by the attending physician, being healed by this method. I consulted a relative of the family as to the case. Although under the constant care of the doctor, she became so dangerously ill that the parents decided to call a Scientist. The child was delirious, but in a few hours, under Christian Science treatment, the fever was overcome, and she called for beefsteak, which was given her and, suffice it to say, it was eaten and relished, she suffering no inconvenience. She rapidly recovered, and soon enjoyed good health.

I had been informed that Christian Science destroyed infidelity, and decided to look into this matter. In conversing with a lady whose husband had been healed of fifteen years' infidelity, she said, "I was a great sufferer with my eyes. Oculists gave me no encouragement. It would almost seem as though I should go blind. The Church teachings no longer satisfied me. I did not care to hear the Bible read. In this condition of doubt as to Christianity, and despair of getting well, Christian Science was brought to my attention. I began to investigate it, and my health and sight improved. My husband noticed this, and some time later accompanied me to church; God was presented in a different light; the people were friendly and sociable, and after a few months' attendance at church he publicly stated that Christian Science had healed him of infidelity."

I visited the home of a mechanic to find out what there is in Christian Science that is practical to a man in the common walk of life. As I listened to this father tell what this Truth had done for his family, I was greatly impressed, and thought surely this is a practical Christianity. He told what a great sufferer his son had been with hip disease, the pains at intervals so severe that morphine did not relieve him. He brought forth two pictures, one an invalid, taken a short time before what he thought would be death, as he said, "I did not see how my son could live much longer," and then he handed me a photograph of a robust young man, the very picture of health, and at the same time summoned his boy to appear before me. His son said, "My knee and ankle joints were ossified, but now you can see I can use them. I could scarcely hear, but now you can witness I can hear by speaking to me in an ordinary tone. I use neither crutch nor cane in walking. All this has been accomplished through Christian Science." The father continued, "Some months ago I fell and badly sprained my wrist. I asked a Christian Scientist to help me. This accident occurred on Saturday, and on the following Tuesday I went to work, using this hand, experiencing no inconvenience." Speaking of the moral effect, he said, "I was an inveterate tobacco chewer, but by reading Christian Science literature, and attending their Church services, this habit was destroyed."

The solution of the poverty question has been of great consideration all the ages. I desired to find out whether Christian Science was practical in this line. I visited different homes. Each had the same story to tell. The first view given was poor health, not able to work, constant expenditures for medicine and consultation with physicians. Then they said, "Since we found Christian Science, it has restored us to health; it teaches us of God; we now have a happy home, with plenty to eat and respectable clothes to wear. Christian Science destroys poverty the same as it destroys sickness."

I sought the solution of intemperance, and wondered what Christian Science would do for a man addicted to strong drink. I consulted a mother whose daughter's family had been broken up because of this evil. She told me of her own healing through Christian Science of rheumatism, liver and lung trouble, heart disease, female and bowel trouble, having had some of these complaints for twenty-six years. Her son-in-law spoke of the happiness Christian Science had brought to him. He said strong drink had broken up his home, and separated his wife and child from him, but through this new-old Gospel his desire for drink had been destroyed, and his family had been re-united.

In my further investigation I found myself in the home of a business man, there to learn the application of Christian Science to business. Through the healing of his wife he was led to investigate this subject. In conversing with his wife, she said, "For fifteen years I was in poor health. I tried both schools of medicine, but continued to get worse. I was troubled with neuralgia of the heart, night sweats, and nervous chills. Hearing of Christian Science, we decided to give it a trial, which resulted in restoring me to health. For eight years we have not had any medicine in our home, finding Christian Science practical in meeting all the needs of the family." This man was engaged in business some years before hearing of Christian Science. I asked him if Christian Science makes

Digitized by Google

business men more honest. He replied, "It does; it establishes the law of doing unto others as you would have them do to you." I further inquired, "Have you lost any trade by pursuing this course?" With a most pleasant look, he answered, "No, instead, my trade has increased. The world wants honest merchants."

A young lady narrated her experience: "For six years I suffered from nervous prostration and lung and stomach trouble. Doctors in Indianapolis and Chicago prescribed for me, but I received only temporary relief. Most of the time for two years I was confined to my bed. I thought death was the only alternative, until I learned in Christian Science that God was my life. Medicines were discarded, and through this Truth I was restored to health."

A father said, "Eight years ago my eldest daughter, then five years of age, fell and dislocated her hip. A doctor was summoned, and she was under his care for some time. Later, abscesses formed, and the child could not walk without crutches, having no use of her limb. Not getting any better under the doctor's care, we decided to give Christian Science a trial. She was soon able to discard the crutches, and walk with a cane. The abscesses healed, and although one limb is some shorter than the other one, she puts her weight on it, which was impossible under the doctor's care. Another case was with my little boy, then a baby. He had the measles, and later took brain and spinal fever. The physician in charge said he could do nothing for him, or if by chance he should get well, he would be an idiot. I placed him in care of a Christian Scientist, and to-day he is as bright a child as you will find."

A mother states, "By the reading of Science and Health I was healed of throat and lung trouble, with which I had been bothered twenty years. Through Christian Science treatment I have been healed of rheumatism, and my daughter has been healed of various ills."

"For sixteen years," says another lady, "I was a great sufferer from nervous prostration, spinal, female, and stomach trouble. I could scarcely eat anything without suffering. Many different doctors were consulted, but I did not receive any permanent relief. Finally, we heard of Christian Science, and taking treatment, I was restored to health. I can now do all kinds of housework, and walk for miles without any trouble."

Like the one leper healed by Jesus, who returned to make just acknowledgment for benefits received, so all Christian Scientists, in various ways, are striving to live this Truth as the best expression of gratitude. A gentleman, in expressing his appreciation of what this Truth had done for him, states, "For forty-three years I suffered with asthma. My mother's people passed away with consumption, while my father's side were asthmatics. Our physician thought I was fast going with consumption, and advised me to change climate. When in the very depth of despair, we heard of Christian Science, and to please my wife, I decided to give it a trial, which resulted in my restoration to health. My friends thought it impossible for me to pass through the winter without asthma, but winter has come and passed without any return of the old claim. The physical healing is not all. It brings peace of mind and rest from the cares of the world. How thankful I am to the discoverer of Christian Science for pointing out the way that we may walk therein."

Dayton (Ohio) Herald.

Healed by Christian Science.

(*From the Hartford, Conn., Daily Times, June 2, 1899.*)

To the Editor of the Times:—

In compliance with your request I herewith hand you a brief statement of my case, giving a condensed account of the medical and surgical treatment I received, *and also a statement of how I was cured by Christian Science.*

I lost my right hand at the battle of Fort Fisher, N. C., in 1865. The ball entered the palm of the hand, passed through the wrist just above the joint, again entered the arm below the elbow joint, and there passed out again. The hand was amputated just above the wrist. The operation was not done skilfully at first. It is only fair to state, however, that the conditions were not favorable for a good amputation. First, I had been wounded four times before, the previous wounds being of such a nature that my condition was not the best to withstand further injuries. Then, too, I was now taken on board the floating hospital at a time when there was a heavy sea running, so much so that the surgeon and all hands who attended me were fearfully seasick, and the storm had destroyed most of the medical stores, leaving our ship without ether or chloroform, or at least very little of these necessary articles. The result was, I was an eye-witness to the operation on my arm, and the pitching and rolling of the ship and the sickness of the surgeon precluded the chances of a very successful operation.

For more than ten years after the amputation I was never free from pain one moment. Finally the pain grew so bad that I was obliged to resort to another operation. Professors Hood and Lamb of Washington, D. C., opened the end of the stump, removed a portion of the bone, and cut away some of the diseased nerve tissues. For a few weeks I suffered somewhat less, but still was not free from pain. The stump now began to grow very tender, so much so that I was obliged to use a wire protector to prevent the clothing from coming in contact with the sensitive flesh. I now went to Philadelphia, where I was again operated upon by one of the most celebrated surgeons of that city, Professor Ernest Goodman. He, with the able assistance of several physicians and noted surgeons, opened the stump for five inches, removed large sections of diseased nerves, scraped the bone, and treated the stump to powerful currents of electricity. From this time on I suffered more than ever. I was obliged to take great quantities of morphine, in fact, I took for years from ten to twenty grains of morphine a day, and at the time I was healed I was taking by hypodermic injection thirty-six grains of morphine a day, besides using large quantities of ether or chloroform at night in order to get to sleep at all. I went on in this way for over a year, suffering more than I can tell, praying, when in my right mind, for death to relieve me from my misery. In fifteen months after the last operation I began to have what the physicians called reflex paralysis.

First, my heart became affected; I suffered fearfully with neuralgia of the heart. I lost the power of hearing, in a measure; my eyesight became very much impaired, so much so that I was for months wholly blind. My left side was affected so that I walked with difficulty, at times not being able to move. I could not take solid food of any kind without the greatest distress, in fact, I lived for some two years on infant food prepared in water, as milk could not be taken.

Again I went to Philadelphia, and Professor Thomas of the Homœopathic College again amputated the arm, this time just below the elbow joint. I was so run down that I very nearly passed out during this operation, but after some weeks I was able to return home, but still suffered greatly.

It may not be out of place for me to state here that *I was a physician myself*, having been in regular practice for some years, and my acquaintance with a number of the leading physicians and surgeons of the country gave me opportunities for the best and most skilful treatment. I

Digitized by Google

should also say that between the different surgical operations, I was under the special treatment and care of some of the most noted specialists in nerve diseases: Dr. Weir Mitchell of Philadelphia, Dr. Loomis of New York, Dr. Thomas of Philadelphia, Dr. Lamb of Washington, D. C., and a number of others. Besides these gentlemen of the regular school, I was at times under the care of several leading homœopathic physicians and surgeons.

In 1887 I visited Philadelphia for the third time, and for the third time underwent amputation of the arm, or what there was left of it. I was again freer from pain, as in the previous operations, for a few weeks, but in two months was suffering as much as ever. My friends now began to despair of my ever being any better, and under the advice of one of the most noted physicians, who said that surgery or medicine could do nothing more for me, they began to give me greater doses of morphine.

In some way my friends now learned of a celebrated surgeon in New York who had worked wonders in nervous cases. We decided to try this gentleman's skill as a last resort. And here I want to say, as a kind of "thank offering" to the physicians and surgeons who first and last treated my troublesome case, that as gentlemen they were all that that term implies: gentle, thoughtful, kind, and tender; each one doing all he could to relieve me from my sufferings, even in some cases declining to take the fees they so laboriously earned. Several of the noted surgeons went to not a little personal expense to provide new and ingenious apparatus for use on my stump. No one could have had better care, more tender, skilful, and considerate attention than was given me during my long years of sufferings and treatments.

I have not detailed all the different surgical operations I underwent during over twenty years of suffering; enough to say, however, that first and last I submitted to seven surgical operations on my arm, side, and shoulder, and that I was under the care of eleven different surgeons and thirty-two physicians.

A broken, shattered, nervous wreck, I was taken to New York to try what one of the most noted surgeons of the country could do for me. Professor Helmouth, of Helmouth House, advised that the remaining stump be taken off above the elbow. This was done by the professor, assisted by several eminent surgeons who were invited in to witness the operation, in fact my case had gained somewhat of a national notoriety, for many of the most celebrated and famous surgeons had had a hack at me or my poor old stump.

The amputation was now performed in the most skilful manner, and with the latest and most approved appliances known to surgical science. For several hours after the operation I fluttered between life and death, but at last pulled through, but not without a most distressing secondary hemorrhage, which was the most stubborn I had ever suffered. For two or three months I was now quite free from pain, but in five months I was back in New York as bad as ever. Professor Helmouth now frankly informed my friends that surgery could not do anything more for me, and said that I could live but a few months at the most.

I returned to my home in Washington, D. C., or where I had made my home for some years. My old physicians were called in, and they too said that nothing could be done for me but to give me all the morphine I could stand, and wait for the end.

It was now that my friends for the first time had their attention called to Christian Science. After much reflection, for I was, when in condition to take any part in the matter, bitterly opposed to even trying this kind of treatment, a healer from New York was called. She arrived at half past four on a Friday afternoon. She gave me one silent treatment then. I went to sleep like a tired child, and when I awoke at five o'clock the next morning I was free from pain, and have been free from that hour, now over eight years. I received two more treatments to cure me of the morphine habit, and have never desired morphine since.

It may be of interest to note here that my case, from the first, presented so many strange and distressing symptoms that several of the medical gentlemen connected with the treatments wrote learned articles for the scientific journals of the day, giving some of the many peculiarities presented in my sufferings. These articles may be found in "The Medical and Surgical History of the War of the Rebellion," Volume 3; in Hayes's "American Journal of Medical Science;" in a pamphlet by Professors Lamb and Burnett of Washington, D. C., and in an article by Professor Thomas in the *American Journal of Homœopathy*, and also in the annual report of Helmouth House by Professor Helmouth. I mention this here so that there can be no question as to my case being one seemingly beyond the cure of physicians and surgeons. While it was a case that presented many purely nervous symptoms and strange nervous reflex phenomena that were new, and seemed unrelated to the original injury, still the case unmistakably presented marked symptoms of wide and deep-seated organic disturbances, which, in a medical and surgical sense, fully justified the professional gentlemen in pronouncing my case incurable.

Now, I know the Truth, in Christian Science, and the Truth has made me free. C. A. Q. Norton.

The Times can add that Mr. Norton is now a healthy, vigorous man.

Meditation.

For his delight is in the law of the Lord, and in His law doth he meditate day and night.—Psalm 1:2.

By the reason of his turning away from the counsel of the ungodly does man find that his joy or delight is in the purer thought. He is not looking for peace and happiness in the "flesh-pots of Egypt," but with thought turned from sense to Soul, he is listening for the "still small voice." He does not imagine vain things, for his pleasure is in the revelation of Truth—in the law of the Lord.

Though the letter may be learned, and even many so-called "wonderful" works of healing be done, the highest, sweetest, demonstration of all is the peaceful meditation or communion with Love. It is the laying up of treasure in Heaven—purity of thought.

Through the sunshine of day is this meditating done, and also through the night when the shadows seem to fall. In many a quiet Gethsemane is the patient Scientist silently communing with "the sustaining Infinite." To such a one joy is an ever-present reality.

From a supposed early derivation of the word "meditate," we may have a thought somewhat common with that of communing. It is, that it means "to heal." Going higher in thought, past the physical curing, we realize the truer work of Science, spiritual healing or reformation, which sweeps away all error, and then we shall know even as we are known.—*Herbert W. Beck, Oakland, Cal.*

There are lots of people in our churches still who believe that the Sermon on the Mount is too good to be applied; that it sets the standard too high, and that if ever it is incarnated in conduct at all it will be in some Utopian existence, about which we can, as yet, only dream.

Rev. F. R. Coyle, Oakland, Cal.

Questions and Answers.

Is it in disobedience of any expressed or implied wish of the Mother, for a Christian Science practitioner to meet weekly with a number of his or her patients, for the purpose of studying the current lessons from the Christian Science Quarterly, when all questions arising from such study are answered impersonally by the reading of passages from Science and Health?—G. C. G.

While such meetings have not been prohibited they have not been recommended. The Sunday service and the Wednesday evening meetings are no doubt sufficient to meet our present requirements. Anything further must be the outgrowth of individual necessity and experience. It is a very convenient way to study the lesson for one person to read from the Bible and another to read from Science and Health, but may not this method of study rob the student of some of the benefits to be derived from applying himself to the personal reading of both the Bible and Science and Health? Personal comments and explanations are undesirable since these books are their own best interpreters. He who relies most on the Impersonal Teacher will undoubtedly make the most rapid progress. The sooner patients and students learn this all-important lesson, the better it will be for them. The temptation to rely upon personality should be carefully guarded against. All concerned in such meetings should judge them by their fruits as to whether it is the best method of advancing individual growth, and likewise conducive to the better establishment of the cause of Christian Science in the community.

***

I observe that the men who accept Christian Science, give up the use of liquor and tobacco if they have indulged these habits. Does your religion require that these appetites be suppressed?—An Observer.

The use of tobacco and liquor is contrary to the teaching of Christian Science, and those who have indulged these habits cease to do so when they discern the Truth of Being and learn that sin confers no pleasure. It is an easy matter to forsake sin when one has outgrown the belief that it affords a sense of pleasure. The belief of pleasure in sin is the whole sin, and when this belief is destroyed sin is overcome.

There are many who honestly tried to overcome the desire for liquor and tobacco, using all the will power they could command, but failed, and were afterwards healed through Christian Science.

Such cases of healing are evidence of the true worth of Christian Science which teaches man that all real pleasure is spiritual. When the sense of pleasure in sin is destroyed, man is truly reformed. This destruction is the only real forgiveness of sin. If man believes that sin brings pleasure, and only refrains from its indulgence because of a fear of punishment, the belief of pleasure may at any time exert a stronger influence than the fear of punishment, and he will sin. Thus existence becomes a constant struggle between the love of sin and the fear of punishment. But if on the other hand the belief of pleasure in sin is destroyed the struggle is ended, and man is made free indeed because he has no desire to sin.

Drifting Unconsciously into Christian Science.

UNLESS one has been born and brought up an Episcopalian as I have been, taught to believe in the apostolic succession, the sacredness of the laying on of hands descended from a long line of bishops and clergy of lesser distinction, they cannot understand my struggles and difficulties in endeavoring to get out of it all into Christian Science, especially having been taught by a dearly loved mother who was opposed to my having anything to do with any but orthodox theology.

Years of sickness, strong laws made for me by several doctors, some of them near relatives, whose help was only temporary, caused me, when I heard of Christian Science, to turn to it for physical healing; but when I heard of a theology as the foundation and principle of its healing, I opposed it, because I found the doctrines so different from everything I had been taught to believe right. Wanting only what *was* right, I honestly and conscientiously turned away from it; this very opposition, as I since believe, was the cause of one claim after another asserting itself. Naturally help came slowly and discouragement followed. Wanting only the healing at this time, I tried to compromise matters by taking *that* part of the teaching of Christian Science into my church, but found it would not work. At times I tried to give it up altogether, in fact I never tried so hard to do anything in my life, but that, too, failed; for I could not get rid of Christian Science thoughts. All this time I was in a most unsettled condition of mind, because I was fighting against the Truth. Many times I have wished some person or power could or would decide the question for me. My thoughts were honest in wanting to do *strictly* what was right. Could it be right to give up all I had been taught for this new religion? No, it could not; and so I reasoned, fancying I had settled the difficulty forever and decided to stay in my own church. But what about that voice which seemed to follow me? I could not shake it off. I would question what it meant. Vacillating for ever so long, availing myself of opportunities to talk with Scientists who always lovingly did all in their power to clear away my doubts; reading, studying, struggling; discouragements often trying to keep the Truth from me; but I am thankful to say by perseverance the light grows clearer.

A time comes to most of us after probably years spent in the churches, when we begin to think for ourselves, and what an awakening it is! What sad regrets for all the good we might have done had we started out in life with a proper understanding of life and God as taught in Science and Health. Our thoughts go back and we take a retrospective glance at our wasted, unsatisfying lives. Six months ago, if told I had to decide between my own Church and Christian Science, I would unhesitatingly have said, My Church; now I would without a moment's hesitation say, Christian Science,—its thoughts are helpful and uplifting. And yet I cannot say just where or how my thoughts became changed. Quietly working with a determination to know that Truth that maketh free, I have pressed forward, until I have unconsciously drifted into Christian Science.—*J. M. J., Toronto, Canada.*

Building Air-Castles vs. Prayer without Ceasing.

BY O. B. HOMANS.

WHO pleads not guilty to the charge of building air-castles, a seemingly harmless and innocent occupation, and yet really an extravagant waste of time, and a direct violation of one of the commands of the Bible, "Pray without ceasing." If the time spent daily in building air-castles were spent in silent prayer, realizing the allness and goodness of God, and our spiritual relation to Him, we should find a reward in our increased ability to demonstrate over error.

An inveterate air-castle builder will find it requires quite a demonstration to desert his old habit and air-friends, and adopt this new line of thought. In speaking of this to a young friend of mine, she at once replied, "Oh yes, I see what you mean, keep your children at home and off the

Digitized by Google

street so they will be well-behaved and under control, instead of allowing them to go in idle company, and become unruly."

A few days after, I asked her how she succeeded in keeping her children at home. She replied, "It is rather hard, they do not like to give up their old playmates, but they are coming around all right. Each day it becomes easier, and they are beginning to like their new playfellows better than the old."

Concord Items.

THE service at Christian Science Hall Sunday morning was a memorable one, it being the observance of Communion and reception of members.

The hall was crowded, and owing to the large number present the ushers were obliged to place chairs in the aisles.

The service, which was simple and impressive, consisted of congregational singing, Scriptural reading, and silent prayer. This was followed by the Communion Hymn which was beautifully rendered by Villa Whitney White of Providence.

The lesson sermon, which consisted of Scriptural texts and their correlative passages from Science and Health, was read by the First and Second Readers—Rev. Irving C. Tomlinson and Miss Mary E. Tomlinson. The lesson topic was The Sacrament. The thought emphasized was the "Communion with the living Christ."

After the lesson sermon Rev. Mr. Tomlinson welcomed the twenty-five new communicants into the church. He said in brief,—

"Your reception into this church does not indicate that you have reached a goal. It tells of stormy seas sailed and a race yet to be won. You have touched the promised land; but this does not mean that you have no work before you. The trees must be felled, the homes must be erected, the home of the Spirit. We can but be grateful to God, and to our Leader, the Rev. Mary Baker Eddy, for her consecrated labors, through whom the blessings have come.

"The message of Paul is the message for us to-day—'forgetting those things which are behind, and reaching forth unto those things which are before, let us press toward the mark for the prize of the high calling of God in Christ Jesus.'"

The congregation was invited to kneel in silent communion, after which followed a hymn, the repetition of the Scientific Statement of Being, and the benediction. The Hall was decorated with rare flowers, the gifts of friends at home and abroad.—*People and Patriot.*

There was the usual large attendance at the Wednesday evening meeting at Christian Science Hall last night. Many most interesting testimonies were given of the healing of disease and sin, through the understanding of the Christ-Truth—the Holy Comforter—which Jesus said, "I leave with you," and which has been so clearly interpreted to this age by the Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy. Many strangers from different parts of this country and abroad are daily coming to Concord to visit the city which their beloved Leader has chosen for her home. Its beautiful elms and the picturesque landscape about it occasion many expressions of delight.—*Concord Evening Monitor.*

The Board of Lectureship.

The following constitute the Board of Lectureship for the year beginning June 1, 1899:—

Eastern Section.—The lecturers for the New England States are, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.; Rev. William P. McKenzie, C.S.B., 367 Harvard St., Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 367 Harvard St., Cambridge, Mass.

The Province of Quebec, the cities of Ottawa, and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Middle Section.—For the states of New York, Pennsylvania, New Jersey, and Delaware, and the Provinces of Ontario, Carol Norton, C.S.B., 170 Fifth Ave., New York, N. Y. Rev. Arthur R. Vosburgh, C.S.B., Powers Block, Rochester, N. Y.

Southern Section.—Mrs. Sue Harper Mims, C.S.B., 575 Peachtree St., Atlanta, Ga.

Western Section.—For the Western States and all Southern States west of the Mississippi River, Edward A. Kimball, C.S.D., 5020 Woodlawn Ave., Chicago, Ill.; Mrs. Annie M. Knott, C.S.D., 759 Woodward Ave., Detroit, Mich.; Judge William G. Ewing, C.S., 3743 Ellis Ave., Chicago, Ill.; Judge Joseph R. Clarkson, C.S.B., Room 450 Bee Building, Omaha, Neb.

Pacific Coast Section.—F. J. Fluno, M.D., C.S.D., 1319 Grove St., Oakland, Cal.; A. A. Sulcer, M.D., C.S.B., 1062 Ninth St., Riverside, Cal.

Great Britain.—William N. Miller, Esq., C.S.B., 57 Bryanston St., Marble Arch, W., London, Eng.

The following directions from the Manual are republished:—

CALLS FOR LECTURES.—When the need is apparent, the Christian Science Board of Directors of the Mother Church may call on any member of the Board of Lectureship to lecture, within his precincts, at such places and at such times as the Cause of Christian Science demands.

The branch Churches of Christ, Scientist, through their clerks, may apply to a member of this Board of Lectureship, within his precincts, for aid, and it shall be granted them.

The following is the By-law regarding lecturers who are First Readers, as it now stands:—

Not over six lectures, yearly, should be given by a member of the Board who is a First Reader; his or her labors are required by the church.

The notice regarding free distribution of literature is repeated:—

Upon request from the clerk of a church where a lecture is to be given, copies of the *Sentinel* will be sent by mail, postpaid, for free distribution to strangers and inquirers at the lecture. Order blanks may be had from the lecturers, whereon clerks will specify the number of copies required for this purpose. These orders should be sent to the Christian Science Publishing Society early enough to secure delivery of the papers in time for the lecture. If sent by express they will be sent at the expense of the receiver.

The Publishing Society requests that Churches will not order lavishly. In some cases hundreds of copies of the *Sentinel* remain unused after lectures, and so are wasted. This offer is intended specifically to reach "strangers and inquirers."

Notices.

The J. C. Derby Co., of Concord, N. H., will be pleased to welcome Scientists at their room 203 Huntington Avenue, corner Norway Street, where they will be until July 1. A complete line of photographs and china are on exhibition.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen: $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., JUNE 29, 1899. Vol. 1 No. 44

Mrs. Eddy Interviewed.

A Reporter for the Boston Journal gives an Account of his Visit to Pleasant View.

The *Chicago Inter Ocean* on Sunday, June 18, published a sensational article to the effect that Christian Scientists of Chicago are seriously in doubt as to whether Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, is really alive and on earth.

The article is based on what purports to be an interview with an unnamed "member of the South Side Society." This mythical person is made to declare that Mrs. Eddy did not appear in person at any of the recent meetings in Boston, during Communion week, and that the address at the Annual Meeting was read by another person and handed out to the reporters under the false pretence that it was delivered by Mrs. Eddy herself.

The *Boston Journal* upon receiving the Chicago paper instituted an investigation of the matter, with the result that a reporter personally interviewed Mrs. Eddy at her home in the city of Concord, N. H., Tuesday evening, June 20, and the interview was published in the *Boston Journal* of June 21. The following is an abstract of the interview.

✙

Concord Depot, N. H., June 20.—"Am I alive? Why I haven't felt more sound for forty years."

These are words which will set at rest once and for all the reports which come out of the West with resistless regularity that Mrs. Mary Baker Eddy, the Mother of the Christian Science faith and the counsellor of its interests the world over, is dead and has been in the grave for several years. It was the forcible and picturesque response to the question of a *Boston Journal* man as Mrs. Eddy tripped lightly into the parlor of her beautiful home in this city last night at an hour when many younger persons are in bed. The *Journal* man had come from Boston to deny or affirm the reports of her death, with particular reference to a purported interview in a Chicago paper with a prominent Christian Science worker there, who says emphatically that all evidence bears out the conclusion that Mrs. Eddy is dead, and that her death is being kept a secret by interested people who fear that knowledge of such a fate would be disastrous to the cause. This same gentleman is alleged to have made a statement that Mrs. Eddy did not deliver an address at the recent National Convention of Christian Scientists held in Tremont Temple, Boston, but that a woman who was made to pass as Mrs. Eddy spoke that day.

To a *Journal* man to-night Mrs. Eddy took notice of these declarations. It was the real Mrs. Eddy and nobody else, with whom the *Journal* man talked for half an hour; the same Mrs. Eddy whom the reporter saw alight from her carriage in front of Tremont Temple two weeks ago when she entered the building on a Tuesday afternoon to deliver her address to two thousand and more persons assembled. As Mrs. Eddy came down the front stairs with the agility of a maiden and tripped lightly across the parlor floor the reporter's eyes bulged as he thought of a woman of eighty who has worked hard and thought deeply all her life.

She was charmingly dressed in black satin, black waist with purple front; her snow-white hair combed gracefully from the middle of her head was held by side combs studded with brilliants; her complexion like pink satin, clear and unflecked by furrow or wrinkle, and her eyes bright and glistening, were no uncertain evidences of health and contentment.

✙

"It is only an impulse that I talk with you to-night," she said. "I see no reporters, and, as my time is so thoroughly taken up by my work, it is not possible for me to entertain callers. I came to Concord for seclusion. Yes, it was way back in the seventies that the reports were first given out that I was dead, but here I am, and in good health. During the ten years that I have been here I think I have missed but three days for my daily drives. I go out summer and winter, rain or shine. There were two days last winter when the streets were almost impassable during that most severe cold weather that I did not go out driving, and one other time in years past that I could not go out, but for ten years I have missed but three days. One day last winter, when the wind blew frightfully, I drove about the city; coming home it seemed as if the carriage would be blown away from the street, and the driver expected it, but we arrived home safely, and I felt no bad effects from the experience."

"What are your working hours?"

"I arise at six o'clock in the morning," replied Mrs. Eddy, "and work all day. I retire to my room at nine o'clock, but not always to sleep. To-day, I have answered about twenty letters. I take ten minutes for every letter of four pages, read it thoroughly, consider it, and then write or dictate the answers to my private secretary. Of course, there are hundreds of letters that I never answer at all; to-day I have entertained letters from Congo Free State, from several European countries, and answered a letter from the wife of our minister to China."

"Your time is occupied in other ways?"

"Yes, from all over the country I am besieged with requests for messages and counsel. Whenever a new church is opened the people think I ought to mail them some words of cheer and comfort if I cannot attend. So

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

all these things take my time. I cannot go to Boston. I have not the time, for there is so much that requires my attention here every hour of the day.

"During the recent convention I felt that it was a call from God to speak to our dear people. I was there all day, and after running up and down stairs, holding receptions, and speaking words of cheer here and there, I rode back at night. There was a couch in my car, but I did not lie down. I did not feel tired, although it was a pretty good day's work."

"I suppose the fact that you are to a great extent inaccessible to those who wish to call on you gives rise to many of these rumors of your death."

"Yes," replied Mrs. Eddy. "I reluctantly turn away many more from my door than I see. It is impossible for me to entertain the hosts who wish to see me. For years I have been trying to discourage hero-worship. Here is an incident. It was the first time that I ever uttered a reproof to anybody on such an occasion. Many people were tarrying at my gate when I got ready to take a drive one day after the recent convention; they had come from all parts of the country. I stopped my carriage at the gate and spoke to these people, then I drove away. But when I came back one woman had remained there two hours, waiting for me to return. I stopped and said, 'What are you here for?' 'For spiritual help,' she replied. 'Have you no God?' 'Yes,' she said. 'Then never come here again to see me. Depend on yourself—go into your "closet" and pray that He may guide and counsel you.' "

"You leave home but rarely now, do you not?"

"Yes; I am trying to extend this idea of God-help instead of my help on all my people. My heart is with them all, but they cannot expect that I can leave my work that is somewhat apart from theirs."

"Age has descended lightly on you, despite your years of thought and toil," remarked the *Journal* man.

"I never boast of my health, or speak of the to-morrow, but when I was driving recently, I was stopped by one who, after inquiring about my health, remarked, 'Mrs. Eddy, you look to be about forty years old.' Farther than this, I do not know what people think, but I really do not feel older than forty years.

"As I toil on I am comforted by the Scripture: 'Ye shall run and not weary, walk and not faint.' "

"Do you find that your faith is flourishing?"

"Oh, very much so. In England there has been a great advance within the last four years; and in Germany, France, and other parts of Europe, the work is in a very flourishing condition."

Items of Interest.

President McKinley attended the commencement exercises of Mt. Holyoke College, June 20. Among the graduates was a niece of the President, Miss Grace McKinley. For the first time in history the graduates of a woman's college received their diplomas from the hands of the President of the United States. As a token of their appreciation of the honor bestowed upon them, the members of the graduation class presented the President with a beautiful class banner. The trustees of the college also showed their appreciation by conferring upon him the degree of doctor of civil law.

The day previous the President had visited Smith College at Northampton, Mass, and while there the trustees conferred upon him the degree of LL.D.

From Mt. Holyoke the President and party went to Springfield, Mass. A reception was held at the Nayasset Club where Mrs. McKinley was presented with a solid berry set by the Adelphi Chapter, Order of the Eastern Star, of which she is a member.

The North Atlantic squadron under command of Rear Admiral Sampson visited Boston on Bunker Hill Day, June 17, and remained about a week. The fleet consists of the cruiser New York, flagship, and the battleships Massachusetts, Indiana, and Texas. All except the Massachusetts were in the memorable fight off Santiago. On Children's Day between six and seven thousand children visited the ships, free transportation having been provided. It was a day long to be remembered by the little ones.

Major-General Wood, military governor of the Province of Santiago de Cuba, visited Boston and had a conference with Admiral Sampson while the Atlantic squadron was in Boston harbor. General Wood said that Santiago is a healthy town. There is practically no dissension. The money for those who were entitled to receive the United States bounty is being paid, and they are very glad to get it.

The Hon. John Barrett, late minister of the United States to Siam, delivered an address at the Boston Chamber of Commerce, June 20, upon "American Interests in the Far East." He spoke from a merely business standpoint, calling attention to the necessity for developing and protecting the foreign trade of the far East which approximates one billion dollars annually.

President McKinley in an interview with a Methodist clergyman at Mt. Holyoke said, regarding the army canteen, that the position which some of the temperance people take on the question is simply absurd. The attorney-general must interpret the law as he finds it. Personally the President said he should be very glad to see the prohibition of the canteen.

At the second annual federation of Zionists held at Baltimore, Md., June 19, the proposition to re-establish Judæa as an independent state, and to purchase the Maccabean sites in Palestine was considered. A nucleus of the fund required was voted, and the remainder is to be raised by subscriptions from individuals and societies.

President McKinley has directed that the election provided for by the constitution of the Republic of Hawaii, to be held in September next, shall not be held, but the present officers shall continue to hold their offices until Congress decides the rule of the islands.

The War Department has received a telegram from the two California senators endorsing the administration in its efforts to suppress the Philippine insurrection, and offering for immediate service a well-organized and thoroughly disciplined regiment of infantry.

The three thousand seamstresses who have been making soldiers' clothing at the United States Arsenal at Philadelphia, Pa., have decided to make a direct appeal to President McKinley against giving the work to contractors.

Steps have been taken by representative colored citizens of San Francisco toward securing for the race a national academy of music to be located at Washington or near the center of the negro population of America.

Immigration to this country is increasing rapidly. In the month of June last year seventeen thousand aliens came to this country, while the returns for the present month will show at least thirty thousand.

Boston celebrated the 123d anniversary of the Battle of Bunker Hill in the usual enthusiastic manner. The parades this year were augmented by a parade of marines and sailors from the North Atlantic squadron.

It is reported that Russia desires to have American ordnance manufacturers establish plants within her boundaries, and will place contracts with them for millions of dollars' worth of guns and projectiles.

A department of colonial affairs and foreign commerce is to be added to the executive branch of the government to meet the new conditions which confront the United States as a result of the late war.

Rear Admiral Kautz has arrived at San Francisco from Apia. He declares he has done his full duty in the matter of the Samoan trouble, and believes that he has been subjected to much unjust criticism.

John D. Rockefeller has made another donation of from two to three million dollars to the University of Chicago. He had previously donated seven million dollars to the university at various times.

From January to May, inclusive, the receipts at Havana exceeded the expenditures by over half a million dollars. No two years of the Spanish rule have yielded as much as the past five months.

Arrangements are being made by Admiral Sampson for a notable observance on July 3, of the destruction of Cervera's fleet at Santiago. The event will probably take place at Newport.

It is estimated that the deficit for the present fiscal year, which ends June 30, will be ninety million dollars, which is twenty-two million dollars less than was estimated by Secretary Gage.

A new fuel has recently been invented in Germany which is three times more powerful for heating than the best Silesian coal, while the cost is only one half.

The board of officers appointed by General Brooke to investigate and make recommendations regarding the army rations has recommended no change.

The transport Sherman, which left San Francisco May 22, having on board eighteen hundred officers and men, has arrived at Manila.

Rear Admiral Watson has arrived at Manila and assumed command of the Asiatic squadron. The cruiser Baltimore is his flagship.

The Standard Oil Company has increased its capital stock from ten million dollars to one hundred and ten million dollars.

At the annual commencement of Georgetown University the honorary degree of LL.D. was conferred on Rear Admiral Schley.

U. S. Grant, Jr., a grandson of General U. S. Grant, has been appointed professor of geology in the Northwestern University.

General Otis has cabled that all volunteer organizations in the Philippines desire to be mustered out at San Francisco.

A combination of St. Louis street railways is practically completed, involving a deal of nearly one hundred million dollars.

The Congregational ministers of New Haven, Conn., have resolved to marry no party who had been divorced.

A new French cabinet has been formed and the minister of war is a man who is favorable to Dreyfus.

Mr. Bellamy Storer, our minister to Spain, was formally received by the Queen Regent June 16.

Concord Items.

Generous Mrs. Eddy.

Pleasant View, Concord, N. H., June 21, 1899.

Editor Monitor:—I am pleased that the governor of our state has recommended an "Old Home Week" to be observed in this state, and believe it will prove a great bond of union to all natives of New Hampshire wherever they may be scattered throughout our land or in foreign lands. But I am in a dilemma—for if I were to send but one half the stamps you credit to my order it would overflow any hall in Concord.

I am deeply interested in Governor Rollins' suggestion that we have a large auditorium erected in this city to accommodate the thousands who may flock here for the annual "Old Home Week," and other special occasions. To assist in securing the success of this enterprise I hereby pledge to pay twelve hundred dollars ($1,200) toward the erection of the above named building.

Cordially yours,

MARY BAKER EDDY.

The Auditorium Fund goes to $3,000 to-day.

The generous subscription of the Rev. Mary Baker Eddy, recorded above, makes this possible.

Mrs. Eddy's is the largest single contribution thus far made to the Auditorium Fund, and by it she furnishes another signal proof of that generous public spirit which has already been manifested in so many ways toward Concord and the interests of our people.

Concord Evening Monitor.

Mrs. Eddy's Public Spirit.

The Rev. Mary Baker Eddy's generous addition of $1,200 to the Auditorium Fund, coming as it does so close upon her gift of $5,000 for the macadamizing of Pleasant Street, is a new and signal proof of her genuine public spirit; and it is not amiss for us to advert to a communication which was printed in *The Monitor* some ten years ago, at the time when Mrs. Eddy first took up her residence in Concord, in which the writer predicted that Mrs. Eddy's residence here would be productive of good to the community—a prediction, the fulfilment of which is plain to be seen, and which will become more apparent when, by the aid of $100,000 of trust fund which Mrs. Eddy has established, the First Church of Christ, Scientist, in Concord, proceeds to the erection of its projected church edifice of stone.—*Concord Evening Monitor.*

Concord, N. H., is making extensive preparations, for "Old Home Week." August 30, has been appointed as the day for the local celebration. An "Old Home Week" stamp of appropriate design has been issued. Mrs. Eddy purchased twenty-five thousand of these stamps.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. CAMILLA HANNA, C.S.D Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

In the Mire of Ignorance.

MR. CHARLES A. CRANE, pastor of the Saratoga St. M. E. Church, East Boston, in a letter recently written and published, undertakes to define his sense of mind-reading. Unfortunately for him, he has not the slightest comprehension of the subject he assumes to elucidate. Had he understood his subject he would have known that there is a wide distinction between a claim that a metaphysician, or spiritual discerner, can read the universal mortal mind, and the claim that one being specially attacked by the thought of a mental malpractitioner can know mentally just what the mental operator is declaring; and he would also have known that the Rev. Mary Baker Eddy referred to the mental malpractitioner alone in speaking of the spiritual sense which she possessed, and not to the mortal mind in general. Those familiar with the methods of the malpractitioner can readily understand the distinction here referred to. Those who know nothing of mortal mind, in this sense, are utterly incompetent to understand or interpret the language of a metaphysician spoken in such connection, and only betray their ignorance when they assume to speak.

Therefore we leave Mr. Crane where we found him,—in the mire of his own ignorance and folly.

SEPTIMUS J. HANNA.

Boston, 1899.

An Expression of Gratitude.

THE First Members of The First Church of Christ, Scientist, in Boston, Mass., at their recent semi-annual meeting sent to their Leader, the Rev. Mary Baker Eddy, the following significant and beautiful message of gratitude and good cheer, which effectually shows how those who are working near to her regard attempts at misrepresenting her:—

To our beloved Mother in Israel:—

The First Members of the Mother Church in Semi-Annual Meeting assembled, thanking God that among the countless blessings bestowed upon us out of the rich storehouse of Infinite Love, we *know* that in you, our Leader, Guide, Friend, Counsellor, and Mother, we have our crowning blessing; because through you He has taught us of Himself—eternal Life and Love.

We desire, as best we know how, to express our deep and renewed appreciation of the wisdom, strength, and majesty of Truth as reflected through you, and the infinite tenderness of that love which bears and forbears, in its Christly purpose to redeem and save.

We desire, also, here and now, to place ourselves anew upon the altar of self-sacrifice on behalf of our sacred Cause, and to extend our deepest assurances of unflinching desire and purpose to support you in every way possible to us in this, your hour of seeming persecution, *but of great blessing.*

As "them of old time" were guided, encouraged, and uplifted by trope, metaphor, and symbol, so are you, in this age, being shown the way whereby you and your children are drawn by the *band* of unity into the great *Heart* of Love.

We once again assure you of our supreme desire to love God and one another. We feel that persecution is but driving us nearer to God and to each other; and that the only *real* effect of malicious attack is to strengthen our courage and faith.

We know that you dwell constantly in the secret place of the Most High, because we believe the promises of God, and that "No weapon that is formed against thee shall prosper: and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

Your loving children,

THE FIRST MEMBERS
Of The Mother Church.

Boston, Mass., June 3, 1899.

A Wednesday Evening Meeting.

Extracts from the Boston Journal's Account of an Important One in the Mother Church, June 21.

THE regular weekly meeting of The First Church of Christ, Scientist, in Boston, was held in the church edifice at the corner of Norway and Falmouth Streets, last night, and during the course of the evening a number of ancient myths in regard to Christian Science and Mrs. Mary Baker Eddy were very effectually handled by Judge S. J. Hanna, the First Reader of the Church and editor of the *Christian Science Journal* and *Sentinel.*

The report that Mrs. Eddy is dead, and has been for years, recently published in a Chicago paper, was summarily dealt with, and there was evidence to show that the statement of the Rev. Charles A. Crane of East Boston, that within three years Mrs. Eddy had taken the decoctions of a clairvoyant physician lacked verification. The church was crowded to its utmost capacity, although no announcement had been made that the exercises were to be different from the usual experience meetings.

The Journal Story Retold.

When the exercises were opened at half past seven there were no seats in the church left vacant, and a good number of people were standing up in the rear and on the sides of the room. The platform was adorned with a few potted plants, palms, and ferns, and other flowers.

The statement of Judge Hanna in refutation of the claims of Mr. Crane was read in a clear and impressive tone, and had the closest attention of the great audience. There was evidently a good deal of feeling among the persons present at the statements of the clergyman in question, but no audible expression of applause or disapproval was heard. It was only when ex-Senator William A. Morse, who had acted as counsel in the matter, read a letter which he had received from Mr. Crane, casting still further reflections upon Mrs. Eddy, that involuntarily the audience, as with a single mind, ejaculated "Oh!" in a tone which indicated horror and disgust.

Mr. F. P. Hull of the *Boston Journal* was called upon

Digitized by Google

to tell how he interviewed Mrs. Eddy Tuesday night, and told the audience how he knew that it was Mrs. Eddy whom he interviewed, and how she looked on that occasion.

The affidavits of the newspaper men who were present in Tremont Temple, and both heard and saw Mrs. Eddy, were read by Mr. Henry D. Nunn of the Publishing Society, as well as statements by reporters of the *Journal* and *Herald*, showing how they knew that it was Mrs. Eddy, and not another, who appeared there.

The exercises were opened by the singing of a hymn by Mrs. Eddy, entitled, "Shepherd, show me how to go," after which Judge Hanna read selections from the Bible, and Science and Health, which was followed by another hymn.

Judge Hanna's Statement.

Judge Hanna read the following statement, which he said he felt it was his duty to read there at the meeting:—

My Friends:—It is not necessary for me to say to you that, as a rule, Christian Scientists do not take notice of attacks upon them or their cause. We neither court notoriety nor desire to enter into controversy, but when direct personal attacks are made upon our revered Leader, the Rev. Mary Baker Eddy, and these attacks are based upon palpable falsehood, do we not owe it to her, to our cause, and to the public that may be deceived thereby, to publicly refute them?

I am persuaded that in our desire to avoid undue publicity and seeming controversy, we have kept silent too long and have been remiss in our duty. Hereafter we shall call her traducers to public account.

Certain preachers also feel at liberty to repeat and emphasize these falsehoods from their pulpits.

The other day Charles A. Crane, pastor of the Saratoga Street M. E. Church, East Boston, in an address before a meeting of the Epworth League, held in the Bellingham M. E. Church in Chelsea, made a personal attack upon Mrs. Eddy, in which he said that within three years she had taken the decoctions of a clairvoyant doctor, and that he had good authority for his statement.

I deem it my duty, in justice to truth and right, and on behalf of Mrs. Eddy, to say that Mr. Crane's assertion is absolutely false. There is not a word of truth in it, nor a shadow of a foundation of fact upon which to base it.

It is to be regretted that Mr. Crane, a minister of the Gospel of Christ, whose profession is to tell the truth, should have permitted himself thus to falsify. Before making a charge so grave against any one, and especially against a Christian lady, this minister should have been prepared to substantiate his charge with indubitable evidence. So far from this being true, I am aware that he based it upon mere rumor, or the idle, irresponsible, and equally unfounded statements of "a physician who was a friend of his."

Mr. Crane's entire address, as reported, was an un-Christian tirade against Mrs. Eddy, so melodramatic as to approach close to the ribald.

As to Mr. Crane's specific charge—all know who are well enough acquainted with her to be able to speak intelligently (and no others have either a legal or a moral right to speak) that Mrs. Eddy has not taken a drop of any kind of medicine since she began her labor in Christian Science; that she has not employed physicians of any kind; that God has been her only Physician since her awakening to the great fact that He is the only true Healer, and to this she will testify anywhere and at any time.

Members of her household who have been with her for many years (one of them for over seventeen) and know fully of her private life, will testify anywhere and at any time that she takes no drugs or medicine, never has since they have been with her, and has had nothing to do with clairvoyant or any other doctors. These members of her household are honest, respectable, and intelligent persons, as the many who know them are aware.

Preachers and others may criticise Christian Science as much as they like, but this dastardly vilification of personal character must cease. It has gone on already too long.

We need not longer refrain from refuting falsehoods on the specious plea that meekness and the Christian spirit demand silence. While our great exemplar taught the turning of the other cheek, and while he was most compassionate toward common sinners, he was unsparing in his rebukes of the Scribes and Pharisees of his day. He pronounced them hypocrites and vipers, whited sepulchres, and blind leaders of the blind, declaring that they, and those who followed them, both should fall into the ditch.

While I by no means liken all our modern clergy to these ancient ones (for they have in their ranks scores of consecrated, God-serving men), may we not justly ask whether such of them as are giving themselves over to un-Christian onslaughts upon a people who are living pure and true Christian lives, and endeavoring to break them down, instead of redeeming the race from the thraldom of depravity and sin, which is their proper mission, do not come perilously near to deserving Jesus' severe denunciation?

The whole mission of Christian Science as originated by Mrs. Eddy is to redeem humanity from sin, sorrow, disease, and death. Was not this the work Jesus did, and taught should be done?

Christian Scientists, under Mrs. Eddy's leadership, are doing a marvelous work in this direction, as every intelligent person knows who has made any investigation. Is it the part of genuine Christians to prevent this Christly work?

Neither the sneers nor jeers of Christian pretenders, in the pulpit or out of it, will stay the onward march of this healing and saving Truth.

Mr. Crane is also reported as saying, "She [Mrs. Eddy] won't let me experiment on her with arsenic to prove this doctrine of hers."

If he meant by this that he made an unsuccessful effort to obtain Mrs. Eddy's consent to let him experiment on her with arsenic—as his language implies—this statement is equally as false as his others; and I so pronounce it.

It is not probable that Mrs. Eddy or any other Christian Scientist would spend her time in allowing a curious preacher or other people to be giving her doses of arsenic to see the effect. Such suggestions show the poverty of his soul and the depth of folly to which mad antagonism will lead.

The climax of absurdity in falsifying Mrs. Eddy and Christian Science has just been reached in an article published in the *Chicago Inter Ocean,* in which was revived the ancient and outworn fable that she is dead and has been for years; and, further, that she did not appear at all before the Annual Church Meeting recently held in this city. The soft impeachment of this article is that we were falsely representing her to be present when she was not. There were three thousand people there—members of her church, who knew Mrs. Eddy and heard her speak—beside the reporters of the Boston press. The reporters certainly had no doubt that they saw and heard Mrs. Eddy, and I am sure that all of them would be willing to swear that she was not dead. It is true that Mrs. Eddy was not present at the Communion service held in the Mother Church, June 4, where her address was read; but she was present at the Annual Church Meeting held in Tremont Temple June 6, and in person delivered an address there to more than three thousand people—members of the church and reporters of the press.

I have known her for nearly ten years. We had the

Digitized by Google

extreme pleasure of entertaining her in her house in this city, where we reside. I also had the honor of introducing her to the great audience in Tremont Temple at the Annual Church Meeting, and I am ready to swear that we entertained and I introduced the original and genuine Mrs. Eddy, and I, too, am ready to swear that she was not dead, but very much alive. I am equally ready to testify that she still lives.

I was told by a gentleman yesterday that some people account for Mrs. Eddy's great following on the ground that she had us all hypnotized. It may be the next we shall hear will be that she is really dead, but has us all hypnotized into the belief that she is alive. This would be no more absurd than the other nonsense.

That great daily newspapers should publish such stuff without stopping to ascertain if they have an iota of foundation in fact, is evidence that the height of newspaper enterprise has at last been reached.

Let us hope that the age may sober down a bit and not run mad, fly the track and end in a general smash-up.

Mr. Hull Tells of his Interview.

Judge Hanna then stated that a reporter of the *Boston Journal,* Mr. Forrest P. Hull, had been to Concord, N. H., and interviewed Mrs. Eddy, the interview appearing in the Wednesday morning *Journal.* Mr. Hull had seen Mrs. Eddy and knew that she was alive, and he said he had invited him to be present and tell the audience about it. Mr. Hull came forward and told about how he secured the interview, what his impressions of Mrs. Eddy were, and how he knew that it was Mrs. Eddy he saw. He said in part:—

It is an uncommon thing for a newspaper man to be called upon to explain in public the whys and wherefores of what he has written for his paper. It's a delicate thing, too, very often, and I imagine that if the reporter of the *Chicago Inter Ocean* were in my position to-night he would feel more embarrassed than myself.

When the report from the Chicago paper was handed to me last Tuesday afternoon I sought Judge Hanna. He authorized an emphatic refutation of everything stated therein. That was printed in the afternoon edition of the *Journal.* Ordinarily that would have settled the matter, but a still further inquiry was ordered. So I went to Concord, N. H., immediately, and drove to her house. It was nearly nine o'clock when the carriage pulled up at the curb. I met Mrs. Eddy's private secretary, Mr. Calvin A. Frye, and as impressively as possible told him of my mission. He realized the import of the visit, but thought it impossible that I could see her. But to cut a long story short, in half an hour I was accorded an interview.

I would not take the time, after the complete *resume* of the case given by Judge Hanna, to tell you of my impressions of that visit. I could not do justice to them offhand, and in a pulpit, which to a newspaper man is the last place in the world which he expects to fill. But I want to say this. Mrs. Eddy is to all appearances in the best of health. Her eye is bright and her complexion wonderfully clear. She walked up and down the front stairway quickly and firmly. Her form is as tall and straight as it ever was, I venture to assert.

Now, how do I know that the woman whom I met last night is really Mrs. Mary Baker Eddy, the Founder of the Christian Science Church? Two weeks ago when I was passing Tremont Temple I was attracted by the crowd at the entrance. I did not know at the time that there was to be a convention there in the afternoon, or that Mrs. Eddy was in town. As I looked in that direction I saw a woman alight from her carriage, and I spoke out immediately, "That is Mrs. Eddy." I had seen her three years ago on this platform, and I recognized her at once.

Affidavits of Reporters.

Mr. Henry D. Nunn then read affidavits of Boston newspaper men to prove the fact that the Rev. Mrs. Eddy was present at the Annual Meeting in Tremont Temple, as follows:—

"We, the undersigned representatives of the following daily newspapers, published in Boston, Mass., *Herald, Globe,* and *Journal,* hereby declare that we were present at a certain meeting in Tremont Temple, in the city of Boston, Tuesday afternoon, June 6, 1899, said meeting being the annual business meeting of The First Church of Christ, Scientist, called the Mother Church.

"We further state that at said meeting we were present in our official capacity as press representatives, and that we there and then saw Mary Baker Eddy and heard her address the audience from the platform, we being at that time seated in the second row of seats from the rostrum, where we could both see distinctly the said distinguished lady, and hear distinctly every word of her address, of which the following is, to the best of our knowledge, an exact report as we heard it:—

My Beloved Brethren:—I hope I shall not be found disorderly, but I wish to say briefly that this meeting is very joyous to me. Where God is we can meet, and where God is we can never part. There is something suggestive to me in this hour of the latter days of the nineteenth century, fulfilling much of the divine Law and the Gospel. The divine Law has said to us,

"Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

There is with us at this hour this great, great blessing; and may I say with the consciousness of Mind that the fulfilment of divine Love in our lives is the demand of this hour—the special demand. We begin with the Law as just announced, "prove me now herewith . . . if I will not open you the windows of heaven, and pour you out a blessing," and we go to the Gospels, and there we hear,—

"In the world ye shall have tribulation; but be of good cheer, I have overcome the world."

The Christian Scientist knows that spiritual faith and understanding pass through the waters of Meribah here—bitter waters; but he also knows they embark for Infinity and anchor in Omnipotence.

May this hour be prolific, and at this time, and in every heart, may there come this benediction: Thou hast no longer to appeal to human strength, to strive with agony, I am thy deliverer. Of His own will begat He us with the Word of Truth. Divine Love has strengthened the hand and encouraged the heart of every member of this large church. May these rich blessings continue and be increased! It hath opened the Gate Beautiful to us, where we may see God and live, see God in all, have one mind, and that Divine, love our neighbor as ourselves, bless our enemies. Divine Love will rebuke and destroy disease, and destroy the belief of life in matter.

It will waken the dreamer: the sinner, dreaming of pleasure in sin; the sick, dreaming of suffering matter; the slothful, satisfied to sleep and dream. Divine Love is our only physician,—never loses a case. It binds up the broken-hearted, heals the poor body, whose whole head is sick and whose whole heart faint; comforts such as mourn, wipes away the unavailing, tired tear, brings back the wanderer to the Father's house wherein are many mansions, many welcomes, many pardons for the penitent. Ofttimes I think of this in the great light of the present, the might and light

Digitized by Google

of the present fulfilment thereof. So shall all earth's children at last come to acknowledge God, and be one, inhabit His Holy Hill, the God-crowned summit of Divine Science, the Church militant rise to the Church triumphant, and Zion be glorified.

Besides the newspaper men whose signatures are given, there were others present, whose signatures it was not possible to secure to this statement in time for it to be read to-night.

The names of the other newspaper men are as follows:—

H. W. Tappan, *Herald* reporter.
Paul Brown, *Herald* staff artist.
O. L. Stevens, *Transcript* reporter.
Henry B. Allen, *Post* reporter.
J. G. Sharkey, *Traveler* reporter.
William Norman Ritchie, *Post* staff artist.

Mr. Powell's Statement.

Mr. Nunn also read the following statement by Mr. Harry F. Powell of the *Boston Herald:*—

I have read with much surprise in a recent issue of the *Chicago Inter Ocean,* an article written with the avowed purpose of persuading the public that the Rev. Mary Baker G. Eddy is either no longer among the living or else is a victim of physical disabilities so pronounced that she is compelled to live the life of a recluse.

Many of the statements made in the article are, within the scope of my personal knowledge, absolutely false. Notable among these is the allegation that she greatly disappointed her followers by not appearing at the meeting held on Wednesday evening of the recent Annual Communion week of The First Church of Christ, Scientist, held at Tremont Temple in this city.

I was present in a professional capacity at the Annual Meeting of the church, held on Tuesday afternoon of the Communion week. I saw Mrs. Eddy on that occasion and listened to the address which she delivered. A short while before the hour set for the meeting I had been informed in the simplest and most natural way imaginable that Mrs. Eddy would be present. My informant was a Christian Scientist whose appointed function on this occasion was to facilitate the labors of the numerous reporters who had flocked to the several events of the Christian Science Annual Communion week. There was not the slightest effort made by him to predispose my mind to the acceptance of the fact that the person who was to appear would be the real Mrs. Eddy. He, like other Christian Scientists with whom I came in contact on this occasion, seemed imbued with a spirit of almost childlike delight that the Founder of his church was about to come before her assembled followers and possibly to address them. Yet this gentleman knew that I, through my long-continued reportorial association with Christian Science celebrations, had become familiar with Mrs. Eddy's cast of thought and the current impressions concerning her personality to a degree rather unusual to one outside the Christian Science faith, and well calculated to create suspicion if the person whom I was to see and hear was other than the actual Founder of Christian Science.

Mrs. Eddy appeared upon the platform at the meeting and I sat in the vast auditorium of Tremont Temple, which was filled with her followers. Among them were many whom I have been told were students in an advanced class of sixty-seven persons whom she had taught at her home in Concord, N. H., last fall. Undoubtedly many of those present had known her personally for years. Had any attempt been made to have her impersonated by another, these persons would readily have detected the imposture. Any conspiracy for this purpose would therefore have been known to thousands of persons present. The fate of a secret thus widely disseminated need not be conjectured or suggested.

Mrs. Eddy remained upon the platform for more than half an hour. The day was warm and many of those present, among them myself, were evidently affected by the somewhat close atmosphere of the crowded auditorium. She struck me as being one of the least affected persons present. Her appearance was that of a person exceptionally vigorous for the age she had attained. There was no sign of decrepitude in her appearance; she walked over the stage with grace, and while seated in her chair showed none of the exhaustion which ordinarily would afflict a lady of advanced age who had within twenty hours traveled from Concord to Boston, gone through the excitement of meeting a number of comparative strangers, and come before a large audience in the hottest portion of a hot day.

Yet there was evidently no effort on her part to assume a vigor she did not possess. In the most unaffected manner possible, while delivering her address, she requested the congregation to permit her to sit while speaking to them. There was no evidence of physical distress in her attitude, her gestures, or her voice when she made this request. It seemed rather the result of an impulse to comfort, than the consequence of fatigue. After sitting a while she arose and finished her remarks with considerable energy and emphasis. So much for her alleged decrepitude.

If the author of the *Chicago Inter Ocean* article had been present at this meeting, he would have been abundantly supplied with evidence of the mendacity of his informant or informants. Waiving the perhaps unintentional misstatement that Mrs. Eddy was expected to be present at the testimony meeting held on Wednesday evening, instead of at the Annual Meeting of the Mother Church on Tuesday afternoon, we come to the statement that Mrs. Eddy being no longer alive, and another person being employed to impersonate her, the impostor is compelled by prudence to wear a thick veil over her face when she appears in public. On this occasion Mrs. Eddy wore a veil. The fact was scarcely apparent, however, to those in the front pews of the Temple, so thin was the veil, until an attendant stepped forward, after she first took her seat, to assist her in removing the veil from her bonnet. Mrs. Eddy remained unveiled during all the time she was present at the meeting except during the first five minutes.

Digitized by Google

If there was any one present from Chicago who entertained doubt that the real, living Discoverer and Founder of Christian Science was present at this meeting, it is absolutely certain that his or her spirit of scepticism was not contagious. The strongest impression made upon a neutral-minded visitor like myself was that the vast congregation entertained the profoundest reverence and affection for the lady on the platform. And furthermore, had this doubt communicated itself to a neutral-minded person who was even superficially acquainted with Mrs. Eddy's published books, messages, and addresses, it would have been dissipated as soon as she began to speak. The same cast of thought pervaded this newest of her utterances that is found in "Science and Health with Key to the Scriptures," in her message read at the dedication of the Mother Church, and in every other emanation of her mind with which I have met. And, moreover, that subtle homogeneity between the speaker and the words, which a newspaper man accustomed to hear public addresses is easily able to detect in an original speech, was pre-eminently perceptible in Mrs. Eddy's address.

The lady who delivered that address—in every line of her face, every tone of her voice, every quiet gesture in which she indulged—evidenced the possession of a strong and unique personality such as cannot be had to order when the exigencies of a conspiracy call for an impersonator. My own impression is that if the lady whom I heard speak on that Tuesday afternoon were to endeavor to impersonate any one, to model her habit of thought or her physical action upon the thought and action of any one else, she would be, on account of her exceptionally pronounced individuality, the most easily detectable impostor I ever met.

I can readily conceive that the circulation of a rumor such as was contained in the article in the *Chicago Inter Ocean* may give pain to many persons to whom Christian Science is a sacred and consoling faith.

I could easily cite many instances calculated to discredit the rumors so persistently set afloat concerning Mrs. Eddy, but I think what I have already written will suffice, so far as any testimony of mine can suffice, to dispose of the suspicion that the Leader of the Christian Scientists is either a helpless victim of physical disability or a disembodied spirit.

HARRY F. POWELL.
Night City Editor, *Boston Herald.*

Statement by Mr. Glidden.

The following statement by Mr. Glidden of the *Boston Journal* was also read by Mr. Nunn:—

Boston, Mass., June 21, 1899.

I was at the Annual Meeting of The First Church of Christ, Scientist, of Boston, held in Tremont Temple, Boston, on June 6, as the representative of the *Boston Journal,* having been assigned to report that event. I sat in a front seat, on the middle aisle, and saw Mrs. Eddy there, and heard her speak.

While the meeting was in progress she entered the Temple and walked up the six or seven steps leading to the platform, escorted by Judge S. J. Hanna. Of her identity I am as certain as I am of my own existence.

She walked with as much ease and with as elastic a step as a person of twenty years, and had I not known to the contrary I should have said that she was perhaps fifty years of age. Her face was as fresh and fair as that of a young girl, and her eyes were bright and clear. She looked the picture of a mature, peaceful life and bodily health.

I have known Mrs. Eddy for some years by sight merely. The last time I saw her before her appearance in Tremont Temple was at her home in Concord, N. H., two years ago in July, at which time two thousand of the members of the Mother Church in Boston visited her and spent the day on her estate. I saw her then, and heard her speak. I was near enough to make a mental picture which still remains with me. Consequently, I know beyond peradventure that it was Mrs. Mary Baker Eddy herself, and no other, who was present and addressed the Annual Meeting of the Mother Church in Boston, June 6.

No one who has seen Mrs. Eddy and heard her speak could be imposed upon by another. Her personality is striking, and while I cannot describe it, no one who has ever seen her would be apt to mistake another for her.

Her style of speaking is peculiar to herself alone and is inimitable. The matter of her remarks is also peculiarly characteristic of her mode of thought and expression. Her intonation is of such a character that while her voice seems small, if I may so express it, it has a wonderful carrying quality, so that even in a large hall seating three thousand people those in remote seats are able to hear everything she says.

When Mrs. Eddy entered the Temple she was given a seat in a chair in the middle of the stage and at the front, directly in front of me. Had I reached over I could almost have touched her. So I was in a position to know if it had not been Mrs. Eddy who filled that role on that day. And I know that it was none other than she.

No one else could have appeared and uttered the remarks made there to that audience besides Mrs. Eddy, without the knowledge of a great majority of those present. For no one but Mrs. Eddy would have been given such rapturous applause and demonstrations of delight as filled the Temple with sound when she entered and at intervals while she was speaking. The audience contained a large proportion of those who had seen Mrs. Eddy before, and they knew absolutely that it was their distinguished Leader who was addressing them.

In the audience there were hundreds of her students, men and women, who went through her classes some years before. There were also several present of the sixty-seven students of her last class, taught in Concord but a few months ago. It is beyond the bounds of reasonable conjecture that all these could have been mistaken in their recognition of their Teacher.

In my experience with them as a newspaper man I have found the character of the leaders in Christian Science in Boston to be above reproach. I believe them to be worthy of the highest respect and confidence. I should regard it as a reflection upon them altogether uncalled for, and one which I believe they have done nothing to merit, to claim that they are endeavoring to deceive the public or conceal anything from the public.

The audience which filled Tremont Temple June 6, was certainly above the average in intelligence and appearance. It was not difficult to perceive that it was composed of earnest, God-fearing men and women. Their every action indicated that. That those present who had seen Mrs. Eddy many times before, some of them, could be deceived, or that knowing the speaker was not Mrs. Eddy, they should conspire to make the public believe it was she, I do not for one moment believe. Such a representation has not the slightest shred of evidence or probability to rest upon.

CHARLES H. GLIDDEN.
Reporter for the *Boston Journal.*

Mr. Albert Metcalf, of the Denison Manufacturing Company, a business man of high standing and also an ex-President of the church, substantiated all that Judge Hanna had said, and testified in the most unequivocal language that Mrs. Eddy is alive and in the enjoyment of good health.

William B. Johnson, Clerk of the Church, stated that he studied with Mrs. Eddy fifteen years ago, that as Clerk of the Church he had constant occasion to see her, and

Digitized by Google

that he knew she was living and that the person who spoke in Tremont Temple was she.

Judge Hanna said it seemed a shame that in this country a grand, good, exalted woman, who was living to lift up humanity to a higher plane, should be so maligned.

In closing the meeting he also stated that he had made every possible effort to trace other falsehoods against Mrs. Eddy to their source, and in every instance they had vanished into nothing as in this case.

The meeting was closed with a hymn sung by the congregation.

Voice of the Press.

THE Christian Scientists have been very bitterly assaulted, lately, and have come out valiantly in defence of their ideas and practices.

The gathering at the Metropolitan Opera House in New York was a most remarkable one, in that the house was filled by a crowd that outnumbered believers, but which went away greatly astonished and much of its curiosity changed into belief, or, at least, resolve to let the sect have a right to freedom. The idea that is taught is not repulsive nor inconsistent to those who believe deeply in the way of the other religions. There is something appealing to the most thoughtful and religious in the plan of using the same means that the Great Teacher employed to cast out diseases and to lift the minds of men from a low plane.

There is undoubtedly good cause for believing that there will be nothing injured by allowing the Christian Scientists to have their way. They certainly present doctrines that are bound to help the world to be better, for a religion that inculcates as its basis, purity of thought and living, the utter discarding of the selfish, and reliance on the Divine; and forbids scandal and gossip-mongering cannot but have a helpful influence. That it has failed in effecting physical cures in some cases does not in the least vitiate its spiritual excellence. There is no disputing the fact that the less people think of themselves the better they will be. Anyway, there has been more good done to the sect than harm by the opportunity vouchsafed it to have a clear explanation of its doctrines. Any people who are devout in a religion that inculcates morality and purity of living have a right to have fair play and decent treatment from the press and people.

New London (Conn.) Telegraph.

Appeal to Thousands.

Christian Science is in for a large share of public attention just now. The newspapers generally condemn this new belief without stint. Mr. Carol Norton, who recently lectured here, presented the philosophy of Christian Science in a manner to gain converts. He holds that it is in harmony, not only with true science, but also with Christianity itself, and that it simply gives a broader and higher interpretation to the Scriptures. That the doctrines of this new creed have appealed to thousands of highly intelligent men and women is beyond question. The growth of the movement is remarkable, and the spread of its influence is a fact which its opponents have nothing to gain by denying. If its teachings are false, comments a New York paper, they will be disproved in due time by the inexorable tests of truth, and the way to the truth lies through the frank, free, and devout discussion which the leaders of the movement invite.—*Olean (N. Y.) Times.*

Healers, Regulars, and Irregulars.

The fight between the Board of Health of New York City and the Christian Science healers is becoming interesting, because it promises to result in a thorough test of the right of unlicensed practitioners to compete with regularly graduated physicians. The Christian Scientists, so far from dodging the issue, have published a list of their practitioners and have invited the Board of Health to institute prosecutions. The challenge undoubtedly will be accepted and the matter will probably be carried to the tribunal of last resort for final adjudication.

And in spite of the ostentatious contempt of the regulars for the irregulars there are two sides to the question. The Christian Scientists and other advocates and exemplars of mental therapeutics are by no means without arguments to sustain their position, and it is not at all certain that the courts will uphold the contention of the Board of Health that a diploma from a medical college is the essential test of a physician's ability to exercise the healing art. More than that, the rights of the patient as well as those of the physician will have to be considered. If the graduates of medical schools are to have a monopoly of the art of healing, it is obvious that the public will, to a certain extent, be subjected to the domination of that monopoly. It remains to be seen whether the courts will sustain a trust in medicine any more than one in sugar, or whiskey, or steel rails.

The Board of Health is going to have some difficulty in proving that medical knowledge is monopolized by those who hold diplomas from medical colleges—for that is what its contention amounts to. If all regularly graduated physicians invariably cured their patients the case would be different. Or if the Christian Scientists cured none of their patients the regulars would have a strong case. But, as every one knows, neither supposition is in accord with the facts. The regular M. D.'s lose a very large proportion of their patients; the Christian Scientists are successful in at least some cases. The question thus resolves itself into one of comparative efficiency, and this issue the Scientists declare themselves ready to meet. They challenge the regulars to comparison in the ratio of death certificates, and express a willingness to stand by the outcome. It would be awkward if the Scientists should prove that they lose fewer patients than their adversaries.

But aside from the conflict between the mental healers and the graduated physicians, there is another factor which will hardly be ignored by the courts in deciding the dispute. That is the question of individual liberty involved. If the law can compel a man to call in a doctor of a certain school, it can likewise compel him to send for a clergyman of a specified creed. Few people will contend that this would be a desirable condition of affairs. The citizen would be told, in effect: You shall have a physician with a college diploma or you shall have none at all, and such a decision would be an invasion of personal rights that the courts are not likely to countenance. Nor would such a finding be effective if it were pronounced. All the laws that can be passed cannot compel a man to hire a physician whom he doesn't want. He may fight disease in his own way. He can do it alone, in the presence of friends, or with or without medical attendance. The law can't compel him to take medicine and can't compel him to employ a physician. If it would coerce him in the matter of calling a doctor it could also prescribe which school of remedies should be employed, and we should shortly have a row between the allopaths and the homœopaths quite as vigorous as the war which both those schools are now waging against the advocates of mental therapeutics.

The question, therefore, interests the public quite as much as the warring healers—regular and irregular—and the result will be awaited with interest. As the contention of the Christian Scientists happens to involve individual rights, it is extremely likely that they will be victorious. The courts are chary of limiting such rights, and to sustain the Board of Health would undoubtedly have that effect.—*Chicago Chronicle.*

Not a Wise Policy.

It is reported that the ministerial association of Kalamazoo, Mich., has engaged Rev. Dr. J. M. Buckley of New York, to lecture against Christian Science. The statement is also made that there is to be an organized and vigorous movement made against this cult. It is very questionable if this, considered merely as a matter of policy, is wise. To go into a great undertaking against Christian Science is to dignify it, if not to magnify it. The new denomination is of comparatively recent origin and has gathered up followers rapidly. There is an element in every community always looking to pick up whatever is new, and when they have experimented with it and exhausted it they will drop it of their own accord. Getting up a lecture campaign will be at once accepted as emphasizing the importance of the creed, and will be pointing out that the various churches are suffering on its account and are taking this way to defend themselves and to hold their following.

It may be silly, but it is no sin, to believe implicitly in Christian Science. There are a great many people who honestly believe in a great many foolish things, but the good sense of the majority may be depended upon eventually, even if gradually, to assert itself and discard the false, retaining only the true. There are some features of Christian Science which commend themselves to good judgment, and there are many others of which as much cannot be said. At least all who wish to, have the right to believe in it and to take it all in, hook, line, bob, and sinker, if such is their fancy. In a free country where religious liberty is specially provided for it is hardly worth while for one denomination or a combination of denominations to set out to make warfare against another. That is not the best way to regain erring brethren and sisters, and in Christian Science, as in most other places, the latter make up the larger proportion of the membership. An organized onslaught on this new creed will simply give it the notoriety which it loves, and accord it a prominence it would not otherwise enjoy.—*Utica (N. Y.) Press.*

Religious Liberty.

Two or three movements are on foot in New York to suppress the practice of Christian Science healing. Commenting upon the matter, the *World* explains that religious liberty in this country does not contemplate exemption from the penalties of violated law; and applying its explanation to Christian Scientists, it says that they are free to believe that there is no such thing as disease, but they must not practise the healing art without a license. This is quite in the usual strain, but it is very weak. Religious liberty does not, indeed, contemplate exemption from the penalties of violated law; but it does contemplate that no law in conflict with freedom of religious practices not criminal *per se*, shall be enacted. The New York prosecutions of Christian Scientists are in reality not for practising the healing art without a license, but for practising it at all. The charge that the practitioners are unlicensed is a makeshift. Licenses would not be given them; not because they are ignorant of the healing art, but because they are either ignorant of or reject the doctor's art. They themselves claim to be proficient in the only healing art there is; and whether they are right in that or not is nobody's business but their own and their patient's, provided the patient be of mature years and of sound mind when he elects their method of treatment. Whatever may be said of the right and duty of organized society to require recognized medical treatment for children too young to choose for themselves, nothing can be said in favor of any supposed right or duty of organized society to compel responsible adults to submit to medical treatment which they hold to be irreligious.—*The Public,* Chicago.

Allies of Christian Science.

Since it became apparent, to quote an exchange, that "thousands of the best people of New York in point of wealth, intelligence, influence, and social standing have taken pains to let it be known that they are against" the proposed raid on the Christian Scientists, the fever to make that raid has perceptibly abated. We have before called attention to the rather unprecedented fact that here is a new cult in religion and healing which has with it the help of much wealth and much of what usually passes for intelligence. As men and women go, the Christian Scientists are made up out of an intelligent class of the community, and it is remarkable that many of them are well-to-do, and even wealthy. It usually is the case that the new in religion has to commence with the poor and, if not with the ignorant, at least with those who have not had the opportunity for wide intellectual culture. Although Christian Science is not precisely new, it is by no means old in the form which it now presents itself, and the fact that it has made so many converts in a few years from among classes which ordinarily are disposed to conservatism is surprising. But the fact must go far to temper the zeal of those who are anxious that Christian Science shall be extirpated by the processes of the law.

The Evening Standard, New Bedford, Mass.

Supreme Folly.

Yesterday the *News* published a telegram from Buffalo, of a Christian Science case in court, where physicians testified that one Ralph Saunders, who had died of pneumonia under Christian Science treatment, could have been cured had he received medical treatment. The *News* does not assume to settle the controversy between the medical profession and the Christian Scientists, but we do submit, that with cemeteries of the country filled with victims of pneumonia, who were treated regularly, it is supreme folly for any doctor to go upon the stand and swear that a case could have been cured, which he did not diagnose or even see.—*Fort Wayne News.*

Buffalo, N. Y., Times.

Boston, June 6.—Among the many very prominent people in this city attending the Christian Science convention are Countess Dunmore of London, Eng.; Lady Mildred Murray, her daughter, also of London, and her son, Viscount Fincastle, who is in the British Army in India, and came to Boston for the sole purpose of attending the Communion services and the Annual Meeting of the church Tuesday.

There is an interesting story connected with the conversion of Countess Dunmore and her family to the Christian Science faith. Four years ago the husband and father of the family, ranking among the higher of England's nobility, was converted to faith in Christian Science by the extraordinary relief it is claimed he experienced from the effects of an injury he had incurred while serving her Majesty Queen Victoria in India. The injury was such that it was declared he could never again participate in his favorite pastimes of the hunt and steeplechase, nor discharge the duties of a mounted army officer.

Physician specialists aided him not and agreed with all other medical attendants that his lordship would never recover from this disability. But to-day he is well and hearty, a most enthusiastic rider, and incidentally he has become a Christian Scientist; in fact, devoting all his time and much of his influence and money to the advancement of the church's principles.

The countess is equally ardent in this faith, and the youngest of their family, Lady Mildred, as well as an elder

Digitized by Google

daughter, have become practitioners of Christian Science also.

Viscount Fincastle is the eldest son and heir of this noble family, and has won remarkable recognition for an act of heroism performed in India. He is now on a leave of absence from the Indian service, which he obtained solely, he says, to make this pilgrimage with his mother and sister to the Mother Church of Christian Science in Boston.

Viscount Fincastle is twenty-eight years old, and has the distinction of being the only civilian ever decorated with the Victoria cross for an act of military valor.

When the Indian frontier troubles broke out in 1897, Lord Fincastle was a lieutenant in the Royal Fusiliers and acting aide-de-camp to the viceroy of India. He obtained leave and went to the frontier as correspondent for the *London Times*.

In one fight the horse of Lieutenant Greaves of an Indian regiment bolted and ran into the enemy's ranks. A desperate attempt was made by Lord Fincastle single-handed to rescue him, but after a gallant fight he succeeded only in bringing off the body of his friend. The Victoria cross was suggested. But the Victoria cross is for soldiers only, and Lord Fincastle, though having a commission, was a civilian for the time being, and the application was refused.

It dawned upon the authorities afterward that this was so purely a technical objection that it would not hold against the public demand for the honor, and Lord Fincastle received the coveted distinction.

It is estimated by Christian Scientists here, that fully seven thousand people attended the services of the Mother Church held Sunday. The congregations were made up of people from almost every part of the country. Some came even from Europe.

There were four services held last Sunday, one after the other. They were all alike. Perhaps, to a stranger, the least conspicuous feature was that which gave the occasion its name—the annual Communion. It consisted only of a brief period of silence, followed by the repetition of the Lord's Prayer.

No material elements lay upon the altar; no bread nor wine passed from hand to hand and lip to lip. With bowed head and bended knee, and in a silence so profound that it seemed itself to proclaim the resolving of substance into spirit, the multitude which had made this pilgrimage from distant states and countries to their mother shrine received the spiritual sacrament for which they had come so far.

And high over organ arch and pulpit and the heads of the worshipers, the painted words of the beloved apostle reflected back the Sabbath light upon the congregation, laden with the message, "God is Love."

During the past year seventy-five branch churches have been organized, as against forty-seven in 1897. There are now 304 branch churches, and 111 additional regularly established Sunday services all over the United States. There is a total membership of upward of seventy thousand, and an attendance of more than three hundred thousand.

Large church buildings are now being erected in Chicago, New York, and many other cities in the United States, and one in Canada. There are four branch churches in the suburbs of Boston, located in Roxbury, Cambridge, Malden, and Chelsea.

The Lectures.

At Missoula, Mont.

Dr. Francis J. Fluno of Oakland, Cal., Friday evening, June 9, entertained a large audience at the Union Opera House with his lecture on Christian Science. His discourse was interesting even to those who do not agree with him, while those of his faith pronounce it the most logical effort they have ever heard or read.

Dr. Fluno is one of the best-known members of the faith on the Pacific coast, being a graduate of the normal course under Mrs. Mary Baker Eddy, and having followed the faith on the Pacific slope the last fifteen years. He was at one time a practising physician. His is the first tour of this part of the country by a lecturer who is recognized as a local authority.—*Daily Democrat-Messenger.*

Dr. Fluno was introduced to his audience by Judge John M. Evans, who spoke as follows:—

Ladies and Gentlemen:—I have been requested to preside at this meeting and present to you the speaker of the evening. We are here to listen to a discussion of the cardinal principles of the subject denominated Christian Science. That I may not appear to this audience under any banner that I have not the right or honor to bear, permit me to say that I have not the honor to belong to any church organization, but I believe in a full and fair discussion and presentation by the adherents and advocates of any religious faith. To me a man's religion, like his conscience, is his own, and no other man has a right to say him nay. Believing thus as I do, having lived many years in the state of Montana and the city of Missoula, I think I can assure the speaker a careful, courteous, and respectful hearing.

I have heard it said that a speaker on the subject of Christian Science would not be treated courteously in Missoula. I believe that the utterance only of some irresponsible person. I want to say to you that when the time comes that a public speaker in the city of Missoula, discussing the subject of Christ crucified, is not accorded courteous treatment, there will be more than one "Daniel" who will retire to his room and "with his window open towards Jerusalem" pray Almighty God to re-assure him of the promise made by His only begotten Son when he said to his disciples, "Lo, I am with you alway."

I believe you will agree with me that there never was a time in all the history of the centuries, when there was so much profound thought expended both in the material and the religious world as to-day. Men are delving into science, philosophy, psychology, and religion as they never delved before. That old problem of "What is Truth?" confronts us to-day as it confronted Pontius Pilate on the day of the crucifixion. Only last Sunday in the baccalaureate sermon celivered at the University of the city, you and I heard the question asked and the problem discussed. Many men and women are to-night in search of a satisfying answer.

Truth about any subject is interesting and useful, and the truth about the subject of Christian Science, a subject that is now engaging the minds of many of the brightest men of the day, will be doubly interesting to you and to me.

We have with us one of the accredited lecturers of the Christian Science Church, and I have the pleasure of introducing to you Dr. F. J. Fluno, of the city of Oakland, California.

At Spokane, Wash.

F. J. Fluno, C.S.D., of Oakland, Cal., lectured at the Auditorium, Spokane, Wash., Thursday, June 1, under the auspices of the First Church of Christ, Scientist, on the subject "Christian Science, and the World's great Need of it."

The lecture was well attended, there being fully one thousand present, many of the best people in the city attending and listening with marked attention to the speaker. Dr. Fluno was introduced by one of our most prominent and respected citizens, Dr. E. D. Olmsted. Dr. Olmsted is a practising physician and prominently identified with

Digitized by Google

public affairs, having just served two years as mayor of the city—a broad-minded and public-spirited man.

LOUISE WRIGHT, Clerk.

Dr. Olmsted's introductory address was as follows:—

Ladies and Gentlemen:—I am one of those individuals who never believe in spoiling a good story for relationship's sake, so I will relate a little incident that occurred the other day, even if it does put the laugh on me. My nephew, a bright little fellow of ten, came out from Chicago to make us a visit. After making the professional rounds with me one day, I said to him, "My boy, how would you like to study medicine with me and take my place when I give up practice?" "No, sir," said the lad; "it will all be Christian Science by that time and there would not be anything for me to do."

It must not be assumed because I introduce the speaker this evening, that I endorse all his utterances. I am here for four reasons: first, I am anxious to know the reasons that induced a medical practitioner in successful practice to take up Christian Science; secondly, I number among some of my best friends in the city those who have embraced that belief; thirdly, I am known to be liberal in politics, religion, and medicine—in fact in all things except where money is concerned—and if any one has any better way of curing disease than I have I want to know about it for the benefit of my patients; and last, but not least, because it is a courtesy due from one professional gentleman to another. With these preliminary remarks I now take pleasure in introducing to you Dr. Fluno, who will address you upon the subject of the world's need for Christian Science.

At Owosso, Mich.

Hon. William G. Ewing of Chicago, lectured here Thursday evening, June 8, to a large and representative audience.

J. C. Shattuck, one of the leading business men of Owosso, introduced the lecturer as follows:—

Ladies and Gentlemen:—The all-absorbing interest of our national life for the half century past has been centred on material things, and the consequent development and progress of physical science has been something marvelous. No smallest detail that would minister to the comfort of man has been neglected. In very recent years, however, it has begun to dawn upon increasing masses of the people that there are elements of true living which materialistic philosophy cannot satisfy, and they are seeking light upon the great question of how to live in the true sense, and to get the most out of life. Modern literature is full of this idea, old as the birth of Christianity, neglected in this so-called practical age, and now most happily being revived. Christian Science claims, I believe, practically to guide men and women to a higher plane of living. As such it deserves, at least, candid investigation. It is unfair, it is un-Christian, to judge a man or a sect upon the testimony of enemies, and yet the judgment of many has no better basis than this.

If there is any one qualified to speak with authority upon this subject of Christian Science, it is the distinguished lawyer and scholar who is with us to-night. It is with pleasure, therefore, that I introduce to you as the speaker of the evening, Judge Ewing of Chicago.

MYRON E. LEPPER.

At Hart, Mich.

At the Christian Scientist meeting in the Opera House, Monday evening, June 5, the speaker was introduced by General Rutherford, and found himself facing a large and intelligent audience ready to give him an attentive and a respectful hearing; for in the plenitude of new things, of new discoveries in science, of new and better avenues of thought, of wider tolerance of opinion, it has come to pass that in this day audiences can everywhere be found to listen patiently, perhaps eagerly, to the truth or what some one or more may think is the truth—and who shall say what is or what is not truth? Whether we like it or not, whether it is for better or for worse, the world is grasping after new things, hoping for better things. Old superstitions are vanishing, it may be for new ones; but to-day the world demands that the new shall be better than the old, and the axiom, "Prove all things: hold fast that which is good." means more than ever before.—*Courier.*

At Mt. Pleasant, Mich.

One of the events of this week was the lecture by William G. Ewing, late judge of the Superior Court of Chicago, on the subject of Christian Science. To get a full understanding of the honorable judge one must hear his lecture in its entirety and absorb his earnestness and sincerity.

His language is that of a lawyer and judge, but invigorated with an earnest personality that is not often heard in charges to juries.

The attendance was gratifying both to the speaker and the adherents of the faith.

Judge P. F. Dodds introduced Judge Ewing in a few well-chosen remarks, saying that it was fortunate that those interested could hear the subject treated by one so thoroughly grounded in the knowledge of Christian Science.

Isabella County Enterprise, June 9.

At Colfax, Wash.

F. J. Fluno, M.D., C.S.D., lectured on "Christian Science, and the World's great Need of it," before an audience that filled the Court House, Friday evening, June 2. He was introduced by Attorney H. W. Canfield of this city, who, although not a student of Christian Science, spoke in a charitable and kindly manner of this Light that has come to the world, and of the advancement the world has made in the way in which it has received new ideas.

There is no organization here, but a good many earnest students of the text-book, who knew how to appreciate the opportunity of having a lecturer, and the funds to meet the expenses were contributed in a very short time.

H. B. MCCROSKEY.

At St. John, N. B.

The teachings of the now much discussed Christian Science were explained Tuesday evening, March 21, at Mechanics' Institute by Rev. W. P. McKenzie, C.S.B., of the Board of Lectureship of the Mother Church of Christian Science, Boston. "The Truth About Christian Science," was his subject.—*Daily Record.*

The Ever-present and Eternal Now.

BY HADLEY M. HENLEY.

THE old Journals, all of which are on my library shelves except the first two volumes, have been so valuable to me with rich experiences and wise suggestions that I am prompted to add a leaf from my own experience with the hope of benefiting some one and thus partially repaying my obligations.

My thought goes back seven years to my first year in the study of Christian Science. I had been greatly helped by treatment and constant reading of "Science and Health with Key to the Scriptures," and all the other works by our beloved Leader. Some of my beliefs of disease, however, were very tenacious and did not yield to my own treatment or that of others. It soon became apparent that I must work out my own salvation, as we all learn in

Digitized by Google

due time, but, not until I was told by a Scientist of longer experience, did I see that one of the best ways to work out our own salvation is *to work for others.*

The opportunity to work for others had come to me frequently, but I had always turned the cases to other Scientists. The subtle error which held me for some time was that I was not good enough to treat others, and that I must first demonstrate over most of my own claims before I could help others. Later I was led to see, however, that if I waited till most of my own beliefs of sin and disease were completely mastered, I might not be able to lend a helping hand to others for a long, long time. I saw that if I continually held to the thought that I was still deep in sin and darkness and without light and understanding enough to treat others, and merely praying and hoping for it to come to-morrow or at some indefinite future period, I was holding to the old orthodox error of "fallen man," instead of the truth that "man was and is God's idea, even the infinite expression of infinite Mind, and co-existent and co-eternal with that Mind" (Science and Health, p. 231). I was simply yielding to the old self-mesmerism instead of "rising in the strength of Spirit to resist all that is unlike God."

Accordingly I was led to deny this error and mustered courage enough to treat a friend (after three urgent requests by him), with a long-standing and distressing claim of asthma and hay fever combined, which yielded almost instantaneously. He had not been able to lie down or sleep at night with any comfort for some time, and immediately after the first treatment had been given, he retired and slept soundly and awoke the next morning with scarcely a trace of his former trouble.

He did not, however, accept Christian Science or even study it, and he had the same claims return to him in mild form in after years, which might have been expected, for when our Master healed the impotent man, he said: "Sin no more, lest a worse thing come unto thee." The lesson for me in this demonstration was that when I quit listening to error's discouraging suggestions and went manfully to work with such understanding as I had already gained from Science and Health, the power of Truth could be manifested through me as well as any one else. I felt that Principle had bountifully rewarded my first effort made in humility and with faith that the promises of God are sure.
